For security reasons, certain South American republics should be definitely avoided despite the representations of their governments that their exclusion might further increase the Communists' power.

A study of the Southern Hemisphere situation by a former active top Communist, Eudocio Ravines, a Peruvian who has taught guerrilla tactics at the Lenin school in Moscow, reveals that the Chinese Communist tactics rather than the Russian have been adopted for that area. It appears that the Moscow and Peiping leaders of international communism regard the Chinese hit-and-run tactics as more adaptable in Latin countries.

The Russian method comprises mass insurrection, coups d'etat, general strikes and occupation of capital cities and of the governmental apparatus from the very beginning. It was applied successfully in Russia in 1917. The Chinese Communist tactics provide training of small insurrectional bands which make mountain fastnesses or jungles their operational bases. From there they raid cities and disrupt lines of communication.

The Chinese Communist method of civil warfare proved highly successful before the outbreak of the last war when the Mao Tze-tung followers ensconced themselves in Yenan. It was highly successful in Cuba when Fidel and Raul Castro established a force of some 1,400 men in the Sierra Maestre and took over the whole of Cuba after a number of hit-and-run activities. It also has the advantage of impressing the American people as an agrarian revolt and thus being less repellent than an outright bloody Communist revolution. It is for this reason that the technical advisers of the Latin American revolutionaries are Chinese rather than Russian. It is also China—using Soviet submarines and other means of sea transportation—that provided the Cubans and other Latin Americans with necessary equipment.

According to Senor Ravines who has become an important member of the Moral Rearmament Organization, Cuba is the main base of operations at the present time. Communism has become deeply imbedded in that island "people's republic," and it is from there that the other movements are being planned for this year. Bolivia is the next immediate target. It is expected that the election to be held within the next 2 or 3 months will result favorably for the Communist planners. The consequences of this situation will deeply affect Venezuela where the Communist infiltration is strong in the Venezuelan press, radio, and political parties. The powerful oilworkers union is being taken over by the Communists in the same manner a number of unions were taken over before Castro's spectacular success.

In Brazil, the Communist leader, Louis Carlos Prestes, is equally active. He has recently returned with 25 followers from North Vietnam where he was the honored guest of the Communist boss, Ho Chi Minh. There he studied for months the tactics Ho used against the French forces. Prestes aims at linking his Brazilian move with the Communist groups in Argentina where they are strongest in the Provinces of Santiago del Estero, Tucuman and Salta, all close to the Bolivian border.

The Communist leaders, both national and international, are convinced that the movement, which aims at dividing the Western Hemisphere into two ideological portions, is certain of success. They claim that the Latin American masses which have suffered for so many years from graft and corrupt politicians who have called themselves liberals or conservatives—but in fact were no different—will accept the changes as the Cuban people have despite the tragedy which has befallen that island republic.

The eagerness of the U.S. Government to recognize the liberal Castro regime is also an encouraging factor for the international and local Communists.

American security officers and competent observers on the spot fear that despite the measures to be taken by the Latin American countries which President Eisenhower will visit, the Communists may have a field day in order to strengthen their own position as a preliminary to their pending revolutionary operations.

Slovakia Under Communism

EXTENSION OF REMARKS
OF
HON. WALTER M. MUMMA
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 12, 1960

Mr. MUMMA. Mr. Speaker, pursuant to permission granted, I am inserting into the Appendix of the CONGRESSIONAL

RECORD an article written by Mr. Joseph Pauco, who is assistant editor of Jednota, at Middletown, Pa.

Mr. Pauco has written several books and many articles about Slovakia and his most recent article entitled "Slovakia Under Communism" appeared in the magazine Slovakia.

This article is an honest attempt by Mr. Pauco to draw a true picture in words of the harm done to the Slovakians by the undesired and forceful interference of the iron fist of communism.

Here in his own words, is the way he wrote it:

[From Slovakia, June–December 1959]

SLOVAKIA UNDER COMMUNISM

(By Joseph Pauco)

In the past 2 years hundreds of American Slovaks visited Slovakia. They were not molested or harmed in any way, and no one was arrested or detained by the police that we know of. It is obvious that Prague wants visitors from America, because that means American dollars.

Only two Slovak clergymen were allowed to visit Slovakia, though many more applied for visas but were refused them. The Czech Reds do not want Slovak Catholic priests from America to visit Slovakia. And most well-known Slovak personalities in America, too, are persona non grata. They want to know too much about the plight of the church in Slovakia, the condition of the bishops and the clergy, and the schools.

I have talked with dozens of Americans of Slovak origin who have visited Slovakia. This report is based on these conversations.

After World War II, a certain Slovak came to America to his father. This year he was allowed to visit Slovakia. He had let his brothers and other relatives know that he was coming. So they waited for him at the station. And they waited and waited in the crowd for some time. He did not recognize them, and they did not recognize him. "We had not seen each other for 13 years," he related. "My brother and brother-in-law have changed beyond recognition."

"My brother," he continued, "is younger than I, but today he looks older than our father. He has aged terribly; he is wrinkled and gray. He is not the same man I said goodbye to in Slovakia 13 years ago."

What did he go through? They confiscated his property, as well as that of the other relatives. A nephew, a priest, is languishing somewhere in a concentration camp, while his two sisters—members of a religious order—are forced to work in the fields. The family is large and there is no money, or any way of earning it, that is, enough of it to keep going. The spiritual and material property of these people is indescribable. No wonder the man aged prematurely.

"During my stay in Slovakia," continued my friend, "not a single smile ever lit up the faces of my relatives. We all cried when my brother related what terrible things had transpired since the end of the war. And they all cry even when they eat and sleep."

He met with his friends in the village. When he left them 13 years ago, they were well off. Today they have nothing. All must work in the kholkhoses. All are aging prematurely; all are beggars today. "They walk in rags," said my friend, "like the gypsies used to long ago."

"I never felt so depressed in all my life," he continued. "These people have virtually lost all faith in themselves. In their great fear and sorrow they care for nothing; nothing interests them. They pray constantly, and it is prayer that keeps them from despairing. I certainly would not want to live in Slovakia today," concluded my friend.

Farmers in Slovakia are losing their land. The Czech Communist state is confiscating it systematically. The state now owns most of the farmers and their farms. The farmers, sooner or later, are forced to join the kholkhose system or they lose everything. In the end they do lose everything. Here is the story as told by an American with a brother in Slovakia, who "voluntarily" joined the collective farm system.

My brother owned 12 hectares of land (29.64 acres). He was obliged to give the Government annually 2,640 pounds of beef, 1,000 pounds of pork, 8,360 pounds of grain, 350 eggs, and 2,500 liters of milk. If the season was dry and crops were poor, or the animals got sick and died, the farmer was lost. He had no money with which to buy grain, meat, eggs, or milk. And even if he had money, he could not buy anything, because the other farmers, too, had to surrender their products. What could he do but surrender his land to the State?

To get the farmers to join the kholkhose system, the Reds promised just about everything to have the farmers join "voluntarily." When this did not work out very well, the Reds began to use pressure. First on the wealthier farmers, whom they labeled parasites, bloodsucker, and political unreliables. After their holdings were diminished "by law," the Reds began to work on the small farmers. They gave them a "choice": Either to give up their own farms and work on the kholkhoses, or to lose everything and work the same amount of acreage somewhere else. In the end the entire community is changed. The farmers have nothing left but a garden which cannot sustain the family. People get paid for working in the kholkhoses. Not in money, but in "units." A unit is worth 6 crowns (85 cents) and 3 kilograms (6.6 pounds) of grain. But to earn this unit, the kholkhose slave must, for example, cultivate cucumbers, or tobacco 6 hours. The value of the unit is figured otherwise for different jobs.

Kholkhose guards are also paid in units. Daily they get one and a half units, that is, 9 crowns ($1.28) and 4.50 kilograms (9.90 pounds) of grain. But the guard not only watches and supervises, but also must work.

A farmer's cow is worth 110 units to the State, that is, he must pay with his work 666 crowns ($95.14) and give 330 kilograms (726 pounds) of grain. This means that a farmer must buy his own cow annually or else lose it. In the summer the cows have a common pasture; in the winter they are fed from the kholkhoses. A milker has to take care of 16 cows. He milks the cows by hand three times daily. Everything is systematized. Each person works in his own department only. With a whip over his head at all times. People must work Sundays, too, so that the Reds can show that they completely control the reactionary peasants, who have always been faithful to God and to their nation. Today practically everything is owned by the State—business, industry, bakeries, butcher shops, drugstores, farms, and even the doctors. Everything is owned by all the people. "Everything is ours, but only to look at," is what the people say in Slovakia.

I asked several American Slovaks who had visited Slovakia recently, how the church fared in Slovakia and how the priests were treated. I was told that many priests still are in jail and that those who are not are under strict police control. The Czech Red secret police and their agents shadow every clergyman. I then asked about the priests who had signed the government program in regard to Catholic Action, and those who had refused to sign it. The number of those who pledged loyalty to the government program was negligible. About half of the latter have already regretted their action. Those who refused to sign have to live a hell on earth. The Communists spread malicious rumors about them to turn their parishioners against them. Where that happens the churches remain empty and then the Reds chase the priests to the labor camps, saying that they have nothing to do in the parish. Of course, Sundays mean nothing to the Reds. People must devote Sundays to put time in the work brigades.

This means that people cannot go to church—and in turn the priest has nothing to do. This in time will have telling effects. Since the Greek Catholic churches are now administered by orthodox clergymen from Russia and Bohemia the Slovak Greek Catholics (Byzantine Rite) attend Roman Catholic churches even if they have to walk miles to ge to one. The Catholics are becoming thus more united in suffering and in their opposition to the Reds.

When I asked recent visitors to Slovakia how fares it with the schools there, I was told that the teachers must sign a statement that they have renounced the Catholic faith or else they lose their positions. "The future of communism," the Reds keep on bellowing, "depends on the training of our youth." And God and religion must be eradicated from the hearts and minds of all youngsters no matter what the cost, according to the Reds.

The Slovaks feel that they have been forsaken by all except God. To Him they turn constantly for help, praying that another war soon breaks out. Yes, in their great affliction they are begging God to allow another war, because they feel that the Reds will never let up unles they are beat up. The Slovaks are now hardened and determined to fight. They tried to help the Magyars when they revolted in 1956, but Red Prague stopped them with its armies. If America or the West had come to the aid of the Magyars at that time, the Slovaks over there say that they, the Poles, Ukrainians, Rumanians, and the other behind the Iron Curtain would also have made a bid for freedom—and the situation today in central and eastern Europe would be different than it is. They still ask why America and the West did not help. And if they did not help in 1956, what are the chances of help from America and the West the next time some nation makes a bid to burst from its Red chains? Who has the heart to tell them that America and the West have decided on a policy of peaceful coexistence? Of course, not Radio Free Europe or the Voice of America—but the Reds will, and they did tell them: "Don't expect any help from the American imperialists. Comerade Nikita Khrushchev is the only one now that can help. Stick by him."

How about the cost of living in Slovakia? Terribly high. Breakfast—a very small piece of butter, a little jam, two pieces of bread, and a cup of coffee—come to 12 crowns (7 crowns equals $1). Lunch—pork and sauerkraut, bread, and a small beer—adds up to 17.50 crowns. A kilogram (2.2 pounds) of tomatoes, 12 crowns; 3 pounds of bread, 8 crowns; a liter of vodka, 80 crowns; a liter of rum, 96 crowns; a kilogram of sugar, 10.20; poor quality sausage, 25 crowns per kilogram, better quality, 80 crowns; women's dress material, 400 crowns (per dress) and to sew same another 300 crowns; men's suits, 1,200 crowns; work shoes, 200, and dress shoes, 380 crowns. There are cheaper shoes, but they last only about 2 to 3 weeks of continuous wear; the better shoes last about 6 months.

Thus a person must work 2 weeks to buy poor clothes. Factory workers are a bit better off. But even an expert or technician does not make more than 1,400 crowns per month. A tractor man gets 1,200 crowns per month. A commander of the national security is no better off.

How about getting food and clothes from America? They were getting quite a bit of

help from American relatives at first, but since CARE was proscribed and the Government has taken over everything, little is coming in, because of exorbitant taxes or customs duty. A headkerchief (babuška) from America for example, is taxed 50 crowns ($7.15), and other articles of wear as high as 200 crowns per kilogram.

A Slovak lady, who had visited Slovakia recently, told of her surprise when she bought some meat at a butcher shop and some buns at a bakery. The clerk would not wrap the merchandise. When she asked for wrapping paper, she was told to bring her own next time to wrap her stuff in an apron.

How about buying an auto in Slovakia? Well, they are offered for sale, but not for everybody or anybody. The prices are exorbitant, but then it's not so easy to get one even if one has the cash. A request form for an auto must first be filled out and sent to the proper authorities. It may take up to 3 years to get an answer. But that does not mean that one is ready to get the auto. The reply usually tells the applicant what further steps he must take.

It's the same thing, my informant tells me, with building one's home. First he must get permission to build; then he waits till he gets an approval for the necessary material. He may ask for a certain kind of material and get another kind.

"You know," my informer told me, "in Slovakia they have plenty of everything—poverty, fear, jails, drudgery—except money and fabricated materials. Many times I could not even buy matches in a Slovak village. And when I walked into a store and asked what they had to sell, one comrade replied sourly: 'Don't ask what we have, but what we don't have'."

Visitors to Slovakia are generally surprised at the excessive drinking of the ordinary folks. "I visited five communities," a friend of mine told me after returning from Slovakia, "but the drinking problem is the same in all of them and, I suppose, in all of Slovakia." The Slovaks drink not because they are well off, but because they are suffering extreme hardships. It seems that the people there are trying to drink their hapless lot away. "But the stuff they are drinking," added my friend, "is terrible stuff, poison that most people themselves make clandestinely. Perhaps it is worse than the worst moonshine ever made in America." The clergy are doing their best to convince the people not to drink, but to little avail. More than one priest told me that the situation is worsening with the years.

Shadowing visitors is common in Slovakia. I learned from several friends who recently visited Slovakia that the secret police of any district know who is coming from where into the area. My friend, let's call him Janko (John), recently visited his relatives, and he had quite a few of them. "As I left the home of one of my relatives for the home of another," said Janko, "I became aware of the fact that somebody was following me. Well, the first time it did not bother me. But I noticed the same fellow shadowing me for several days. When I entered the home of my aunt, the man slipped out of sight. The next morning he reappeared again. On this occasion he approached me and said: 'Pardon me, but I think you are looking for the home of your friend's mother, not the friend that lives in the same town in America that you do? Well, his mother lives over there.'

"Surprised? Of course I was," continued Janko. "I had told no one that I was going to visit my friend's mother, because he had asked me not to, since he was a public official. But the shadow evidently knew whom I would probably visit in that particular village. When I visited some relatives and friends in another town, I was shadowed again."

Another American visitor visited the pastor of the parish to which his relatives belong. "How are you, Father?" he asked. "Oh, I'm getting along fine, thank you. So fine, in fact, that things could hardly be better. And briefly, let me tell you how fine. Last Sunday I gave a sermon and then celebrated holy Mass. As I left the church, a well-known Communist official approached me and asked me to repeat the sermon I gave since he did not have time to attend church, because, he said, he wanted to be edified.

"Yes, he did want to learn something. He wanted to hear from my own lips what I said said so that he could check this with the report that would be brought to him by his own stooges," concluded the priest.

Use the Knife

EXTENSION OF REMARKS
OF
HON. LEO E. ALLEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 12, 1960

Mr. ALLEN. Mr. Speaker, under leave to extend my remarks, I include the following editorial entitled "Use the Knife," which appeared in the Rockford (Ill.) Morning Star of January 3, 1960:

USE THE KNIFE

Battlelines between the forces of economy and spending are being drawn again as the 86th Congress prepares to open its 2d session Wednesday. Outcome of the battle will depend to a considerable extent on the interest of the public in the affairs of Congress. Members of the House and Senate will be particularly sensitive in this election year to public reaction to proposals before Congress.

Congressional spenders are preparing another big offensive for Federal aid to education, Federal housing, medical and surgical benefits for social-security recipients, area redevelopment, and other costly programs which are not based on need but are calculated to win votes. The spenders seem to have forgotten that public opinion in the last session of Congress was on the side of economy, and helped President Eisenhower apply a restraining hand on the spending-minded Democratic-controlled Congress.

President Eisenhower has served notice that he will again lead the fight for economy when Congress reconvenes. The President credited an "outspoken citizenry" with preventing reckless spending schemes from being carried out last year.

Budget Director Stans recently issued a rallying call for mobilization of the economy drive that must be resumed. He urged support of the efforts of President Eisenhower to make the country live within its means and called upon citizens and organized groups to withhold demands on the Federal Government that can be avoided, deferred, or handled by local governments or private enterprise.

The need for economy in Government is greater than ever. Congress has a duty to limit legislation to essentials and to put aside the frills. Cost-cutting measures rather than new spending programs, should have top priority. Tax cuts are out of the question, but there is urgent need for a start toward reduction of the staggering national debt.

In a presidential election year, there may be a tendency in both major parties to resort to some extravagances. That tendency will have to be overcome, for the strongest party will be the one that is mindful of the earnest desire of the public for an end to excessive costs of Government.

If Congress keeps the interest of the Nation ahead of political consideration, it will provide realistic legislation by taking care of necessary measures and limiting action on subsidy and aid programs to generous use of the paring knife.

Addresses by Maj. Gen. Lionel C. McGarr, Commandant, U.S. Army Command and General Staff College, Fort Leavenworth, Kans.

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 12, 1960

Mr. SIKES. Mr. Speaker, I am privileged to submit for reprinting in the CONGRESSIONAL RECORD two speeches by Maj. Gen. Lionel C. McGarr, commandant of the U.S. Army Command and General Staff College, Fort Leavenworth, Kans. One of these was delivered October 21, 1959, to the American Bridge, Tunnel, and Turnpike Association in Kansas City, Mo., and the other was delivered November 11, 1959, to the Leavenworth, Kans., Rotary Club. It was my privilege during the congressional recess to serve on active duty at the Command and General Staff College. There I had the privilege of observing the outstanding work by General McGarr and his staff. His has been a most impressive record of accomplishments and I consider him among the most capable and effective officers in our Army.

The addresses follow:

REMARKS BY MAJ. GEN. LIONEL C. MCGARR, AMERICAN BRIDGE, TUNNEL, AND TURNPIKE ASSOCIATION, INC., KANSAS CITY, MO., OCTOBER 21, 1959

Members of the American Bridge, Tunnel, and Turnpike Association, gentlemen, it is indeed a pleasure and an honor for me to be here with you this afternoon, and I wish to thank your president, Mr. Collard, for affording me this opportunity to discuss the role of the U.S. Army Command and General Staff College as it pertains to our Army's effectiveness—as an eminent member of the overall triservice defense team.

Fort Leavenworth is a military post steeped in tradition and history. It was founded in 1827 by Lt. Col. Henry Leavenworth who saw the bluff upon which the present academic building is now situated, as he came up the Missouri River and decided to place the post at this location. A military installation which was to become an important key outpost in the majestic westward sweep of the tide of empire in the early part of the 18th century, as our young, virile Nation pushed out of the perimeter of the Thirteen Original Colonies to the golden gate on the sparkling shores of the Pacific Ocean in California. You gentlemen, as experts on bridges, tunnels and turnpikes would be interested in the fact that the historic Oregon and the Santa Fe trails meet at Fort Leavenworth. As American citizens, I am sure you are interested in the fact that today the college is a focal point where ideas and concepts on the optimum use of weapons

of the nuclear, missile, rockspeed age, meet, are evaluated, coordinated, and built into forward-looking, viable military doctrine which will control tactical operations of our ground forces in the future.

Our educators, both civilian and military, are confronted with a monumental challenge. Education must be vital and aggressive in providing basic information, presented in such a way as to motivate the student toward meeting the challenge of change, while at the same time enlightening his mind and it must instill mental discipline. Unfortunately, as has been truly said, man obstinately resists change of any sort—particularly a change of his mental raiment—the trousers of convention, the vest of doctrine, the coat of dogma, and the all-enveloping mantle of tradition.

He uses his God-given power to reason, almost exclusively, to buttress the opinions, prejudices, and minor faiths he has unthinkingly absorbed from his environment. This he incorrectly calls thinking. The right name is rationalizing. Specifically, the challenge to the military educator is to change the mental approach and thought processes of our officer corps to keep it not only abreast but ahead of current developments. This requires mental mobility of the highest order. Down through the ages, men have hidden their failure to think objectively or creatively under the cloak of convention, conservatism, and conformity. Too often they were merely rationalizing their own mental laziness. Even today, this mental block tends to prevent a breakthrough in the art of war, commensurate with the astounding technological revolution now in progress. This self-imposed obstacle must be overcome by a comparable breakthrough in the art of thinking. Leavenworth has always been a military idea factory and with our reorganization, reorientation, and rewrite of the entire curriculum some 3 years ago, it has been brought currently abreast of new ideas and concepts. Even more important, it now has the growth potential for continued improvement which is so necessary in our fast-moving age. Yes, Leavenworth today is a far cry from the days when the padding sounds of Indian moccasins, the creak of Conestoga wagons moving west, the shout of the wagonmaster, and the thundering charge of the U.S. Cavalry, the finest in the world, echoed through this hard-bitten, challenging countryside. The USACGSC is dedicated to the service of our Army and of our country. It is dedicated to a firm belief in our way of life, a way of life founded on the simple truths our Savior taught and for which we must be willing to serve and sacrifice, no matter what the cost.

Whether we like it or not, our country has become the leader of the free peoples of the world and the hope of those who wish to be free. This imposes the requirement for a grave sense of public responsibility as citizens and a crystal-clear understanding of the seriousness and complexity of the situation confronting us. As a nation, we must have the courage, born of knowledge, to face the facts—what ought and ought not to be feared—for knowledge is power. This special kind of knowledge comes only through education. Therefore, the general public must be made fully aware of the complex and continuing nature of the threat which is not merely military in character but moral, economic, and psychological as well. It is my personal opinion that an enlightened public opinion is essental to understand, resist, and defeat Soviet cold war talk tactics. We must understand, that to the Soviets, the conference table has become an extension of the battlefield, with propaganda and concessions as the objectives.

Also, we must understand that although technology has but recently placed the military might of the Soviets on our borders, their ideological weapons systems—including propaganda, historical distortion, politically inspired cultural programs, missile blackmail, political subversion, state-controlled education, and even religion—have actually been firing from our very doorsteps for some years. We must not become paralyzed or rendered impotent by their ideological fallout. For this is the real stuff of which the Soviet nonmilitary cold war weapon systems are fashioned and which we must counter if our freedom is to survive. As a soldier who has fought in two wars, I earnestly hope and pray that the conversations between our great President and Mr. K will result in a meaningful lessening of tension throughout the world and that the cold war will give way to peace with freedom and honor. I do not for an instant believe, however, that these conversations prior to his meetings, even as our President indicated, can be expected to cause Mr. K to forsake his way of life or his ideas. The Marxist-Leninist theory of social and economic reform is based on materialism, naked military force, and duplicity, plus a highly refined technique of social revolution, with world domination through world revolution as the objective. And let us remember that all of Mr. K's actions indicate that he has been, and is likely to remain a dedicated exponent of Marx and Lenin.

The basic difference between communism and democracy can be summarized in terms of three rules. The first of these is the Golden Rule, "Do unto others as you would have others do unto you." The Golden Rule is magnificent—where peoples have roughly the same degree of culture, the same religion, the same values. To illustrate, one day a missionary received a gift of 13 beautiful maidens from an African chieftain he had recently converted to Christianity. He was horrified. The chieftain could not understand why. He said, "You preach the Golden Rule—treat others as you would have others treat you. Someday I hope to visit you in America and this is exactly what I would expect from you. When I try to live up to your Golden Rule, you won't let me." This, of course, shows the distinction between the ethics and the religion of the missionary and the chieftain. Neither could put himself in the other's place without giving up something sacred to him. So we see the Golden Rule applies only to golden-hearted people. So, let's consider another rule—don't do to others what you wouldn't have them do to you. This is the silver rule, formulated long ago by Plato and Confucius. Being negative, it is much easier to apply because although you may not owe people a positive duty, you do owe them the negative duty—letting them alone.

Now, because all people in the world are not either golden or silver hearted, we must have another and final rule. Any free country living in our nuclear world without some equivalent of this rule is inviting disaster, not only to his form of government, but to his whole way of life—including Christianity and the Golden Rule. This rule I will formulate very simply. We may call it the iron rule—and this is where your Army serves our country 24 hours of every day—this rule is: don't let others do to you what you wouldn't do to them. I give you this analogy as food for thought.

Traditionally, the USACGSC through both resident and nonresident instruction has nurtured and developed the talents of our military leaders and, impelled by continuing technological advance, has been the keystone in the development of doctrine, concepts, and organizations for use by the Army in the field during wartime. The coat of arms of the college is indicative of its martial character, distinguished particularly by the shield, the chevron, and the eagle. The three lamps of learning stand for the major components of the Army of the United States—the Regular Army, the National Guard, and the organized Reserves. This symbolizes the one army concept and recognizes that no victory in American history has ever been won by a solitary arm, service, or component of the Army. Victory in the field has always been the product of the combined efforts of Regulars, guardsmen, reservists, and Army civilians with all arms and services working together as a team within the tri-service defense team structure. Our motto is: "Prepare in peace for war."

The Leavenworth Lamp was presented to the college on May 7, 1956, by the Kansas City chapter, Military Order of World Wars, on the occasion of the 75th anniversary of the founding of the college. It symbolizes the traditional lamp of learning from which emerges a mailed fist representing the military nature of this knowledge. Clenched in the fist are a rifle and a sword connoting earlier days at the college, and a guided missile symbolizing the future. Basically, Leavenworth prepares select officers of all components of the Army for duty as commanders and general staff officers in its on-campus courses and furthers the preparedness of the Reserve components (National Guard and Reserve) by conducting off-campus courses of instruction through the medium of its extension course work and USAR schools located throughout the country. As the Army's senior tactical school and college of the combined arms and services, Fort Leavenworth is responsible that all of the various combat arms and the supporting services of the Army learn to fight together on the battlefield as a coordinated, cohesive combat team.

In accomplishing this, we must lead the way in a timely recognition and exploitation of new concepts and developments so as to produce new and sound combinations of ideas and weapons, together with organizations which will insure success on the modern battlefield. Only through the unstinting efforts of man's creative capabilities can the required quantum advance be achieved and the necessary continuing impetus be maintained. To accomplish this to the desired degree, we must teach our students how to think objectively and creatively, decide logically and operate effectively in applying all important principles rather than memorizing or learning by rote. In other words, we must teach our future commanders to be military problem solvers and decision makers who can evaluate all courses of action, arrive at a logical solution, communicate it by proper order and then supervise it through to a successful and victorious conclusion. In this respect, it should be remembered that the tactical concepts which carried Guderian's Panzers from the Rhine to Dunkirk were developed, not in the crucible of war, but in peacetime general staff councils and the classrooms of the Kriegs Academy at Potsdam. This transparency represents the overall Army educational system. From the time an officer is commissioned he moves through his normal troop and basic school assignments until, after 12 to 15 years' service, about 50 percent of the Army's officers are especially selected for attendance at the college. About 50 percent of the Leavenworth graduates are later selected to go on to the highest level of military schooling, the war colleges and the Armed Forces Staff College. In other words, at Leavenworth and beyond, military schooling becomes very selective.

The vast future battle area with its highly mobile, self-contained, hard-hitting battle groups capable of dispersion over great distances and then quickly concentrating for attack, habitually operates with the threat of nuclear weapons ever present. This will require a much more highly trained type of leader than ever before. As an example of the increase in responsibility as a result of technological advances, this represents the

area of responsibility of a World War II divisional commander. Now note the greatly increased area of responsibility of the present day division commander. The firepower in future wars available to a single division commander will be greater than that available to all division commanders during World War II and Korea. More important, the use of nuclear weapons with their terrific force, as well as other new types of weapons, has reduced the all-important reaction and decision time of the commander to an absolute minimum. Only the most highly dedicated, motivated and well-trained officer will be able to lead troops successfully on the battlefields of the future.

As today's composite soldier requires knowledge in almost every field of military endeavor, higher education becomes a must. The battlefield leadership of tomorrow's soldiers will also demand a thorough understanding of the complex nature of man himself. No military leader at any level can be expected to be successful in the absence of a working knowledge of the tools of his trade and an understanding which permits motivation, facilitates learning, and enhances performance. This chart shows the present organization of the college. I shall not go into detail, except to point out the horizontal and functional nature of the organization wherein a single department is responsible for an entire course of study for a particular military organization and level of command. The staff organization provides a principal assistant in each area of the college mission. Our Navy, Air Force, and Marine representatives, plus our liaison officers from England, France, and Canada, and our special representatives from the technical and administrative services, together make up a cohesive team capable of dealing with the various facets of today's fast-moving situation.

The next chart indicates the worldwide coverage of our curriculum. The red dots indicate geographical locations of one or more of our problem settings. By solving these problems, students become intimately familiar with the actual locales worldwide where they could some day be called upon to fight. You will note that the 1956–57 course concentrated 59 percent of all problem settings in Western Europe. The reduction to 11 percent shows the trend of our present-day global interest. It is also interesting to note the reduction in general war instruction from almost 100 percent in 1956–57 to 35 percent for the course now being presented, as well as the proportional increase in teaching officers to fight limited war, such as Korea and the situations short of actual war, such as Lebanon. This, of course, is to insure that our Army can handle the brush-fire type wars, which if unchecked could well result in total war.

The next chart represents the present school year at the college and shows the many different courses we teach. This block of courses will graduate about 4,2000 students this school year—students who range in rank from lieutenants to major generals in the Reserve component refresher courses and from colonels to lieutenant generals in our senior officer nuclear weapons employment course. Our courses run from 10 months for the regular course to 1 week for others. Our average student population runs around 1,220 for 9 months out of the year, and these officers represent the Army's best, the cream of the crop.

One of our most important missions at the college is our allied officer program. Over the years, 1,900 allied officers from 62 countries have attended the college. At present we have 111 allied students from 43 countries represented on this chart. It is significant to note that the allied students at the college this year represent countries with a collective population of over a billion and a half people—about half the population of the world. Over half of those now attending come from the so-called underdeveloped countries of the Middle East and Africa. Forty-six out of the 111 students come from countries which border on the Sino-Soviet dominated countries. I do not have to tell this group of the importance of our mission with respect to these officers, not only from the viewpoint of giving them sound military instruction, but also our far-reaching contributions to international good relations with allied countries of the free world.

So far I have talked about our resident program—students who were physically present at the college. This chart shows the extent of our nonresident—or off-campus—student representation. As I have said, we will instruct about 4,200 residents students this year. Our nonresident program, however, will reach over 15,000 students, most of them from the important reserve components of our Army. Please note the significant—100 percent—increase in our off-campus students from 1956 to the present. This is attributable to our curriculum modernization. The college takes great pride in its close and continuous association with the reserve forces and considers its nonresident courses fully as important as the student body physically present at the college.

CONCLUSION

The USACGSC feis that the greatest battle since the dawn of history, is for the mind, the heart, and the soul of man. The college is convinced that its military contribution must be toward a better way to use man—man who is the one constant in the equation of battlefield success. This, of course, requires the continuing development of the moral as well as the mental, physical, and psychological side of the student. Fort Leavenworth, therefore, develops the complete man. This is because we are firmly convinced that what the mind can conceive, he can accomplish. He must follow his ideas and his ideals as beacons into space—beyond the known confines of our galaxy to the unknown outer reaches of the universe itself—if he is to fulfill his destiny and exploit fully his God-given power of thought.

Those of us who are privileged, as members of the staff and faculty of the U.S. Army Command and General Staff College, to be entrusted with the awesome responsibility of molding the minds of our future leaders in the direction of progress feel not only a heavy sense of responsibility, but a terrible sense of urgency. This is because our survival as a great nation depends not only on the quality of our ideas in competition with those of the Soviets but upon their timeliness and our ability to convince the world of the justice and validity of these ideas. What is needed in this world, conditioned by tensions and opposing ideologies—even more than land, sea, air, or even industrial power—is brain power. Brain power coupled with the will and determination to work and sacrifice for a national purpose in which we wholly believe and behind which we will wholeheartedly unite. The Army has its purpose, continuous readiness for sustained combat. Readiness for the nuclear or nonnuclear battlefields of the future or the arena of unconventional warfare. It is our sacred trust, our proud duty as soldiers that the college—by the worth of its instruction and example—continue to furnish top battlefield leadership for our country. And now in closing—I like to think that as the many windows of Bell Hall, our new academic building, reflect the dying rays of a setting sun, they call to mind the old ode to a soldier—"For gold the merchant plows the main, the farmer plows the manor, but the soldier's gold is glory and the soldier's gain, his honor." If, God forbid, we must fight again, both sides according to their own convictions will have won glory and both sides will have defended their honor but only one, the most highly dedicated, the most highly motivated and the best led, will have won victory—this is the mission of the USACGSC. Thank you.

OUR HERITAGE OF FREEDOM

(Remarks by Maj. Gen. Lionel C. McGarr, commandant, USACGSC, to the Rotary Club, Leavenworth, Kans., November 11, 1959)

It certainly is a privilege this afternoon to have the opportunity of addressing such a group of public-minded citizens as the members of the Leavenworth Rotary Club, who are dedicated to the improvement and progress of our community and our country. I wish to thank Vic Shalkoski for making it possible for me to speak to you on Veterans Day. I feel this is a day when we should all rededicate ourselves to the spirit of service and sacrifice to our country, and to pause for a moment in the hectic business of enjoying our freedom to pay homage to those who made this heritage of freedom possible. I speak of those men of the Armed Forces who in their hour of decision, in past wars, chose the harder right instead of the easier wrong and kept their honor and that of their country untarnished and unsullied, thus setting an example which those who lived strove humbly to emulate—I speak of those men whose selfless sacrifice stiffened our resolve and strengthened our courage in those dark days—I speak of the men who made the victory of our way of life possible—the men who made the supreme sacrifice. To those men—husbands, sons, brothers—who did not come back, I dedicate these few poor words here today.

The memory of their sacrifices will remain ever green in the hearts of many but the adulation heaped upon the warrior soon fades when the war is won. Those of us who lived, soon learned to accept the fact that a grateful country can give little in the way of concrete reward for their sacrifices. But this was ever the lot of the soldier and soldiers down through the ages have accepted it. Their reward was knowing deep down inside that they had done a good job. But we would be remiss in our duty to our country and to ourselves if we did not continue to fight for a better world in which to live, for a greater understanding among men. For this reason I consider it an honor and a sacred duty to speak of these men to you gentleman here today.

In order to place the soldier's sacrifice in proper perspective, I feel it well that we consider the complex, continuing, and serious nature of the threat which faces our Nation as a leader of the free peoples of the world today, and by facing up to our responsibilities, to ensure in some small way that these men who did not come back, shall not have died in vain.

In this respect we might well review events leading up to this, the 15th year of what I shall call World War III—a war which, we could logically say, began with the Communist ideological invasion of Greece in 1944. At that time international atheistic communism owned 170 million persons, body and soul. Today this same godless ism owns and controls 970 million people—eight-tenths of a billion more. Fifteen years ago, this foreign directed ism controlled 8 million square miles of the earth's surface; today it controls 16 million square miles of the globe—an increase of 100 percent. It is my personal opinion that our people must have a crystal-clear understanding of the act that this materialistic ideology, offered for sale by international communism in the economic and diplomatic marked places of the world, is a major instrument of overall Soviet power. Historically, the spread of this ideology has been accomplished primarily through Soviet-Satellite military threat, subversion and diplomatic action—not because of its worth or its ability to come to power through free

elections. Therefore I feel it should be evident to all that this ideology of strife and duplicity is the advance guard of Communist military power.

The strength of communism is not in its preponderant numbers, for numerically it is weak, but in its ability to penetrate and exploit non-Communist organizations and peoples who then, knowingly or unwittingly, support the Soviet World War III—international communism had long used every possible media of communication to precondition the minds of its intended victims with a guilt complex—a complex against resisting the insidious threat of this Communist ideology. At the same time, it has worked to reinforce this guilt complex with a "fear complex" based on the threat of the use of force. In this way it attempts to seize the psychological initiative and so implant an excessive defensive mentality in the minds of the peoples of the west. Continued well-directed propaganda in this area also skillfully attempts to fix in the minds of all concerned the so-called reasonableness of Communist claims. Meanwhile the fateful shadow of Emry Nagy with his Hungarian freedom fighters and the Deli Lama with his supporters remains, by implication, a thinly veiled nightmare threat—especially to smaller countries—against challenging Communist might. This psychological guilt-fear complex type action based on the threatened use of ruthless, naked force has all too often given communism the victory by default.

Because of the Soviet's adherence to their concept of "continuing revolution" with its strategy of ambiguity, the cold war, which they decry, has continued unabated in all its ramifications, with no tangible or concrete evidence of a meaningful change in the foreseeable future with respect to freedom with honor for the peoples of the world. The Soviet current battle cry is "peace," but Tibet, the Formosa Straits, India, the Middle East, and now another round on Berlin show the continuing nature and globe-griding scope of Communist mechanician and design for eventual world domination through world revolution. Conditioned by our heritage of domestic and military success and our outmoded belief that peace is normal we have failed to fully recognize this Communist strategy of ambiguity—the use of alternating belligerance wtih peaceful coexistence and naked repression with subtle infiltration. We must not allow ourselves to be lulled into a false sense of security. Equally as important, we must realize that to the Soviets the conference table has become a major battlefield conditioned by Marx-Leninist ideological fallout with concessions and propaganda as the objective of Communist talk tactics and sweet reasonableness.

For the immediate future at least, it appears that the Communist have gained a secure strangle hold on both the political life and the military strength of their satellite nations. Although total dependability of these nations in time of war certainly must remain a principal Soviet concern, we must face up to and prepare for the total context of the situation by considering that the Soviets will, at least initially, be capable of capitalizing on and exploiting the full military, econmic, and political potential of these peoples. Our own people must have the special knowledge born of a complete understanding of the nature of this deadly threat to ensure a national course of action based on firmness of purpose appropriately combined with flexibility of method. Our overall purpose as leaders of the free world must be a conspicuous preparedness and readiness, to insure our capability of resisting any necessity to secure a temporary peace by surrender of our basic principles and our vital interests. Linked as we are in no less than 8 formal alliances with our free world allies, composed of 42 different nations, we are committed to assist them politically and ideologically and we could almost without notice be committed militarily. As you know, one of a number of the serious threats to the peace of the world is again centered in Berlin where our country has undertaken an unqualified commitment to resist new aggression.

Naturally all segments of our country, especially the military and those of you who have served in wartime, hope and pray that world tensions can be lessened by current conferences and negotiations. I am sure we all agree with our President that, "Strength can cooperate; weakness can only beg." This means that to ensure peace with freedom and honor, we must have in being sufficient visible balanced strength to impress the Soviets with the fact that an attack would not be a profitable venture. Thus it is apparent that the military man in the application of his art must, more than ever before, understand and be guided by the global, political and military implications as they impact upon the strategic and tactical complexion of the wars he must fight in the future.

I feel that it is most important today, of all days, to relate the political, military, and ideological impact of the struggle to the one decisive factor in warfare—man—man on the ground, in the air, and on the sea with his courage and his fears, with his sacrifices and his unquenchable will and determination to carry the fight to the enemy against insurmontable odds in accomplishing his mission. This is the spirit, the very fighting heart of the Army, resolute and determined, driving forward to victory in the mud, and the blood, and the slime to exploit the decisive attack and dominate the battlefield. Man, driving forward with or without the help of his supporting arms and sister services to carve his initials on the chest of the enemy—asking no quarter and giving none. Man, tried, tested, and refined on the training fields, in our schools, and finally in the cruciable of war itself. This is the fighting man to whom we must look for ultimate victory. I know you all realize that only a soldier who has faced death on the battlefield can ever fully appreciate that the so-called path of glory trod by the fighting man must, of necessity, be a hard, grueling, uphill grind against terrific odds with death stalking him at every turn.

After the surrender of the German forces in Italy at the end of World War II, General Von Kesselring made the following interesting statement: "All armies have their epic of glory. The British had their Dunkirk. The French had their Verdun. The only epic of glory the American army had in this war was Anzio." I would like to tell you the story of a regiment which fought through the "hell that was Anzio" on the Anzio beachhead in Italy. As a part of the small beachhead force, isolated far behind the enemy lines, this regiment carried the initial corps main effort, attacking over a frontage two times the normal width on the morning of the breakout. The men of the regiment knew the strength of the triple "Iron Ring of Cisterna" comprising the German defenses in front of them. They had fought the vaunted German "superman" to a standstill for 5 hellish months, since the initial landing. Their casualties had been heavy and they knew that even heavier casualties would result from their attack, driving up off the low beach area with the sea at their backs against the well-fortified mountain heights to the front. Heights which had afforded the enemy observed day time artillery fire on anything that moved within the beachhead.

They went forward that gray dawn through terrific artillery fire, disregarding the cost. They went forward under cover of their smoke generators. They went forward that gray morning—singing—and they cut the road to Rome. Their casualties for the first 24 hours were 500 killed and wounded.

Six days and 1,000 casualties after H-hour, they led the victorious corps into Rome, as the first regimental combat team to reach the banks of the Tiber. One-third of the regiment were casualties, but there was not one of that doubtful category, missing in action. These soldiers were either wounded or they were dead, but wherever they were, wherever they fell, they knew they were victorious. Report after report came forward to the regimental commander in the attack that his men were going a.w.o.l.—a.w.o.l. from aid stations and hospitals. This was true—these men were going absent without leave, but they were going back to their regiment in the attack.

That regiment had been in action for 2 long years prior to the fall of Rome which, as you know, took place the day after the supreme commander launched the cross-channel invasion of France which, according to the historians, started the so-called big show. The regiment was shot full of replacements and its teamwork was weakened by losses of key personnel but it was held together by esprit, discipline and leadership—an unbeatable triumvirate.

I am sure the commander was half-humbled—half-proud—as he drove forward with his attack. Humbled because he knew the terrible price his regiment paid for victory. Proud because in 31 months of almost continuous combat against near impossible odds, his regiment never once had failed to take an assigned objective. I am sure if he could live through countless battles yet to come, if he should live to be a thousand years old, and grow to be 10 feet tall, he could never reach the height of achievement and glory which his regiment made possible for him that day. For you see, gentlemen, I had the honor to be its commander. In tribute I can only say, my regiment was superb in attack and unbeatable in defense—retreat. only, it never learned, nor ever needed.

Many other battles in World Wars I, II, and in Korea also showed the fighting qualities of freemen fighting for their way of life.

Now let us take the epic of a small group, a platoon of Baker company which held one of those many small cone-shaped hills, vulnerable positions, forward of our main battle-lines, near Old Baldy in Korea in 1952. This was an understrength platoon of only 28 men led by a young lieutenant. The Communist attack came at dusk. As was customary, the attack was preceded by a vicious, smothering bombardment by heavy mortars, which left the bunkers a shambles and the trenches only knee-deep ditches. The platoon sergeant was killed in the initial attack. The lieutenant was wounded and his leg was crushed and caught tight in a destroyed bunker. However, he directed his men from this exposed position, and his platoon withstood and drove back three separate Communist attacks, one of which swept through his final protective wire and up over his position. All except seven of the men of that platoon were either killed or wounded. To their undying glory, they held their position and accounted for 180 dead Communists by the next morning. Gentlemen, these and many more were fighting men of my command. I am sure there were many of your acquaintances also. These were freemen fighting for their way of life. These were American soldiers at their best.

This type of fighting man does not just happen. He is trained, indoctrinated, and then led that way. Those of us in the Army educational system who are charged with the awesome responsibility of directing the minds of our young future leaders in the direction of progress are firmly convinced that our future battles must first be won

in advance in the minds of our leaders before they can be won on the battlefield—that men must first learn to think in new patterns before they can act in new patterns. However, even if every commander had a whole army of Univac-minded soldiers, armed with the most terrible weapons of destruction, equipped with a whole array of multicolored push-buttons and flashing neon lights, the thinking direction and the moral courage of the leader will still be an absolute must for victory.

The pious Greek, fearing that he would forget one of his many gods, added one last altar—the altar to the unknown God. So whenever we are inclined to think or speak of our great leaders such as Patton, MacArthur, Eisenhower, and the like, we should add one more altar, an altar to the unknown leader, the good platoon, squad, or fire group leader who, clinging to a stricken field by the fighting fury of his troops, has won when, according to the books, he should have lost. For he is the man who too often falls unknown, unsung, and alone, but who in the final analysis, along with the men he commands, is a vital catalyst of victory—the real leader who wins our wars.

We must insure that men such as these who have given us our priceless heritage of freedom and liberty must not have died in vain. To accomplish this, we must stimulate positive action at all levels of our national life, including the local level, to deter communism and to defend our type of democracy we must continue to fight for reality versus illusion. Communism has hurled the mortal challenge. Our response and the response of freemen throughout the world will determine whether or not freedom itself can survive. The negative approach of merely reacting defensively to each shift in Communist tactics is not sufficient. We must place greater emphasis on the positive role of our democratic way of life.

History shows that the losers in almost every battle actually lost the conflict before the fight began. The loser was defeated before hand by superior confidence on the part of the winner, and not by superior numbers of weapons. Most certainly American reality is morally superior to Communist illusion, not only because it is our way, but because it expresses the universal desires and ambitions of human beings everywhere.

A demonstrated faith in our heritage—our heritage of democracy—of Americanism is our greatest weapon in the vital struggle for the minds, the hearts, and the souls of men. Military might, morale, esprit, economic resources, while effective, cannot of themselves guarantee victory for either side. All the weapons of the military arsenals of the world would be inconclusive, if not reinforced by the citizen's will and determination to use them and, even more important, by his abiding awareness and confidence in the overwhelming superiority of our ism—Americanism—and by our way of life. We must have a national purpose in which we all believe. We must revitalize our awareness, as well as our will and determination to make our form of democracy a vital, living force of moral persuasion which will again actively capture the imagination and support of the entire world.

And now in closing, to me, as the dying rays of the setting sun light the tombs of our Unknown Soldiers in Arlington Cemetery, on hallowed ground overlooking our Nation's Capitol, they seem to call to mind that old ode to a soldier—"For gold the merchant plows the main, the farmer plows the manor, the soldier's gold is glory and the soldiers' gain is honor." If, God forbid, we must fight again, only the most highly dedicated, the most highly motivated, the best led and the soldier most genuinely convinced of the worth of his case will have won victory. Service and sacrifice to our ideals and to our country. This is our debt to the men we honor today—the men of our Armed Forces who did not come back—we must not, we cannot fail.

Loyalty Oath

SPEECH
OF
HON. PAUL C. JONES
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

(Mr. JONES of Missouri asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. JONES of Missouri. Mr. Speaker, during the past week I received a letter which I presume was mailed to every other Member of Congress soliciting support for legislation seeking repeal of that provision of the National Defense Education Act which requires a loyalty oath and an affidavit disclaiming which seeks the overthrow of the the U.S. Government by force or violence or by any illegal or unconstitutional methods.

At this time I want to go on record as being unequivocally opposed to the repeal of that portion of the act under which this Congress has authorized and appropriated money for the use of students.

As I wrote in reply to the letter I received:

Any American should welcome the opportunity to proclaim and/or reaffirm his loyalty to the Unitd States of America and I cannot help being suspicious of those who for any reason would attempt to avoid such expression.

Mr. Speaker, instead of attempting to find ways to discourage public expression of the support of our Government, I feel that we should encourage our young people particularly to have a deeper sense of loyalty, and a greater appreciation of the heritage which is theirs to nurture and preserve.

Each week at service club meetings and at thousands of other meetings and gatherings throughout the land, millions of Americans are proud to stand, facing the flag, and repeat together the pledge of allegiance to the flag. On such occasions we are reminded of the freedoms which we enjoy as Americans, and I believe all true Americans are inspired as they repeat:

I pledge allegiance to the flag of the United States of America and to the Republic for which it stands; one Nation, under God, indivisible, with liberty and justice for all.

And inclosing, Mr. Speaker, I ask you and other Americans, what possible objection can anyone who claims or professes to be a loyal American citizen, have to signing this oath which states:

I, ————, do solemnly swear (or affirm) that I will bear true faith and allegiance to the United States of America and will support and defend the Constitution and laws of the United States of America against all its enemies, foreign and domestic.

And what stigma can be attached to the affirmation contained in this affidavit:

I, ————, do solemnly swear (or affirm) that I do not believe in, and am not a member of and do not support any organization that believes in or teaches, the overthrow of the U.S. Government by force or violence or by any illegal or unconstitutional methods.

The Great American Deception

EXTENSION OF REMARKS
OF
HON. HOWARD W. ROBISON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. ROBISON. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include, at the request of the author, the following copyrighted article by Mr. Neil Hancock Burlingame, of Binghamton, N.Y.:

THE GREAT AMERICAN DECEPTION
(By Neil Hancock Burlingame)

We Americans accept without much question the ways and customs under which we live. Many of us seem unaware that our pattern of living stems largely from a continuing propaganda of business and government which stresses the role they claim in making life better for everybody.

For many years this parade of news stories, statistical reports, magazine articles, and public statements has emphasized great progress in bettering conditions for our low-income population. These morsels of information call attention to overall improvement of social and economic conditions, and often use statistics to show that the average dollar income of the lower classes is steadily on the upgrade.

To those brainwashed by this barrage of business and political bombast, it may come as something of a shock to learn that neither business nor government has been able to do anything during the past half century or more to improve the position of the Nation's low-income families. Business and political leaders may deny this, and keep right on with their attempts to deceive the American people.

Newspapers throughout the country recently published a report that the average American makes a salary of between $5,000 and $7,000 a year. Most Americans do not receive salaries, and the impression conveyed by this report about income is misleading and false. Two-thirds of our families have incomes less than the lower figure mentioned. One-half live on less than $4,000 a year. One-fourth receive less than $2,000. And over 6 million families try to exist on less than $1,000 a year. And that doesn't tell the complete story either, because millions live on almost no money income at all. About one-third of our population do not receive sufficient income to buy the necessities of life.

To better undertsand why the averages quoted from time to time regarding income are misleading, let's say that out of 100 families, 1 has an income of $100,000; 3 have $35,000; 7 $18,000; 12 $8,500; 18 $5,000, 25 have $3,000; and 34 $1,000. Actually, in this situation, analogous to the true national situation, over three-fourths of the families would receive less than the average. Two-thirds would receive about one-half of the average. During many years average incomes

have increased while incomes for the lower classes have decreased.

Through several national administrations during the first half of the century, there was much lip service about the plight of our low-income families. But in spite of social security and other so-called social advances, wage increases, and numerous accomplishments claimed by labor unions, progress in employee benefits, and the many measures to alleviate distress and help the aged, there has been comparatively no improvement for those who continue to be the underprivileged of the Nation. The "haves," as always, are intent upon gaining more and more for themselves, and have never appeared much concerned about the burdens of the "have-nots."

While campaigning in 1928—over 30 years ago—Herbert Hoover said "We shall soon be within sight of the day when poverty will be banished from the Nation." In 1928 the lowest one-third of our population received a larger proportion of the national income than they do today. Nothing that the Hoover administration accomplished dispelled the shadow of poverty hanging over the heads of a third of our American families. Mr. Hoover was not the first to call attention to the situation facing our country's low-income population, nor the last to fail in efforts to get them a bigger share of the national income.

During his second inaugural address, January 20, 1937, Franklin D. Roosevelt spoke as follows:

"In this Nation I see tens of millions of its citizens—a substantial part of its whole population—who at this very moment are denied the greater part of what the very lowest standards of today call the necessities of life.

"I see one-third of a nation ill housed, ill clad, ill nourished.

"It is not in despair that I paint you this picture. I paint it for you in hope—because the Nation, seeing and understanding the injustice of it, proposes to paint it out."

But even for our four-term President, the Nation's paintbrush was pitifully inadequate. Today, a quarter of a century since he became President, the lowest one-third of our population receives approximately the same proportion of the national income it received in 1937 when Mr. Roosevelt was crusading so loudly for social justice. The only ones who have gained in the long years since are those who already had more than their fair share of the Nation's bounty.

Yes, our public officials and big businessmen, even our labor leaders, parade the statistical averages on income, wage levels, plane of living, and other aspects of the economy, in a never-ending attempt to prove how greatly conditions are improving for the low-income families. But big business continues to grow bigger, the labor leaders more powerful, and the politicians more secure, while assuming credit for social and economic gains which do not exist.

Much of the information passed out to the public regarding incomes is given in dollar comparisons. The difficulty of securing an accurate picture of the dollar-income situation, and the ease with which income statistics can be garbled and misinterpreted, is indicated in this paragraph from the report of the Joint Committee of the Economic Report, 84th Congress:

"Although the number of families with incomes under $2,000 dropped by more than 1 million between 1948 and 1954, it must be remembered that $2,000 could purchase less in 1954 than 1948 because of the average increase of 12 percent in consumers' prices. In terms of the purchasing power of money income, therefore, families with current incomes under $2,000 were worse off in 1954 than in 1948."

Then the committee made the significant observation that measured in constant dollars, the greatest gains in the income distribution of families occurred at the higher levels of income. And this shift of wealth to the higher classes, not the lower, has been going on since long before President Roosevelt decried the plight of the "forgotten man."

Certainly, the true situation is not generally comprehended. Even the congressional committees, research organizations, economic councils, and other experts in the realm of economics, many keyed to telling Government and business what they want to hear, are bound by outmoded research and investigative concepts, and often do only a partial job of analyzing information, or miss the meaning of the facts entirely.

The widely publicized Rockefeller Report on the U.S. Economy has this to say about the low-income families of the Nation:

"The economic status of many low-income families can be raised through programs focused specially on their individual problems."

What programs? What individual problems? For two decades the Federal Government supposedly has been furnishing stepped-up leadership in an attack on poverty. How much will it cost, and how much longer will it take along the lines we have been moving, to make even a dent in the overall problem? The truth is, of course, that billions can be spent as in the past in misconceived programs which only help the well-to-do become richer, and that generations of starving Americans will come and go before that day gets any closer. It would seem that the businessmen and politicians simply cannot, or do not wish to devise a program which will change the balance between our different income groups and improve the lot of the low-income population.

Let us take a look at the best available information concerning family income over the past 50 years:

1. In 1910 the lowest tenth of our families were receiving 3.4 percent of the national income. Today they are receiving only 1.0 percent. For a period of 20 years, since 5 years before World War II, this proportion of the national income received by our poorest families has remained at precisely the same level. The dollar averages issued by corporation executives, and the wishful thinking of Government officials, does not change the fundamental truth that our lowest income families have proportionately less to live on today than they had 50 years ago.

2. In 1910 the lowest one-third of the Nation's families received 15.8 percent of the national income. Today they are receiving only 10 percent. Their income has remained at exactly the same level during the quarter of a century since Franklin D. Roosevelt so forcefully directed attention to their plight.

3. In 1910 the lower middle 30 percent of the families of the Nation received 21 percent of the national income. Today they receive 23 percent, an improvement since World War II.

4. In 1910 the upper middle 30 percent of the Nation's families received 31.3 percent of the national incomes. Today, after 30 years of great social progress, these families in the well-to-do class have reached an all-time peak of over 40 percent of the national income.

5. In 1910 the top wealthy one-tenth of our families received 33.9 percent of the national income. Today, these filthy rich still receive nearly 30 percent. They reached their highest point in 1929 before the stock crash, and recent studies indicate a trend that may swing them back to new heights of affluence.

One thing should be clear. The shift in wealth, which our business and political friends would have us believe is going in the direction of the low-income families, has in reality traveled upward from the poor, and downward from the millionaires, into the pockets of the upper middle well-to-do. This group has gained more than all others combined.

The statistics used in this article have been secured from the only acknowledged authority on personal and family income in the United States, the U.S. Department of Commerce, which takes its information from the census and from special surveys and studies conducted for that purpose. There are flaws of fact and reason in its findings, just as there may be in this article. But these are insignificant against the bold, bare truth that poverty is as prevalent as ever in this country, and that measures of business and Government to alleviate the situation have been remarkably ineffective. Anything which businessmen and politicians may say to the contrary will be sheer quibbling. Whether willfully or through ignorance, they have been deceiving the American public for the greater part of a century, and there is every reason to believe they will continue to do so for years to come. Isn't it time that new light and inspiration brought emancipation of millions of Americans now in economic bondage?

"Today in Congress"

EXTENSION OF REMARKS

OF

HON. RICHARD E. LANKFORD

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, January 11, 1960

Mr. LANKFORD. Mr. Speaker, it is generally agreed that this 1960 congressional session will be an unusually busy one for all of us. This compounds our problem of keeping abreast of the fast-breaking events here on Capitol Hill. I am delighted, therefore, that the radio program, "Today in Congress," which was a considerable help to me in keeping informed on congressional developments during past sessions, is back on the air for this session. Sponsored as it was in 1958 and 1959 by the Independent Airlines Association, this program is conducted by Joseph McCaffrey and is heard each night, Monday through Friday, on Washington radio station WMAL at 6:45 p.m. Mr. McCaffrey, who is in his 13th year covering Congress for radio and television, brings us a comprehensive summary of the day's activities on the floor, in committees, and elsewhere here on the Hill, and gives us the schedule for the following day's session. The program represents a unique and valuable service.

"Today in Congress" returned to the air Monday night, January 4. On the opening program, Mr. Clayton L. Burwell, President of Independent Airlines Association, appeared, and under unanimous consent of my colleagues, I include Mr. Burwell's remarks in the Appendix of the RECORD.

The remarks referred to follow:

REMARKS OF CLAYTON L. BURWELL, PRESIDENT, INDEPENDENT AIRLINES ASSOCIATION

Good evening. Independent Airlines Association is pleased to bring you once again during the 1960 congressional session, Joseph McCaffrey and his nightly report on the day's activities on Capitol Hill.

In presenting this program it is our aim to provide a ready source of information on

what took place in Congress each day not only for the Members of Congress, those who work in and around the Capitol and those in Federal departments, but for all citizens who are interested in our Government.

The U.S. Congress is the world's greatest legislative body. Its innate sense of fairness, its constant striving to implement the voice of the people, make Congress a direct reflection of the hopes, ideals and aspirations of freemen. All Americans should be proud of our Congress.

On the eve of the opening of the 2d session of the 86th Congress, the Independent Airlines Association extends a cordial "welcome back" to our Congressmen and Senators, and wishes them Godspeed in their deliberations during this 1960 session.

Poems by Mrs. Mattie M. Kelly

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. SIKES. Mr. Speaker, I submit for reprinting in the CONGRESSIONAL RECORD two poems written by Mrs. Mattie M. Kelly, the wife of C. L. Kelly, prominent Florida businessman. They live in Destin on Florida's beautiful gulf coast. Mrs. Kelly is a housewife who writes only as a hobby, and she has shown unusual ability in her poetry. These poems I consider to be outstanding examples of her work. Because of this, I want to share them with my colleagues and with others who will read the RECORD.

The poems follow:

PRAYER ROOM—U.S. CAPITOL

(By Mattie M. Kelly)

(To the Honorable ROBERT L. F. SIKES, U.S. Congressman, Third District, Florida, upon the occasion and celebration of 25 years of public service, this poem is thoughtfully and respectfully dedicated.)

This is a place apart,
A quiet place,
A holy place;
An altar eternally holy,
Mark of a covenant,
A stepping stone to the presence of God.
The crossroad of the world,
And of the human heart;
For praises and thanksgiving, and
Humility (every knee shall bow).
A holier place than the common haunts
Of men, where clanging horns and
Penny-play
Shape human souls
Into a paltry shell.
The Nation's gear
Is apparitioned and appareled here.
Here, organized and synthesized
The government of man—
The beginning and the end
Of law;
The shape of things that are,
And things to come,
The shapelessness of minds,
The home,
The farmer's boy across the yellow fields,
The charcoal mine,
And industry,
The skies, the sea, the cosmic floor;
Time and man's face, their feud and fire,
And famine's ire,
Stubbornly yield
To seek this open door.
This is the place
Where nations gather—
Every nation under heaven—
Gather freely,
From want and ill and fear.
Here,
Each in his time and place
Shall gather in to pray;
And cloven tongues among the nations
Shall speak one voice:
The voice of peace.
No flag of creed
Prescribes the voices, unison,
Jehovah, Allah, all the same.
One search, one need,
One great Spirit
One great creed
One great name
One great God.

WHITE SATIN

April rose
Reaching to thorned green heights,
Holding aloft
In spring-pinked domes
Unfolding buds
Of white satin.
Sepals, waxen and rounded,
Cupped like avid thrusts of a bride's breasts—
Untouched and virginal—
Under white satin.
Ripening chill and the warm sun's flights
The freshness of April rain
Quicksilver pools
On white satin.
You and the year
And the yearning heart
Go forever together—
You and the troth
And the glory
Of white satin.

M.M.K.

APRIL/DECEMBER 1959.

A Labor Union That Uses Imagination

EXTENSION OF REMARKS
OF
HON. WILLIAM H. BATES
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 12, 1960

Mr. BATES. Mr. Speaker, the town of Amesbury, Mass., which I have the privilege to represent in Congress, continues to be the scene of something new, daring, and stimulating in the labor-management field.

The spotlight is on the Merrimac Hat Co., which closed its doors in 1958 after over a century of operation. When no buyer could be found the Hatters Union made a proposal, took over operations, and last year declared a quarterly dividend of 50 cents a share. It was front-page news all over the Nation because it marked a new chapter in business operation.

The union was the principal owner, workers still worked and management still managed, all the result of an enlightened appraisal of the critical situation in 1958, and a remarkable cooperative spirit in which the union, individual workers, and business leaders and management worked closely together toward one goal.

Pursuant to permission granted, I insert herewith in the RECORD an article by Irwin Ross in the November issue of the Reader's Digest:

A LABOR UNION THAT USES IMAGINATION

When the board of directors of the Merrimac Hat Co., Inc., met last July and declared a quarterly dividend of 50 cents a share, it was considered front-page news by the New York Times. Commenting earlier on this company, the Times had said "Karl Marx must be turning in his grave." The reason: Merrimac's principal owner is a labor union. And thereby hangs a tale.

The Merrimac firm, the country's largest manufacturer of women's fur felt hat bodies, has been in existence in Amesbury, Mass., for over a century. In the first 5 months of 1958, however, it lost $150,000, and in November it closed its door. For Merrimac's 325 workers, many of whom had spent a lifetime in the trade and had no other skills, this was calamitous.

When no purchaser could be found immediately, Alex Rose, president of the United Hatters, Cap and Millinery Workers International Union, made a startling proposal: that his union buy the factory. Merrimac was no economic weakling; its 1958 losses were largely due to temporary factors. Why shouldn't the union risk a novel experiment in defense of the interests of its members? As Rose said, "A union can't simply live by the old formulas."

A new corporation was set up: The union bought $300,000 worth of stock; another $100,000 was taken by two business firms which deal with Merrimac; $70,000 was subscribed by Merrimac employees (99 percent of them invested) and other Amesburyites.

The union, occupying six of the nine places on the new board of directors, retained Merrimac's old management, headed by President Hans Rie, but reduced the size of the executive and administrative staff to cut costs. Before the plant reopened last February 2, the union assured competitors that the firm would get no special advantages in wages or working conditions. Normal collective bargaining prevails, and Merrimac has to meet industry-wide standards. The workers still work; management still manages.

Business has been excellent. From February through June, Merrimac made a profit of nearly $70,000. To diversify its markets, the company began to make a large quantity of men's as well as women's hat bodies. Renewed popularity of velour hats also boosted sales. Net result: the workers' jobs are safe, and they can also anticipate a good return on their investment.

The United Hatters Union has a mere 38,000 members, but it makes up in daring and imagination what it lacks in numbers. What really distinguishes this union, however, is its broad-angle vision of its responsibilities. "Our workers can prosper only if the industry prospers," says Rose. "Any industry problem is our problem."

Rose, a tall, soft-voiced man of 61, has been a union officer since 1924, president of United Hatters since 1950. He came to New York City from Poland at the age of 15, worked in a millinery factory by day, studied by night. The Merrimac venture is several worlds removed from the rough days through which Rose and his union struggled in the late twenties and early thirties.

Beginning in 1928, the millinery branch of the union had to fight, simultaneously, Communist efforts to take over the leadership and hoodlums hired by employers to keep the union out of their shops. For 4 years guerrilla warfare was waged in New York's millinery factories, with strikes, sluggings, bloody street skirmishes. Rose himself, then secretary-treasurer of local 24 (operators and cutters), was beaten up in the lobby of his New York apartment house by two burly underworld characters. But by 1932 the union had won out; the canker of communism had been removed, and 90 percent of the industry in New York had been union-

ized. By the early forties the United Hatters had consolidated its position throughout the country.

With power came responsibility—and the way the union has exercised its leadership has been the measure of its statesmanship. The union's record in New York, which manufactures the bulk of the Nation's millinery, typifies its approach. In collective-bargaining agreements, strikes and lockouts were outlawed; unresolved disputes were to be submitted to an arbitrator. Nor did the union exert its vast economic pressure to bludgeon employers: in both 1942 and 1952, when it was negotiating new agreements, the union decided that the manufacturers could not afford higher wages and withdrew its original demands.

From 1932 to 1958, the New York industry did not suffer a general strike. Early in 1958, however, there was a 5-day nationwide walkout of 22,000 workers—in large part designed to raise standards in various millinery centers. It resulted in susbtantial increases in wages and fringe benefits.

A comparatively small number of large companies manufacture men's hats, but the Nation's caps and millinery are produced by hundreds of shops, some of which have as few as 10 workers (100 is a fair-sized work force). The union thus finds itself the strongest element in an atomized industry. Its sense of responsibility to the industry has grown in proportion. Over the last 5 years, for example, the union and its members have loaned $539,017 to employers in temporary difficulties.

In 1954 Charles Kartiganer, though one of the largest millinery manufacturers in the country, found himself short of operating capital and hard pressed by creditors. He had miscalculated in 1952 when he bought an old hat factory; it cost $250,000 more than he had anticipated to reequip. Then, in 1954, the millinery industry went into a slump. Kartiganer had to furlough all but a skeleton force of his employees; it looked as if nearly 1,000 would be permanently out of jobs. Whereupon the union resolved to perform a rescue operation.

At a meeting in Rose's office, Kartiganer's principal creditors agreed to a percentage settlement. The union then loaned Kartiganer $50,000 and worked out an arrangement whereby each worker would advance an additional sum. For workers who lacked cash, local banks put up loans, to be repaid from payroll deductions. In all, $180,000 was raised. Kartiganer, in turn, agreed to protect the jobs of his employees. Ultimately he paid off his creditors in full, repaid the union and his employees, disposed of back Federal taxes, and during the first 4 months of this year made a substantial profit.

There have been other rescue operations, not all of them as successful. But the union has had to write off only $95,000 in bad loans.

Another industry problem in which the union has lent aid is promotion. In recent years growing numbers of men and women have dispensed with headgear. The union has long lectured the industry that the long-term solution is to persuade Americans that, as in grandmother's day, it is downright unfashionable to appear without a hat. Finally during the 1954 contract negotiations in New York, the union waived its demand for an additional contribution by management to the workers' retirement fund in return for a 1-percent payroll tax which employers would contribute to a promotional fund. Similar agreements were made with millinery manufacturers throughout the country, and wholesalers, jobbers, and suppliers also pitched in.

The campaign was designed to get hats seen in all media—movies, television, magazines, newspapers. At one point, pictures of Mrs. Eisenhower and Mrs. Roosevelt attired in stylish bonnets appeared on the cover of a leading Sunday supplement. Elsa Maxwell and Marilyn Monroe were also photographed in hats.

Meanwhile, the union's absorption in industry problems has not meant any slackening of its militancy. In 1954 it conducted a bitter 10½-month strike against the Hat Corporation of America in Norwalk, Conn. The issue, as the union saw it, was whether a company had the right to "run away"—to transfer its operations to a low-wage, non-union area. In the end the company, having already set up plants in two other States, promised that Norwalk would remain its center of operations and agreed to provide severance pay for workers affected for any future shifts. Whatever the merits of the dispute, the union showed an iron will in the face of financial disaster; the strike of 1,500 workers cost $2 million.

A long period of harmonious relations followed the strike. The hat corporation was taken over by new owners who introduced many innovations in manufacturing methods. Says W. P. Morin, the company's director of labor relations: "The union helped us all along the line."

The Hatters have come a long way. Wages, once low, have steadily improved; today skilled operators, blockers, and cutters often make an annual wage of $4,500 to $7,000. Equally important, the average member of the union now enjoys medical insurance, plus retirement, and disability, maternity and, in many plans, death benefits. From 1946 through 1958, for example, the welfare fund of the New York industry received nearly $21 million in employer contributions and paid benefits of almost $12 million.

Alex Rose stated his union's remarkable position in the industry last July when he summed up the success of the Merrimac venture. "What the union has done," he said, "has been to provide continuity, capital, and confidence."

Chronicle: It Could Happen Only in America

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, January 11, 1960

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by the Honorable R. Dewey Stearns, mayor of the city of Saginaw, Mich., given at the Saginaw Club on January 1, 1960. It is indeed a pleasure and a privilege to call to the attention of this body Mayor Stearns' eloquent toast to the President of the United States:

[From the Saginaw (Mich.) News, Jan. 2, 1960]

CHRONICLE: IT COULD HAPPEN ONLY IN AMERICA—SAGINAW CLUB HEARS MAYOR'S TOAST TO PRESIDENT

(EDITOR'S NOTE.—Mayor R. Dewey Stearns, himself a member of the Saginaw Club, yesterday at the club gave its 48th annual toast to the President of the United States. It was notable for its eloquence and sincerity.)

(By R. Dewey Stearns, mayor of Saginaw)

Today, on this first day of a bright new year, we who have gathered here at the Saginaw Club with our sons and grandsons by our side, do so to perpetuate an old and cherished tradition as we join hands and hearts in this 48th annual toast to the President of the United States.

When I accepted the invitation to deliver this year's toast, I did so with great humility, as well as no little hesitancy, being fully cognizant of the importance of the occasion. I entertained serious misgivings at my ability to contribute something of lasting value to an annual tradition whose eloquence dates back to the year 1912. What could I offer, what could I add to the long line of distinguished tributes that had gone before? Was there yet something that might be said that would be of interest to this closely related group here today, these fathers, sons, and grandsons? Something to spark the curiosity of an effervescent youngster tugging at his grandfather's sleeve? Something to create a new vision for a clear-eyed young man seated next to his father? Was there yet something to be said that could stimulate the imagination of the fathers, something that could be accepted by the older generation, who justifiably weigh a man's words with the knowledge that comes from quiet maturity?

This, then, was the challenge. A New Year's toast to the President of the United States, a toast that would span the years of interest beginning with childhood, through young manhood, and on to the maturity of adulthood. It was then that I decided to turn to the story of America itself, and to the creation and growth of this office we honor today, as a source of both inspiration and information.

And, so, I set out to explore the highways of history, to examine at first hand the origin, or childhood, of the Presidency, to acquaint myself with its years of youthful adolescence, and, finally, to grasp from its present-day maturity an assurance for the future.

It is a chronicle of growth that could only happen in America.

The Office of the Presidency of the United States was conceived 173 years ago, in 1787, when a group of strong-willed, firmly seasoned patriots met in a dedicated Constitutional Convention in Philadelphia. It was here that they forged a singularly exceptional document that has served as the foundation stone on which has been built the greatest Nation in the world today. This original Constitution, with its seven articles and its preamble, set down for all to witness, and accept, the fundamental working machinery for the first wholly free nation the world has ever known.

The brevity of this Constitution, and its general statement of principles, have, by accident more than design, made possible the extension of meaning that has fostered our continuous and continuing growth. I am sure that few of the men involved in drafting the document had any concept of the power and importance that would come to the executive position they labored so long to create in article II of that Constitution. In just slightly more than 100 words, virtually unchanged today, our forefathers created a position of leadership that yet stands unchallenged as the most singly powerful executive position in the free world today.

With these few simple but direct words, expressed in article II of our Constitution, the Presidency of the United States was conceived:

"An executive shall be established separate from the legislature. The executive shall consist of one man, the President of the United States. The President shall have source of election outside the legislature. He shall have a fixed term of office. He shall be eligible for relection to an indefinite number of terms. He shall be granted his own powers by the Constitution, especially the power to veto acts of Congress. He shall not be encumbered with a council to which he would have to go for approval of his nomination or other acts. No person hold-

ing the office under the United States shall be a Member of either House during his continuance in office."

It is held by many historians that no single act or force had more to do with the shaping of the Presidency than did the universal assumption of the convention of 1787 that Gen. George Washington would be chosen as first to hold the office. As one convention delegate later wrote, "I do not believe the executive powers would have been as great had not so many of the members cast their eyes toward General Washington as President; they shaped their ideas of the powers to be given the President by their opinions of General Washington's virtue."

General Washington's "virtue" is ably represented in the great gifts he brought to the Presidency, and to the Republic which the office represented. Gifts of dignity, power, and constitutionalism.

With his inauguration in 1789, the Presidency was born, a young Nation taking the first tentative steps of childhood. And, not unlike children everywhere, those initial steps were closely confined by the rules set down defining their horizons. It was Washington's glory as President that he never broke faith with the solemn vision of the American mission as outlined by the 100 or so words of article II. His was a strict interpretation of those rules. General Washington not only fulfilled the hopes of the friends of the Constitution, but spiked the fears of its critics as well.

It has been said of Washington that he could have been a king, but instead chose to be something even more exalted, the first elected head of the first truly free Government anywhere in the world. It is a strange commentary that the man known as the "Father of his country" was also custodian of the Presidency of the United States during the childhood stages of this exalted office.

In the year 1860, just 100 years ago, Abraham Lincoln was nominated for the Presidency. Lincoln emerged on the national scene at a time when the Office of the Presidency was in a turmoil of hot political and constitutional controversy. Passions were running at a fever pitch. Factionalism held sway in the Nation with little, if any, apparent middle grounds. It was a period of dissension, distress, and dismay.

When Abraham Lincoln assumed the Presidency in 1861, he did so with virtually no preparation, no preconception of the power and authority his new position embodied. He held only that he had "sworn an oath registered in heaven" to defend the Constitution, and he so expressed himself in the words of his inaugural address.

It was in this message, wherein he promised his fellow citizens to save the Union without which, the Constitution would be nothing but a scrap of paper, that we see the Presidency emerging into the age of young manhood. In the closing lines of that first inaugural address, phrased in the clear and famous Lincoln eloquence, he not only outlined his policy toward the States in rebellion but offered a humble plea for conciliation as well, when he said:

"In your hands, my dissatisfied fellow countrymen, and not in mine, is the momentous issue of civil war. The Government will not assail you. You can have no conflict without being yourselves the aggressors. You have no oath registered in heaven to destroy the Government, while I have the most solemn one to preserve, protect, and defend it. I am loath to close. We are not enemies, but friends. We must not be enemies. Though passion may have strained the bonds of our affection, it must not break them. The mystic cord of memory, stretching from every battlefield and patriot's grave to every living heart and hearthstone all over this broad land will yet swell the chorus of the Union, when again touched, as surely they will be, by the better angels of our nature."

In contrast with the strict interpretation which Washington gave to the rules of the Presidency, President Lincoln had little concern for the form his actions might take, as long as the result merited the action. He meant only to act as commander of the Armed Forces, as executor of the laws, and as sole possessor of the shapeless grant of power outlined in those 100-and-some words of article II of the Constitution. And it is here again that we see the expressions of young manhood making themselves felt in the life history of the Presidency. Feeling the surge of power that comes with growth, and utilizing it in a manner that he felt was beneficial to the majority, Lincoln raised the powers of the still youthful Presidency to new unprecedented heights in his efforts to save the Union.

In the course of his famed 11-week dictatorship, during the initial days of the Civil War, President Lincoln interpreted those 100 words of article II as his authority to call out the militia, to clamp a blockade on the South, to enlarge the Regular Army and Navy beyond statutory limits, to advance public moneys to persons unauthorized to receive them, to pledge the credit of the United States for a sizable loan, to close the mails to treasonable correspondence, to authorize the arrest of potential traitors, and to suspend the writ of habeas corpus. Through the boldness of his untutored initiative, through an unprecedented plea of necessity, and through a unique interpretation of Executive power, Lincoln raised the Presidency of the United States to a position of constitutional and moral ascendancy that left no doubt where the burden of crisis Government would thereafter rest.

Just as George Washington fathered the childhood of the Presidency, Abraham Lincoln guarded it safely through its stormy adolescence into the strength of young manhood.

And thus, as the years have passed into history, the office of the President of the United States has continued to grow in stature, in importance, in power, and in worldwide influence.

Today, the Office of the Presidency carries a staggering burden of responsibility unequalled in its requirements. It is the burden of responsibility that comes with maturity. The responsibility that accepts an obligation of faith and trust in behalf of the free peoples of the world. The responsibility of preserving a strong and friendly symbol of freedom and salvation, of tangible hope, for the countless millions of the world's oppressed.

And what has happened to those 100 words of article 11, the words that shaped the childhood of the Presidency, the words that provided this office with growing room during its adolescence and young manhood? We need but to read between the lines to see how they have extended, and expanded, to foster this mushrooming growth.

Today the President is our Chief of State. He is the ceremonial head of our Government. He represents to us what the Queen does to the people of England.

The President is our Chief Executive. He is the one official commanded by the Constitution to take care that the laws are faithfully executed. The one official expected by each of us to secure for us all ethical, loyal, efficient, frugal, and responsible administration.

The President is our chief diplomat. He is, in the words of John Marshall, "the sole organ of the Nation in its external relations, and its sole representative with foreign nations."

The President is our Commander in Chief. In peace and war, he is the supreme head of the civil over the military authority.

The President is the leader of our legislation. He is, in every sense of the word, a "third house of Congress," one intimately associated with every stage in the legislative process.

The President is chief of his political party. Since the earliest days of American history, the President has served as the active leader of his own party and thus becomes the Nation's top political boss.

The President is the voice of the people. He is, in the words of Woodrow Wilson, "The spokesman for the real sentiment and purpose of this country."

The President is the protector of the peace. He is a one-man fighting force, ready to must up troops, food, money, loans, equipment, medical supplies, and moral support in the event of natural disaster or social disorder.

The President is our manager of prosperity. He is an economic overseer, expected by Congress and the people to act decisively to promote maximum employment, production, and purchasing power.

The President is the leader of a coalition of free nations. He is the permanent presiding officer of various committees of his peers, the leaders of nations united in the face of enemy pressures and threats.

And so, the office of the President has grown, forging upward and outward from its swaddling-clothes childhood, to its present-day position of worldwide eminence and authoritative maturity. The initial 100 words or so of article II still stand, changed only by an amendment limiting length of service, and yet the job they define, the principles they call for, have grown a thousandfold since the day of their writing.

In closing today, let us think for a moment of our present leader, President Dwight D. Eisenhower, and examine a bit more closely his contributions to the maturity that has come to this highest office in our land. A living symbol of freedom, the unchalleneged hope of a free world, President Eisenhower, with his deeply personal and sincere humanitarian philosophies, perhaps best expressed by his own "people-to-people" program of communications, is a firm believer in one of President Lincoln's strongest philosophies, "The best way to destroy your enemies is to make friends of them." As President Eisenhower carrier our message of human understanding throughout the world this past month, as he "destroyed our enemies by making friends of them," his mission recalled an interview he had granted some 15 years ago. He was General Eisenhower then, Supreme Commander of the Allied Forces in Europe, when he told reporters what he saw as a soldier's primary duty. (And by profession, President Eisenhower is a lifelong soldier, and we must so consider him now.) The primary duty of an Army, Navy, or Air Force, the general said, their chief responsibility is to stop wars. Armed forces have nothing to do with starting war. Kings, prime ministers, and presidents are the people who start wars, aided by the congresses or parliaments, which authorize a declaration of war desired by political leaders. The Armed Forces have but one duty, and one duty only, the general said, and that is to stop wars once they have been started by civilians. After a war is started, General Eisenhower told the reporters, the Armed Forces are called in and told:

"Look, it's up to you to stop this war we started, by victory, of course, if you can manage it."

Eisenhower, the soldier, the supreme commander, the college president, the diplomat, military chief of NATO, and President of the United States, is still, primarily, a soldier.

That philosophy which he recounted in the war, 15 years ago, is certainly still his philosophy today, a philosophy that provides us with the assurance that we can rely on this

great soldier-President to exercise every effort in stopping not only the cold war but the threat of hotter wars that might otherwise lie ahead.

And so, with the mantle of maturity of the Presidency as our shield, I know that all of us gathered here today agree there is no place under the sun we would rather live than the United States. We have seen it grow from infancy to a towering giant of strength. It is the land of the free, and it is all here, all about us, all ours. It is worth fighting for; it is worth living for, and it is worth our undying efforts to keep it great.

Gentlemen—fathers, sons, and grandsons—a toast to the President of the United States.

Cheating the Cities

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 7, 1960

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following editorial which appeared in the Architectural Forum of September 1959:

CHEATING THE CITIES

The cause of urban renewal is in deep trouble. It is not simply that the President vetoed one inadequate housing bill in favor of another still more inadequate, to balance a budget. Urban renewal can survive that. Far more serious is the import of the veto message, indicating that in the future the Federal Government should shift major responsibility in this area almost wholly to the States and municipalities, withdrawing wholly from public housing and other critical areas of human shelter. This would evade, as will be shown, the mounting Federal responsibility for the plight of cities through its own operations, notably such really massive Federal programs as highways and defense.

As if this were not trouble enough, urban renewal has erupted a messy situation of its own in the title I slum-clearance scandals of New York. These, thrown up on the national proscenium in big black headlines, are rarely distinguished as singular to one city and one man's rule, as shown elsewhere in this issue. And if a Congressional investigation of all title I gets under way in New York this month, as scheduled, the messy pot may be kept boiling for weeks to come. Granted that programs so closely linked to the public weal need constant scrutiny, it is still unfortunate that such fuel is being added to the fire breathing of those who oppose all public, planned slum clearance and urban renewal anyway.

The truly serious difficulty is that so many men of substance and good will, even as the President, seemingly have failed to think things through. Ignored is the enormous urban revolution going on chaotically around them, transcending all governmental boundaries; unapplied is all the sound fiscal sense these leaders bring to other enterprises, as in combating the obsolescence of industrial plant. Not all men of substance have failed to grasp this great challenge. Rising numbers of solid citizens, including business and corporation leaders, are actively engaged in urban problems, and have come to see from the grassroots the need for substantial Federal leadership and assistance. The veto message itself has been attacked as misleading by no less a conservative member of the President's own party than Senator HOMER E. CAPEHART, of Indiana. On the national and administration level, however, three great blind spots remain:

1. Federal policies and programs are creating unprecedented new problems for cities. Since World War II, the Federal Government from necessity has been putting huge sums into various programs, and taking other actions or nonactions that have had explosively damaging effects on cities.

One billion nine hundred million dollars a year in Federal housing insurance and home loans, on th average since the programs started, have been going to home builders. Around 90 percent of the total has gone to expedite the postwar explosion of suburban developments, discriminating against new housing in cities. While some redress is under way to encourage rental housing in cities, subject to heavy Federal taxes that home building escapes, it is too late to reverse the tide that has drained cities of the middle class and homeowners, leaving behind tidal flats in which blight, slums, and decaying downtowns are rankly growing.

One billion six hundred million dollars a year in Federal defense highway funds, on the average, have been apportioned since 1956 to States. The impact of this program on cities, though difficult to measure, is not difficult to see from coast to coast. Altogether, the people and property being displaced and demolished by this Federal program is estimated to be running about 90,000 family units a year, with little local and almost no Federal responsibility displayed for relocation, replacement, or planning.

Forty billion dollars a year in defense contracts have been going, on the average since 1950, into what amounts to reshaping the economy. The direct and indirect leverage on cities, little noted, is tremendous. Concentration of new industries, as on the west coast, has built up huge new population agglomerations; dispersal of other industries, as in the South, has created bulging new backwoods towns. Some cognizance is taken of this in a tiny emergency defense housing fund, but all the larger aspects are ignored.

When, therefore, the Federal Government attempts to shift responsibility for the plight of cities, it is being less than honest. Add to this a long record of inaction in promoting the modernizing of railroads and public transportation, and the Federal position becomes untenable.

2. Cities are in the midst of an urban population revolution of unprecedented proportions.

Below all this, pushing with inexorable force, is an urban population revolution which, beginning about World War II, is just now approaching full tide. This is the phenomenon known as "scatteration" or "the exploding metropolis," described by Coleman Woodbury, director of urban research at the University of Wisconsin, as "a new pattern of settlement."

The main characteristic of the new pattern is the centrifugal growth of metropolitan areas. The total national growth from 1950 to 1956 breaks down into 15.6 percent for center cities, 27.2 for suburbs, and 41.5 for fringe areas, with the latter whipping up a 55.8 percent rate of increase against only 4.7 percent for center cities. Professor Woodbury sees nothing here to indicate any diminishing of the outward flow. This urban population explosion, simply at its present rate of growth, will add residents by 1975 equal to the 1950 metropolitan area populations of New York—northeast New Jersey, Chicago, Los Angeles, Philadelphia, Detroit, Boston, San Francisco-Oakland, Pittsburgh, St. Louis, Cleveland, Washington, Baltimore, Minneapolis-St. Paul, Buffalo, plus 15 million persons more. Even if the rate dips or levels, it will still be something phenomenal.

Above all, it is this fragmentation bomb that both the President and Congress, as well as the public generally, fail to take into account.

3. The new 85 percent urban population gets only a fraction of the Federal money going to farms.

Such changes as the new pattern portends require capital investment, public and private, on a huge, unprecedented scale. States and cities have neither the tax base nor the power for leadership to hold up the public end. Yet the Federal projection for urban renewal funds is so small as to be bizarre. The whole current rumpus is over funds—now at a yearly rate of about $300 million—slightly larger than the price support program on potatoes or about one-eighteenth of the Department of Agriculture's budget. Comparison with agricultural supports is not irrelevant. As Thomas R. Reid, civic and governmental affairs manager of the Ford Motor Co., pointed out to the recent conference of mayors, there are now a million more slum dwellers than farm dwellers, yet Federal per capita expenditure on farm families is $3,000 yearly against only $84 per slum family.

Washington has signally failed to wake up to the fact that this is no longer an agricultural nation, but one composed 85 percent of urban dwellers. When the huge wasteful farm surplus program is added to other urban burdens, the cities are being cheated on the vastest scale in history.

With or without Federal funds, the forces of change are so powerful that urban creation and renewal will go on willy-nilly. The only issue issue is whether, with some foresight and planned investment, some order, reason, and beauty—which is to say architectural quality—can be brought to America's fast-changing scene. The hard fact is that despite Federal reluctance to support public works, its own actions in housing, highways, and defense have destroyed or made obsolete a large part of our cities, and its own monopoly of tax base has made it impossible for States and cities to do for themselves.

The Late Honorable Richard M. Simpson

SPEECH
OF
HON. HAROLD R. COLLIER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 7, 1960

Mr. COLLIER. Mr. Speaker, I was shocked to learn several weeks ago of the serious illness of my good friend and colleague, DICK SIMPSON. I hoped and prayed, as we all did, that he would survive the serious operation he had to undergo. Words cannot express how saddened I was to learn that the Lord, in His wisdom, had taken DICK from us.

My association with DICK SIMPSON was a brief one; I came to know him a few short years ago when I was elected to serve in this House. But, I soon learned that he was one of the truly dedicated members of our party. He was sincere in his convictions and he fought for those convictions when the occasion demanded a fight. He communicated this spirit to his colleagues and served his party, his constituency and his country with perseverance and distinction.

The loss of DICK SIMPSON will be felt by all of us who knew and worked with him.

He has left a vacancy in this House and in our hearts that will not be easily filled.

I extend my sincere sympathy to Mrs. Simpson and his family. May they take some solace in knowing that so many mourn in his passing with them.

Correspondence on U.S.-U.S.S.R. Cooperation in Outer Space Exploration

EXTENSION OF REMARKS
OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 7, 1960

Mr. ANFUSO. Mr. Speaker, under leave to extend my remarks, I wish to insert into the RECORD a series of letters and correspondence which I had in recent weeks. It deals with a most important subject, namely, cooperation between the United States and the U.S.S.R. in the peaceful exploration and uses of outer space.

As a member of the House Committee on Science and Astronautics and chairman of its Subcommittee on International Cooperation and Security, I am strongly of the opinion that such cooperation be established for the purpose of peaceful exploration of outer space. All of mankind stands to benefit immeasurably by international cooperation in this field, while the lack of such cooperation contains the seed of humanity's destruction at some future date.

The world today both fears and yet depends on the United States and the U.S.S.R. for guidance in the new space age. Both of these nations working separately would not only bankrupt each other, but may ultimately bring destruction upon themselves and the rest of mankind. Working together, in a spirit of cooperation, they can help bring about a better life on earth for all peoples. Together they can explore and exploit outer space for the benefit of all mankind, so that no one on earth need ever be in want.

Working in unison in this field, the United States and the U.S.S.R. can make a joint contribution to strengthen the permanent committee of the United Nations and eventually bring all nations into a world program of outer space research and ultimate expansion toward other planets of the universe, thus guaranteeing an abundant life for all peoples.

Mr. Speaker, briefly stated, joint U.S.-U.S.S.R. coperation in outer space exploration would accomplish the following:

First. It would accelerate progress in space exploration.

Second. It would save billions of dollars for both countries which could then be diverted to education and raising the standard of living of all peoples of the world, provided it is undertaken as a joint or multilateral operation.

Third. It would prevent waste and unnecessary duplication of effort.

Fourth. It would make possible an exchange program of scientists specializing in the field of outer space exploration.

Fifth. Better safety measures could be developed and applied.

Sixth. Joint outer space operations could be undertaken, as was done to some extent in the Antarctic during the International Geophysical Year projects. Among such joint operations could be the following: Sending a man or a team of men to make a landing on the Moon: research of cosmic rays; worldwide communications; weather control; exploration of other planets; safe travel through space and safe reentry into the Earth's atmosphere, and others.

In the meantime, our own research program in this field must continue so that we can catch up and surpass the achievements of the Russians, which would enable us to have a stronger position in our negotiations with them and in our efforts to obtain the kind of joint or multilateral cooperation which would provide and assure peace.

I urge our Government, through the Department of State and in cooperation with the National Aeronautics and Space Administration, to enter into immediate negotiations with the Russians on the peaceful exploration and uses of outer space.

Included in the correspondence which I am today inserting into the RECORD is a reply to me from the Charge d'Affaires of the U.S.S.R. Embassy in Washington, Mr. M. N. Smirnovsky, which seems to me to be a clear indication that the U.S.S.R. is ready for such negotiation. The letter specifically states:

> The Soviet Government regards favorably the idea of concluding a bilateral agreement on peaceful uses of outer space. If the Soviet Union receives definite proposals to start negotiations on this question, we will be prepared to express our attitude toward them. The Soviet Union is ready to cooperate not only on a multilateral basis, as in the U.N. Committee, but also on a bilateral basis, when such cooperation is based on mutually advantageous conditions.

Following is the text of the letters in the exchange of correspondence in the matter:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington D.C., December 15, 1959.

The PRESIDENT,
The White House,
Washington, D.C.

DEAR MR. PRESIDENT: First, I want to thank you for your recent reply to my letter of August 26, 1959, on international cooperation on the peaceful uses of outer space within the framework of the United Nations. I am glad to note that progress is being made in this direction.

I was also pleased to learn that on November 24, 1959, the United States and the Soviet Union officially entered into an agreement for a cooperative program of nuclear research. This step augurs well far the future of mankind, and both countries deserve to be commended for it.

As a member of the House of Representatives Committee on Science and Astronautics and chairman of its Subcommittee on International Cooperation and Security, it seems perfectly logical to me that these two nations should extend their cooperation into the field of outer space. Let us apply the same spirit of cooperation as exemplified in the agreement reached in nuclear research toward the attainment of a United States-Soviet Union agreement on the peaceful uses of outer space.

Under such an agreement, it is not too difficult to visualize the early exchange of scientists who are specializing in the exploration of outer space, as well as an exchange of research information in this field. Similarly, the two nations can jointly undertake specific research projects of various kinds, such as the launching of satellites to sample certain physical phenomena of the universe, the establishment of joint tracking stations to keep flight articles under continued observation, joint operations in regaining control of space capsules returning to earth and their safe reentry into the earth's atmosphere; later, when man is introduced into the space environment, there could be joint logistic support for control and recovery operations and similar other joint efforts.

Such an arrangement would be most advantageous to both countries. At the present time, each country is conducting a vast research program of its own, which is costly, time consuming, and a duplication of effort. Naturally, such duplication is a great waste of money, effort, and brains, much of which can be saved if the scientific plans and projects in outer space undertaken by the two countries can be fully coordinated. There is no doubt that progress in space exploration would be greatly accelerated through such international cooperation between the United States and the Soviet Union.

I should further like to propose that the information obtained by our two countries regarding outer space be made available to other interested nations as a mark of our peaceful intentions and our desire to make available to mankind whatever benefits may accrue from this cooperative program.

I earnestly urge you to give full consideration to these proposals and to request the responsible officials in both countries to undertake early negotiations toward the attainment of an agreement on the peaceful uses of outer space.

The same letter is being forwarded to Premier Nikita S. Khrushchev, of the U.S.S.R.

Respectfully yours,

VICTOR L. ANFUSO,
Member of Congress.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., December 15, 1959.

Premier NIKITA S. KHRUSHCHEV,
Chairman, U.S.S.R. Council of Ministers,
Moscow, U.S.S.R.

DEAR MR. PREMIER: First, I want to thank you for your recent reply to my letter of August 26, 1959, on international cooperation on the peaceful uses of outer space, within the framework of the United Nations. I am glad to note that progress is being made in this direction.

I was also pleased to learn that on November 24, 1959, the United States and the Soviet Union officially entered into an agreement for a cooperative program of nuclear research. This step augurs well for the future of mankind, and both countries deserve to be commended for it.

As a member of the House of Representatives Committee on Science and Astronautics and chairman of its Subcommittee on International Cooperation and Security, it seems perfectly logical to me that these two nations should extend their cooperation into the field of outer space. Let us apply the same spirit of cooperation as exemplified in the agreement reached in nuclear research toward the attainment of a United States-Soviet Union agreement on the peaceful uses of outer space.

Under such an agreement, it is not too difficult to visualize the early exchange of scientists who are specializing in the exploration of outer space, as well as an ex-

change of research information in this field. Similarly, the two nations can jointly undertake specific research projects of various kinds, such as the launching of satellites to sample certain physical phenomena of the universe, the establishment of joint tracking stations to keep flight articles under continued observation, joint operations in regaining control of space capsules returning to earth and their safe reentry into the earth's atmosphere, later when man is introduced into the space environment there could be joint logistic support for control and recovery operations, and similar other joint efforts.

Such an arrangement would be most advantageous to both countries. At the present time, each country is conducting a vast research program of its own, which is costly, time consuming, and a duplication of effort. Naturally, such duplication is a great waste of money, effort, and brains, much of which can be saved if the scientific plans and projects in outer space undertaken by the two countries can be fully coordinated. There is no doubt that progress in space exploration would be greatly accelerated through such international cooperation between the United States and the Soviet Union.

I should further like to propose that the information obtained by our two countries regarding outer space be made available to other interested nations, as a mark of our peaceful intentions and our desire to make available to mankind whatever benefits may accrue from this cooperative program.

I earnestly urge you to give full consideration to these proposals and to request the responsible officials in both countries to undertake early negotiations toward the attainment of an agreement on the peaceful uses of outer space.

The same letter is being forwarded to President Dwight D. Eisenhower of the United States.

Respectfully yours,

VICTOR L. ANFUSO,
Member of Congress.

DECEMBER 15, 1959.

Dr. T. KEITH GLENNAN,
Administrator, National Aeronautics and Space Administration, Washington, D.C.

DEAR KEITH: I not only approve, but will vigorously support, your request for more funds to increase our efforts in the space program. You know that I opposed cuts last year which have unquestionably retarded our progress.

I sincerely hope that you will use some of the money to expand your international cooperation section, because I am convinced that money alone in an all-out race into space will not solve the problem. In such a race, without international cooperation, we could impoverish our Nation, without attaining the peace and the strength we desire.

I fought for international cooperation in the establishment of a permanent committee for that purpose within the United Nations. I am glad to see progress being made in that direction. I am now following the same procedure to seek a joint agreement between the United States and the U.S.S.R. in the peaceful uses of outer space by writing to both President Eisenhower and Premier Khrushchev.

The only way I know of attaining peace is working for peace. If the two nations which have made the greatest advances in the exploration of outer space work together by directing their discoveries toward peaceful uses, which can create a world of abundance and bring all nations closer together, then the number of experiments in outer space could be expanded and at the same time result in savings of billions of dollars.

I want to develop this idea with you in hearings before my subcommittee.

With best wishes for a more fruitful new year, I am,

Sincerely,

VICTOR L. ANFUSO,
Member of Congress.

THE WHITE HOUSE,
Washington, December 17, 1959.

The Honorable VICTOR L. ANFUSO,
House of Representatives,
Washington, D.C.

DEAR VIC: In the President's absence, this will acknowledge your December 15 letter in further regard to international cooperation on the peaceful uses of outer space.

Your interest in the advancement of space exploration is appreciated, and you may be sure that the specific proposals you set forth in your letter on this subject will have consideration.

With kind regards.

Sincerely yours,

JACK Z. ANDERSON,
Administrative Assistant to the President.

NATIONAL AERONAUTICS AND SPACE, ADMINISTRATION,
OFFICE OF THE ADMINISTRATOR,
Washington, D.C., December 17, 1959.

The Honorable VICTOR L. ANFUSO,
House of Representatives,
Washington, D.C.

DEAR VICTOR: Thanks so much for your thoughtful letter of December 15. I am sure that you will be interested in the progress we have made in developing a program of international cooperation. We will be happy to discuss this in hearings before your subcommittee and with you personally before that date if you so desire. Naturally, I am grateful for your vigorous support of the total space program. Only with congressional interest and support can we make the progress which we must make in this area of national endeavor.

Kindest personal regards and best wishes for the Holiday season.

Sincerely,

T. KEITH GLENNAN,
Administrator.

DEPARTMENT OF STATE,
Washington, December 31, 1959.

The Honorable VICTOR L. ANFUSO,
House of Representatives.

DEAR MR. ANFUSO: I refer to your letter of December 15 to the President discussing the possibility of cooperation with the Soviet Union in the field of outer space. In this connection, it is significant that during the recent session of the United Nations General Assembly, the United States and the Soviet Union reached agreement concerning participation in a new United Nations Committee on the Peaceful Uses of Outer Space and in an international scientific conference to be held under United Nations auspices during 1960 or 1961. Further, on an informal technical basis, exploratory talks were conducted by scientists of the National Aeronautics and Space Administration and Soviet scientists during a visit by the latter to this country in November. Technical talks have also been held with scientists of a number of other countries. Such steps as these should provide the basis for an increasing degree of international cooperation in outer space activities.

Sincerely yours,

WILLIAM B. MACOMBER, JR.,
Assistant Secretary.

UNOFFICIAL TRANSLATION

DECEMBER 31, 1959.

DEAR MR. ANFUSO: In response to your letter of December 15, 1959, addressed to N. S. Khrushchev, Chairman of the U.S.S.R. Council of Ministers, I have been instructed to inform you of the following:

The Soviet Government and its head N. S. Khrushchev appreciate your efforts toward further development of cooperation between our two countries.

The Soviet Government regards favorably the idea of concluding a bilateral agreement on peaceful uses of outer space. If the Soviet Union receives definite proposals to start negotiations on this question, we will be prepared to express our attitude toward them. The Soviet Union is ready to cooperate not only on a multilateral basis, as in the U.N. Committee, but also on a bilateral basis, when such cooperation is based on mutually advantageous conditions. As is known the Soviet Union has already more than once made proposals on cooperation on the outer space problems. I have been also instructed to inform you that satisfaction is being expressed in the Soviet Union that XIV session of the U.N. General Assembly, which ended not long ago, decided to establish a United Nations Committee on Peaceful Uses of Outer Space. It goes without saying that the Soviet Union will take an active part in the work of the Committee.

Sincerely,

M. N. SMIRNOVSKY,
Chargé d'Affaires a.i. of the U.S.S.R. in the U.S.A.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., January 5, 1960.

Hon. WILLIAM B. MACOMBER, JR.,
Assistant Secretary, Department of State,
Washington, D.C.

DEAR BILL: Thank you for your letter of December 31, 1959.

Yesterday I was handed the U.S.S.R. response to my letter of December 15, 1959. For your information I am mailing you a copy of the letter as well as the translation.

I believe this is a good sign and I trust the Department will immediately engage the Russians in talks regarding the same.

I am at your disposal in anything I can do to cooperate.

With warm regards, I am,

Sincerely yours,

———.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., January 5, 1960.

Dr. T. KEITH GLENNAN,
Administrator, National Aeronautics and Space Administration, Washington, D.C.

DEAR KEITH: Thank you for your letter of December 17, 1959.

Yesterday I was handed the U.S.S.R. response to my letter of December 15, 1959. For your information I am mailing you a copy of the letter as well as the translation.

I believe this is a good sign and I trust your agency in cooperation with the Department of State will immediately engage the Russians in talks regarding the same.

I am at your disposal in anything I can do to cooperate.

With warm regards, I am,

Sincerely yours,

———.

The Late Honorable Tom Jenkins

SPEECH

OF

HON. JACKSON E. BETTS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, January 11, 1960

Mr. BETTS. Mr. Speaker, TOM JENKINS was part of the Ohio political scene for 50 years and in that time he

made many friends and few, if any, enemies. This was because of his sterling character and rugged individualism. On the national scene he was respected and admired for the same reasons. As a member of the important Ways and Means Committee for 25 years, he contributed much to significant tax legislation.

I shall always remember him for his intense devotion to Congress and particularly the House of Representatives. He believed that it was the most important part of our Government because it was in closer touch with the people. He was an honest, dedicated public servant and I join with his host of friends in mourning his loss and expressing my sympathy to Mrs. Jenkins.

Farm Program

EXTENSION OF REMARKS
OF
HON. GLENARD P. LIPSCOMB
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 12, 1960

Mr. LIPSCOMB. Mr. Speaker, on January 11 I submitted for inclusion in the RECORD five articles comprising a series on the farm subsidy and surplus problem, written by Jack Tobin, staff writer, which appeared in the Los Angeles Mirror News during November 1959. The views and recommendations of the Mirror News in regard to this problem were summarized and commented on in three editorials appearing on November 5, 6, and 16. Under leave to extend my remarks, I am submitting the Mirror News editorials for inclusion at this point in the RECORD:

[From the Los Angeles Mirror News, Nov. 5, 1959]

OUR FARM SURPLUS MESS—NO. 1

(First of two editorials based on the Mirror News series and offering some approaches to a solution of the farm surplus problem.)

The farm price support program is a failure.

It doesn't accomplish its mission: to prop up that portion of agriculture which needs propping up.

It's a failure and experts by the hundreds will expand on this theme. Virtually all of them can give you chapter and verse on why this is so.

But there isn't anything resembling general agreement over what to do about it.

A lot of farmers will tell you it's impossible for the city folks to understand this problem. You've got to live on a farm to see the real picture.

We might agree it helps. But we contend the city dweller viewpoint is equally important.

This is so because the urbanite (a) as a consumer of farm products and (b) as a taxpayer is deeply involved in anything our Nation does to prop up the farmer.

The Mirror News' series this week on the price support program is based on intensive research, on facts. And we can tell the farmer this:

The consumer-taxpayer is fed up, to his ears. It's no longer a joking matter that he's on the verge of revolt. It's a fact.

And, frankly, we believe it's time our national leaders—and this includes the so-called spokesmen for farmers—understand the breaking point is at hand.

JUST THE FACTS

Consider these conclusions from our factual series:

We've spent more than $22 billion on national programs to help the farmer during the past quarter century.

We've pumped almost half of that amount into schemes to stabilize farm prices—and income.

And yet the sorry fact is that we haven't stabilized prices—at least insofar as the farmer is concerned.

And we certainly haven't stabilibzed farm income. It dropped about 30 percent between 1951 and 1956—at a time when most of the rest of us were prospering.

We've tried to reach some kind of balance between production and consumption. Between supply and demand.

Our series shows conclusively that the price support program has not limited production. Our mountainous surpluses have not been reduced. Instead, the shocking piles of stored grain, of row upon row of stored bales of cotton, continue to expand.

Every single day, the taxpayers have to shell out $1,750,000 just to store the farm glut. An Omaha grain elevator operator says he's had wheat—Government-owned wheat, please note—in storage for 5 years. And each year adds another 25 cents to invested cost in each bushel of wheat.

And so the story goes. Ever increasing costs. Ever increasing surpluses. And who benefits?

The middleman, perhaps. The warehouseman, the shipper, the broker.

But not the farmer, at least the little farmer for whom so many tears are shed in the halls of Congress.

And certainly not the consumer-taxpayer.

And that's the individual, frankly, that we're concerned about here.

TIME FOR ACTION

We believe it's about time the politicians, the officials who shape and direct our national policies, begin to understand the price support program isn't some kind of exclusive domain where only the farmers and the Farm Belt spokesmen can roam.

We get mighty fed up with all this hokum about the sanctity of the great American farmer. It's as if being a farmer is something that puts you a cut above the average run of American.

It's sickening to see the way so many Senators and Congressmen fawn over the "farm vote." Some seem to relish in the competition to outdo each other in schemes to help the poor farmer.

How about helping the poor consumer-taxpayer?

We can find it in our hearts to feel sorry for the industrious, efficient, small farmer who struggles with the weather and the economics to make a decent living. We recognize that our Government, as national policy, owes him the same attention, the same subsidy, that's due any of us.

HELP FOR BIGWIGS

But when our price support program clearly operates unfairly, when it gives inordinate boon to the big corporate farmer, when it socks the consumer-taxpayer heavily without at least a kiss of reward, then it's time for our representatives in Washington to face up to their responsibilities—to all of us.

And we don't like the hypocrites who tell us city folks how hard they're fighting for economy back on Capitol Hill and then make their private deals with the string-tie Claghorns from the Deep South who seek to perpetuate the obvious national disgrace that is our price support program.

OK, the Mirror News doesn't like it. What would we do about it?

[From the Los Angeles Mirror News, Nov. 6, 1959]

SOME ANSWERS TO FARM MESS

(Second of two editorials on farm surplus problem based on exclusive Mirror News series.)

When it comes to figuring out a common-sense answer to the farm subsidy program, you have to start with some basic facts:

Fact No. 1: We're sadly out of supply-and-demand balance in our basic price support crops. We produce more than we can consume nationally, and we haven't been able to find a way to dispose of our surplus internationally.

Fact No. 2: Our price support program is holding some farm prices artificially high. It's a handout.

Fact No. 3: Artificially high prices encourage overproduction, further throwing supply and demand out of balance.

Fact No. 4: The farmer chronically is subject to wide ups-and-downs in income. He's subject to weather and to market disasters, neither of which he can do much about.

Fact No. 5: Several million farmers don't belong in the business. They're marginal operators, unable to compete without substantial taxpayer subsidies.

Now, what do we do about it?

The hard facts, disclosed in the Mirror News' series by Jack Tobin this week, make it obvious the most costly farm subsidy program in all history can't continue.

The taxpayers won't stand for it.

Some will say: Let's abolish the whole, disgraceful boondoggle.

Economists tell us utter economic chaos could result. Our system is so closely geared to the Government-controlled price support program that abrupt dislocation of the subsidy plan might well throw our whole national economy out of whack.

Eventually, we would recover, to be sure. But the shock waves would be felt for years.

COURSE OF ACTION

Better, we think, to do this:

We should tell the farmers we're going to remove price supports, except for a minimum basic program keyed specifically to emergency conditions.

We should tell him this will be an orderly reduction, spanning a fixed number of years.

We should tell him he'll have to decide whether he wants to sweat it out, to compete freely and independently. If he doesn't, he'll know exactly how long he has to get into some other work—or some other crop not covered by price supports.

We should extend to farmers who don't want to compete the same assistance and aid we give anyone else who's looking for work. We should assist him in training for a new occupation, if he needs it.

Frankly, this would drive a lot of marginal operators out of farming. Inhumane? We don't think so.

If we truly believe in free enterprise, in the right of every American to compete, we should welcome a chance to free ourselves from a program which subsidizes the inefficient farmer along with the efficient operator.

Now, as stated national policy, we should make it clear to the farmer we intend to use the Government as a force in gearing production to demand.

We should encourage a land reserve program which, unlike the present soil bank, is specifically and singly devoted to reducing agricultural resources. And this means both land and people.

We should tell the farmer that, as taxpayers, we're willing to undertake a program which will provide him access to crop loans and crop insurance in case the weather or the market puts him on the rocks temporarily. We do the same for some other segments of our society.

And we should tell the farmer, in clear, unmistakable terms, we don't intend to see him forced to the wall to the benefit of the big boys—provided he shows the willingness and the ability to compete.

Now, what are we going to do with the staggering farm surplus already on hand so we can reach a supply-and-demand balance?

PAINFUL STORAGE COST

Here's a tough one. We've got so much taxpayer money already invested in mountains of stored wheat and rows of baled cotton it kills us to think of giving it away. But it also kills us to keep laying out $1,750,000 every painful day just to pay storage charges on this farm glut.

But dispose of it we must, if we're ever to solve the farm problem.

First, we don't believe in simply destroying our surpluses just to get rid of them. To do so would be a shocking waste of good food and fiber. And it would give the Communists a tremendous propaganda pitch around the world. Just imagine how a picture of burning wheat surpluses would look to starving Asiatics.

Second, we do not believe we can put much of our surpluses in the hands of the ill-fed, ill-clothed people of other nations. We believe this can be done (a) as a humane act to less fortunate people and (b) as an effective tool in international goodwill.

We recognize that it's a costly process to ship wheat to India, for example, just to get rid of it. We also recognize that our Canadian and Australian friends, for instance, are going to be hurt deeply because our gift inevitably would depress the world market.

And we recognize the gift of our surplus food and fiber simply extends the life cycle of underprivileged people, thereby adding to an already overwhelming population burden.

Despite all this, we still believe sensible men can work out a sensible program to channel our farm surplus into good use. An extension of our present barter program, a development of a U.N. food distribution program, these and other proposals may point the way.

SENSITIVE TOES

So these are some of our suggestions. We've oversimplified, perhaps, to make our point. We've undoubtedly stepped on some sensitive toes.

What can you do about it?

Do what we plan to do: Pass the word to our California Senators and Congressmen. Insist that they think about the consumer-taxpayer the next time they vote on a price support plan.

And you should make it clear to the lawmakers you intend to check on how they vote. Also on how many times they sell out to the Deep South politicos on vote-trading deals. For the record shows it has been the southerner who has perpetuated price supports.

We welcome your suggestions. In fact, we encourage them. We solicit your concern.

For if you're concerned—as much as we are—your voice can be heard. We know this to be true.

[From the Los Angeles Mirror News, Nov. 16, 1959]

FARM SOLUTION: END HANDOUTS

Secretary of Agriculture Benson has performed a great public service in denouncing the outrageous cost (in you tax money) of the farm price support program.

However, Secretary Benson's new farm price and aid program seems unlikely to eradicate the basic evils of tax subsidies to farmers.

BAD FEATURES

The 5-point program for 1960 retains many of the objectionable features Benson inherited from prior administrations. At best, it is simply a rejiggering of old formulas.

Secretary Benson proposes to expand the soil-bank program, under which farmers voluntarily withhold land from production in return for set payments. He suggested an increase of $150 million, to $600 million, for soil-bank operations.

Payment for not raising crops is a questionable principle, even when it was first broached by Henry Wallace during the depression.

Its only virtue is that it does away with storage charges on the crops not raised. But it's still a costly approach to farm problems.

You can't quarrel with Benson's plan for more research to find uses for farm produce in industry, or his food for peace program to ship surpluses to friendly nations. Rural redevelopments to aid marginal farmers is also a good idea. But no real aid in solving the farm problem is likely, even if these approaches succeed.

Putting wheat under a new parity formula, based on the last 3 years' prices, doesn't offer much hope, either. This idea was tried on corn, and a whopping surplus piled up.

The California Farm Bureau Federation wasn't impressed with Benson's new approach. Radical reduction of supports is the only way to reduce the billion-dollar handouts, according to Louis A. Rozzoni, bureau president.

And Rozzoni also advises city consumers to bombard Congressmen with demands for reduction of farm subsidies which are patently unfair to taxpayer-consumers who pay the freight.

LIMIT AID

Rozzoni argues that farm aid should properly be limited to the marginal, low-income farmer, too.

On balance, Rozzoni's plan seems more practical than Secretary Benson's, if not as political.

It's doubtful if Benson's program will reduce overall farm aid costs appreciably. Rozzoni, on the other hand, proposes deep cuts in subsidies as the only way to end the giveaway.

It seems to be the logical way.

On Behalf of the Consumer

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 12, 1960

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news article which appeared in the October 30, 1959, issue of Footwear News. It discusses the move by the Federal Trade Commission to expand its informal review of shoe industry substitute materials usage as a possible prelude to a full-scale drive of corrective proceedings.

I have introduced legislation which would provide for the labeling of shoes to protect the consumer from being misled. I certainly wish to commend the FTC for looking into this important subject, vital to each of us:

WIDER STUDY OF MATERIALS SET BY FTC

(By Robert Barr)

WASHINGTON.—The Federal Trade Commission is expanding its informal review of shoe industry substitute materials usage as a possible prelude to a full-scale drive of corrective proceedings.

FTC Chairman Earl W. Kintner wrote Representative CHARLES O. PORTER, Democrat, of Oregon, that the preliminary check made by his agency about possible deceptive failure of shoe manufacturers to disclose use of substitute materials was being expanded to include investigations of particular firms. No firm names were revealed.

Mr. PORTER is sponsor of H.R. 1320, the shoe labeling bill, awaiting House Interstate Commerce Committee consideration. He requested FTC some time ago to review shoe industry use of substitute materials as part of his program to press for action on the shoe labeling bill.

Twice, in interim reports, FTC has advised Mr. PORTER the preliminary review was still in progress.

However, the latest report to him, in Mr. Kintner's letter, explained that the preliminary check "developed only information of a general nature relating to the shoe industry and its products."

The FCT Chairman added, "based upon these data, it has been decided to conduct further investigations of an individual-case nature, to assemble more detailed information relating to specific products of some particular companies.

"It is expected that the material assembled in these individual-case investigations will permit a determination as to whether corrective proceedings should be undertaken against the particular companies now being investigated, and perhaps others."

"And Its Rider's Name Was Death"

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 12, 1960

Mr. PORTER. Mr. Speaker, on November 8, 1959, Rev. Robert W. Burtner, minister of the Trinity Methodist Church, of Eugene, Oreg., preached a sermon which I would like to have preached from every pulpit in the country. His text was taken from the Revelation of John and he likens the Pale Horse of the text to the fallout from nuclear bombs which threatens us today. Under a previous consent I am including the sermon here.

THE PALE HORSE

(By Rev. Robert W. Burtner)

There are few books of the Bible—or anywhere else, for that matter—that have such weird and strange melodies than the Revelation of John. Its warlike attitude, its fantastic visions, and its excessive outbursts of praise to God are foreign to our ears whose excesses run to fields of thought other than the end of the world. But in spite of this there are few books that have provided us with as rich an imagery as this one.

One of the fascinating images from Revelation is described by John in the breaking of four seals from which come four horses. There is a white horse upon which is a rider with a bow symbolizing the coming of war; there is a red horse whose rider carries a sword signifying the revolutions of nations; there is a black horse upon which is a rider with a balance symbolizing the destruction of famine; and finally, following the thunderous voice of "Come," John describes the

fourth horse: "And I saw, and behold, a pale horse, and its rider's name was Death, and Hades followed him."

Four horses which symbolize the imminent and present destruction of the world. To the little band of Christians trying to remain loyal John was telling them of conquerors, revolutions, famine, and death which would immediately be spread throughout the world and would be used to usher in the final destruction of the world. He seemed to be saying to them to hold tight, to endure yet a little while longer and when the four horsemen deal their deadly blows the loyal persons in Christ will be raised and the kingdom of God will come in.

Apart from their original use these four horses and their riders have provided for mankind an apt symbol of the dreaded powers of every age that keep peace from the world. And Christians from time to time have seen in them some conqueror, some famine, some revolution, some death-dealing power that is apparent at the moment. Such is the richness and suggestibility of the imagery of the four horses.

Without presuming to announce that the end of the world is upon us this morning, I do want to call your attention to the pale horse and its rider and suggest that the possibilities of death going through the earth are not exhausted and that we would do well not to forget that the four horses and their riders still stalk the earth and one may well wonder how long, O Lord, this will be true.

I want to suggest this morning that the pale horse whose rider is death is an apt image of the acute danger of nuclear radiation—the silent, powerful specter of slow death that gives little warning and is fantastically subtle.

Use your imagination for a moment to enter into the mind of John. A voice of thunder roars forth the word, "Come," and out comes the pale horse riding swiftly and silently and moving through the earth dealing its destruction without the help of sword, of noise or equipment.

Now move for a moment into the image of T. S. Eliot's poem of several years ago which ended with the words—

> "This is the way the world ends
> This is the way the world ends
> This is the way the world ends
> Not with a bang but a whimper."

Now move in your mind's eye to the picture from a new movie, "On the Beach," where a huge white cloud begins to silently roll over the earth from its beginning in a nuclear holocaust of North America. The cloud comes slowly but surely into Australia and the final scene of the movie is one of the cloud taking over the deserted city and an old sign flaps aimlessly in the prevailing winds and reads, "There is Still Time, Brother."

In all of these vivid pictures we can well imagine that the fourth horseman has taken on new form in our time—the form of the reaction from atomic weapons explosions and wastes from even the most peaceful uses of atomic energy. The pale horse is the strange but inevitable radiation that is not only the specter of death but that is making intolerable burdens upon Christian consciences.

The fact of radiation is a well-known danger from X-rays and even from some natural sources. Those scientists who first worked extensively with various forms of radiation recognized its possibilities as a death-dealing form of activity.

After the dropping of the bombs on Nagasaki and Hiroshima it was immediately recognized that the radiation from the blast was as deadly as the blast itself. It is not at all pleasant for us to read that today in Japan there are 90,000 persons being treated for "atomic sickness"—90,000 persons who find difficulty getting jobs because of their probable short lifespan and who find difficulty even getting marriage partners because of dangers of hereditary genetic defects in children. These people are the direct victims of the strange character of radiation from a bomb.

But the real danger of fallout came to the public's attention only after the super-bomb tests in the Pacific when a Japanese fishing vessel, the *Lucky Dragon*, was showered with white ash which caused immediate sickness. When the not-so-lucky ship reached port it was determined that they had been showered with radioactive fallout from the bomb test. One of the crewmen died, the others are still living through though with symptoms like the loss of hair.

Last May the Joint Atomic Energy Committee held some extensive fallout hearings. From these hearings have come information telling us that the amount of radioactive material in the atmosphere now is the result of the three nations tests of the equivalent of 8,500 bombs of the type that were first used in Japan. It was shown that the fallout was coming back to earth at a faster rate than was originally anticipated and it was generally agreed that any dose of radiation, however small from now on, produces some biological effect and that this effect is harmful.

There are two types of damage produced by contact with radioactive fallout. One is the damage to the body by, for instance, strontium 90, which is a bone-seeking substance, a cousin to calcium, the deposit of which in the bones may lead to bone cancer or leukemia. Almost all scientists who testified at the hearings made it clear that the amount of strontium 90 is infinitesimally small over the Western Hemisphere in comparison to what it would probably take to do extensive damage to large numbers of people. But at the same time their findings showed that the amount of this radioactive substance has increased appreciably in many areas of the United States. Linus Pauling, a somewhat extreme, but nevertheless acknowledged scientist recently wrote a letter in the New York Times giving details of how and why it would be well for persons to take calcium tablets to counteract the effect of strontium 90 that they might be subjected to through the use of milk or other food.

A second kind of damage by radiation is that produced which may affect the reproductive cells of a person and is transmitted to children in the form of deformed limbs or liability to cancer or leukemia. These radioactive particles are referred to as cesium 137 or carbon 14, the last of which decays for as long as 6,000 to 8,000 years. The scientists all agree that the damage by this fallout is extremely slight, but even so it may mean an increase of 1 percent in total number of children under 10 who die of cancer each year.

Another problem in the same connection is that of wastes from atomic energy plants used to generate electricity. In 15 years the United States has acquired 60 million gallons of radioactive atomic waste. Ninety-five percent of this is stored underground near Hanford, Wash., where some of it has been boiling for 6 to 8 years. Some will remain dangerous as long as 1,000 years. The rest of this waste is buried in the ocean within tight vaults and some of it is being stored experimentally in abandoned salt mines. The leakage of radioactive material is the main problem with this waste.

All of this, in spite of its controversial manner among scientists themselves, does not paint a very rosy picture. Bertrand Russell once said that it was his experience that those who know the most are the most gloomy.

Let us return now to John's vision. John manages to convey to his beleagered colleagues the fact that God realizes the urgency of the situation and as a result He would have them remain faithful and if necessary die for their faith.

The practical situation of these Christians demanded this message from John. These Christians were a small group living in a tyranically governed province; they had no influence whatsoever in the affairs of state and their best witness was to stand firm in their faith even if it meant death. Their faithfulness to God was measured in terms of their ability to stand up to persecution and take it.

But I have no doubt that John's advice to us would be the same in that he would call us to be faithful, but we can show our faithfulness in a different way in the present hour. Christians may still be in a minority, but there is hope in the fact that there are some Christians who hold responsible positions of authority who want to show their faithfulness to God by doing everything possible to see that the effects of atomic radiation are curbed. These Christians will join with non-Christians to do everything necessary in the plodding, laborious task of negotiation, of arbitration of nuclear test suspension and disarmament treaties.

But even though the advice now is to be faithful in seeing to it that curbs are made and enforced the urgency is the same. It is no longer the form of a plundering army or a fanatical dictator from Rome, but is instead the form of the silent disfigurement and destruction of persons through atomic radiation. And it is this urgency which demands of a Christian his utmost skill and determination to see to it in ways open to him that the patient and laborious work of atomic test cessation and disarmament is begun and carried through.

This patient work applies also to each of us as an individual. It is open to us from time to time to speak out, to voice our opinions, to stand up, and it is at such times that we can particularly show our loyalty to God in this matter. And indeed this is little enough in comparison to the stand of many of those who chose to be loyal in death. No man can measure what will happen when one person stands against the prevailing winds.

Several men decided to witness against testing of nuclear weapons by risking death by sailing into the testing area of the Pacific Ocean in the small sailing vessel, *The Golden Rule*. They actually never got there, but the witness of reasonable men against the dangers of fallout was an expression of loyalty to a higher God than the expediency of the state. In our own spheres the witness can be as powerful and there is no doubt that it is as urgent.

A final part of this vision is very foreign to our ears. John implies through his book that God is destroying the earth to bring in His kingdom. Though we would not put it in this way, we can put it in such a way as to say about the same thing—namely, that this is God's world and it is in His hands and it is His love and His power that form the foundation of all that is.

It may be that our imperialism of individuals or nations may force us into our believing that it is best to test and even to retaliate with atomic weapons which could conceivably destroy our civilization by radiation but even this fact would not be able to destroy finally the purposes of God.

The fact that the world is in the hands of God allows us to see, apart from this ultimate possibility of destruction, that even the negligible deaths of so small a dose of radiation now living with us makes a Christian conscience feel a terrible burden. For when is the willful death of a man or child negligible?

Further if it is God's world we have to consider another question of whether or not we have any right to continually contaminate the air not only for ourselves but also for our children and their children. This world

is given to us as a privilege to live within its bounds, and as creatures of God we must bear the guilt if we take it upon ourselves to allow this world to be disfigured willingly through efforts of ours in the direction of testing weapons. "The earth rejoices when the air is clean" is almost literally true today insofar as it is our hope and the direction of our work and our witness.

All of this is to say that when we are faithful to God in much or in little regarding the cessation of atomic tests and further contamination by radiation we are in actuality faithful to the highest, the deepest, and the best that there is in the universe for it is God's universe and His love and His power hold the reins. It is by His grace we are permitted to live and it is this grace that allows us to be faithful, to keep the pale horse of radiation bridled and well secured. So far no one has caught it. Our faithfulness must be directed toward this end.

Young Democratic Clubs of America Resolutions on Labor and Agriculture

EXTENSION OF REMARKS
OF
HON. NEAL SMITH
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. SMITH of Iowa. Mr. Speaker, both agriculture and labor are basic and important in our high production economy. Legislation and administrative policies can increase or decrease the the take-home pay of those who work and produce in the factories and on the farms, and so we are all interested in knowing the attitudes and thoughts on those subjects by our younger generation, which will, or are now, becoming participants in government. Two thousand delegates assembled in Toledo, Ohio, November 17 through 20, at the National Young Democratic Convention. They wrote and passed resolutions concerning these important matters.

As chairman of the convention, I had the opportunity of witnessing their hard work in writing these resolutions, which were passed by an overwhelming vote. So that others may know the thinking of these younger voters, under unanimous consent I include them in the RECORD, as follows:

LABOR

GENERAL STATEMENT

The Young Democratic Clubs of America recognize that the Democratic Party, as the party of all the people, must be concerned primarily with the common interest of all, and then with the particular interests, not only of labor, but of others also, including businessmen large and small, stockholders, landowners, bankers, professional people and farmers. All have their justifiable interests in a free enterprise economy, which we endorse and support.

Nevertheless, we believe that if members of the great organized labor movement will consider carefully the voting records of members of the two political parties in the light of Samuel Gompers' admonition "Elect your friends, defeat your enemies" they will discover that time after time the great majority of Democrats are their friends and the great majority of Republicans their enemies. It was a Democratic administration and a Democratic Congress which gave us that great magna charta of the labor movement, the Wagner Act, as well as a host of other legislative accomplishments long sought by working people, such as the Federal minimum wage law, unemployment insurance, social security, the Walsh-Healey Public Contracts Act, and the Full Employment Act of 1946.

"We commend the labor movement for its progress in ridding itself of the very small minority of corrupt officials who had infiltrated the labor movement, and we call upon and expect the business community to correct corruption in business and industry."

We affirm our belief in the right of working people to bargain collectively with their employers, and in union security.

We favor policies conducive to a high wage, full employment, prosperity in an ever-expanding economy.

We believe that the material welfare of human beings is a greater need than the balancing of the Federal budget every single year whatever the economic condition of the country.

We deplore the highhanded manner in which the Eisenhower administration has ignored millions of people, especially in depressed areas, crying for bread, and has handed them instead the fluff of Madison Avenue "prosperity."

We favor extension of the Fair Labor Standards Act to millions yet unprotected and the increase of the minimum wage to $1.25 an hour.

We call for establishment and updating of State minimum-wage laws to these same standards.

We favor amendment of the Federal Unemployment Compensation Act to provide Federal standards as to the amount and duration of benefit payments.

We support extension of the Davis-Bacon and Walsh-Healey Public Contracts Acts to cover fringe benefits which have been accepted by industry.

Recalling that labor is not a commodity of commerce, we reject as absurd and inhumane the notion that antitrust laws should be extended to labor unions.

Having nothing to fear from the political strength of labor, we affirm the right of union members to contribute time, energy, and money to political activity, and we encourage them to do so.

We call upon Congress to repeal those sections of the Labor-Management Reporting Act of 1959, commonly known as the Landrum-Griffin Act, which are inequitable and unjust. These features include curbs on labor's right to organize, its rights of freedom of speech, and its right to engage in legitimate advertising of its disputes to the public.

We urge the revision of the bonding provisions in title III and oppose and urge the repeal of the "no-man's land" feature of title III. This latter feature deprives small business and labor of the services of the National Labor Relations Service to their mutual disadvantage. Within the confines of free speech and peaceful persuasion, we believe that labor should have the right to exert the maximum economic influence which it can when engaged in legitimate labor disputes with management. These examples are only illustrative of the general bias of the bill.

We condemn those sections of the Landrum-Griffin Act which are punitive and designed to hamper and destroy the unions' right to organize and improve the wages, hours, and working conditions for the workers whom they represent. We urge amendment of such sections of the Landrum-Griffin Act so that the act will be a true charter of democracy in labor unions, rather than a device to weaken or destroy legitimate trade unions.

Our Nation's economy has suffered a serious blow because of the protracted, industrywide strike in the steel industry. This strike reflects the adamant insistence of the steel industry that union workers give up gains of previous contracts as a basis for settlement of this dispute.

Industry has obscured the contract issue behind a smokescreen of "fighting the battle against inflation"; yet there have been three times as many steel price increases since World War II as there have been wage increases. A private study undertaken by the Secretary of Labor indicates that steel prices have already advanced, steel profits are setting records, and wage increases are justified.

Recognizing these facts, the Young Democratic Clubs of America condemns:

1. The refusal of the President to set up a fact-finding board at an early stage in the dispute.

2. Invoking the so-called emergency injunction provisions of the Taft-Hartley law, thereby nullifying the effect of labor's only defense—the strike—and forcing workers against their will to return to work on management's terms during the so-called cooling off period.

3. The President's general favoritism shown toward the steel industry in this dispute.

RIGHT-TO-WORK LAWS

State antiunion security laws, sometimes called right-to-work laws, are a continuing threat to the entire American labor movement. Experience has shown that where right-to-work legislation is enacted, labor-management relations become strained.

We urge the U.S. Congress to repeal forthwith section 14(b) of the Taft-Hartley Act which makes it possible for State right-to-work laws to prohibit the union shop in industries affecting interstate commerce.

AUTOMATION

The tremendous changes in the work force caused by technological advances and automation represent a national problem requiring national attention of the Federal Government in cooperation with labor and management. We commend the action already taken to meet this serious problem in the meat industry by labor unions and management working together. However national defense needs and the survival of our free society call for congressional attention to this problem and for legislation to bring our training and educational programs abreast of atomic age needs. Already we are wasting countless man-years of highly skilled manpower in the United States because of the lack of a national approach to automation and technological changes.

OCCUPATIONAL HEALTH AND SAFETY

We believe that the health and safety of workers in the atomic industry and other fields where cancer and disease producing products are a problem is a matter too important to be left to the States alone. We urge the establishment of a national health and safety code to meet these new health and safety problems of our atomic age.

AGRICULTURAL WORKERS

Every year over 2 million workers toil in the fields of 20th century America under conditions which belie the supposition that peonage, vicious labor exploitation and extreme forms of child labor are grim memories of an unenlightened past. Included in their number are hundreds of thousands of migratory workers who annually shift from shack to shack in search of employment. These are the Nation's forgotten people.

The average American farmworker gets only about 125 days of work per year, makes less than $5 per day, and earns less than $740 per year. His plight is growing worse, not better, with the passage of years as the spread between industrial and agricultural wages continues to widen.

Despite this lack of job opportunity for American farmworkers, almost 500,000 for-

eign workers are now brought into the United States every year on certifications of need issued by the U.S. Department of Labor. These foreign workers have no rights as citizens and frequently work under conditions which border on slavery.

The Young Democratic Clubs of America believe that governmental policies should be directed to the welfare of all the people, but especially of those most in need and least able to help themselves. We cannot remain cold and indifferent to the deplorable condition of domestic and foreign farmworkers. Therefore, we call for the following program:

1. The enactment of legislation which will extend to farmworkers such protections as the right to organize for collective bargaining; and coverage under social security, the Fair Labor Standards Act, unemployment insurance, and State workmen's compensation laws.

We commend the AFL–CIO on its efforts to organize farmworkers and we pledge this campaign our full support.

2. Federal and State legislation to regulate housing and sanitation in farm labor camps; to regulate unscrupulous labor contractors who prey on the migrant worker, to regulate the transportation of farmworkers, and to provide educational opportunities for the children of migrant workers.

3. The adoption of enlightened policies by governmental agencies, most prominently the U.S. Department of Labor and State employment agencies, who have considerable authority to eliminate exploitation of farmworkers if only they have the will to do so.

4. Curtailment of the use of foreign farmworkers who have been used to drive down wages and working conditions of domestic workers and deprive them of job opportunities.

We recognize the practical problems involved in extending such a program to the few employees of the small family or tenant farmer.

Part of the small farmer's problem today is that substandard labor conditions constitute an enormous subsidy to the big farmer.

Yet a way must be found to alleviate the abject poverty of farmworkers, and this is an additional motive urging our Nation to adopt a sound farm program, so that farmer and farmworkers alike may enjoy their just share of our Nation's economic abundance.

WORLD FREE LABOR MOVEMENTS

In many areas of the world, the labor movements are or may be the most powerful nongovernmental force. The Communists are making a determined effort to take control of these movements and pervert them from their legitimate aims and aspirations. The United States is doing little to combat this effort or to give assistance, material and otherwise, to these democratic movements.

We believe that a free trade union movement is one of the greatest bulwarks of democracy. We, therefore, recommend that the U.S. Government undertake an intensive and extensive program to assist these emerging trade unions. We propose that labor attachés be established in every American mission overseas. These posts should be filled with men trained in the democratic union movements who would establish contact with those peoples and who would stand ready to give advice and assistance to all. As a corollary we pledge support to those American unions who are attempting to carry out such a program on their own initiative.

RECOMMENDATION FOR EDUCATION

We reiterate our recommendation of the 1957 YDCA convention that a permanent committee be set up to work with designated representatives of organized labor for mutual education. We urge that whenever possible this program be expanded to a regional and State basis during the coming years.

RAILROAD LABOR

We commend railway labor for the great increases in productivity during the past 10 years. The contributions they have made to the railroads in the form of increased productivity amounts to several hundred million dollars a year in the form of increased services at no increase in wages.

We urge the Congress to curb the outrageous abuse by the railroads of their public service responsibility by spending millions of dollars of railroad revenues to persuade the American public that railroad workers are featherbedding, wasteful, and incompetent.

Railroad management has the right of free speech but they also have the responsibility to tell the truth and to cease their antilabor public relations program which they list as a legitimate business expense in their tax returns.

AGRICULTURE

The income of farmers has been steadily declining while the Republican administration has demonstrated neither sympathy nor interest in the family-type farmer.

1. Because we believe that the continued independence of the family farmer is a cornerstone of the American way of life, we advocate a Brannan-type farm program with 100-percent parity of income for the family farm production of all agricultural commodities through production payments direct to farmers.

2. We support adoption and use of workable combinations of farm commodity income improvement methods such as: loans; purchase agreements; market surplus diversion purchases; parity income deficiency payments direct to farmers; stabilization operations by farmers and by Governments: market agreements and other farmer bargaining. We support marketing premium payments designed to keep supplies in balance with demand; marketing standards and scheduling; and a system of marketing quotas for all commodities as a whole, for groups of related commodities, and for individual commodities as needed.

3. We believe that the farm programs must be democratically administered through referendums and farmer-elected committees with adequate safeguards to prevent the domination of such committees by the large or corporate farmers.

4. We believe that all production payments and allotments must be aimed at providing an adequate income for family farmers, with reasonable limitations on the amount paid to any individual payee so as to halt the trend toward corporate farming.

5. We support assistance to small farmers in the form of low-cost Government credit, technical aid, and larger soil conservation allowances. We urge the enactment of legislation to expand the funds and authorities of the Farmers Home Administration.

6. We urge the establishment of a compulsory food stamp or food quota system for the distribution of surplus commodities to needy families under a separate division of the Department of Health, Education, and Welfare. We further favor the expansion and the improvement in quality of the present school lunch and school milk programs.

7. We support a world food reserve administered by the United Nations with contributions of surplus foods and adequate funds to the reserve.

8. We propose an extension of Public Law 480 for a 10-year period and its expansion to extend foreign aid through shipments of farm surpluses to needy countries of the world, such as India. The present cumbersome and onerous agricultural surpluses that burden our nation's economy should be turned into a positive food and fiber program to ensure world peace and domestic prosperity through the following methods:

(a) The expansion of the present program of agricultural trade development and foreign assistance so that it will play a more effective role in the conduct of American foreign policy.

(b) The gradual distribution of American food and fiber surpluses to the needy nations of the world for the purpose of supplying these nations with needed agricultural reserves. This program would be conducted on a long-term basis so as not to upset world markets.

9. We urge expansion of world markets for American farm products.

10. We support genuine farm cooperatives, which help farmers reduce the cost price squeeze and which assist in maintaining and strengthening the bargaining power of the small farmer in the domestic market place.

11. We ask a more rapid expansion of the rural electrification and rural telephone programs with provisions for adequate funds and Federal policies to expand rural telephone and electrification facilities. We oppose legislation designed to increase interest rates on loans to rural electric cooperatives and legislation designed to transfer existing rural electric associations to private power agencies.

12. We believe there should be expansion of the Federal Crop Insurance Corporation, on a financially self-supporting basis, to include all crops in every county in the United States.

13. We believe in the maintenance of adequate reserve of food and livestock feeds against such emergencies as war, flood, and crop failure.

14. We believe allotments to farmers should be made on a bushel or unit basis rather than on an acre basis as in the past.

15. Many of the expenditures accounted for in the Department of Agriculture budget are actually expenditures in such areas as foreign aid, welfare, etc. We advocate a breakdown of the Department of Agriculture budget to clearly reflect the areas of actual expenditures.

Resolutions of the United Italian-American Labor Council

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 7, 1960

Mr. ANFUSO. Mr. Speaker, the United Italian-American Labor Council is a strong and positive force in the ranks of labor in New York, where it is in the forefront for progressive legislation in the interests of the working masses. It is also dedicated to the cause of freedom and lasting peace.

The president of this organization is the well-known labor leader, Mr. Luigi Antonini, who is a veteran leader in labor's ranks extending over several decades. He is beloved by all who know him or work with him, and is known for his sincerity, devotion, and loyalty to his country and his fellow men.

On December 5, 1959, the United Italian-American Labor Council held its 18th annual conference in New York at which a number of important resolutions were adopted stating the organization's position in these matters. Four of these

resolutions, dealing with freedom and foreign policy, labor legislation, the recent steel strike, and immigration, are of more than local interest and should be more widely known.

Mr. Speaker, under leave to extend my remarks, I am pleased to insert these four resolutions into the RECORD and commend them to the attention of my colleagues and to the public. They are as follows:

RESOLUTION ON PROMOTION OF FREEDOM

Since its inception, our organization has dedicated itself to promoting the cause of freedom and the defeat of all totalitarian aggression.

This fundamental principle was reaffirmed last year on the occasion of the reunification of our forces into the United Italian-American Labor Council.

Together with the entire labor movement, we are yearning for lasting peace, freedom, and well-being. These goals and aspirations are still very much unfulfilled.

We endorse the statement unanimously adopted by the 1959 San Francisco convention of the AFL–CIO that:

"The threat of Soviet aggression and worldwide Communist subversion stubbornly persists despite all talk about Moscow's 'new look,' Khrushchev's 'peaceful coexistence' drive and a 'thaw' in world tension resulting from recent developments in top level personal diplomacy."

In view of this persisting danger, the United Italian-American Labor Council reaffirms its wholehearted support of the foreign policies of the AFL–CIO.

In this spirit, we call upon the Government of the United States:

(a) To strengthen the NATO as a more effective defense against any possible military aggression, and to make this alliance of the free nations an instrument for unified action and cooperative policies among all its members;

(b) To give effective and decisive support to the democratic Republic of Italy; with its population of 50 million in one of the most strategic areas of the world, being given an adequate role in the highest level of NATO and permanent membership in the Security Council of the United Nations;

(c) To promote genuine people-to-people relations and contacts so as to strengthen the bonds of friendship between the United States and other free nations; and

(d) In the continuation of the programs for visits to the United States, and the technical training of foreign trade union delegations, countries like Italy, where Communist influence is still strong and menacing, should not be discarded or diminished, but should rather be expanded.

RESOLUTION OF ANTILABOR LEGISLATION

Whereas recent months have seen increasing attempts to deprive the American workers effective protection afforded them by their union; and

Whereas the strength of American labor is the most solid and fruitful basis for the stability and improvement of our free society; and

Whereas America would be in danger of failing to meet the Communist totalitarian challenge, if its free-labor movement were weakened in its aspirations and actions aimed at improving the standards of living of our people: Be it

Resolved, At the annual conference of the United Italian-American Labor Council, held on December 5, 1959, Hotel Statler-Hilton, New York, to extend vigorous support to the AFL–CIO campaign against the old and new antilabor legislation, especially the Landrum-Griffin Act.

RESOLUTION ON SOLIDARITY WITH THE STEELWORKERS

The United Italian-American Labor Council, at its annual conference held on December 5, 1959, Hotel Statler-Hilton, New York City—

Expresses its fraternal solidarity to the United Steelworkers of America. We protest against the issuance of the Taft-Hartley injunction which serves only the interests of the biggest steel corporations and aims to force the workers to return to the plants;

Warmly praises the decision taken by the AFL–CIO San Francisco convention to raise a solidarity fund for the steelworkers by having every union member contribute each month 1 hour's pay; and

Extends heartfelt wishes to the steelworkers and their valiant union for a just settlement.

RESOLUTION ON IMMIGRATION

Whereas from 1948 to January 1959, 64,000 Italian relatives (sons, daughters, brothers and sisters) of American citizens had applied to immigrate to the United States under the fourth quota; and

Whereas these applicants, together with the members of their families, constitute a population of about 170,000; and

Whereas Congress provided initial, very limited, relief by admitting under the fourth quota those relatives whose applications had been approved prior to December 31, 1953; and

Whereas this limited congressional action thus leaves many thousands of families still divided: Be it

Resolved, at this annual conference of the United Italian-American Labor Council, held on December 5, 1959, Hotel Statler-Hilton, New York, to urge the President of the United States to recommend, and to the Members of Congress to provide for, the admission to the United States of those relatives of American citizens who shall have made their application for the fourth quota prior to January 31, 1959; and be it further

Resolved, To urge the President of the United States to recommend and Congress to enact the following necessary and just revisions of our immigration laws:

(a) To determine the number of immigrants to be admitted into the United States under the first quota on the 1950 census and not on the 1920 census;

(b) To distribute among the countries, members of NATO, the unused quota numbers of the other European countries; and

(c) To abolish, as damaging to the good name of American democracy, the quota system based on the national origin, and thus end the present discrimination against south European peoples.

Foreign Policy and National Defense

EXTENSION OF REMARKS

OF

HON. NEAL SMITH

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 7, 1960

Mr. SMITH of Iowa. Mr. Speaker, some of the NATO countries and others are now trying to encourage youth groups to better appreciate democracy and the fact that citizens from the various walks of life in a democracy cannot afford the luxury of letting other people do all the thinking. In this this country, we have youth groups such as the Young Democratic Clubs of America which have been a training ground for democracy. Two thousand delegates gathered in Toledo, Ohio, at the 1959 national convention of the Young Democratic Clubs of America on November 17–20. These young men and women were legislators, party workers, college students, and citizens from various occupations and professions who are interested in making democracy work. Among the resolutions they hammered out were those on national defense and foreign policy, both of which reflect the depth of their thinking and the extent of their work.

Under unanimous consent I insert resolutions on these subjects in the CONGRESSIONAL RECORD.

FOREIGN POLICY

The need for achieving a just and lasting peace presents the greatest political and moral challenge confronting mankind today. We recognize that there can be no peace without the development of the rule of law on the world level, at least in the field of war prevention. We urge that a fundamental objective of U.S. foreign policy be the support and strengthening of the United Nations to make it capable of maintaining peace with justice under law.

The opportunities for creative American leadership to meet the challenges of the nuclear and space age have been cravenly ignored by the present Republican administration.

Young Democrats welcome any concrete and enduring relaxation of international tensions. Recent exchanges of visits of some few top leaders, cultural interchanges, talk of friendship and peace and the apparent agreement by the Soviet Union not to attempt to take over West Berlin by force, are indications of progress toward peace.

We see evidence of a new awareness and understanding of the international situation by the American people and a universal desire for a peaceful world community.

The United States and the rest of the world is tired of war and armament races. Too long have precious national resources been poured out in what appear to insatiable demands for more and more weapons. The time has come for a new bold approach to the settlement of international poroblems.

The United States must take the initiative in proposing imaginative solutions.

We believe that the solution lies in steps toward the development of a world organization to which the nations of the world would surrender their power to make war in return for the protection of international law enacted by an internationally constituted legislative body interpreted by an international court, and enforced by an international police force.

We recommend that the United States should submit without reservation to the jurisdiction of the International Court of Justice. Such action will represent a forward step toward the rule of law in the relationships among nations.

We urge all possible steps, including revision of its charter, to strengthen the peacemaking powers of the United Nations. We support the objectives of Senate Concurrent Resolution 52 and of similar resolutions in the House which favor the early holding of a conference to review the United Nations Charter and which request the executive branch to prepare U.S. proposals for such a conference. This study should concern itself with such matters as realistic representation in a strengthened United Nations.

The survival of our Nation, of civilization and perhaps of the human race, depends upon the abolition of war. Only with the

removal of the perpetual threat of war can the way be opened for the constructive utilization of nuclear power and the conquest of the evils of poverty, undernourishment and disease.

The recent decision of the administration to transfer nuclear weapons information and components to allied nations in Western Europe has greatly complicated the problems of European security and increased the difficulty of achieving a workable agreement on disarmament.

We call for a halt to further distribution of nuclear weapons components and technology and urge that ultimate world disarmament be the goal of U.S. foreign policy.

We urge the U.S. Government to initiate studies and consultations to begin to move toward this goal, including studies of how the U.S. economy can be adapted to full peacetime production. The reduction in the defense share of the Federal budget that will result from reduction of armaments production must be compensated for by increased public and private production of consumer goods. To this end the United States should greatly accelerate its program to develop peaceful uses of atomic energy.

We believe that it is not beyond hope that Communist nations can be persuaded to agree to limited disarmament extending to mass-destruction weapons. Cessation of manufacture and destruction of stockpiles of these weapons can be a first step toward eventual total disarmament.

We approve disarmament only if there is guaranteed effective inspection and controls under the auspices of the United Nations.

We deplore any resumption of nuclear-test explosions. The price which future generations will have to pay for such tests is horrifying to contemplate. Our governmental leaders have attempted to justify nuclear tests in terms of national security. We are not convinced, in fact, we are appalled at the contradictory and incomplete information which we are given by the administration. While keeping our eyes on the long-term goal, we must also turn attention to specific problems which confront us today.

SELF-GOVERNMENT OF COLONIAL AREAS

It should be a tenet of American foreign policy that we support the demand for self-government of those areas now under colonial rule. We favor phased programs for the transfer of power to native governments which include specific target dates for the granting of complete independence.

No idea has greater force in the world today than the idea that men should have the right to determine for themselves the form of government under which they live. This idea has penetrated into the most remote regions of the earth and fires the imagination of even the most primitive peoples. It is an idea for which the United States is in a large part responsible. Our Declaration of Independence, Wilson's 14 points, and our voluntary granting of self-government to the Philippines have earned for us the reputation of a nation dedicated to the right of self-determination of all peoples. It is a good reputation, one which increases our influence in world affairs and one which should be judiciously preserved.

ECONOMIC DEVELOPMENT

We firmly believe that assistance to underdeveloped areas does not depend upon the action or inaction of the Soviet Union.

In recent years this country has placed more emphasis on military pacts and treaties than on measures to promote the growth of that type of stable democratic society abroad which will remain in the free world, not because it has been coerced or bought, but because it is politically healthy and mature. Since political health and maturity are to a large degree dependent upon a degree of economic development which many countries and colonies of Africa, Asia, and Latin America lack it is in our best interest as well as that of humanity to aid economic development in those areas. To be effective, such aid must not involve political ties or conditions; the best means of achieving this end is utilization of the machinery of the United Nations. By permitting the U.N. to dispose of U.S. farm surpluses, their distribution is achieved in a manner least likely to endanger price stability in other agricultural regions thus absolving the United States of charges of dumping. Although we favor channeling the major portion of American contributions for economic development through the United Nations, we do not wish to preclude special unilateral programs such as American aid to India, in special circumstances where unilateral assistance is necessary for the strengthening of those nations which are making special contributions to the advancement of democratic forms of government or those whose economic welfare is especially important to international stability. Private as well as public capital is necessary in the development of underdeveloped areas of the world. Vigilance must be maintained against the formation of cartels which exploit backwardness for private gain and exert undue and unhealthy influence on weak governments.

TRADE

We favor the progressive reduction of protective tariffs on all commodities and manufactured goods as a step in the direction of a truly free world market. We support U.S. membership in organizations dedicated to the expansion of world markets through reduction of artificial trade barriers.

We believe that healthy commerce among the nations contributes greatly to the preservation of peace as well as to the prosperity of all. We see no advantage in aiding foreign nations to improve their economies if at the same time we deny them markets for the goods they produce. We look upon trade with the nations of the Communist block as an opportunity for lessening tension by steps toward mutual prosperity, and therefore believe such trade should be increased.

EUROPEAN ECONOMIC INTEGRATION

We welcome the beginning and initial success of the European Economic Community. We believe that one goal of American foreign policy should be to assist and encourage the furtherance of the purposes of this community and, as soon as possible, its expansion to include more nations.

NO MILITARY AID TO PERPETUATE DICTATORSHIPS

We believe the United States should use all moral and economic pressure which will not damage the collective security of the free world to insure that U.S. military aid is not used to perpetuate the rule of dictators who govern without the consent of the people, and repress legitimate responsible opposition.

AFRO-ASIAN-PACIFIC RIM INTERNATIONAL CONFERENCE

We recommend that an international conference of young political leaders from the Pacific rim, Asia and Africa be hosted jointly by national organizations of Young Democrats and Young Republicans and held in Seattle during, or immediately prior or following, the Century 21 Exposition, 1962; and that the conference be composed of delegations of young leaders representing major political bodies in the above-mentioned countries, consonant with security and immigration regulations (although consideration might be given to inclusion of young leaders from the Communist nations and solution of the attendant problems of entry, and so forth, explored).

NEAR EAST

The Near East, with its crucial problems of Arab unrest, Soviet imperialism, and the conflict between the State of Israel and its Arab neighbor remains a threat to world peace.

Arab unrest in most instances is an outgrowth of poverty, malnutrition, and famine for the greater part of an exploding population. We recommend that the United States Government, through the United Nations and the International Cooperation Administration, give all possible assistance to these Arab States. In this way, land and resources can be developed to provide the people with the food and wherewithal to fruitfully support themselves.

We recommend that the United States and the United Nations take positive action to negotiate a peace treaty between the Arab States and Israel. We maintain that a settlement of the boundary questions, the refugee problems, and free access to the Suez Canal are prerequisites to the establishment and maintenance of a more stable atmosphere in the Near East. We propose that our Government do everything in its power to guarantee mutually the territorial integrity of Israel and the Arab States upon the establishment of a peace treaty.

We feel that as the Near Eastern nations resolve their problems, raise their living standards, and become active partners in the world marketplace, Soviet imperialism will, of itself, manifest a lesser pressure in this area.

FAR EAST

We believe that the only civilized way to solve international disputes is by negotiation through regularized diplomatic channels. Because of the policies of the present administration such channels are not now available for use with China. We, therefore, call for the opening of diplomatic negotiations with China for the purpose of seeking solutions to the outstanding differences existing between our two nations, including the settlement of the status of Formosa; for exploring the possibility of a worldwide inspection system for disarmament and the control of nuclear testing; and for the beginning of mutual profitable trade and cultural interchange.

AFRICAN INDEPENDENCE

Africa's desires for independence and self-government cannot be denied. Unfortunately, the Republican administration has allowed the United States to become identified with colonialism in Africa. We maintain the majority of Americans are in sympathy with African independence.

America was founded upon the concept of self-government—simple integrity dictates reaffirmation of the principle of freedom for all nations. Our Government must boldly support the cause of liberty and identify itself with the peoples of Africa in their striving for independence.

NATIONAL DEFENSE

The present poor state of our national defense clearly demonstrates the ineptitude of the Eisenhower administration. The Republican's false economics in cutting Armed Forces' appropriation have made us incapable of anything else than massive retaliation. As a result, any war must be a war of total annihalation.

In addition recent Soviet scientific advances have been notable in many fields necessary for national defense, while our efforts have been absorbed in wasteful competition among the branches of our Armed Forces and among private industry under Government contracts. It is doubtful that the United States now has sufficient scientific skill and finances to draw abreast of the Soviet Union in the near future.

Perhaps the most serious, dangerous, subtle and insidious threat to our national defense (and to the Nation as a whole) derives from the distrust which the Eisenhower administration has shown in the past and continues to show toward the public and the scientific community. The Republicans' ridiculous and overbearing security

measures and their misrepresentation of facts—many of which are well known to the Soviets—produces doubt, confusion, and apathy in the public.

We therefore now recommend that—

1. The false economy cuts in our Armed Forces budget must be stopped.

2. The State Department must cease to think only in terms of total war, tottering from brink-to-brink. To counter this problem more attention must be paid to our strategic forces.

3. The Federal Government adopt a coordinated program for research vital to national defense removing the wasteful competition among branches of our Armed Forces and among the favored industries under contract to the Government, thereby more effectively utilizing our scientific talent.

4. Our Nation works closely with our fellow NATO members in scientific research and development.

5. The unnecessarily strict security regulations imposed by the Eisenhower Administration be relaxed. These restrictions have had the effect generally—especially in nuclear research and development—of discouraging competent men from seeking Government employment and have choked off vital channels of information upon which the scientific community relies.

6. Great effort be expanded toward accomplishing basic research in the natural and social sciences and in mathematics to provide a basis for future technical progress, realizing the inherent value which basic research possesses.

7. An avoidance of the tragic misuse of valuable scientific personnel in the Armed Forces, by establishing a careful program for their utilization in proper places.

8. A military policy be established which promotes career soldiers, especially by attempting to permit as normal a family life as possible.

Education for a Free Society

EXTENSION OF REMARKS
OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 7, 1960

Mr. MULTER. Mr. Speaker, on April 25, 1959, President Truman was the principal speaker at the 89th convocation of the board of regents of the University of the State of New York.

I commend to the attention of all his address, which follows:

CONVOCATION ADDRESS BY HARRY S. TRUMAN

Thank you very much, His Excellency, the Governor of the great State of New York, Mr. Chancellor of the University of the State of New York, the board of regents, and all these distinguished guests.

You know that I am extremely sorry that my good friend and predecessor in the White House, the Honorable Herbert Hoover, could not be here tonight. He and I do not agree very much on anything politically, but we are the closest of friends. I think very highly of him and we enjoy an almost continuous correspondence on various subjects on which we can agree.

This is a very wonderful educational setup you have here in this great State of New York. I am very much intrigued with it and I think it would be a good thing if we had one like it in Missouri. Missouri has to be shown, you know.

There is another thing I want to call to your attention. This is a wonderful band. There is nothing I like any better than good band music. I listened very carefully to all the playing I heard here tonight and I didn't hear a single sour note. I have pretty good ears.

Now, with your indulgence, I am going to talk to you about the Presidency of the United States. I have had a little experience at it and I want to give you the results of some of my experiences and some of my studies on the subject. It is one of the most unusual, the most important, and the least understood constitutional offices in the history of the world. Generally speaking, we have a pretty good idea of the nature and functions of the Supreme Court and of the Congress. Their words and acts are preserved in official publications and official records, but there is no single publication that preserves the utterances and acts of the Presidents. Many of them can be found only inadequately reported in the newspaper files.

The personal papers of the President, which are the best record of the functioning of the office, have often been scattered and destroyed. I am trying to correct this condition by encouraging an official and current publication of all the public utterances of the President, just as the CONGRESSIONAL RECORD reports all of the public acts in the Congress, and by establishing firmly the precedent set by Franklin D. Roosevelt that the papers of the President should be preserved as the property of the Nation.

Do you know that Millard Fillmore's son, who was a native of this great State of New York, deliberately burned all his father's papers and that Robert Lincoln burned more than half the papers of his father? The papers of other Presidents have been scattered from one end of this country to the other. Princeton University is spending $250,000 to get Jefferson's papers back together.

To this end, I have built a library in Independence in which I have placed all my papers for research and study by all qualified students. There are about 4 million of those documents. On dedication day last July the building and its contents were turned over to the National Government and when all my papers have been properly sorted, I hope that some of you will come to Independence and work in this library.

President Hoover has built a library at Palo Alto, Calif., which contains all of his papers. President Roosevelt's are at Hyde Park where they are being properly indexed under the supervision of the National Archives.

When my library was being dedicated, I invited Mr. Hoover, Mrs. Roosevelt, the leaders of the minority and the majority in the House of Representatives and in the Senate, other Senators and Congressmen and half a dozen Governors, and I was up against it. I did not know what was going to happen with all those people there. They are the topnotch people of their political parties and of the country. My chief of protocol took it upon himself to go to Europe. I wrote to Mrs. Edith Helm, who had been secretary to Mrs. Truman and Mrs. Roosevelt and to Mrs. Woodrow Wilson and said I would be happy if she would come out and help me as chief of protocol for that day. She wrote me: "I am 82 years old. It gets even hotter in Missouri than in Illinois. Besides, I don't see why you are so interested in protocol now. You never paid any attention to it when you were in office."

You know, Mrs. Truman was very pleased with Mrs. Helm's rebuttal. I want to tell you something. When the President is in the White House, he sets the protocol. No matter what he does, that is protocol.

The first three articles of the Constitution outline the three branches of the Government of this great Nation. Article I sets up the legislative branch of our Government and gives that branch certain powers and duties. Article II sets up the executive branch and gives it executive powers and duties. Article III sets up the courts and creates a Chief Justice. He is not Chief Justice of the Supreme Court. He is Chief Justice of the United States and he has supervision over all the courts of the United States. It gives that great Court and all the rest of the courts—Federal courts—certain powers and duties.

The Founding Fathers outlined the Presidency in article II of the Constitution, but they left a good meany details rather vague. The office of the Chief Executive has grown with the progress of our Republic. It has given our Nation a means of meeting our greatest emergencies, and today it is one of the most important factors in determining whether or not we provide leadership for the free world, leadership for the Western Hemisphere and leadership for the people of the United States.

If you take the powers of the President as enumerated in article II and the duties that have been given to the President by the growth of our country, you will conclude that the President has the most difficult job in history. It is also the most honorable and powerful office in the history of the world and one of which every American should be proud, because the President is given his position by the voice of the people. No dictator in history ever rose to a position of such power and influence as this chosen spokesman of a free electorate.

The President's job is really six jobs. You must bear one thing in mind that, as a former President of the United States, my sympathies are always with the man who holds these jobs in the White House. I may not agree with him politically, but he still has my sympathy, because I know exactly what he is up against.

I am going to enumerate the President's duties. One of the first jobs the President has—and this is the one that is enumerated first in article II of the Constitution—is to take care that the laws are faithfully executed. He takes an oath that he will support and defend the Constitution of the United States and enforce the laws of this great Government of ours. You know that every officer in the United States takes that oath to support and defend the Constitution of the United States. I have taken it about 40 times, and it impresses me and did impress me just as much the last time as it did the first, because it is equally awesome to have that responsibility in the smallest political job as it is to have it in the greatest political job in the history of the world.

The next duty of the President is to be Commander in Chief of the Armed Forces. He appoints and commissions officers in the Army, Navy, and Air Force. He has complete authority over the Armed Forces of the United States. He can place admirals and generals in command, and when it is necessary, he can take them out, too.

Sometimes, I am sorry to say, that is necessary. This is a very great responsibility and one that has to be considered very, very carefully.

The third job I would like to think about and would like you to think about, too, is the President's role in foreign affairs. He is the foreign policymaker of this Nation. The Constitution says that he shall appoint ambassadors, with the advice and consent of the Senate, and receive ambassadors and ministers from foreign governments. Few of us fully appreciate what this means. Our ambassadors are the personal agents of the President, his eyes and ears abroad. The ambassadors of other countries cannot operate here unless they are approved by the President. The President recognizes foreign countries diplomatically and this is a great power and responsibility.

In times past, it used to be customary for an ambassador to be ushered in to the Presi-

dent, and he would stand up with great formality and read a long speech. The President would have to sit and listen to it and then have to read his own speech. Now, when an ambassador is introduced formally to the President, he hands the President his speech, the President hands him his, and they get up and part company.

The President is our foreign policymaker, also, because he negotiates treaties. The Constitution says that he shall have the power to make treaties by and with the advice and consent of the Senate. In the days when the Constitution was young, George Washington tried to carry out the provisions by going personally to the Senate with a proposed treaty to get their advice and consent during his negotiations. The Senate said they couldn't act on things that way. They would have to appoint a committee. The committee would have to report back. They would have to have a lot of hearings and they couldn't work properly with the President sitting there wtih them. At this, George got pretty indignant, and he made some very salty remarks, which I cannot quote here. So, ever since, the President has negotiated the treaty first and then submitted it to the Senate for approval, but he can make executive agreements wth foreign countries and send special representatives without consulting anybody. Presidents have always done these things when needed.

Turning again to the Constitution, the President's next job is his legislative responsibility. The Constitution says that he shall from time to time give Congress information on the state of the Union and recommend measures for their consideration. Of course, he must approve these laws before they can become effective, unless the Congress can muster a two-thirds vote after his veto. I have had that done to me a time or two.

The Constitution has written the President in as a vital part of the legislative process and he is not supposed to stand by and be a "yes man" for the Congress. He must fight for his legislative program and if he doesn't, de doesn't get one.

The fifth job of the President is the one from which I got the greatest kick. The President is the head of his political party. You won't find this job mentioned in the Constitution. Political party leadership was the last thing the Constitution contemplated. The Founding Fathers did not intend the election of the President to be mixed up in the hurly-burly of politics, but our two-party system, as it developed, changed all this. The electoral college became a formality and the President has come to be elected by the whole people. As a result, the President has emerged as the man who leads his party to political victory and who is expected to set the policies of his party for the future.

The President must try to convince the people that his party can run the National Government better than the opposition, but at the same time, he must never forget his responsibilities to all the people in the Nation, regardless of party. He must also think of the welfare of the Nation as a whole.

The President and the Vice President are the only officers elected from the United States at large. As I have said, the President is the only lobbyist in Washington who looks after the interests of about 150 million people. The other 15 or 20 million are able to hire people to go to Washington to present their claims to the Congress on any subject they choose. That is lobbying, a perfectly legitimate function and an exericse of the right of petition, but there are 150 million people who don't have any lobbyists. It is the business of the President to find out what is good for those 150 million people and to act as the principal lobbyist in the Nation for their welfare and benefit. When a President does that, he usually has a successful administration.

I have had a lot of experience on this subject; I know something about it and the first job of lobbying I ever did outside the White House was not long ago when I went to the Congress and got them to pass a bill for the indexing and microfilming of all the Presidential papers in the Library of Congress.

The President cannot carry out his job without a lot of opposition. The Constitution makes the executive and legislative separate and independent branches of the Government, and, as a result, there is a certain amount of conflict built into the Constitution. The separation of powers was not devised to promote efficiency in government; it was devised to prevent absolutism and dictatorship. That is the most important statement I am going to make tonight. This division of powers was established for the purpose of keeping the Government out of the hands of a dictator. So, a certain degree of struggle between the President and the Congress is natural.

It is the duty of the President to see that the powers of the Presidency are not infringed upon. Some elements in Congress are always trying to legislate him out of office. To them, it is a legislative government, which is not what the Constitution provides for.

I think the Constitution is the greatest document of government that has ever been written. You can read it every day and you always will find something new in it. It took the Supreme Court 150 years to find a certain word in the Constitution—that word was "welfare."

The President is the social head of the Nation. That is a great thing and all the stuffed-shirt socialite people like it very much. They think it is the finest thing in the world to be able to meet princes and dukes and kings and queens. Of course, when distinguished guests of that kind come to the United States, the President is their host. It is a vital part of our international relationships, but you ought to see the pulling and hauling, when a state dinner is given, by all of the people who want to sit close to one of these dignitaries. The President gives five or six state dinners at the White House and several large receptions, and if you think it is a lot of fun to stand in line and shake hands with 2,700 people whose names you can't even understand when they are pronounced, I wish you would try it.

At diplomatic receptions, the wife of the President has a tremendous burden. The last year we were in the White House, Mrs. Truman shook hands with 50,000 people by count. I shook hands with 25,000 and dodged the rest. There are receptions for organizations, the D.A.R., the Colonial Dames, the Boy Scouts, and Girl Scouts, and everything else. Mrs. Truman would stand in line as long as she could and then one of the Cabinet ladies would spell her for a while. The social end of the President's office is a necessary job and a very important one.

I have enumerated the six full-time jobs that one man has to fill and there isn't any way under the Constitution that he can avoid them. He must do them. When they aren't done, it is too bad for the country. There is only one way to do these jobs, and that is to keep everlastingly at them and to give them as much time as possible out of 24 hours. I used to get up at 5 o'clock in the morning, read all the papers, take a walk and go to the White House office. I would have a session with the staff, and with organizations that had dates with the President, and then at 1 o'clock would start the same thing over again. You never get enough time to do everything. I used to wish there were 48 hours in the day and 8 days in the week.

There have been Presidents who have been working Presidents and there have been Presidents who did not appreciate their responsibilities. Washington was Commander in Chief of the Colonial Armies and he was the Presiding Officer of the Constitutional Convention in 1787. As the first President, he established the Government of the United States. He had his troubles with Congress. He was abused unmercifully in the press of that day, as all great Presidents have been. If you think some of our later Presidents have been roundly abused, you ought to go down to the Library of Congress and see what the newspapers had to say about George while he was in the White House.

Washington was followed by a New England reactionary, John Adams, who claimed special privilege for a part of the people. He left the White House at midnight rather than speak to the next President, Thomas Jefferson. Before their deaths, however, they became great friends. They both died on the same Fourth of July, and as Jefferson lay dying, Adams' last words were: "The country is safe, Jefferson still survives." Jefferson was a real Democrat, although just as much as aristocrat as Adams. Thomas Jefferson explored the Northwest with Lewis and Clark and set a precedent for the exploration of other territories. He was bitterly attacked in the press which called him both an atheist and a traitor.

He was followed by Madison, James Monroe and John Quincy Adams, and then came Andrew Jackson. Jackson moved the money capital from Philadelphia to Washington and released the stranglehold of old man Biddle from the throats of the people. You ought to read what the papers had to say about Jackson. He was followed by William Henry Harrison and John Tyler. John Tyler's brother was my great-grandmother's father.

Then came James K. Polk, who bought all the Southwest from Mexico and paid the same price as Jefferson had paid for Louisiana—$15 million. At the time, it wasn't worth a cent. If I said that in Los Angeles, they would throw me in the Pacific Ocean.

Polk was followed by a professional soldier, Zachary Taylor, whose daughter married Jefferson Davis. When Taylor died in office, he was succeeded by Fillmore, who, in turn, was followed by Franklin Pierce and Buchanan, all easygoing Presidents.

Then came Abraham Lincoln, who, by making the Constitution fit the emergency, saved the Union and really established the United States of America as a growing concern and as a great Nation.

Some people are impatient with the United Nations and wonder how in the world they are going to get it to work. It took 50 years for the U.S. Government to become firmly established and we had to whip ourselves to do it.

Lincoln was followed by Andrew Johnson, U. S. Grant, Rutherford B. Hayes, James Garfield and Chester Arthur. I could dwell on each of these men, but that is not my objective. I will tell you one story about Chester Arthur. He was a very fine-looking man and wore striped pants and a swallowtail coat. The White House had been furnished in the time of Jefferson and Monroe and John Quincy Adams with some very beautiful furniture—antiques that would be invaluable today. Arthur loaded it all into nine vans, had a sale and then bought some Victorian furniture.

Grover Cleveland, a native of this great State, was the next President. He established a two-party system and made it strong. After Ben Harrison, Cleveland was elected again, but he was not the same Grover Cleveland. William McKinley, who followed, was succeeded by Theodore Roosevelt, who undertook certain reforms and, because of his policies, was finally disowned by his own party.

William Howard Taft was a kindly, easy-going man, who was followed by one of the greatest of the great Presidents, Woodrow Wilson.

Right here, I want to put in a plug for Mr. Hoover's book. He has written a biography of Wilson that is one of the most objective things ever written about Woodrow Wilson. It is a very wonderful thing for one President to write the biography of another.

Wilson was forced into the First World War. He not only recognized world history in the making, but he realized the effect it would have on the United States.

Wilson was followed by three more Presidents and then came the election of Franklin D. Roosevelt brought on as a result of the great depression. He was a great man. He and Winston Churchill organized a free world and won the war that saved it. The United Nations was established. The great Roosevelt was followed by me and the present occupant of the White House.

I am anxious for all of you young men and women to become curious about your country and the world, and to follow through to keep this the greatest republic in the world. It is up to you youngsters. It is up to you now to make this Republic what the Founding Fathers wanted it to be, and you cannot do it unless you study the history of the United States and the world.

Our great Presidents were followed by other Presidents who were not so great. The history of the United States, in the light of the Presidency, is one of the most interesting things you can come across. Then, when you begin with the things and the deeds that happened all during the period since this Republic was founded, you will find something that will make you the proudest person in the world, that will make each one of you youngsters go right ahead and carry the Republic on as it should be, because you have the greatest government the sun has ever shone upon. I am proud to have been a part of it.

Resolutions of the Young Democratic Clubs of America

EXTENSION OF REMARKS

OF

HON. NEAL SMITH

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 7, 1960

Mr. SMITH of Iowa. Mr. Speaker, the 2,000 delegates assembled at the national convention of Young Democratic Clubs of America in Toledo, Ohio, last November 17 through 20, divided into subcommittees and worked very hard upon producing resolutions reflecting the majority thinking of the members of the organizaiton. The product of their long hours of work in the fields of economic policy, conservation, and natural resources and social legislation is an example of the kind of thinking young people in America today are capable of.

As chairman of the convention I witnessed the work, and so that others may see the product of their labor, under unanimous consent I include the resolutions on this subject in the CONGRESSIONAL RECORD, as follows:

ECONOMIC POLICY

BUDGET

Capital investments by the Federal Government in fields such as power, reclamation, conservation, navigation, and irrigation are not handled systematically in the Federal budget but are lumped with budget funds for paper clips, stationery, and other current operating expenditures. Consequently, many so-called economy drives in Congress have ill-advisedly cut or abolished capital investment programs under the false impression that such cuts would result in economy. This confusion is caused by the failure of the Federal Government to distinguish between capital investments (proper development of our national assets) and current operation expenditures.

We strongly endorse legislation for the establishment of a Federal capital budget which provides for a distinction between capital assets and current operating expenditures in the Federal budget.

BUDGET POLICY

A balanced Federal budget in a time of national prosperity is a fine ideal, however, it must not become a shibboleth to be followed blindly nor an idol to be worshipped to the exclusion of greater national needs.

We must always first measure what expenditures are necessary to national survival in the defense and foreign aid field, and for national well-being and growth in such domestic fields as housing, education, conservation, sceince, and health—rather than just using an arbitrary dollar figure or last year's budget or 5 percent under last year's budget.

The Young Democratic Clubs of America believes we must elect a Democratic administration in 1960 in order to change the nearsighted policies of the present administration.

INTEREST RATES

It is a well-recognized fact, even admitted by many prominent leaders of the present administration, that the Soviet Union is not only far ahead of us in the missile and space race, but perhaps even more serious, has been able to achieve a rate of economic expansion of about 9 percent per year compared to our laggard rate of about 2 percent per year during the recent years of Republican administration.

The Eisenhower administration took to Washington in 1953 the Wall Street economic philosophy of tight money, and this policy will be continued by any succeeding Republican adminsitration. This policy has been one of the chief causes of the failure of our economy to expand and our people to prosper sufficiently during the last 7 years; it has caused an increase in Federal taxes because of almost doubling the national debt service; and it has contributed substantially to inflation and everyone's cost of living. It has particularly hampered homeowners and small business. The Young Democrats of America go on record as declaring that it is necessary that the tight-money policy be reversed, and that the U.S. Treasury Department and the Federal Reserve Board work together to see that money rates and credit expansion serve the needs of an expanding population so that our production will return to at least a 5-percent annual growth rate and that this Nation may prosper at all levels and have the strength to remain free.

CONSERVATION AND NATURAL RESOURCES

We believe that the Nation's foremost task is to develop and protect our human resources. To do this we must manage our bountiful natural resources in such a manner that future generations yet unborn can say of their ancestors, "In the last half of the 20th century those responsible for formulating our resource policy—left our forests, rivers, and lakes in better condition than they found them—to them we owe our bountiful heritage."

We define conservation as the wisest use of natural resources for the greatest good for the greatest number of people forever.

The land and water resources in the public domain are part of the commonwealth. As owner, the public has the right to expect the wise use of these resources for the creation of new job opportunities, consistent with our goals of conservation.

The general welfare of the American people demands that the Federal Government follow wise policies of stewardship of our natural resources. We believe in the deliberate development of all our resources for the maximum public use. We oppose the Republican administration's policies of accidental and wasteful development primarily for the benefit of special economic interests.

We urge that the administration of the various resource agencies be returned to the professionals in these fields by replacing present incompent political appointees.

ATOMIC ENERGY

The taxpayers of the United States have invested many billions of dollars in the activities of the atomic age. The fruits of this investment belong to the American people. The Republican administration desires to take these fruits away and to give them to special interests for private profit.

We believe that the fruits of the public investment in the atomic era must go to the entire public. Therefore, we support the following: Public ownership of all atomic power generation plants, and adequate Federal control and protection against the hazards of radiation.

We call for an international investigation of the effects of radiation on ocean life and the human race with a view toward negotiating international treaties to protect against threats from the sinking of nuclear-powered vessels and the dumping of radioactive wastes. We urge a similar policy with regard to nuclear-powered aircraft to protect the human race against radiations from accidents to nuclear-powered airplanes.

ENERGY

We believe it essential for an expanding economy that we develop a positive program of continued development of all our energy resources and that the costs of Federal Government participation be allocated in the Federal budget as capital assets rather than as current expenditures.

In order to allow for development of the full potential of each region in the United States and to avoid artificial rate decisions influencing the location of industry we support a federally owned national and regional grid system for the transmission of electric energy.

We urge the encouragement of commercial development of the vast oil shale reserves of this Nation.

We firmly support legislation to establish effective regulation of price and sales of all natural gas sales as well as location of transmission pipelines.

We firmly believe that import controls on oil should be relaxed to allow the U.S. consumer the advantages of low cost Canadian and Latin American oil supplies.

WATER

We believe that the control and the benefits of the rivers of the United States belong to all of the people. We oppose the discredited partnership and multi-agency programs of this administration for river development.

The management of a river and a river basin is one problem. We believe that the greatest benefit to the most people (from the standpoint of development of natural resources, needed power, and irrigation water; the preservation of natural beauty of wilderness areas, recreational areas, and fishing areas) is realized in the comprehensive planning and Federal development of entire river basins.

We support sound measures for Federal multipurpose development of the power and water potentials of the Columbia River Basin, Central Valley of California, Upper Columbia

Basin, Missouri Valley, and the Colorado River, and other river basins.

We specifically urge the Democratic Party in the Congress to support an amendment to the Federal Power Commission Act to insure that the FPC grant licenses for construction of dams which provide only for maximum full development.

We urge the establishment of a Department of Natural Resources and urge that the civil functions of the Corps of Army Engineers be transferred to that department.

We believe that a thorough investigation is needed of the reemergence of the dominating economic power of electric utilities and of the Securities and Exchange Commission's inexcusable assistance to mergers in the public utility field. We also call for legislation to curb the outrageous abuse of millions of dollars of ratepayers' money spent to influence the American public by the private utilities of this country. Their attacks upon public power have been dishonest and irresponsible.

OUTDOOR RECREATION

The demands upon our recreational resources are accelerating and will continue to do so with the increase of population growth, the increase in leisure time and the increase in personal income.

We favor an increased systematic development and expansion of natural and State parks, campsites and lakes and streams for recreational purposes.

We urge increased appropriations for the maintenance of existing facilities, particularly for National forests and State parks.

We urge continuation of the program to develop and expand park and camping facilities for all Americans and to protect all recreational areas by means of a national antiliitter policy.

We favor legislation to create an adequate national wilderness preservation program.

We urge the adoption of legislation to establish a Youth Conservation Corps.

POLLUTION

Water and air pollution are primarily an interstate and Federal problem. We therefore urge the adoption of legislation establishing Federal regulations to protect our air and rivers of pollution. We urge Federal regulations to regulate pollution from exhausts of motor vehicles.

We urge the Congress to provide a national policy of regulation of artificial weather control and cloud seeding.

FORESTRY AND TIMBER

We endorse the Forest Service recommendation for doubling our timber and pulp and other forest products output by the year 2000 by means of long-range programing of increased forest acreage, more effective use of forestlands, construction of forest roads and increased efforts to control forest insects, disease, poisonous weeds and fires. We favor the reinvestment of the Federal share of our Forest Service earnings for the purpose of increasing forest production.

FISH AND WILDLIFE

We urge immediate action by the Congress to provide much larger funds for research and programs to sustain and enlarge anadromous fish runs in our rivers and in the ocean.

We favor a policy of providing access to the public of all streams, banks, lakesides, and river courses for the purpose of fishing and other recreation on public as well as private land. We believe land bordering interstate waterways and their tributaries should be public rights of way, in the same manner as the waterways.

RECLAMATION

We urge the preservation of the antimonopoly provisions of the reclamation law.

We believe in the preference of public agencies for power distribution and the 160-acre limitation. We oppose piecemeal undermining of these protections by such devices as special bills exempting particular projects.

MINERALS

We believe that a healthy American mining industry is essential to the welfare and safety of the American people.

We condemn the policies of the Eisenhower administration which contributed to a deterioration of our domestic mining industry. Our mineral reserves are stockpiles and should be maintained upon at least a minimum standby basis.

At the same time we urge the Congress to develop policies to allow the American economy to utilize more widely the more economic mineral deposits of undeveloped countries which is consistent with our policies of assisting these countries toward full economic development.

MAPPING

We urge a program of combined Federal and State aid to procure new topographical maps of the United States for evaluation of forest reserve, water resource and soil conservation problems.

RESOURCE EVALUATION

We urge an evaluation of the resources of the free world toward the long-range development of marketing, production, and distribution programs between our Government and our major resource industries and the governments and major resource industries of the free world.

SOCIAL LEGISLATION

SOCIAL SECURITY

The aged, persons unable to work because of illness or injury, widows, and minor children must be provided with adequate income in maintain their dignity as human beings, their health, and their opportunity to happiness and comfort. Such basic human requirements can only be provided through a program of private and public insurance. As social security programs are a proper and necessary function of government, we strongly urge that the Congress greatly expand the scope and increase the benefits of the social security programs.

HEALTH

We urge the adoption of a program of hospital and medical benefits for our senior citizens on social security covering all illnesses including mental illness with the cost to be met by Federal funds.

MEDICAL EDUCATION

We urge an increase in national expenditure for medical research with particular attention to preventive medicine. Federal, State, and private funds should be made available to greatly expand medical training facilities of all types.

PURE FOODS AND DRUGS

We urge an immediate expansion of the investigative personnel of the Department of Health, Education, and Welfare, so that the present pure foods and drugs laws may be enforced as they were intended to be. We further strongly urge a strengthening of these laws.

HOUSING

In the face of the reactionary Presidential vetos of the first two housing bills and the resulting passage of the greatly weakened housing bill, we reaffirm our belief that the Democratic Party must continue its fight for a meaningful housing program. A comprehensive program must include Federal aid to local governmental units for urban renewal, low-cost housing, industrial development and unified city planning and development.

We further favor legislative action designed to provide long-term low interest rate mortgage money for the construction of new private housing units.

REPRESENTATIVE GOVERNMENT

Proportionate representation in government is a fundamental requisite for maintaining a free, democratic government. Today, widespread inequality exists in State legislatures and the Congress of the United States. This situation is brought about by a lack of the reapportionment process and the basis used for apportioning legislative bodies. We urge young Democrats throughout the Nation to work toward solutions of this basic problem which threatens our democratic form of government.

NATIONAL CONVENTION

In order to encourage young Democrats to enter into and discuss national political issues, the Young Democrats of America urge the Democratic National Committee to employ young Democrats as ushers, doormen, etc., for the Democratic National Convention to be held at Los Angeles in 1960.

CONVENTION HOSPITALITY

Whereas the Lucas County Young Democrats and the Ohio League of Young Democrats have expended tremendous energy in planning, organizing, and executing this 11th biennial convention of the Young Democratic Clubs of America; and

Whereas this convention has been the most successful in the history of the Young Democrats: Now, therefore, we commend the Young Democrats of Ohio for their unselfish efforts in making our stay in Toledo a memorable one.

THANKS TO CHAIRMEN

Whereas Congressman ED EDMONDSON and Congressman NEAL SMITH, by their excellent chairmanship of this convention, have contributed materially to the success of this convention; therefore be it

Resolved, That the Young Democratic Clubs of America thank Congressman EDMONDSON and Congressman SMITH and wish them the greatest success in their political careers, which are a credit to the Democratic Party and to themselves.

Save Our Shorelines

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 12, 1960

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the CONGRESSIONAL RECORD an article appearing in the September 1959 issue of Outdoor America under the byline of Mr. J. W. Penfold, a distinguished conservationist and officer of the Izaak Walton League.

The article sets forth in plain terms why the Congress must enact during this session the save our shorelines bill sponsored by a number of us here in Congress.

Failure to do so may witness an irreplaceable natural resource and an irreplaceable part of America's heritage developed for other purposes and loss to our future generations without hope of recovery.

The article referred to follows:

SAVE OUR SHORELINES

(By J. W. Penfold)

"The last 5 miles of undeveloped beach between Miami and Daytona" reads an ad

in the Wall Street Journal, "$1 million down—the balance on easy terms."

"National Steel Co. Let's Contract for $100 Million Steel Mill on Indiana Dunes," is a recent eye-catching headline. "Area had been sought for public park."

And a few random samples from the news:

Reports show attendance at national and State park areas up 14 percent above last year's record high.

A Pennsylvania park developed to handle 5,000 people was swamped with 250,000 over the July 4 weekend.

"As a result of action to abolish the State park strip along the Overseas Highway," comes another plaint, "before very long there won't be one spot along the 100 miles of Florida Keys where a fisherman can launch his boat without paying tribute to some developer."

Items bearing the same message, in endless variation, can be found in the press almost every day, in almost every section of the country which boasts of ocean or lake shore frontage. In the aggregate they—both the number and urgency of the cases of local crisis—add up to a frightening conclusion: our shorelines are vanishing in a tidal wave of urban sprawl.

Demand for water frontage—acute almost everywhere—has reached a peak in Florida, where bulkhead, dredge, and fill replace the natural shorelines with barren canals, boat slips, and the stench of stagnant water. That such improvements may destroy the breeding and nursery grounds for important commercial and sport fishes and obliterate winter feeding areas of hard-pressed waterfowl populations disturb the developers not one whit.

Nor will the trend be reversed. The pressures on our shorelines arise naturally from growth. But the need for wise development is snatched as a shield by the fast buck operators. And thoughtful Americans thus must seek means whereby the public values may survive in a trend which reflects burgeoning populations, improved standard of living, and a yen for the outdoors.

There can be but one answer and it's not a new one in any sense. The Indiana Dunes presents the classic case:

Over 40 years ago Stephen Mather, first National Park Service chief, urged that the 30 miles of Indiana Dunes along the Lake Michigan shoreline be designated for preservation in the National Park System. He foretold that except as it was so, it would be lost to the public in the years to come.

In the early 1950's, the Izaak Walton League's Indiana Division tried to set aside the dwindling Dunes, preferably as a State park, but found little support from a still-apathetic public.

Today conservationists, faced with overwhelming odds, are attempting to save the last 4-mile stretch not already lost to industry and city growth. We are apparently too late to save it all; a steel mill is under construction; the beach and Dunes area—which could serve recreation needs of the new mill's workers, their families and countless other new residents—has now been whittled down to 2 miles.

Just 2 miles. Not much—but doubly valuable because of it. Perhaps this small remaining fraction of what was once a glorious public potential can be salvaged if public officials display the vision the situation demands.

There are, fortunately, men of good will who are determined that the sad tale of Indiana's Dunes will not be repeated again and again throughout the country.

Within the past few months the administration sent to Congress a rather sharply reduced version of a bill to do something about our fast-vanishing shoreline. It would provide authority for the Secretary of Interior to establish three national shoreline recreation areas not to exceed 100,000 acres in total, and an authorization to spend up to $15 millions for the acquisition of lands. The areas to be selected were not named.

Senator RICHARD L. NEUBERGER (Oregon) demonstrated bipartisan recognition of the problem by introducing the measure at the administration's request. Senator GORDON ALLOTT (Colorado) cosponsored it.

This bill (S. 2010) was so patently inadequate, however, that key Members of Congress who had given the problem thorough study appraised it as hardly a start on the task of preserving examples of superlative shoreline for the public.

Senator JAMES E. MURRAY of Montana, chairman of the powerful Interior Committee, Senators CLINTON P. ANDERSON (New Mexico), PAUL H. DOUGLAS, Illinois' determined fighter for the Indiana Dunes, and NEUBERGER joined forces to prepare a broader, more comprehensive bill. Introduced on July 29 as S. 2460, Senators MOSS (Utah), KEFAUVER (Tennessee), MANSFIELD (Montana), RANDOLPH (West Virginia), LANGER (North Dakota), MCNAMARA (Michigan), GRUENING (Alaska), HART (Michigan), MCCARTHY (Minnesota), GREEN (Rhode Island), ENGLE (California), BIBLE (Texas), BYRD (West Virginia), and MUNDT (South Dakota), joined as cosponsors.

At almost the same time JOHN DINGELL (Michigan), LEE METCALF (Montana) and JOHN SAYLOR (Pennsylvania), were introducing similar bills (H.R. 8445, 8449 and 8519) in the House. WAYNE N. ASPINALL (Colorado), House Interior Committee Chairman, has expressed a favorable attitude and called for departmental reports on the bills.

The 10 shoreline recreational areas that would be authorized under the bill would be established as described and pictured on these pages.

The legislation itself is simple in the extreme:

1. It authorizes the Secretary of the Interior to "take appropriate action toward the establishment of national shoreline recreational areas," following recommendations by the National Park Advisory Board, consultation with the Governor of the State concerned and public hearings in the area.

Objections raised on grounds that the measure places too much power in the hands of the Interior Secretary seem to be based on imperfect understanding.

Congress can be trusted to study each area carefully before the original bill is passed. Public hearings are required. And routine appropriations processes offer Congress an annual review of land acquisition programs in each authorized area.

2. It provides for the establishment of the basic regulations for their administration. Recreation uses which have been traditional in the areas will be continued, such as fishing, hunting, and waterfowling.

3. It provides for assistance to the States (up to one-half the cost, subject to rather stringent regulations and appropriations) in the acquisition of State-managed shoreline areas which are best suited for inclusion in the State park systems.

4. It provides for thorough study of potential areas by the National Park Service, with the cooperation of the appropriate State, to determine if they warrant establishment either under the National or State park systems.

5. It authorizes funds up to $50 million for acquisition of the national areas, $10 million for assistance to the State acquisition programs, and a nominal sum for the necessary study of additional areas. Funds are anticipated to be spent over a series of years.

The scope and purpose of the program has been most dramatically expressed in the slogan coined by Senator DOUGLAS: "S.O.S.—Save Our Shorelines."

The legislative sponsors, the administration, the Izaak Walton League, conservationists, and the public know that to save anything of our heritage for ourselves and the generations to come we must act.

May we all have the courage to act promptly and vigorously.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

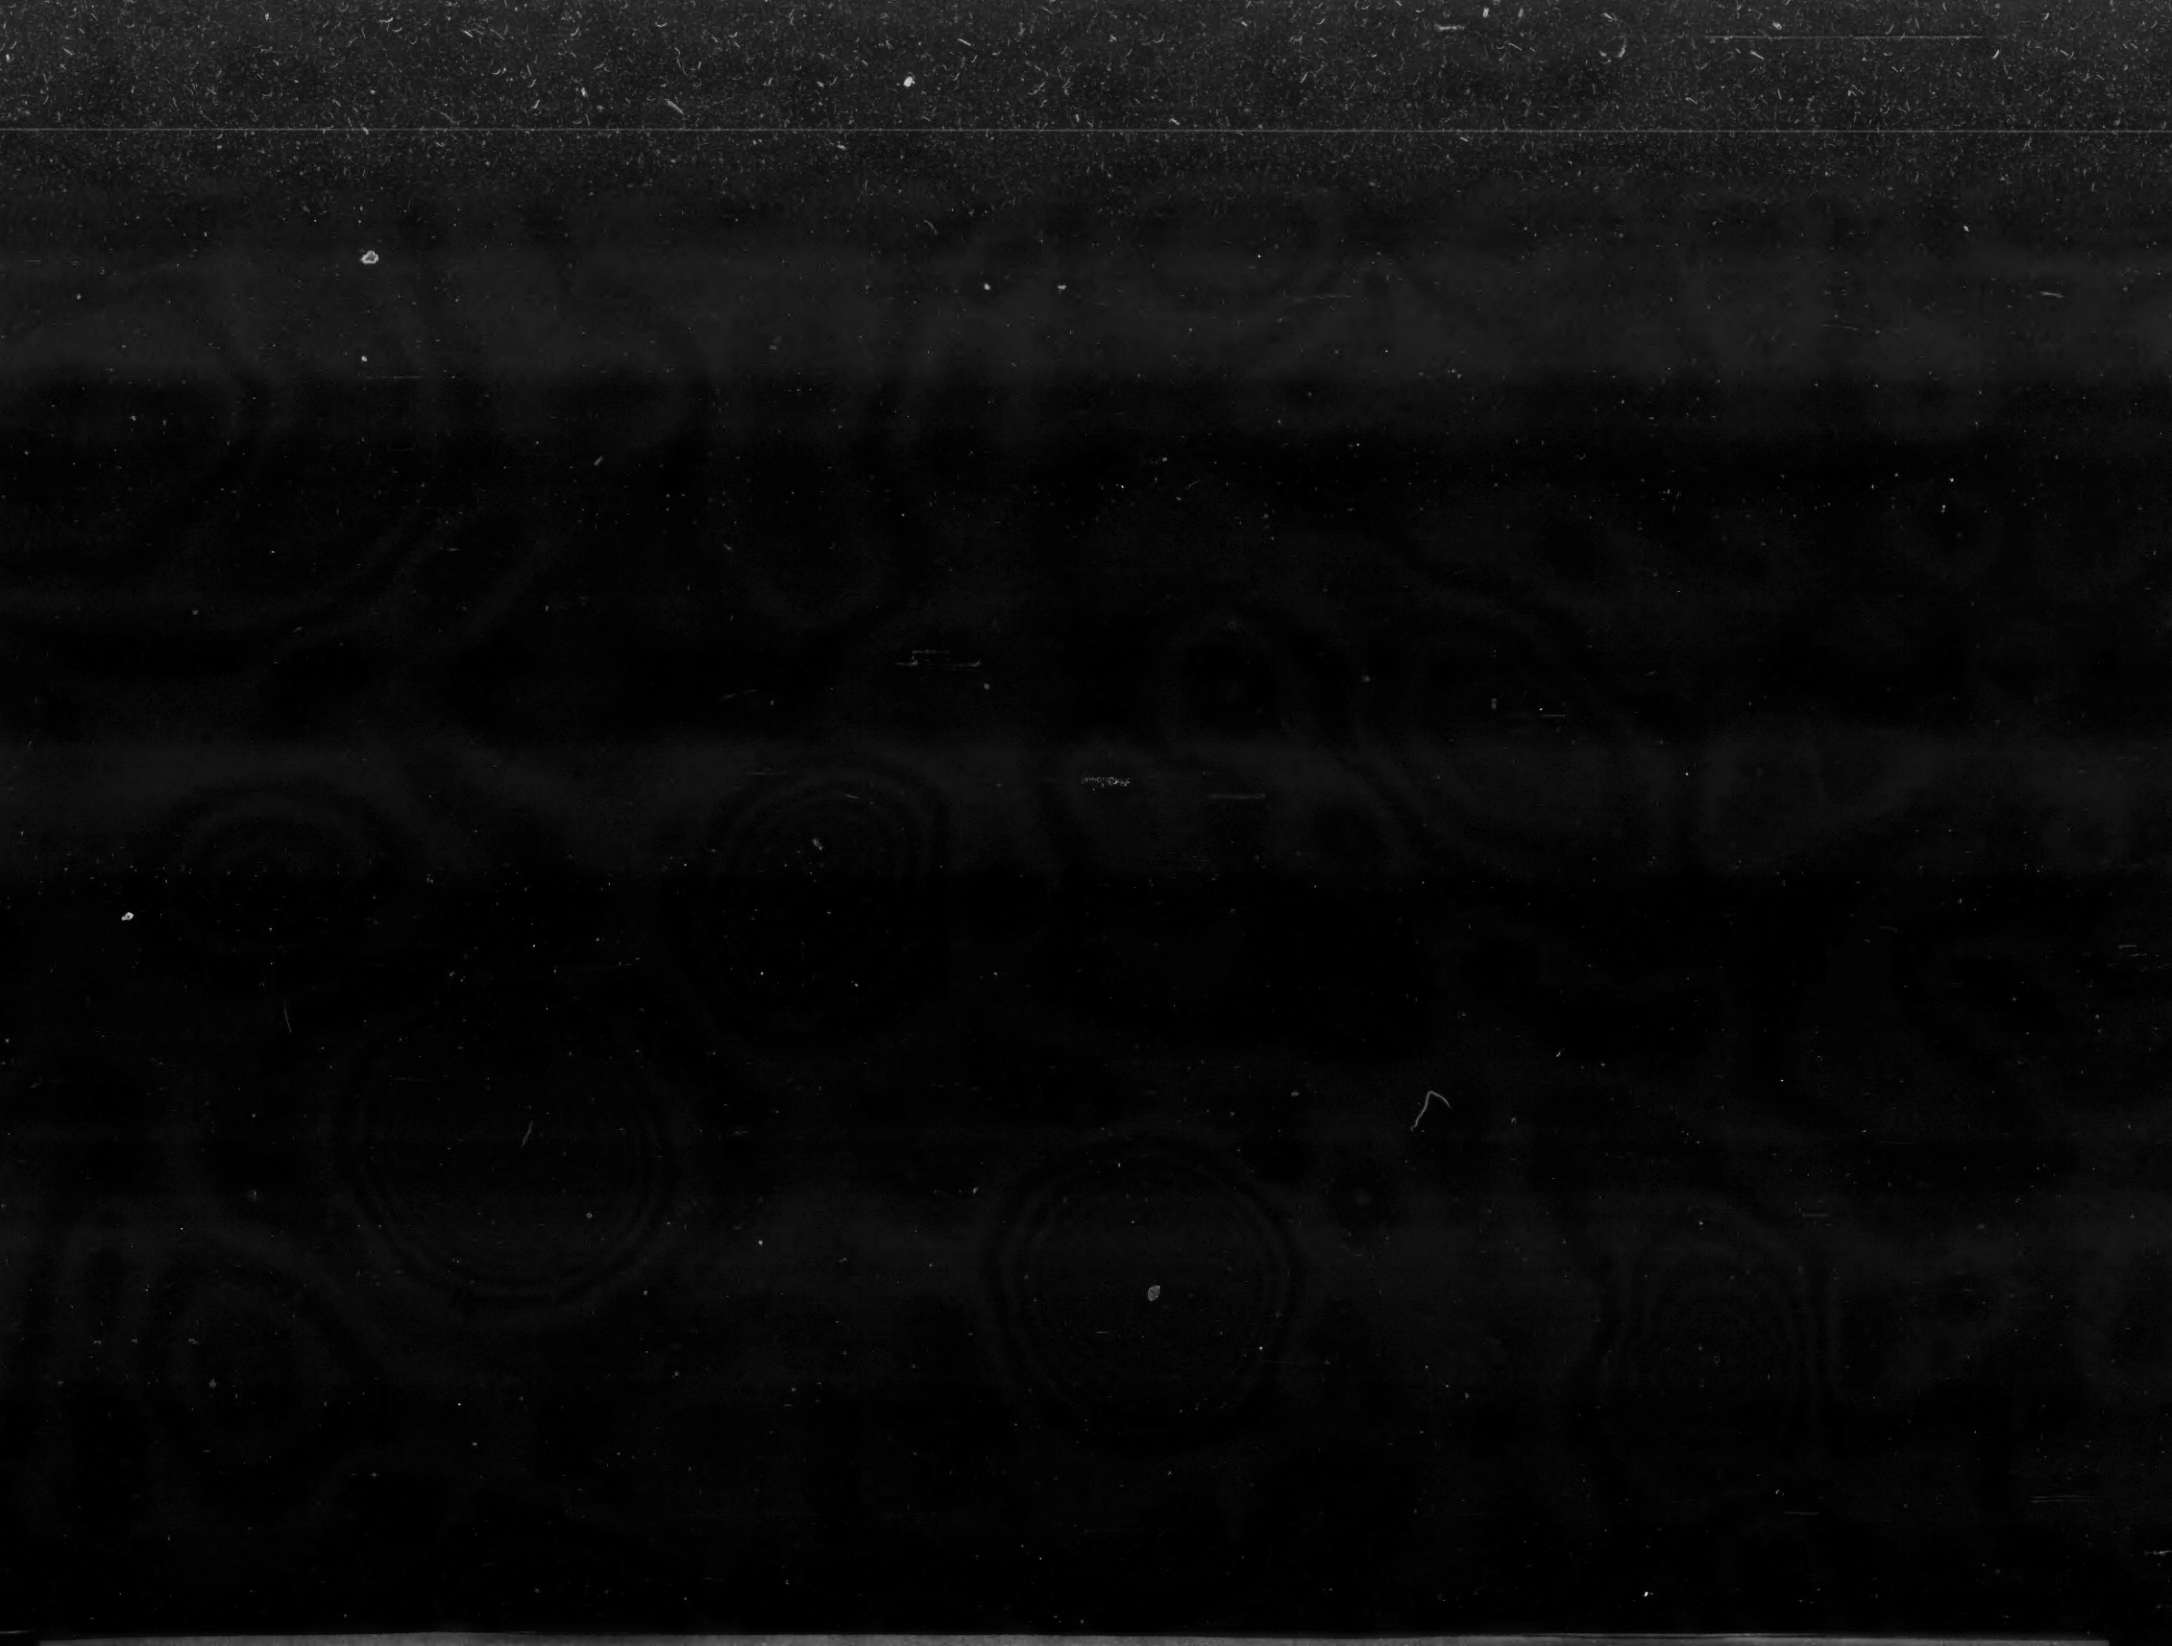
The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.



Appendix

Address by Hon. Jennings Randolph, of West Virginia, to Membership Dinner of Veterans of Foreign Wars, Post 629, Fairmont, W. Va.

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Wednesday, January 13, 1960

Mr. MANSFIELD. Mr. President, on behalf of the distinguished senior Senator from West Virginia [Mr. RANDOLPH], I ask unanimous consent that there be printed in the Appendix of the RECORD the text of an address delivered by him at the membership dinner of the Veterans of Foreign Wars, Post No. 629, Fairmont, W. Va., on January 10, 1960. The subject of the address is "The Obligations of Freedom."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE OBLIGATIONS OF FREEDOM

(Address by Senator JENNINGS RANDOLPH, Democrat, of West Virginia, to the Veterans of Foreign Wars, Post No. 629, Membership Dinner, Fairmont, W. Va., January 10, 1960)

Commander Jack W. Bunner, officers and members of the Fairmont Post of the Veterans of Foreign Wars, the topic which you have asked me to discuss is not only one of cold war implications. It is one which bears upon our hearts and minds and embraces the very nature of the meaning of freedom and the duties of free citizens to maintain it. But, as Dr. Karl Menninger said of the virtue of humility which disappears when one lays claim to it, freedom tends to disappear when it is confused with license.

The absolute and unabridged right to do as one pleases and to pursue personal pleasure and profit do not in themselves represent the liberty of men and women in a free society.

Freedom imposes its own obligations upon the citizen. The first of these is to understand the nature of freedom itself, the second to understand the nature of its opponents. Since each veteran here has contributed a portion of your life, and some have given blood in the defense of freedom, I know you have more than an average understanding of the cause of freedom. It has been suggested that I indicate ways in which such patriotic organizations as yours can best contribute to the common defense.

Let me devote a few words to defining the face of the evil with which we are confronted.

DIRECTOR OF FBI EXPLAINS GROWTH

One hundred years ago communism was a theory of history and economics coveted by a handful of men in Europe and England. Some 40 years ago, at the time of the Bolshevik revolution, communism commanded a small but militant force of some 80,000 followers. Today, it claims a total world membership of more than 33 million, with active party units located in 83 nations, according to J. Edgar Hoover, who has acted with courage and zeal in the uncovering of Communist schemes.

In addition, while the Soviet Union holds forth the olive branch of peaceful coexistence, international communism, aided by followers working within, has subjugated 17 countries with a population of over 900 million people or about one-third of those on this planet. While Khrushchev extends the hope of lessening world tensions, his Chinese partners are engaged in shipping contraband arms to North Africa, fomenting disturbances among their neighbors, and threatening the peace of Southeast Asia.

Though the capacity of the individual American citizen to affect the tide of events in these areas is limited, each of us can contribute by keeping ourselves informed on foreign affairs and by supporting the kind of military and economic aid programs which will strengthen our friends abroad.

But I interpose the declaration here that we have a double obligation to provide adequately for our domestic needs if we would keep our country strong.

The challenge on the domestic front, however, is one which can be accepted by each individual in his capacity as a citizen in a free society. And we must all make sure that our voices are heard and that our rights of suffrage are exercised.

As the primary target of worldwide communism, the United States is the chief objective of Soviet espionage. Again, according to FBI Director Hoover, Soviet defectors indicate that between 70 and 80 percent of Russian officials in the United States are members of the Red intelligence services. The importance which the Soviet Union attaches to the value of these agents is vividly pointed up by the sharp increase of Soviet diplomatic personnel in our country. In May 1954, there were 212 Russian officials in the United States; 5 years later, that number had increased to 313—or almost 50 percent.

SOVIET SEEKS TO SECURE SECRETS

Soviet espionage activities in this country expose their disregard for the doctrine of "peaceful coexistence." A 10-year "peace offensive" is but a brief episode within the "permanent revolution", as many of us believe. Just as this revolution continues unceasingly, so do the Communist espionage efforts in the United States. Using blackmail, bribery, and similar techniques, Soviet agents—many with diplomatic immunity—continue in their efforts to obtain our military, scientific and industrial secrets.

Aiding and abetting them is the Communist Party, U.S.A., an integral part of the international Communist conspiracy. It is composed of the disciples—the hard-core militants for the Soviet Union—who sing the praises of Communist Russia despite the dreadful inhumanity to man inflicted in much of the world by the Soviets and their satellites.

These are the people so blinded by their commitment to the false doctrines of communism and so indoctrinated in their hatred of the United States that they still give their allegiance to the Communist Party despite the Soviet brutalities in Hungary, the herding of countless millions of Chinese into the degradation of the communes and the rape of Tibet.

Within the United States there are certain groups which—because of the roles assigned them by the science of Marxism-Leninism—are targets for infiltration and indoctrination by the Communist Party. Five of these groups are of prime importance.

The first group is the working class, through which, according to Marxist ideology, capitalism prepares its own doom. During the 1920's the party's efforts in this field were spearheaded by the Trade Union Educational League. But in 1935, in accordance with a new party line of the united front, boring from within became the order.

And from 1935, when the CIO became the chief target, to 1949, when the Communist-dominated unions were expelled, the party was astonishingly effective in making its inroads. In a factual and carefully written book by Max M. Kampelman, "The Communist Party Versus the CIO," is this passage: "Assuming that of this number (70,000—the largest number of Communist Party members in recent years) one-half belong to the unions, * * * they would have had a maximum numerical strength of twenty-four ten-thousandths of the 15 million labor union members. Yet at the height of this power drive within the CIO, they dominated 12 to 15 of the 40 international CIO unions."

LOYAL LABOR UNIONS OPPOSE COMMUNISM

The final victory of the millions of loyal union members under the inspired and courageous leadership of such men as Philip Murray and Walter Reuther is now the source of much well-won wisdom and strength within organized labor. As a result, the American labor movement today is one of the strongest bastions against communism.

A second permanent target has been the Negro community. According to one of the tenets of Leninism the underprivileged minority group is ripe for revolution. Though time does not allow me to go into detail here, the failure of the Communist efforts among Negroes has been more conspicuous than in any other area. This has been due not only to the militant opposition to communism by the NAACP but also, and more fundamentally, the Communists have attempted to exploit rather than solve the problems of the Negro.

The third target group is the Armed Forces, which Lenin said must be infiltrated, subverted, and made ready for mutiny before a revolutionary situation could develop. Though the party no longer expects to bring about such a situation within the foreseeable future, it does exploit every event in the peace offensive in a concerted effort to influence servicemen, their families and draftage youth. These efforts, and the cries to bring the boys home are designed for both psychological and practical weakening of our defenses.

The fourth target is the youth group—because, under Marxist-Leninst doctrine, to win the youth for communism is to win the future. Here the party attempts to capitalize on youth's uncertainty in today's world, on its lack of knowledge of our country's history and traditions of democratic institutions, and on youthful idealism and the desire to join an appealing cause.

To combat this we must seek to lead our young people to a deeper understanding of democratic values and provide them with the kind of challenges in community and national life which will harness their idealism.

The final permanent target group is that of the intellectuals. The party achieved some notable successes in this field, particularly during the 1920's and 1930's, though even then it was but a small minority of the total number. However, during the late 1940's and 1950's most of these defected from the party—and though some have simply adopted another kind of authoritarianism, many have become effective sources of strength in the anti-Communist effort.

COMMUNISTS FAIL TO FIND VETERANS AID

Since World War II there has emerged another group which has become a prime target of the Communist Party, U.S.A. That is the veterans group. The party has adopted several techniques in this respect, but whether through establishing its own front organizations or by trying to infiltrate such loyal organizations as the VFW and the American Legion its aims have been the same—to influence veterans to support the peace offensive and to press immediate demands for the solution of all the veteran's problems.

These then are the main groups which the Communist Party seeks to infiltrate, divide, and subvert to its own purposes. We know their aims and purposes to be illegal; but often their methods are legal. We thus have the problem of how to combat this conspiracy without sacrificing the legal safeguards and moral principles that underwrite our own freedom.

The answer to our problem is certainly not to turn into a nation of amateur detectives and informers, each suspecting his neighbor at the slightest show of nonconformity in thought and action. Nothing could serve the Communist purpose better than the development of such a divisive national temper.

ALL DEMOCRATIC AND FREE PEOPLES CAN AID

I would suggest five general principles that we might observe in combating the threat of international communism.

First, maintaining our regard for the Anglo-American tradition of law. When the respect for law begins to crumble the people become the victims of the perversion of power. The intemperate attacks on the Supreme Court we have sometimes witnessed do not serve the cause of freedom, whatever one might think of some of the Court's decisions.

Second—and this is the cornerstone of Western civilization—is the traditional respect for the individual. Nowhere in the lexicon of communism is the word "individual" acknowledged as meaningful—always it is the masses, the proletariat, the bourgeoisie, the capitalist, the progressive, or the revisionist—never is it the average sensible man or woman who experiences the fullness of the emotional and spiritual life.

And now to the third principle, which is to maintain the integrity and the spontaneity of the good life of friendship, compassion, and love—the very antithesis of the class hatred which the Communists seek to inculcate.

Fourth, we must seek to extend the principles of civil liberties and economic and social justice to all of our citizens, regardless of race, color, or creed. Only thus can we present to the world at large the true America. And let us not forget that approximately two-thirds of the world's population are composed of people of color—most of whom have only recently been freed from the white man's dominance.

Finally, we must seek to extend these ideals to other nations within the international community and to live with knowledge of the aspirations of others beyond our shores. The true and really "permanent revolution" was that of 1776—a revolution in the spirit of man, and not in the ownership of the means of production. If we but maintain the faith in the Revolution of 1776 we will have the necessary armament to combat the Communist onslaughts, whether psychological, political, economic, or military.

Human Values and Red China

EXTENSION OF REMARKS
OF
HON. FRED MARSHALL
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 13, 1960

Mr. MARSHALL. Mr. Speaker, I commend to the attention of the House a new book on Communist China which gives special attention to the methods used in the brainwashing technique known as "Hsio-Hsi." Entitled "The Communist Persuasion," it was written by Rev. Eleutherius Winance, O.S.B., now a professor at St. John's University, Collegeville, Minn.

He is a Belgian Benedictine monk who lived and taught in China until his expulsion by the Communists. This is more than a journal of personal experiences, however; the author examines the psychological indoctrination process as it affects both individuals and the Chinese nation.

Under leave to extend my remarks, I include an excellent review of the book by William Henry Chamberlin in the Wall Street Journal of November 2, 1959:

HUMAN VALUES AND RED CHINA

(By William Henry Chamberlain)

All sorts of mirrors have been held up to Red China, in press accounts and in a sudden stream of books. Those range from the reports of lavishly entertained visitors to the grim stories of former prisoners.

The story of Eleutherius Winance, a Belgian Benedictine monk, falls somewhere between the two extremes. Father Winance was not subjected to outright physical abuse. But, together with other Catholic missionaries, monks and nuns, located in remote Chengtu, in west China, he went through a distinctly unpleasant experience of being spied on, haled before the local authorities, pestered with false accusations and finally expelled from China.

Father Winance notes that, although the guards tried more or less mechanically to whip up public feeling against the expelled missionaries, the general attitude of the people was friendly, some whispering consolation that they would be much better off when they got out of China.

What made the deepest impression on the author, obviously a thoughtful man and so well versed in Chinese that he was able to give lectures in philosophy in a Chinese university, was the intensive psychological indoctrination practiced by the Chinese Communists, frequently referred to as brainwashing. Every occupational group, workers, peasants, government employees, professors, students of all grades, is subjected to this process, known in Chinese as "Hsio-Hsi," which means literally: "To receive learning and put it into practice."

Led by Communist teachers, these groups are given constant drill in the correct party attitude toward every subject under the sun, from "American imperialism" to correct wiving habits. By observing the reactions of participants in these gatherings, it is possible to promote the Communist ideal of having everyone spy on everyone else. To be sure, as Father Winance reports, the Chinese develop a certain defensive skill in masking their real views and saying what will be considered acceptable. Still the mass impact of this organized propaganda, especially on untrained and undeveloped minds, must be fairly formidable; there is something a little terrifying in the idea of over 600 million people (if the Chinese Red census figures are correct) being conditioned to strive, admire and hate, all in unison.

Even mature minds are caught up and carried away by the "Hsio-Hsi."

The author agrees with other foreigners who were in China at the time of the Red takeover that the first months were deceptively mild, with conditions in some ways even improving. The Red troops were well disciplined; the new fairly stable money was a relief after the bottomless pit of inflation into which the Nationalist regime fell during and after World War II.

But this mild period was of short duration. As Father Winance describes further developments: "This calculated mildness was to be altered into a harsh, inexorable, but diabolically subtle procedure that would result in the suppression of independent newspapers, the destruction of the Christian communities, the crushing out of small business, the extermination of the large landholders, the impoverishment of the small landowners, the enslavement of the workers and the expulsion of foreigners."

The author describes in some detail how, through the slogan of the "Three Autonomies," the Red rulers tried to undermine and destroy the communion with the Holy See which is an integral part of the Catholic faith. These "Three Autonomies" were "administrative, economic and apostolic." For a long time both Catholic and Protestant missionary groups have recognized the desirability of removing any stigma of "foreign domination" and seeing native Chinese take positions of leadership in their Christian churches.

But the Communists wanted something much more: To sever the Christian communities completely from foreign contacts and turn them into obedient tools of the totalitarian state. Some Chinese Catholics yielded and participated in uncanonical ordinations of bishops; others suffered death or imprisonment for their faith.

Father Winance does not try to give a broad panorama of Communist rule and its effects for China. His book is mainly a record of what he saw and experienced himself, with special emphasis on the continuous high-speed indoctrination of the population. Recognizing more than once that there is, on the surface, a certain similarity between indoctrination by the Communists and by the Church, he sees in this proof of the adage that "the Devil imitates God."

Forced labor is often prescribed as a punishment for Chinese whose "thinking is wrong" and Father Winance suggests that this systematic disregard for human dignity should be kept in mind "if we are to give a wholesome judgment on the gigantic material progress that strikes the eyes of kindly visitors in China."

Annual Business Forecast by C. B. Stephenson, President of the First National Bank of Oregon

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Wednesday, January 13, 1960

Mr. NEUBERGER. Mr. President, on January 4, 1960, Mr. C. B. Stephenson, president of the First National Bank of Oregon, presented his annual business forecast to the Portland Chamber of Commerce. Mr. Stephenson is an outstanding leader in our State in banking and finance, and he has had the advantage of observing foreign trade, the common market and other international problems at firsthand overseas. Because the Senate will be considering many grave economic and fiscal problems during the months directly ahead, I ask unanimous consent that Mr. Stephenson's annual business forecast, which he presented under the title, "Surging Into the Soaring Sixties," be printed in the Appendix of the RECORD.

There being no objection, the forecast was ordered to be printed in the RECORD, as follows:

SURGING INTO THE SOARING SIXTIES

(Annual business forecast presented by Mr. C. B. Stephenson, president of the First National Bank of Oregon to the Portland Chamber of Commerce, January 4, 1960)

I

These repeat command performances make me think of the lady visitor to a mink farm who was surprised and somewhat confused by the sight of the great number of mink coats on the hoof. She inquired of the owner of the farm who was conducting the tour, "How often do you take their pelts?" The farmer was taken aback but replied after a short pause, "Well, it makes them very nervous if we skin them more than once a year."

What I mean by "command performances" is some set of circumstances that seems to combine each year in driving me into a corner from which I can't escape. This year Russ McNeill, who takes over the chairmanship of the chamber forum, is one of those circumstances. If I had declined to make this speech this year, he would have yelled to high heaven that I had let him down.

Before talking to you about 1960, a brief backward look at 1959 seems appropriate: 1959 was indeed a good year for Oregon and the Nation as a whole. Some of the statistical estimates I made last year proved low. The year contained some very significant highlights, all of which bear a relation to the business outlook. I will enumerate them without indicating any order of importance.

From the standpoint of news, I suppose the visit if Nikita Khrushchev was the number one story. Will the impact of his visit affect congressional thinking? Will we go soft on our defense program with consequent cut-backs in defense orders?

President Eisenhower's visit to 11 countries in three continents also looms large in importance. What effect will it have, pro or con, on our foreign aid program?

The race to conquer outer space accelerated in 1959 and will continue in 1960. It has to be given a high rating in the list of important events of 1959. Some say, "Suppose the Russians have hit the moon—what of it?" I am told by those who deal with such matters that one day satellites will be developed to carry observers and equipment to permit detailed observation of the earth from 100 miles up. We have to be up there peeking at the other guy if he is going to be up there peeking at us.

On a more earthy basis, the steel strike and the tight money situation have a more immediate relationship to the business outlook for 1960.

To review a little further, most everyone recognizes that we had a good business year in Oregon in 1959. Almost every index showed gains in 1959 over 1958. This is true of bank debits, which showed a 17-percent increase; and is also true in the decline in business failures and in the increase in retail trade, employment, lumber production, and farm income, and in many other areas that are used to measure the economic scene. Some things moved up that can't be classified as gains—namely, the increase in the number of bankruptcies and total consumer debt.

The same general pattern prevailed in the country as a whole. I'll not bore you with statistics except to say that when the figures are in, the gross national product may hit a high of $480 billion at 1959 prices, which is considerably higher than the estimate I made when I spoke to you a year ago.

II

Usually by this time of year my mail is flooded with forecasts for the year ahead. That is not true this year. Those forecasts that have been published predict that 1960 will be a prosperous year, and I agree with that. With the caution typical of economists and forecasters in particular, there is a sizable minority of the breed who think that the second half of 1960 may not be as good as the first half. This is known in some quarters as second half-itis. Predictions, however, are based on the assumption that the steelworkers will continue at work. Also that the impetus that the continued production of steel will give to the economy will provide a springboard for the economy at least to equal 1959 and likely to exceed it.

There are two possible soft spots—prices for farm goods, and housing. Total housing starts in 1960 likely will be somewhat lower than in 1959, principally because of the money shortage. One aspect of the housing business that cannot be measured statistically in number of starts is that new houses are bigger than they used to be and require more plywood, which will take up some of the lumber slack.

It is my opinion that the steel strike will be settled on some basis. If it is not settled by negotiation or a vote of the men to accept management's offer, settlement will come about through some type of intervention at the Federal level, either executive or legislative. Some say that the economy can withstand a prolonged steel strike; but I question that. I think the defense needs of the country will be a controlling factor in the attitude of government if other measures fail.

So it could be that we will surge into the "soaring sixties". All of these happenings and predictions, however, are posed against a background of some underlying problems that continue to plague us. The steel strike took a heavy toll in Government tax receipts and shot full of holes the Government's plans for a balanced budget. These recurrent deficits tend to make us punch drunk and apathetic to the significance of sound fiscal and monetary policy; but I must remind you that the real reason for a balanced budget, in simple terms, is the "American way of life".

Your future freedom and mine are at stake. To quote Senator Byrd, one of the sound money stalwarts of the Senate, "With fiscal soundness I would have no fear for the future economically or militarily. I would anticipate the period ahead with enthusiasm for my children, and with pride for the contribution of my own generation. Without solvency and sound money, there will be neither solid economic progress nor national security."

Much attention is being given to the problem by both public and private groups. Like the alchemist's dream of finding a formula which would turn base metal into gold, is the search now being conducted by the Joint Economic Committee for a method that will insure an adequate rate of economic growth, maximum employment, and substantial stability of the price level. It would be a neat trick if it could be done.

America cannot be governed into perpetual prosperity. Our system is not like that of the Russians—God forbid. But when you get into the field of monetary and fiscal policy we find too many Congressmen who either are looking out the window or at the ballot box. Money, credit, and interest rates in particular are a fertile field for demagoguery. Some politicians have a solution of sorts based on the discovery that governments can spend not only what they take in but what they do not take in. Since the latter is limitless, their spending can approach infinity. This gimmick is known as deficit spending, and in the economic books it is also called inflation.

III

Why is money so tight? The answer is simple. It is nothing more than the operation of the law of supply and demand. There are too many dollars chasing too few goods. To expand the money supply would accentuate the problem.

But will we accept the disciplines necessary to stop the inflationary spiral and maintain the integrity of the dollar? Are we ready to face up to the fact that government has to stop living on credit cards and must pay its way?

An example of how unrealistic we are is the reaction of a Swedish banker in Stockholm, with whom I talked last May, who expressed amazement that we should have a statute on our books that limited the rate of interest that the Federal Government could pay on its long-term securities. He asked, "How can you operate your country with such a straitjacket?" When forced into the short-term market, the Federal Treasury is hamstrung in attempting to manage our huge Federal debt. It is a penny wise and pound foolish philosophy for Congress to take the position that it has.

It is hard to get people to recognize the importance of a sound dollar. Someone said: "Economics is like being lost in the woods—how do you know where you are going if you don't even know where you are?" We are people who live by headlines and catchwords, and we do not pause long enough to observe what we are doing or where we are going. But with world conditions as they are, we had better take stock.

France and Germany had to learn things the hard way. German currency became valueless. The French franc that the American soldier used to buy in vin rouge in 1917 is worth two tenths of a cent in contrast to its value then of 19 cents.

Much of this may be just old stuff to you, but there is a crying need for an understanding and acceptance of the economic facts of life. There is a time when silence is not golden—just yellow. We need to find a way to fit socially, politically, and economically into the very small world in which we now live.

The emergence of the Common Market in Europe and the development of a comparable group of countries which have called themselves the "Outer Seven" Free Trade Area have meaning for us. I referred to this matter last year and results are beginning to show. For the first time in history the United States had an adverse balance of trade in the month of August 1959. The "balance of payments"—which is an inclusive term and covers foreign aid, tourist expenses and the like—is further against us. That, of course, could be adjusted somewhat through curtailment of our foreign aid program. Should not the NATO countries bear a greater share than they do now? But our trade, involving the export and import of goods, has far greater significance to us than the 10 percent of our total production of manufactured goods and farm products which our exports represent.

We have all heard the expression "pricing ourselves out of markets". We all know of products that can be manufactured in Europe and sold in this country at much lower prices than we can produce them. A close-at-hand example has to do with one of the food packers in this area who has discovered that he can buy box shook in Finland, have it shipped by water to Portland, thence by rail to his packing plant, and have it cost him less than a similar item available at a near-by sawmill. He also can buy nails in England and have them delivered to his plant here at a price cheaper than he can buy them in this country.

IV

It must be said that if the item of automobiles was deleted from the import figures, our balance of trade would not look so bad. On the other hand, the American people seem to have gone for the low-priced European car; and it is too early to say whether or not they will substitute the so-called low-priced American equivalent.

But if we import more than we export, the balance is made up in gold; and there have been some rather heavy withdrawals of gold during 1959. They are not alarming, but if the trend continues, the dollar will naturally depreciate in value and our problems will intensify.

Dr. Roy Reierson, economist and vice president of the Bankers Trust Co., emphasized this point very forcibly some weeks ago when he stated,

"Perhaps the most painful adjustment required of us today is to recognize that we are no longer free, as we were for so long in the postwar period, to make our own rules and shape our domestic policies independently of economic developments abroad and independently of the effects of our actions upon our foreign creditors. Now that other countries have regained their economic and financial strength, we are once again only one among a group of nations, each subject to the discipline of the balance of payments, and each required sooner or later to correct any maladjustments and imbalances that have been permitted to develop in the economy. The question is whether we shall conform to these requirements which are basic not merely to our own economic progress but are also essential in living up to our responsibilities to the economy of the free world as a whole."

I have belabored you this half hour with a discussion of some problems which I hope will be thought-provoking. I have been around too long to deal in platitudes and "sweetness and light" philosophies.

These are sobering times and it is no time for boom and bust with the Russian threat overhanging us.

Again, 1960 should be a good year. In 1956 the title of my speech was "Can Business Hold the Pace?" We can hold the pace if we orient our thinking to give proper regard and perspective to the manifold complexities of our times.

Soviet Sub Strength Grows

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 13, 1960

Mr. RIVERS of South Carolina. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I enclose therewith an article by Steve Tillman, the able associate editor of the Army-Navy-Air Force Regitser, Washington, describing his interview with Adm. Jerauld Wright on Soviet Sub Strength Grows. Admiral Wright, commander in chief, Atlantic and U.S. Atlantic, and Supreme Allied Commander, Atlantic, is the authority on the subject of the interview; his words should be read carefully by the American public.

The article follows:

SOVIET SUB STRENGTH GROWS, SAYS WRIGHT

(By Steve Tillman)

Soviet ballistic-missile submarines will be a threat to the Western World, possibly within a year, warned Adm. Jerauld Wright, NATO's Supreme Allied Commander Atlantic, in an interview with the Register, noting that there is conclusive evidence of a Russian missile "sub" building program of such proportions that the threat may be significant in 1960.

In a 10-year growth the Soviet Navy has risen from comparative unimportance to a position second only at this time, to that of the United States in immediately available offensive and defensive power. Reliable sources report that Russia has the largest force of "subs" in her history—more than 450 being in commission. Approximately 300 of these are of modern convention construction. All are fully manned.

Throughout history we have realized that control of the seas is a necessity of life. Then, what is our defense, and how good really is it, we asked Admiral Wright, in this question: "Assume that behind the so-called Iron Curtain a thumb is poised ready to launch the weapons that will devastate the world—what deters the thumb?"

The admiral answered with the explanation that NATO has three distinct but inseparable military tasks to be done. One is the defense of Europe, a second is the defense of North America, and the third is the defense of the Atlantic. If one of these fail, they will all fail.

There are two coequal supreme allied commanders in the NATO military organization. The Supreme Allied Commander Europe is Air Force Gen. Lauris Norstad, in Paris, and the Supreme Allied Commander Atlantic is Admiral Wright with headquarters at Norfolk, Va. Norstad is charged with all NATO military operations on the European Continent while Wright with all NATO sea operations in the Atlantic.

SACLANT (Supreme Allied Commander Atlantic) is composed of army, navy, air force, and marine officers of the eight NATO nations, and this organization is what Admiral Wright discussed in this interview.

"European nations are dependent upon the heavy tonnage of seaborne traffic. Deny European countries access to the sea and they would not long survive. Deny America the use of the seas and she would be divested of her allies, and deprived of raw materials so vital to her war production.

"Finally, the loss of the seas would result in the loss of any initial advantage from our atomic capabilities because we would then be unable to follow up with the deployment of essential support to Europe.

"Contrast this with the picture presented by the Communist bloc. Here is a vast land mass with relatively little reliance on the seas and, in fact, relatively short sea coasts in the Temperate Zone.

"Even though the Soviets are not forced to rely upon the seas they are vulnerable to attack by naval forces. Within NATO these attacks could be launched from the Norwegian Sea area and the Mediterranean.

"The Soviets have the advantage of being able to operate from one vast base, within which their industrial complex can be geared closely to their military machine without any substantial reliance on outside help.

"The doctrine of communism allows no margin for gambling nor does it include reckless haste in meeting their objectives. The Communists have patience, years of it, in the achievements of their aims. It is not likely, therefore, that the Soviets will precipitate any armed conflict directly involving their military forces with those of NATO so long as their leaders are convinced that they will be opposed in force and that NATO is capable of defeating them.

"The ability to convince the Soviet leaders on these two counts is NATO's best assurance of maintaining peace. That ability is what we call the deterrent. The NATO Alliance is the greatest deterrent to aggression in the world today, and it must be kept as such."

Here the admiral interrupted his conversation to observe that he had been asked, "What deters the thumb?" First, he pointed out in reply, the various early warning systems are constantly alert. In tests and training operations these systems have demonstrated that they can help us to destroy the knockout punch before it reaches its target. Secondly, and probably the most important, there is power of retaliation possessed by NATO's air, ground, and sea forces. Combining these two factors, it is reasonable to believe that the "button" will not be pushed so long as the aggressor knows it will mean self-destruction.

We asked Admiral Wright what were the major tasks facing SACLANT in the Atlantic?

"First, working in close coordination with our SAC and aircraft assigned to the defense of Europe, fast carrier task forces would seek to destroy the sources of enemy naval power. In this objective the carrier fleets have the great advantage of mobility and are, therefore, free from pinpointed guided missile attacks and free to launch their attacks from any point at sea. With the present range and capabilities of naval aircraft, no point on the European continent is beyond the range of attacks launched from the sea.

"The second task requires domination of the seaways around northern Norway and down through the Iceland-Faeroes Gap, for it is through these waters that the enemy naval forces from the north must pass. By an effective antisubmarine campaign in these confined waters NATO can blunt the Soviet wedge and ease its third task—the protection of the Atlantic shipping lanes.

"By the use of antisubmarine aircraft, ocean escorts, and antisubmarine carrier

groups, a protective screen would be thrown around the trans-Atlantic convoys.

"The fourth task demands protection of the coasts of North America and Europe against attacks launched from guided missile subs. This would be accomplished by dependence on air surveillance from Iceland, northern Ireland, and the Azores for protection of the European coasts, and from Newfoundland, and additional bases on eastern seaboard for protection of the North American coast. These maritime air patrols working in close liaison with specialized antisubmarine ships are the principal close-in defense against the guided missile submarine.

"The last primary sea task is in support of the defense of Europe. This is done indirectly by the defense of trans-Atlantic lanes of supply and reinforcement, and directly by carrier based air support of the armies in Western Europe and the Mediterranean."

A missile-firing submarine force of the U.S. Navy is coming into being, that will carry a built-in guarantee that we will have a nuclear deterrent ready when needed. Polaris subs when ready, will make it unnecessary for the United States to engage in a missiles arms race with any other country. The first Polaris sub is expected to be ready about 1 year hence. More are in the building. The missiles they will carry have a range of 1,200 miles.

In conclusion, Admiral Wright said that the broad expanse of the North Atlantic must be regarded as the focal area upon which the success of the alliance rests.

Admiral Wright, who retires in March, has been SACLANT since nominated by the President in 1954. He will be succeeded by Adm. Robert L. Dennison.

Wright has served as commander in chief, U.S. Naval Forces, Eastern Atlantic and Mediterranean and as U.S. representative to the Standing Group of the North Atlantic Treaty Organization in Washington where he worked with service representatives of NATO nations in the formulation of the plans and policies of NATO military organization and operations. He participated in NATO conferences at Washington, London, Paris, Bonn, Brussels, Ottawa, Lisbon, and Rome to effect the development of NATO military plans—plans which as SACLANT he had a great part in carrying out.

Address by Hon. Harry Flood Byrd, of Virginia, Before the American Farm Bureau Federation

---

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, January 13, 1960

Mr. BYRD of Virginia. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a speech I made before a meeting of the American Farm Bureau Federation in Chicago on December 15, 1959.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am honored to be among those on the program of this 1959 meeting of the American Farm Bureau Federation. It is always a pleasure for me to participate in Farm Bureau meetings.

I take pride in being a conservative. Sometimes I am called old fashioned; but this is not the worst thing I have been called over a period of 50 years in public life. Let me tell you some of the things I believe.

I believe sound progress should be a primary purpose in every man's life. Sound progress is a source of strength. But progress is not sound unless it is based on sound financing; this is another application of the theory of checks and balances which has been so useful in our form of government.

Our form of government is the greatest and most productive the world has ever known. The fundamentals on which it was founded must be preserved. I have always fought wherever they were being attacked. They guarantee our freedoms and nourish our free enterprise system under which it is possible for every American to start at the bottom and work to the top.

I believe it is the individual initiative and national strength developed under our system that have brought this Nation to world leadership in relatively few generations. Historically, lives of nations are measured in hundreds—even thousands—of years. I want ours to be the longest and best.

I believe of our form of government, our system and our freedoms can and would be destroyed by continuing centralization of government. Excessive centralization of government will inevitably lead to excessive Federal regulation, competition and taxation. In short, it will lead to State socialism.

I believe our people want our system perpetuated and strengthened. Basically the requirements are simply honesty and individual initiative, independent attitude and hard work, constructive production and free competition, and progressive development with sound financing. How well are we measuring up?

This Nation is showing signs of weakness when it should be strongest. Our form of government is being challenged from abroad and undermined at home. I pray none of us will live to see the fall of our great free enterprise system; but our freedoms are already being weakened.

We are in serious need of character and fortitude to restore, develop and defend the sources of national strength which raised this country to world leadership. I urge your attention to these conditions today because we are in an historic turning point in world history.

We are entering a new era of atomic energy, rocketry, space, etc. Our population is increasing. Our resources are great. Our productive know-how and capacity are yet unsurpassed. Representative democracy with free enterprise should thrive soundly on these elements for the good of all mankind.

I firmly believe that with responsible citizenship, good government, and fiscal soundness there could be no fear for the future. Wihout these there can be neither solid progress nor security with military preparedness. These are simple requirements. But we are showing weakness at many points.

Our strength has been sapped by paternalism in Federal bureaucracy grown too big, usurpation of power by the Federal Supreme Court grown too mighty, and force of labor leaders grown too arrogant. These have undermined our system, changed our attitudes, and hobbled our will for freedom.

We are faced today with more deficits, more debt, growing inflation, sinking foreign trade balance, dwindling gold reserves, Russian gains in the continuing race in scientific, military and economic fields. These are serious weaknesses. They are dangerous conditions which must be reversed.

Federal deficit financing has been the rule for more than a quarter of a century. But the fiscal situation in the United States Government deteriorated faster in fiscal years 1958–59 than in any comparable peacetime period during my 26 years in the Senate.

In the short span of 6 months we moved from estimates of virtually balanced budgets to combined deficits of $15.4 billion. In the same period we were forced to raise the statutory limit on the Federal debt twice. In fact, it has now been raised the third time in 2 years.

During the past fiscal year Federal debt passed the World War II peak, and Federal spending and deficit financing reached levels exceeded only in years of all-out global war emergency. There will be more debt and deficit this fiscal year. Budget Director Maurice Stans sees rising expenditures in the future.

Today, December 15, 1959, the Federal debt is at its all-time peak in the history of this Republic. The debt is now $292½ billion and it is expected to be a billion dollars higher this time next month. There are no plans to begin paying off this astronomical debt.

As of this date, I foresee another deficit this fiscal year of $1 to 2 billion. A $95 million surplus is the official estimate. But the spending estimate is too low and the revenue estimate is too high. Spending up to $80 billion and revenue not exceeding $78 billion would not be surprising.

Deficit financing is a heavy factor in continuing inflation. Purchasing power of the dollar has dropped an average of a tenth of a cent a month for the past 7 months. It is down to 47.3 cents on the 1939 index. Think of this in terms of insurance you bought 20 years ago for protection of your family. And all indications point to continued cheapening of our currency.

Interest on the Federal debt this year will cost $9.1 billion. This figure should stick in the mind of every taxpaying citizen of this Nation, especially farmers. The Department of Agriculture is now estimating the combined net income of all farm operators in the United States this year at $9.6 billion.

Not only does interest on the Federal debt nearly equal net income of farm operators, but it approximates total annual Federal, State and local highway expenditures, and it is equivalent to far more than half of all State and local expenditures for public school education.

Interest on the Federal debt is averaging about 3 percent. New issues of recent months are costing nearly 5 percent. Should the whole debt of nearly $300 billion ever be refinanced at the new rates the interest cost would be upward of $15 billion, compared with $9.1 billion now—an increase of $5 to $6 billion, or more than 50 percent.

The terrible burden of this terrific debt is the result of 24 deficits in the past 29 years. Half of these deficits were incurred during years when we were fighting neither war nor depression. There have been four deficits totaling $23 billion since the Korean war was stopped. And the end is not in sight.

There was reason to expect runaway new Federal spending authorizations during the past year. This is where the Farm Bureau Federation stepped in so effectively to help sustain the President in his efforts to reduce spending by vetoes. Only one veto was overridden. I urged the Presidential vetoes; more will be needed in the coming year.

The total cost of Federal Government in the United States has gone up nearly $16 billion since the Korean war. This is a tremendous increase. It is 23 percent; it amounts to nearly $100 per capita; more than a billion and a quarter dollars a month; more than $43 million a day.

It may surprise you to know that the great increases in this period were not for

military and foreign aid. They were in domestic-civilian programs and these too frequently involve multiyear or permanent commitments for heavy spending in the future. Increases in these programs are continuing.

But in the past 6 years domestic-civilian program spending increased nearly 83 percent to $54.9 billion; housing, highways, and commerce from less than $1 billion to nearly $7 billion; agriculture from $2.6 billion to more than $6 billion; labor and public welfare nearly doubled to $4.4 billion.

Much of this domestic-civilian spending is for subsidies through all kinds of Federal loans, grants, and payments. These not only increase Federal spending; they contribute to inflation. Inflation is destructive of fixed incomes, provident investment, prudent business, sound financing, national security, and free enterprise.

Nearly 40 million people will receive payments from the Federal Treasury this year totaling some $40 billion, including social security. With their families these 40 million people could easily reach a number equivalent to half our population. In this connection, there are now 90 Federal programs for subsidy payments to States, localities, individuals, etc., totaling more than $9.5 billion a year.

In addition to increasing direct expenditures and debt, the Federal Government has underwritten nearly $275 billion in contingent liabilities in the form of insured and guaranteed loans, insurance in force, etc. This is an increase of $70 billion in contingent liabilities assumed since the Korean war.

The Federal Government is now subsidising business, industry, private finance, agriculture, transportation, power, housing, health, education, States, localities, and individuals, etc. And when they take their subsidies they give up independence and freedom. They submit to bureaucratic control.

And where does this money come from? Taxes are the Government's only source of revenue. To borrow the money simply takes more taxes. And wherever there is debt—public or private—cold terms of mortgage are grim reality. How can we disregard this?

Subsidies and inflation feed on each other, and both of them feed paternalism. Paternalism centralizes power in Washington bureaucracy. By the process of cheapening our money and centralizing power we have descended to a level of state socialism which is obvious if not admitted.

Social democracy undermines sound government and stifles constructive enterprise. Its evils have been proved wherever nations have stooped to it. We know these things, but responsible citizenship in this country today seems insufficient to hold back the growing demand for more.

Irresponsible attitudes with respect to Federal spending are bad enough, but they are epidemic. They have spread to State and local governments. They have permeated the whole economy and society. They are evident in both public and private pursuit. Take our great highway programs for example.

Perhaps more than any other group, farmers have reason to be interested in good roads and highways. Few people have worked longer and harder for them than I have. In Virginia we are proud of our 52,000 miles of State highway systems—all developed on a pay-as-you-go basis.

I think there should be an interstate highway system. I appreciate traffic problems in urban areas. But like you, I know the basic requirements for farm-to-market roads, and I think all who benefit from them—at both ends—should think twice before they do anything to impede their continuing development.

I am certain essential requirements of both the regular Federal-aid primary and secondary roads, generally referred to as the ABC system, and the Interstate System can be met in an orderly way on a pay-as-you-go basis without excessive taxes. This was the purpose of the so-called Byrd amendment in the Federal Highway Act of 1956.

Under that act Federal gas taxes and revenue from other highway sources were segregated into a trust fund for use in construction on both the regular Federal-aid roads and the Interstate System. The Byrd amendment put the whole Federal program on a firm basis by writing the pay-as-you-go policy into the law.

As you know, the time-proved ABC system roads are constructed with funds matched equally, on a 50–50 basis, by the State and Federal Governments, and the States retain dominant control. But it is generally understood that interstate roads are built with 90 percent Federal money and 10 percent State funds.

Under such a Federal formula it is easy to see how interstate projects may be very enticing. But like so many other Federal programs, this one, too, needs further examination. And if it is not watched closely and controlled carefully, it can result in more harm than good in highway development.

Take a look at the experience to date. We superimposed this Interstate System over our well-tested ABC system, and the weaknesses and temptations came quickly to light. The estimated cost of the system has gone up 73 percent since its inception, and on present schedule the program still has 15 years to go.

At best these are extremely expensive roads. It is not difficult to find interstate projects where 10 percent of the cost exceeds 50 percent of the cost of equally important ABC projects. And once interstate roads are built the States forever assume 100 percent of their high-cost maintenance.

Furthermore, the interstate highways are almost invariably limited access roads. In many areas the States must construct paralleling roads to get traffic on them, off of them, and on the other side of them. This places another heavy burden on State highway funds.

In short, it is easy to see how 90–10 Federal highway money may tempt States to divert their funds from ABC roads of higher priority to interstate projects. And once Interstate System roads are built they eat up State funds in expensive maintenance and construction duplication.

With its high ratio of expenditures on interstate roads, the Federal Government is now spending twice as much as the States on highway construction—$3 billion to $1.5 billion. In this situation, as you can imagine, the Federal Government has begun dominating the programs.

Excited by the temporary recession in 1958, Congress abandoned the Federal pay-as-you-go provision by repealing the Byrd amendment and went on a spending spree. Our great highway programs were thrown into an inexcusable mess. State programs were seriously disrupted and threatened with chaos. The trust fund was broke. The integrity of the Federal Government was impaired when the cost of contracts awarded exceeded funds available.

We were forced to raise Federal gas taxes. But we managed to make the increase temporary and reinstate the Byrd pay-as-you-go amendment. But I can tell you there is need for vigilance if we are to avoid making the gas tax increase permanent and raiding general fund revenue for the Federal Interstate Highways.

You know the importance of both systems. Your position for sound financing is traditional. Farm bureaus all over the Nation have intimate knowledge of highway requirements. The federation can be of great constructive service in keeping these programs in proper balance and within our ability to pay for them.

Raising Federal gas taxes is an example of how, in the process of centralizing power, the Federal Government usurps State and local revenue sources at the same time it encourages greater expenditures at all levels. Like the Federal Government, States, and localities are now finding it difficult to pay their bills.

Both are trying to push more of their costs on the Federal Government—States sacrificing their sovereignty and localities their autonomy. Taxpayers, pinched by levies at all levels, look for tax loopholes and avoidance at the expense of their self-respect.

We have increased total debt in the United States nearly $300 billion in 5 years. Most of this increase is private. The American people now have nearly a trillion dollars in debt on their backs; more than $350 billion in public debt, and more than $550 billion in private debt.

When individuals become insolvent they take bankruptcy and dispose of their obligations. When governments become insolvent their money becomes worthless and they go through a revolution wringer. The nature of the revolutions may vary, but change in the form of government in inevitable.

I do not imply that this Nation or the Government is insolvent. But make no mistakes. Profligate spending has strained our fiscal position. And in this condition we are vulnerable to insidious attacks on the fundamentals of our form of government.

Ours is a government originating in the sovereignty of the States. Under our Constitution the States gave certain powers to the Federal Government and kept the rest. And constitutionally the Federal Government is in the form of three separate branches—they are coordinate, but each is independent of the other.

The checks and balances in this system are obvious. Their purpose is to protect the fundamentals on which our form of government and our enterprise system are based and the freedoms they require. And we had better start defending against those who would destroy the things which have made this Nation great.

In our present condition and state of mind, the Warren Supreme Court has usurped legislative powers and executive authority, struck at State sovereignty, deprived citizens of traditional freedoms, and set free those convicted of Communist subversion.

By destructive decree and naked force the Warren Court has violated our fundamentals, undermined our institutions, and invaded our privacy. Its decisions are called "law of the land." Our Constitution empowers only Congress to make Federal law; and there is reason for this. Members of Congress are elected by the people and are answerable to them.

Without the great strength developed in this Nation in earlier days, it would be difficult to survive this latter-day Federal bureaucracy and judiciary. Federal usurpation, combined with abuses by irresponsible labor leaders, curtail sound progress, and insidiously sap national strength.

I am glad to learn Senator JOHN MCCLELLAN will be among the speakers at this meeting. No one has done more to reveal corruption at high union levels and misuse of power by arrogant labor leaders. This takes courage, and JOHN MCCLELLAN has got it. He has contributed great service to his country.

Senator MCCLELLAN has a fine legal background. He has keen insight. He has studied labor legislation. His advice to you on this subject will be the best. And if the

steel strike is not settled when the injunction expires next month, demand for more legislation is certain to come soon.

When he speaks tomorrow I hope he will tell you how Harry Bridges, the Communist Longshoreman's boss, and Jimmy Hoffa, the Teamsters' boss, planned a worldwide boycott. That plan demonstrates the power and danger in present labor leadership. He told me 232 witnesses "took the fifth amendment" in hearings before his labor rackets subcommittee.

You heard and saw those witnesses before the committee. Did you imagine so many thugs, gangsters, and racketeers were out of jail? "Taking the fifth," their silence was indisputable evidence of weakness in our national fiber. We all know they should be restrained from the practices to which they were witness.

You have shown your knowledge of this weakness. I supported all labor legislation the federation recommended in the past session. I am the only member now in the Senate who voted against the Wagner Labor Act in 1939. This Act gave special privileges to labor unions. I voted for the Taft-Hartley Act and against the Truman veto. I supported the strong labor bill last session. I would vote for a stronger bill now.

I have always conceded to the good citizens in the rank and file of labor unions the privilege of organizing. I was among the first to concede to legitimate labor unions the privilege of collective bargaining when they are bona fide representatives of their membership.

But when irresponsible labor leaders have the power virtually to shut down the country, our national security is imperiled; when they have the power to stop production and wages, our economy is impaired; when they have the power to force wage increases unjustified by increased production, they create inflation.

We hear a lot about issues in strikes today. Usually there are only two. One is an inflationary wage increase unjustified by increased production. The other is more authority to tell management how to run the business. More power for the labor leaders usually is the big objective, with little regard for others.

I am sure you have noted the dangerous competition among today's labor leaders. When one gains in a strike, the others think they must do better. If McDonald wins in steel, Reuther will think he must strike the automobile industry for more, and so on it will continue.

Not only can irresponsible labor leaders choke off vital production in critical periods; they can ruthlessly control the livelihood of millions of people. The costly steel strike ran 116 days before it was stopped by court order. Who can measure the price to be paid either by steel worker families or the Nation?

That strike alone stopped production for nuearly 4 months by a half-million workers employed in steel plants. Work stopped for thousands more in dependent industries. At the same time lesser strikes stopped work for tens of thousands more in the butcher, mine, mill, smelter, glass, shipyard and other industries.

More than 60 million man-days of labor have been lost this year as a direct result of strikes. Strikes almost invariably increase production costs. We feel some of the undue production costs directly, but much of the damage is hidden. For instance, our products must compete in foreign trade markets.

This is a matter of great importance at this time. The comparative level of our imports affects our balance of payments with other countries. We are in balance-of-payments difficulty now. Serious imbalance siphons out our gold. This, among other things, involves the value of our money.

The level of imports is not the only factor in the problem; others include dollars spent out of the country by our far-flung military operations; we are still dumping billions abroad in foreign aid programs, etc. But it would help the situation if our prices were more competitive.

The Secretary of the U.S. Treasury appeared before the International Monetary Fund asking that certain nations stop discriminatory trade practices against us. I know this action would not have been taken unnecessarily.

In 10 years we have purchased abroad, invested abroad, and given away abroad 17 billion in gold and liquid dollars more than we have earned from foreign nations through exports of goods and services. This deficit in the current year is running at the rate of $4 billion. Last year it was $3.4 billion.

Such deficits cannot continue indefinitely. Foreign countries are now holding more than 17 billion in liquid dollars. More than half of this is in official accounts, and the governments holding these dollars can call upon us to convert them into gold if they wish. They will do this if the dollar is not kept strong.

There is need to protect our gold reserves. In this situation you can see there are reasons for balanced budgets and reduction in debt that do not readily meet the eye. Keeping our currency sound, and protecting its purchasing power at home, is a major factor in preserving free world confidence in the U.S. dollar.

The Secretary of the Treasury needs backing at home. He needs the cooperation of the Government, labor unions, and business—by all of us, including farmers. Failure to adjust our balance of payments will be a continuing threat to our gold reserves.

The Government should balance its budget, reduce its debt and stop inflation. It can start by reducing foreign aid expenditures. Over the last 14 years we have dumped $75 billion of foreign assistance into 85 countries. And many of these have become our serious competitors in world markets.

Labor leaders have great responsibility for rising prices and inflation. Industry has its responsibilities in this matter, too. The fact is that many of our products have been priced out of foreign trade.

Agricultural products have been about 22 percent of our total merchandise exports during the past 10 years. Actually, this is a somewhat smaller percentage than it was before World War II; and about one-third of the farm exports are now being sold for "soft" currencies abroad under Public Law 480 programs and section 402 of the Mutual Security Act.

Most of our payments abroad are in dollars, many of which accumulate in foreign reserves. But farm exports sold for soft local currencies, bartered or given away do not earn for the United States either gold or dollars. This type of export is of little help in efforts to correct our balance of payments deficit. We know the Public Law 480 program has been exploited for use not intended. Perhaps it could be constructively reviewed.

I know the Farm Bureau Federation wants to make our agricultural products more competitive in world markets, and less dependent upon Government at home. I hope you will redouble your efforts to bring about that highly desirable condition. You can count on my enthusiastic support.

Our tolerance of increasing Federal paternalism and spending, increasing usurpation of power by the Supreme Court, and increasing arrogance by labor leaders is a clear sign of national weakness developing among us. These are three menacing subversions of our system which must be brought under control.

Our complacency about such fundamental matters is amazing. In contrast, last year when a recession cloud appeared on the horizon, Congress was deluged with spending demands that made the Nation appear hysterical—approaching panic. Our idol seems to be a fast buck; not a golden calf.

In my opinion too much Federal control and spending are at the base of most of our trouble. Easy money through Federal paternalism, and an economy continually doped up with inflation will never produce national strength. They are destructive of charatcer and initiative.

We shall be moving for national strength when we demand—and get—elimination of paternalistic programs and deficit financing, reduction in debt, halt in inflation, and sypmathetic allegiance to fundamentals throughout the Nation, including the Federal Government and the judiciary.

We shall be moving for strength of character and constructive initiative when we stop requesting nonessential new programs and expenditures; when we revitalize our State and local governments; and when we assert the fundamental freedoms and independence which are our heritage.

When these things are done we shall merit our position of leadership in the free world. Unless and until they are done we shall be working for the Communist objective publicly declared in Moscow last May Day when the Russians said their primary purpose is to outgain capitalism in minimum time.

We have to admit they are achieving impressive gains in many fields. Their gains have made our weaknesses clearer and more ominous. We know what our weaknesses are. We know where they are. We know in our conscience what should be done. We know in our minds what must be done.

The American Farm Bureau Federation has taken the lead before in proving the judgment of our people is basically sound and can be made to prevail. I urge you to renew your efforts now for the good of our country at the grassroots and in high places.

Among other things which must be done, I think the American Farm Bureau Federation can render especially effective leadership in:

1. Stopping expenditures in excess of our income by eliminating nonessential spending;

2. Reducing the Federal debt; this would be a great deterrent to inflation for the present and lift some of the burden we are loading on generations of the future.

3. Watching and controlling the Federal highway programs, to keep the interstate system from running wild at the expense of farm-to-market and other important State roads;

4. Conducting a constructive review of the Public Law 480 farm product export program; and

5. Curbing the excesses indulged in by labor leaders, without destroying the right of collective bargaining.

I shall be with you all the way to the fullest extent of my capacity and energy.

Honor for Representative Pillion

EXTENSION OF REMARKS

OF

HON. THADDEUS J. DULSKI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 13, 1960

Mr. DULSKI. Mr. Speaker, each year during the past decade Buffalo's 10 most outstanding citizens have been chosen by the Buffalo Evening News.

It is my honor and privilege to call to the attention of the House the inclu-

sion of one of its Members among those chosen for the 1959 roll of honor. Cited for outstanding achievement is my esteemed colleague from Erie County, the Honorable JOHN R. PILLION.

In selecting Mr. PILLION, the News said:

An able and effective champion of western New York interests in Washington and a rugged individualist whose outspoken and informed opinions are respected, Mr. PILLION, representing the 42d New York District in the Congress of the United States, has a wide range of interests which, nevertheless, do not divert him from personal service to his constituents and an active concern for the Niagara frontier. He labors without fanfare. His accomplishments are many.

During 1959, Mr. PILLION was one of the few to recognize the potential danger of Russian expansionist efforts in the Antarctic. To bolster his opinions the Congressman visited the Antarctic and endured innumerable hardships in order to weigh the vast, down-below continent's strategic importance.

Information he provided and arguments he advanced prompted administration policy which will preserve U.S. interests in the Antarctic in concert with other nations. The Antarctic will not fall under the domination of any single ideology.

Congressman PILLION can take pride in this accomplishment, among others, and future generations may have reason to be thankful that he had the foresight and the will single-handedly to press his case. His effort and ultimate success on the Antarctica issue alone is worthy of the plaudits of his constituents and the populace of western New York which he serves.

Also named outstanding Buffalo citizens in 1959 were:

Robert B. Abram, 45 Penhurst Place, for outstanding service as a merchant and as a community leader in sparking the rejuvenation and revitalization of the downtown Buffalo area.

Dr. Edgar C. Beck, 33 Gates Circle, for community service as an associate professor of medicine at the University of Buffalo Medical School, for his work in the field of diabetes detection, for his leadership in organizing medical alumni support for the university's basic science departments.

Judge Charles S. Desmond, Eden, for outstanding achievement in his chosen field of law, who was the bipartisan nominee for chief judge of the New York State Court of Appeals, first resident of Erie County to occupy this high court position.

George M. Frauenheim, 697 LeBrun Road, Eggertsville, for community service, as a Roman Catholic layman whose tireless efforts for the Buffalo diocese have brought aid and comfort to thousands of persons of all races and creeds, who in 1959 led both the successful Catholic charities appeal and the successful seminary fund drive.

Dr. James T. Grace, Jr., 19 Kimberly Drive, Williamsville, for outstanding achievement as a noted cancer research surgeon and as assistant director of Roswell Park Memorial Institute for leading a team of researchers in a significant discovery of a virus in certain human cancers.

James P. Kavanaugh, 2415 Seneca Street, for community service as executive secretary of the city planning board, in directing significant civic improvements like rebuilding the Ohio Street Bridge, and coordinating major rail and highway route changes to fit the city's future.

T. Emerson Murphy, 33 Gates Circle, for community service as a leader in work for underprivileged and handicapped children, as president of the Fresh Air Mission summer haven, and executive committee chairman for the Buffalo Evening News-Rotary Club crippled children's camp fund.

Ralph J. Petersen, Strykersville, for outstanding achievement as an industrial executive, and for community service as chairman of the 1959 Community Chest and Red Cross appeal which surpassed its goal—first time since the drives were combined 5 years ago.

Paschal A. Rubino, 25 Woodley Road, for community service as a leader in education, as a dedicated member of the board of education, and for his work with youth, with the boys club, the police athletic league, and with personal sponsorship of several teenage athletic teams.

Farm Prosperity Beckons

EXTENSION OF REMARKS

OF

HON. CARL T. CURTIS

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Wednesday, January 13, 1960

Mr. CURTIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of an address entitled "Farm Prosperity Beckons," delivered by Henry E. Kuhlmann, president of the Merrick County (Nebr.) Agricultural & Industrial Corp., before the presidents of Nebraska's county Farm Bureau organizations meeting at Lincoln, Nebr.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

FARM PROSPERITY BECKONS

(By Henry E. Khulmann)

We can have a prosperous Nation if we make use of the knowledge chemergic science has given us. Through compilation and correlation of ideas relative to the exigency which exists in managing the farm surplus problem, Farm Bureau of Nebraska established an independent research entity. Thus a new and properous future awaits Nebraska agriculture and the Nation. We have said, now is the time we in agriculture take the lead in doing something for ourselves for our own future.

Many of us have been guilty of saying, "If I just had an oil well behind my barn." You have. You are not using it. The production of chemicals from farm crops is the oldest branch of organic chemistry and occupies an important place in our modern economy. The farm depression following World War I brought forcibly to the attention of farmers, businessmen and scientists, the need to expand the utilization of farm surpluses at home. Much public discussion has occurred on this subject since the Congress of the United States set up four research plants in the 1920's to study utilization of farm products by industry. These four plants have switched from their initial purpose to 85 percent production research and 15 percent utilization research.

Today we could be facing 1929. The pattern is very much the same. Great depressions are not caused from scarcity but from ill or unmanageable surpluses. The last war forced us into a great expansion in the production of industrial alcohol, vegetable oils and industrial starches from domestic farm crops. Chemurgists and scientists have been confronted with the problem of converting these industries to peace economy, with little evident assistance or encouragement from the man on the farm.

There are no tricks or sleight-of-hand in chemistry and science. Progress is made simply by intelligent application of knowledge together with long hours and hard work.

There are three distinct divisions to this industry; first, of course, is production of farm crops or raw materials. A job that is done by each farmer as he operates a little chemical plant of his own.

Second, is the conversion of these crops into a relatively few primary chemicals such as ethyl alcohol, butyl alcohol, acetone, acetic acid, glycerol, lactic acid, industrial starches, dextrium, sugars, cellulosic materials, vegetable oil, and others.

Third, division is one which takes these relatively few primary chemicals and combines or transfers them into a very large number of secondary products including rubber, plastics, textiles, paints, soaps, dyes, medicinals and many others that are so very familiar with our daily lives.

I am firmly convinced that when the farmer is not prosperous neither is labor, industry, or the Nation itself, but we are the ones who must seek methods to make our own prosperity.

Not one of us is untouched by the great agricultural production that has taken place, regardless of restrictions the last few years. It has brought about the most amazing and greatest surplus in a like period of time in all the history of the world. This production has not begun to tap the knowledge of research in respect to such advances as pelleted seed and 20-inch corn rows just to mention a few. In potential production we have only scratched the surface.

I realize it is not popular to talk about surpluses and low income for farmers when the economy is worried about inflation, and I certainly hope we do not let the farm cost-price squeeze become a depressing factor, not only for the farmer, but industry, labor and the entire Nation to force us through another financial wringer such as the early thirties so that the standard of living of all is greatly reduced.

Keep in mind that all depressions are the result of surpluses and never the result of deficit production. Our great surpluses can lead to disaster for all or we can turn them into opportunity.

Under Public Law 480, we have the same program as we used under the name of lend-lease that caused our Nation's financial collapse after World War I. Since we have the ability to overproduce; and no buyers in sight for our surpluses, it seems to me we are left with only two choices.

First, stop production. Second, to make use of the profitable uses for our production at home by industry.

I believe we should produce every bushel of grain we can on every acre, consistent with the preservation of the soil, and that we make use of the profitable utilization methods that scientific research, through chemurgy has found. Continued effort in this field will give us not only better food and clothing, but also many yet unimagined products.

Under the first choice, stop production, we as farmers become wards of our Government. Surely, none of us crave this approach.

Under the second choice, surely farm prosperity beckons.

Now let us turn to our disposal operations for a minute. Under lend-lease, after World War I, foreign countries had to protect their own farmer from our dumping program and charged as much as 60 cents per bushel tariff which was used to keep their government. Now let's turn to our present disposal in India. The cow is sacred so she will be fed first; next will come the older people and, last, the starving babies. These are of least importance because they are the easiest to reproduce. Let's take a look at a few figures. We plan to send $1,300 million through Public Law 480 in grains to foreign lands. For this, we will receive about 20 percent of the cost in other currency and trade besides getting only 20 cents on the dollar, we have the honor of picking up the tab for ocean shipping $37.6 millions.

Also, India is the recipient of $25 million of U.S. fertilizers to increase production. Just to confuse you, if you are not already confused, Firestone Tire & Rubber Co. is teaming with a firm in Bombay to build a plant to extract alcohol from sugar cane, their principal food, to make synthetic rubber. Let's look further. In the Wall Street Journal of November 24, 1959, under the heading, "Ike and India," we read of the great starving of the people and of the rationing of sugar and rice in Bombay state. Yes, it's all very clear. We need to take India's food so we might have tires to produce more so that we can give more away.

Let's head for home.

The facts are known to all. One bushel of grain will yield 2¾ gallons of alcohol which will yield about 6 pounds of butadiene, which will yield about 6 pounds of synthetic rubber which is the amount needed for one passenger car tire. Why not American surpluses? We used American agricultural products to keep the Nation on rubber-tired wheels during World War II.

We have been indoctrinated by the petroleum philosophy that our product cannot compete with them. Let us consider this fact as our nonreplenishable resources are used up the price will go higher. As we begin to use industrially our replenishable resources such as farm products, the price will become cheaper and, through full production, the income to farmers increased.

I believe if the public was fully informed, they would not long stand for the present methods of using our nonreplenishables and paying farmers not to produce. Under prevailing conditions of internal-combustion motor operation, it is impossible to burn completely such hydrocarbons as gasoline. Whatever the extent of combustion, it is usually not in excess of 75 percent of the fuel admitted. This marked inefficiency of combustion of gasoline costs the American public upward of $1 million annually. But more alarming is the poisonous nature of vapors from motor exhaust. A great portion of these vapors are dissipated, but a little here and there finds its way into the lungs of passengers in immediately following automobiles. The result in time is cancer of the lungs. A majority of the hospitals in the country are fully aware that the spread in lung cancer is keeping pace with the increase in use of gasoline in motors.

Though many people preach free enterprise, they scoff at what it calls for. The young people of today look askance upon the plundering of the limited reserve of unreplenishable fuels by private interests whereby only holes in the ground will fall to the younger generation. They are beginning to demand and will soon be voting for the Government to take over coal, petroleum, natural gas, and shale.

Would that someone, and it could be Farm Bureau that takes this lead, to ascertain a line of chemurgic procedure promising unlimited development of renewable resources to supply power and promise to the lifespan of our young people. Nature stands ready with Farm Bureau members, to produce a bounteous supply of all we can utilize in the way of food and fuel.

Let us look at a business proposition. If, out of 10 bushels of corn, 2 bushels are sold to a fermentation alcohol plant, and the distiller's dried grains resulting therefrom, as a byproduct, are returned to the farmer to be mixed with the remaining 8 bushels of corn, the mixed feed so obtained will produce greater gain in livestock than is securable by feeding 10 bushels of corn. Such is an experimental report from Iowa State College.

Now let us look at alcohol as a fuel. A 25 percent blend of farm-produced alcohol blended with gasoline practically eliminates carbon monoxide gases from the exhaust.

Or a 10-percent blend will:

1. Reserve 10 percent of our nonreplenishable resources.

2. It clears the atmosphere of a great portion of foul and poisonous carcinogenic hydrocarbons ordinarily discharged in motor exhaust.

3. It cuts down by 50 percent the content of deadly carbon monoxide in these same exhaust vapors.

4. It prevents deposition of carbon within the cylinders.

5. It prevents deposition of gum-forming substances in fuel lines.

6. It adds appreciably to mileage of car per gallon of fuel.

7. It eliminates knock or ping.

Tests have shown that when gasoline was blended with 17 percent agrol its combustion in a motor operating on 8.5 to 1 compression ratio actually delivered a 50 percent greater mileage than when agrol was absent. A great new field in plastics. These also from the starch in grains. Such things as fence posts that would last longer than steel and be as strong. Also for buildings, alfalfa storage with gas. Polyethylene truly is coming to the fore. Much more could be done with our replenishable farm resources that are causing the Department of Agriculture so much concern, but much growth and this is as they desire it. They will keep you broke, fellow farmers, so they can get increased pay by adding new people on the payroll. This is the way they get their raise, not by the help they give to us.

A plan is now under way to store our surpluses in grain bins all over the world. This will put a new and greater army to work under our Agriculture Department heading and will be charged as a subsidy to the farmers. The Government wants to stop storing grain in its own bins here at home, because it has learned it is more expensive than to have privately owned storage handle it for them. Pray tell, how can they do it in India when they can't do it at home.

I have merely touched the surface on unexplained and unmanageable theories of disposal of our crops. All prove to be costly to everyone and, most of all, the farmer. What is the reasoning behind all of this?

The petroleum philosophy of thinking has, for too long, governed our Agriculture Department. Their policy is to give it away rather than see it used as a fuel. In England, a company in which the controlling stock is owned by one of the largest oil companies in the United States, advertises the greatest fuel ever produced was that with an alcohol blend. Alcohol long has been a part of other countries' fuels.

Now a new philosophy rubber has entered into the picture. How soon are we going to be asked to go to war to protect Americans' part in the recent $30 million investment. All this while our grain is hauled to Government storage on tires made from India's food supply.

It certainly would seem that we should charge a part of the dollar, to say nothing of the bloodshed of our past war, to the cost of gasoline. Do American and foreign oil interests in foreign countries, with their 18.7 percent import to American markets, need to be protected at all costs to agriculture?

We, as farmers, must approach this from a positive viewpoint. Industry can, and will, use our farm production when we decide to help with a program that will bring this great project into being.

Chemurgic science has given us the knowledge to make us a prosperous agriculture. Our motto should very well be "forward march." Surely farm prosperity beckons.

How Old Is Too Young?

EXTENSION OF REMARKS
OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 13, 1960

Mr. McCORMACK. Mr. Speaker, in my remarks, I include an interesting and informative article on the ages of our Presidents entitled "How Old Is Too Young?" written by James H. Powers, and appearing in the Boston Globe of January 10, 1960.

The article of Mr. Powers refreshes our memory of information particularly interesting this year in connection with the coming campaign for President.

The article follows:

HOW OLD IS TOO YOUNG?

(By James H. Powers)

What is the appropriate age for a candidate seeking the Presidency of the United States?

Should he be young, in keeping with Bacon's warning that, "Men of age object too much, consult too often, and adventure too little, repent too soon, and seldom drive business home to the full period"?

Or should he be older, conforming with the advice of the Roman sage who insisted that youth should spend its time acquiring experience and leave to the old the task of applying it?

The Founding Fathers believed they had answered these questions by stipulating 35 as the minimum age for the White House. Yet, in the opening stages of the preconvention campaign for presidential nominations in both parties, some are suggesting that men in their 40's belong in the category of the unduly young.

YOUNG MEN OF 1960

None of the three presently avowed candidates for their party's leadership in 1960 will, of course, have to defend himself against this soft impeachment as did William Pitt, Prime Minister of the British Empire at 25, who pleaded "guilty to the atrocious crime of being young." All three aspirants are well into their forties.

Vice President NIXON yesterday observed his 47th birthday.

HUBERT HUMPHREY, who challenges Senator JOHN KENNEDY for the Democratic nomina-

tion, is 49. The Massachusetts Senator, at 43, is in fact 3 months older than was Thomas Dewey, of New York, when, as Republican nominee in 1944, he extolled his youth as his party's asset in the effort to roll back the Roosevelt tide.

Evidently definitions of "youth" need revision if the judgment of the writers of the Constitution is to be discounted in 1960.

Senator KENNEDY, urging that "vitality, energy, endurance, new ideas, and receptivity to new ideas" are "qualities a new President is going to need," was stating a case for all three avowed candidates, not for himself alone.

On five occasions the Nation has sent men in their forties into the White House. The results compare well with records of those who took office in their fifties or sixties.

THEIR RECORD SPEAKS

James K. Polk, first "dark horse" to attain the Presidency, was 49 when inaugurated in 1844. Long adjudged an indifferent Chief Executive, he has undergone rehabilitation as the record of his services has become better known. No President, excepting Jefferson, presided over so vast an expansion of our country's territories; none has given closer attention to the duties of the Presidential office or shown a greater capacity in firm administration and policy.

Ulysses S. Grant became President at 46 as a war hero of no party. Though twice elected as a Republican, he did not even vote his party's ticket until his final year in the White House. His lack of political knowledge and acquaintance outside the circle of his military and family associates brought his administration to grief.

Republican James Garfield, elected at 49, remained untested when an assassin's bullet quickly closed his career.

YOUNGEST EVER

The two other Presidential 40-or-more-year-olders were among the ablest Chief Executives of the past century. Grover Cleveland, relatively unknown when elected at 47 in 1884, displayed such capacity that he achieved the miracle of winning a second term after an interlude of defeat. He was the only President to do so.

Theodore Roosevelt, who was 42 when the assassination of McKinley elevated him from the Vice Presidency has become an almost legendary figure among our Presidents.

The Nation's experiments with Presidents in their forties have scored more hits than misses. Only one proved a dismal failure, and in that case the circumstances were unusual.

The median age of all our Presidents stands at 53. Only 1 of the 7 reaching the office after 60 can be listed among Presidential figures of force. William Henry Harrison, a hero of the Indian wars, died exactly 1 month after his inauguration at 68. James Buchanan at 65, allowed the drift to civil war to gather speed.

Zachary Taylor, 64, another "drifter," lasted 14 months.

But Harry S. Truman, assuming Presidential responsibilities at the age of 64, proved by his bold dynamism that Bacon's strictures on age need qualification.

THE MAN, NOT HIS AGE

And indeed they do, in or out of the Presidency. Like those who denigrate the youth of men in their forties those who indict the incompetence of age would better exercise caution.

One's biological age and his mental age are often quite different matters, depending upon the individual himself. The wiser view was Emerson's who wrote: "We do not count a man's years until he has nothing else."

Michelangelo was chief architect of St. Peter's in his eighties. John Wesley attained his greatest power and eloquence at 88. At 80, Talleyrand contrived the Triple Alliance; Hugo wrote some of his greatest works at 4 score; Goethe finished the Second Part of Faust in his eighties; Bancroft completed his famous history at 80; Gladstone began his fourth term as Britain's Prime Minister at 83.

The appropriate age for a President seems to be a question less of years (above the constitutional stipulation) than one of physical and mental capacity. Perhaps Cicero was right. These qualities, he suggested, are found in a youth with something of an old man in him, and an old man who has something of youth in him.

Dorothy Rochon Powers, Montanan, Wins Ernie Pyle Award

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Wednesday, January 13, 1960

Mr. MANSFIELD. Mr. President, in the Appendix of the RECORD for January 11, 1960, page A101, is an item entitled "Henry N. Taylor, Montanan, Wins Ernie Pyle Award." Due to a mistake on my part, this is a misnomer, because while Henry N. Taylor, a distinguished writer for the Scripps-Howard newspapers, did win the Ernie Pyle award this year and is entitled to due credit for it, he is not a Montanan; I believe he is a Virginian.

I had intended to have the headline read: "Dorothy Rochon Powers, Montanan, Wins Ernie Pyle Award."

Mr. President, I ask unanimous consent that my statement and the article published in the Scripps-Howard press be printed in full in the Appendix of today's RECORD.

There being no objection, the statement and article were ordered to be printed in the RECORD, as follows:

Mr. MANSFIELD. Mr. President, last week the winners of the seventh annual Ernie Pyle Memorial Award were announced. One of the winners was a Montanan, and, in addition, she is the first woman to receive this distinguished award, sponsored by the Scripps-Howard newspapers. I refer to Mrs. Dorothy Rochon Powers, feature writer on the Spokesman-Review, a daily newspaper in Spokane, Wash.

Mrs. Powers is a graduate of my alma mater, Montana State University, and was a student there while I was on the faculty. She has had a distinguished career in journalism, and has covered every kind of a beat in news reporting, in addition to writing feature columns.

I am much pleased that Mrs. Powers has received this honor, and I heartily concur with the statement of the judges of the contest that she "has the heart, the soul, and the insight of a woman Ernie Pyle."

Mr. President, I ask unanimous consent to have an article from the January 7, 1960, issue of the Washington Daily News printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

"MRS. DOROTHY ROCHON POWERS, MONTANAN, WINS ERNIE PYLE AWARD"

"NEW YORK, January 7.—The Scripps-Howard newspapers today announced two 1959 winners of the Ernie Pyle Memorial Award.

"They are Mrs. Dorothy R. Powers, feature writer on the Spokesman-Review, Spokane, Wash.; and Henry N. Taylor, correspondent for the Scripps-Howard Newspaper Alliance, Washington, D.C. (Mrs. Taylor's dispatches appear regularly in the Washington Daily News.)

"Mrs. Powers is the first woman winner in the 7 years the award has been made.

"Each will receive $1,000 cash and a bronze plaque for writing and reporting most nearly exemplifying the style and craftsmanship of the great war reporter and columnist.

"The trustees of the Scripps-Howard Ernie Pyle Memorial Fund also announced a grant of $2,500 to the Inter-American Press Association for an exchange scholarship.

"TREMENDOUS IMPACT

"The judges said Mrs. Powers 'has the heart, the soul, and the insight of a woman Ernie Pyle. Her reporting and writing have had a tremendous impact on her community.'

"Of Mr. Taylor, they said: 'He combines good, solid reporting with good, easy-to-read writing devoid of frills. This is reminiscent of Ernie Pyle's topnotch copy. On any front, from home to Rome, Mr. Taylor makes the reader feel right there with him.'

"Mrs. Powers, 38, was graduated from Montana State University, edited a weekly, the Maryville, Tenn., Enterprise, and was State editor of the Clarksville, Tenn., Leaf-Chronicle.

"OUR TOWN

"She has covered virtually every beat on the Spokesman-Review, from courts to stockyards, and writes a column, 'Our Town,' in addition to general assignments and features.

"She was named 1959 National Headliner of the Year by Theta Sigma Phi, honorary women's journalism sorority, and received a National Headliners' Club medal in 1959.

"Mr. Taylor, 30, is a graduate of Virginia University, served as a U.S. Navy intelligence officer from 1951 to 1954, and while stationed in London was a contributor to the London Observer.

"He became a reporter on the Cincinnati Post, a Scripps-Howard paper in 1954 and in 1956 won the American Political Science Association's Award for outstanding coverage of State and local politics.

"THREE YEARS HERE

"For the past 3 years he has been a member of Scripps-Howard's Washington and international staff. He accompanied Khrushchev on his recent U.S. tour, and his recent foreign assignments have included Cuba, the Middle East, the U.S.S.R., Europe, and the Far East.

"Judges for this year's Ernie Pyle Memorial Award were Edward J. Meeman, editor of the Memphis Press-Scimitar; Loye W. Miller, editor of the Knoxville News-Sentinel; and E. M. Pooley, editor of El Paso Herald-Post."

Address of Hon. Joseph W. Martin, Jr.

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 13, 1960

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks, I include an address by the Honorable JOSEPH W. MARTIN, JR., of Massachusetts, at the annual dinner of the New England Society in the city of New York, on Thursday, December 3, 1959.

In his speech, Mr. MARTIN related the fine progress of the New England States in the new industrial age. He also discussed the menace of inflation and the need for action to prevent the destruction of the value of the dollar.

There is a message in this address which I consider extremely timely and of great importance to the American people. It is important from the viewpoint of the economic soundness of our country.

The address follows:

It is a great privilege to come to this fine gathering of people who, while now a vital part of the great Empire State, have not forgotten the part of the country to which they trace their origins.

This is the 154th annual dinner of your society. Its very age is conclusive evidence of the ties of affection which a New Englander always bears to the land of his origin. While I still live in the bustling town where I was born, I have traveled far, and whether it was in California, Hawaii, or even the Orient, people of New England origin never fail to grasp the chance to reminisce about the State of their birth and yearn to relive the old days.

One hundred and fifty-four years old. What mighty changes have come to New England, America—yes, to the world in this span of time. In the early days of this society, we were a struggling nation, a nation whose people were mostly loyal to some particular section, as your founders were to New England. Now while we are properly loyal to and cherish the State of our birth, our supreme loyalty is to the Nation itself. It is this love of country which has made us the mightiest Nation of all time. It is this loyalty that will make it possible for us to meet the challenge which will unfold in the future.

If there is any fault to be found with New Englanders, it is that we do not extol more vigorously our past contributions to the Nation, the contributions we are making today, and those we expect to make in the days ahead.

Texas never tires of telling of the wonderful achievements of that great State in the Southwest. Virginia takes just pride in its historic past and the great part it had in the formation of the Republic. California properly boasts of its tremendous growth and of its great future. New York likes to remind us of her eminence in trade, commerce, and banking. This is the spirit which makes it possible for us to look to the future with great expectancy.

We New Englanders have every reason to speak up about our contributions to the early history of our country, our busy present days, and the promise of the future. It is because that, as a people, we are of a modest nature many have come to believe we are slipping backward and that we are a declining section of a great nation.

This concept is far from the truth. New England is still forging ahead—a little slower perhaps than the newer sections, but still progressing at a healthy rate. We hope to accelerate that rate in the days ahead.

New England has been forced to redirect its course on several occasions. The early days were the maritime era. It was in New England where the American Navy was born and where it was stimulated in the critical days of the Republic. Our clipper ships sailed the seven seas, bringing the wealth and produce of the world to the new land. The beautiful homes of the old sea captains upon Cape Cod and the north shore still remind us of this great era.

Then started the industrial age. The Government nurtured the new industries with the tariff to protect our infant industries, and simultaneously there was a decline in shipping. Quick to adapt itself, New England turned to the factories for a livelihood.

The first cotton mill in America, the first iron foundry, and one of the first General Electric plants were just a few of the early contributions.

Those were the days of water power. It was not long before every river in New England was dotted with a little factory giving employment to hundreds of workers and prosperity to many little villages. Far removed from the sources of raw material, this progress was remarkable. These industries blazed the way for the great industrial empire of the United States.

In later days, new conditions arose. Many cotton mills went South to be close to the sources of raw material, to obtain cheaper labor and operating costs. Dominance in the cotton textile trade, for years a bulwark of New England economy, was no longer to be found here. This was a painful period of readjustment to many of our cities and towns. But happily that period has passed. We have come through this crisis with customary New England courage and determination, and we can now see brighter days ahead.

We have grasped the opportunities of the new age, the age of nuclear power, the age of electronics and plastics. The coming nuclear power will give New England a great advantage in the future, an advantage we have not had in the past. Today new factories are springing up everywhere. Wonderful modern plants are replacing the old factories. People are working at better wages than ever. I can tell you good people there is no gloom or despair in New England.

We face the future fully confident that the people of our section will measure up to their historic past.

How, I ask you, can we fail? Here in New England is the wealth, greater per capita than any other section. We have the brains and the industrial leadership to direct that wealth. And above all, we have great educational advantages and research centers in our many fine universities and colleges. Every year these schools are turning out the best-trained minds in the world to meet the industrial challenges of our times. We must continue to maintain and expand our great schools of learning. They are one of our greatest assets.

Years ago, when taunted in the Halls of Congress by a colleague with the inquiry: "What does New England produce?", Daniel Webster thundered back with his great voice—"New England, sir, produces men."

It is because we produce able men and women, the most skilled workers, the best-trained leaders that we go forward to further glorify your New England heritage.

We have many handicaps in New England, such as a hard soil to cultivate, and remoteness from the sections where raw materials are produced. But we do have distinct advantages. Within a radius of 500 miles is a market containing a population of 52 million consumers, the richest buying market in the world.

New England is the mecca of people from all parts of the Union who want to get away from the heat of other sections and enjoy the opportunities for a refreshing summer vacation under excellent climatic conditions. Every year the list of summer visitors grows, and Cape Cod is sometimes called the Florida of the summer season. It is unnecessary to mention the possibilities this provides to increase the earning opportunities of our section. Thousands are already profiting from the evergrowing tourist trade.

We do not forget the deeds of the Pilgrims and the Puritans who, along with the cavaliers of Virginia, built this great American heritage. It was built by hard work and loyalty to the State. We must not stray from these principles. They are still the foundation upon which the safety of our great Republic rests.

The Pilgrims in Plymouth taught us early that communism or socialism would not work in the New World. They briefly tried this system of regimentation, but it ended in failure. They were quick to cast aside the experiment and to substitute instead the system of profit for work accomplished. They knew that, if the new land was to flourish and grow, it must have the stimulus of individual opportunity and initiative.

The lesson is most timely today when a powerful nation asks the world to embrace the ideology of communism. The Pilgrims knew better and so must the people of today if they are to enjoy the blessings of progess, happiness, and human dignity that are available only when freedom prevails.

The Pilgrims knew, too, the value of a democratic government. They realized that free men and women are supposed to run the Government, and it should not be the function of government to manage the private lives of the people. Chaos and confusion generally result from too much government interference.

Today we are drifting away from those principles. I hope this trend will not go too far and that the people of New England will remain true to their traditions and sturdily resist the tendency toward a powerful bureaucracy which seeks to manage the details of our lives. This eventually would mean the loss of our liberties and finally the end of the American way of life.

To those who constantly seek government aid for private projects, I might remind them that the Government in Washington has no secret source of revenue. It has only the money it takes from the people in taxes. When the Federal Government is given the assignment of spending your money, it levies a huge brokerage charge for doing so. Thus it can readily be seen you are paying more when you ask the Federal Government to pay for a project than if you did it yourselves.

The people of America have many grave, challenging problems today. We must solve them properly or risk the danger of a serious blight on our future. Above all is the need of preserving peace. Closely associated with the need of peace is the need of controlling the forces of inflation.

The curbing of inflation should be the grave concern of every American, regardless of economic status. But its ravages are felt especially by the poor. In fact, the lower an individual is on the economic ladder, the more he suffers from the effects of rising prices. For the poor, a sound and stable dollar makes the difference between a decent meal and hunger. That is why the achievement of a stable currency must be our goal.

The little people of our land—those owning modest insurance policies, savings accounts, Government bonds, and those old folks living on small pensions and social security—are rightly worried by the gradual whittling away of the value of money in the devastating course of "creeping inflation."

In a rising and expanding economy, the accomplishment of price stability becomes a difficult and a complex problem. It is economic history that, in periods of high and rising demand for goods and services, prices tend to go up. There is no easy solution to the problem, such as the passage of a law. The truth is that the most effective laws we can employ to combat the menace of inflation are the laws of commonsense.

The practice of reasonable self-restraint on the part of management, labor, and the general public is inherent in the success of this undertaking.

It would be a sad day for America to resort again to a system of Government controls. Such controls are destructive to competitive enterprise, and they are destructive to individual liberties. What is even worse, for the most part, they do not work.

A system of price controls would be unworkable without wage controls, profit controls, and the rationing of goods. This would mean the creation of another gigantic bureaucracy in Washington to run the Nation's business, when the bureaucracy is already too big. Moreover, controls lead to the inevitable black markets and the loss of freedom on which our prosperity has been built.

The problem we face, therefore, is to maintain a growing, expanding economy, providing jobs for our increasing population and at the same time to maintain a stable dollar. It is unthinkable that we should reconcile ourselves to a continuous vicious spiral of inflation where wages and prices chase each other ever-upward.

Dilution of the value of the dollar discourages people from saving. They see little incentive to save dollars which would steadily decline in value each year. Of course, under such conditions, the little people on pensions and fixed incomes find it impossible to save anyway. Declining savings would mean that capital to finance normal growth would become scarce, making it more costly to borrow money as interest rates go up. This could result in cutbacks in programs for business expansion and improvement; and that, of course, creates unemployment and recession.

For the past 20 years, the dollar has been declining in value as a result of the inflationary process. There have been variances from year to year in the rate of decline, but there has been no essential change in the pattern of decline. Thus, a dollar in the period from 1935 to 1939 was worth 48 and a fraction cents by the year 1958.

We have seen other nations go through the wringer of inflation. We have seen Germany, for instance, after World War I so debase its currency that it was literally necessary for a housewife to carry a wheelbarrow full of paper money to buy her groceries.

The experience of France furnishes further testimony of the havoc wrought by runaway inflation.

Typical is the story of the thrifty Frenchman who sold his house in Normandy and bought life annuities that at the time of purchase would have provided himself and his wife a minimum of security for their old age. That was in 1927. Thirty years later, the cost of living had gone up 37 times what it was in 1927. The pound of butter she could have bought for 10 francs in 1927 now costs her 410 francs. This tragic widow was reduced to buying one egg at a time, a little milk every other day, and a slice of ham once a week.

France has experienced the disastrous results of a paternalistic government which went too far toward socialization. The French have learned the bitter lesson that government cannot give its people anything it does not take away from them in the first place. The people rebelled against paying for their social reforms in taxes. So they are paying for them in the destruction of the value of their money. Here again, of course, it is easy to see that the poorest people are the hardest hit.

But we do not have to go beyond our own shores to realize the evils of inflation. The decline in the value of the American dollar graphically tells the story.

An American with an income of $3,000 a year in 1939 needed an income of $7,370 for exactly the same amount of purchasing power in 1957.

An individual who had an income of $5,000 a year in 1939 needed an income of $13,004 in 1957 to maintain the same standard of living.

If the same trends should continue from now until 1975, the person who had a $3,000 income in 1939 will need an income of $16,867 to live in the same manner as he did in 1939.

One does not have to be much of a prophet to see that, if the present trend continues unabated, this country is on a joyride to a disastrous crash. It must be prevented. It will be prevented if the people do a little serious thinking.

There are numerous reasons for this inflationary process, but the heart of the problem lies in Federal deficit spending and a mounting Federal debt.

In 22 of the last 27 years, the Federal Government has spent more money than it has taken in taxes.

What should be done to control the destructive forces which in 20 years have cut the value of the dollar in half and which threaten to diminish it still further?

The first sound approach to this problem is to discontinue this now accepted practice of deficit spending and to operate on balanced budgets in all years except years of national emergency.

One method of balancing our budgets would be to increase taxes. But this method should be rejected because taxes already absorb too great a proportion of the citizen's dollar.

Studies made by the Tax Foundation show that in an 8-hour day the average $4,500-a-year wage earner must work for the Government 2 hours and 29 minutes. This is more than he must work to pay his food bill, which is 1 hour and 39 minutes; or his housing, for which he must work 1 hour and 25 minutes; or for clothing, for which he must work 37 minutes. The average man already pays out one-third of his income in direct and hidden taxes. That is too high. Reduced taxes are vital to stimulate our economy.

The only other method of balancing the budget is to reduce Federal spending. And this is the sound and sensible approach. If this country is to wage a successful battle against ruinous inflation, it is obligatory on the part of the administration and the Congress to begin now a system of progressive reduction in our budgets each year.

We often hear it said that you cannot cut military spending—that to do so would endanger our national defense. I cannot subscribe to this belief. And the fact that military spending accounts for such a large part of the whole budget is often cited as an excuse for not reducing spending anywhere at all.

Spending for national defense should be scrutinized as carefully as any other forms of expenditures. Enormous savings can be made in the armed services without in any way impairing their essential strength and their defense potential. We need to give all that is necessary for the preservation of peace and our security, but not a cent more.

The responsibility for drasic cuts in spending is not the responsibility of the Congress alone. Far from it. Equal responsibility rests upon the administration and the executive departments. Too often the Appropriations Committees of the Congress are the innocent victims of inflated budget requests sent up to the Capitol by the executive branch. The administrative people, feeling their requests may be cut down, often overstate their needs in order to get what they want. This is wrong. Those who run the departments would render a real patriotic service and help to control inflation by putting their own houses in order and keeping their budget demands down to a minimum instead of a maximum which has grown to be a rather general practice.

There is not a single department, including the military, which could not run for substantially less money without impairment to any essential public service if there is the will and determination to do so.

The maintenance of peace and the need of cooperative relations with the other nations of the world demand our closest attention. Without peace no nation can expect to attain the progress its people pray for. With peace we can all expect an expanding economy, prosperity, and a better world for all.

The real guardianship of peace in the immediate years ahead will primarily rest with the United States. We are the one nation whose resources and strength make other nations pause before engaging in a war that would be disastrous.

It is because of that great responsibility we are spending over $40 billion for national defense. Your national administration would much prefer to use these funds to balance the budget, cut Federal taxes, and direct great sums to humane activities.

But as long as the threat of communism exists we must continue to spend huge amounts for missiles, aircraft, the Army, the Navy, and the Air Force. We must be so strong that our strength will guarantee peace. We spend these vast sums for peace and not for war.

It is the same story with our aid in the building up of the "have not" nations of the world. We help other nations build their military strength because we want them to be able to resist aggression and contribute to the defense of the free world.

We spend for economic aid so that other nations may live better, and we know that will contribute to our own prosperity through the purchase of goods that could not be bought otherwise.

We help the little nations of Asia, Africa, and South America because we know that if we do not the Communists may well do so. We want them as friends and voluntarily on the side of the free world.

In the past we have been neglectful of South America. We have taken these countries too much for granted. The Communists, noticing that neglect, have not been slow to stir up strife through their insidious propaganda. Fortunately, the South American Republics know full well that they can expect no permanent good from the Soviet world. They want freedom; they want to build strong nations; and from our past history they know the United States is the one country that can and will help them. So it is incumbent upon us to invest a little money in building up South America. It will yield great dividends of good will and cooperation and, from a business point of view, will open tremendous markets for American goods.

Wisely administered, we can well make these foreign expenditures profitable to both the recipient of the aid and to our own country as well. South America knows, as indeed the whole world must know, that our country is not selfish in its aid. It seeks neither territory nor domination in any part of the world. It wants all nations and all people to be free, independent, and prosperous.

The future is full of hazards, and the picture is cloudy. But I believe we will meet these difficult problems at home and abroad with the courage and determination demonstrated by our New England forebears when this Nation was born. With courage we can meet the challenge given to us by the other nations of the free world.

We can and must avoid war, and we must make our dollar sound. If we do there will be a more abundant life not only for the people of America but for the other free nations of the world as well.

May the Almighty guide us in the great tasks which lie ahead.

America's First Polaris Submarine Is Commissioned

EXTENSION OF REMARKS
OF
HON. NORRIS COTTON
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Wednesday, January 13, 1960

Mr. COTTON. Mr. President, on December 30 last America's national defense preparations took a significant step forward into a vast new dimension when the first Polaris missile submarine was commissioned as an active part of the naval forces.

Dr. George B. Kistiakowsky, special assistant to the President for science and technology, was the speaker at the commissioning ceremonies for the U.S.S. *George Washington*. His remarks aptly picture the characteristics which make the missile-launching submarine a key weapon for our national survival:

She and her sister ships will give our Navy a new capability and so will provide our Nation with a unique strength—the strength of a secure deterrent—of a force that can, with inevitable assurance, decisively punish an aggressor.

She will slip through the dark reaches of the oceans that cover seven-tenths of the earth's surface, moving stealthily and with surety, because her electronic brains will tell her at all times where she is; she will be hidden by hundreds of feet of water; her detection and destruction will be well-nigh impossible and yet her targets for retaliation will be continually within reach.

Commissioning of the U.S.S. *George Washington* is a heartening accomplishment, but we must not overrate its importance. It is only an early milestone on the long road we must travel before we have a fleet of nuclear-powered missile-firing submarines continually on the alert in the oceans of the world.

We must forge ahead to complete the development of the Polaris missile which these submarines will carry, and we must swiftly augment the number of these submarines. I believe we must have at least 40 of them, if we are to realize their full value to our national defense, and only 9 have been authorized so far.

We must move ahead on this program as swiftly as possible. No amount of money will buy back the time lost if we do not, and the Polaris missile system will give us more defense for less money than any other weapon in the whole arsenal.

For my part, Mr. President, I shall press this year, as I have in the past, for approval of the largest construction program for Polaris submarines that we can effectively support.

Because of its importance and interest, I ask unanimous consent that the remarks which Dr. Kistiakowsky made at the commissioning ceremonies be printed in the Appendix of the RECORD.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

Captain Osborn, men of the *George Washington*, distinguished guests, ladies and gentlemen, it is a great privilege and honor for me to take part in this historic event. The commissioning of the first Polaris missile submarine—that moment when this complex product of our technology springs to life and becomes the U.S.S. *George Washington*—will long be remembered proudly by all of us. We, assembled here today, are citizens of this young and free Nation of ours that had the enterprise, initiative, and great skill to conceive, design and build this incomparable ship. All of us, whether our forefathers bore the hardships of the American Revolution or, like myself, became adopted sons of our country not so long ago, will share together in the advantages accruing from the capabilities of this undersea vessel of the future. We all already share the benefits of the foresight, courage, and devotion to freedom of her namesake, President George Washington.

This man is known to all as a man "first in peace, first in war, and first in the hearts of his countrymen." We, ordinary citizens, cannot hope to serve our country as George Washington did. Nor can we, as individuals, expect to earn the recognition that is so rightly his. Captain Osborn, however, and his fine crew of officers and men, being welded into a living entity with their ship, the *George Washington*, will come nearer to this enviable goal. Theirs will be key roles in peace or war; they will be close to the hearts of a multitude of their countrymen.

"In any circumstances," President Washington said, "a decisive naval superiority is to be considered as a fundamental principle and the basis upon which every hope of success must ultimately depend." The ship we see before us will give a truly new dimension to the concept of naval superiority. Late next year this young lady called *Washington*—that was baptized last June and is having her coming-out party today—will be wedded to her intended, the Polaris missile. Feminine though she is, hers will be the prowess and endurance of a nuclear-powered submarine and the awesome striking power of ballistic missiles. She and her sister ships will give our Navy a new capability and so will provide our Nation with a unique strength—the strength of a secure deterrent—of a force that can, with inevitable assurance, decisively punish an aggressor.

She will slip through the dark reaches of the oceans that cover seven-tenths of the earth's surface, moving stealthily and with surety, because her electronic brains will tell her at all times where she is; she will be hidden by hundreds of feet of water; her detection and destruction will be well nigh impossible and yet her targets for retaliation will be continually within reach.

Let us keep in mind, though, the spirit in which she was built. It is the same spirit in which George Washington led the Revolutionary Army in which he became the first President of the United States of America: To further the dignity of the individual; to further the cause of freedom.

It was 160 years ago this month that George Washington died, but this spirit—his spirit—has never foundered. It has been built into this ship to maintain peace and to preserve our precious way of life. And so let us fervently hope that as long as she sails the oceans her work will be that of deterrance, not that of retaliation; of a guardian, not an avenger. Let us hope that her mission to prevent war will succeed and that she will convince all of the determination of the American people to stand fast by their basic principles as set down in Mr. Washington's day:

"We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable rights, that among these are life, liberty, and the pursuit of happiness. That to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed."

Let us hope, therefore, that she may fully share in the peaceful exploration of that vast inner space asleep beneath the blanket of ocean waves—a realm that we cannot neglect in our justifiable excitement over the conquest of outer space. Let her gently disturb the ocean's sleep to pioneer in research of the deep. Let her be a leader in mapping the untrod ocean floors, in learning about ocean currents and thermal layers. Let her discover new wonders of flora and fauna in undersea depths. One of these days mankind will learn how to tap the abundant treasure now hidden in the oceans. Let the new *George Washington* be among those who are forging ahead at these never-ending frontiers of human knowledge.

Like her namesake, this *George Washington* will be in the hearts of her countrymen, particularly in the hearts of the men and women of the Electric Boat Division of the General Dynamics Corp. who built her. In so doing they have added another superior and well-deserved entry on their already glowing record—a record that includes the building of the first U.S. Navy submarine *Holland*, the first nuclear-powered submarine *Nautilus*, the largest and most advanced picket submarine *Triton*, and many other famous firsts.

This *George Washington* will also be in the hearts of many others. Let us remember that under this stout hull there are now hidden—or soon will be—the most advanced and diverse products of our technology: turbine and rocket propulsion, nuclear power and nuclear weapons, electronics tailored into sophisticated radar, radio, sonar, and many other applications. Fluid dynamics, hydraulics, metallurgy, ceramics, and the art of plastics all found unique applications here; it is a breathtaking microcosm of American technology. Many men in many places of our land toiled to make all this possible. There is probably not a single one of our 50 States whose sons and daughters have not contributed, in some way, to this proud ship and so she will remain close to the hearts of men and women throughout the land.

However, this day belongs to Osborn and his men. It is their efforts that have earned for her the proud title U.S. ship. They have given much of themselves to her and will be expected to give more.

We must not fail to recognize the enormity of the task that confronts this select group of Navy men. To them goes the job of breathing life and order and precision into this mass of steel, interlaced with cables and filled with complex machinery.

Officers and men of the *George Washington*, your watch is set, your duties are clear, your opportunities boundless. As so many other Navy men before, you are pacesetters and explorers. You are also pioneers in a new dimension of your profession.

Yours is a glorious heritage—to follow in the footsteps of so many famous predecessors—those valorous Navy men who gave so generously of their talents, their years, and—all too often—their lives. We know that you will be brave, be loyal, be faithful to the ideals of George Washington. To each of you we wish for every dive, "Green board—pressure in the boat," and on every cruise, smooth sailing.

The Thing That Counts

EXTENSION OF REMARKS
OF
HON. CARL ALBERT
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 13, 1960

Mr. ALBERT. Mr. Speaker, one of the top ratings in the annual southeastern

Oklahoma district speech contest was awarded to Kenneth Wolfe of Wilson, Okla., for his oration on the subject of education.

Under leave to extend my remarks, I include a copy of his speech "The Thing That Counts." In the light of the tremendous demands of our age for technical knowledge, it is worthwhile also to restate the importance of education in enabling the individual to understand and participate fully in a democracy.

THE THING THAT COUNTS

As a society, we have allowed our rapidly expanding educational needs to outstrip our educational efforts and performance. The task now is to close this gap, which has already grown dangerously wide and which could prove even more disastrous for our society in the long run than inadequate military defenses.

The children now in school need a far better education than any we could have dreamed of in the past, or can even conceive of now, if they are to cope successfully with the challenging problems and opportunities of the 21st century in which they will live.

What is an adequate education for people who will travel to the moon, who will enjoy unbounded solar energy, whose working hours will seem more like our lunch hours, who will live in a world of technological devices as unimaginable to us as TV was to Moses, and whose lives may be as long as Methuselah's?

Are we giving an adequate education to the future President of the United States, who is attending school somewhere right now?

No belief is more firmly held in the United States than belief in education. But belief is not enough. We must understand education as well as believe in it. The thing that counts, after all, is not the number of schoolrooms we have, but what goes on in them.

Since the beginning of time man has developed through trial and error method. Later on, he experienced, he explored, he discovered, he read, and he is now launching out for new horizons, ideas, and perceptions. This has all been a process of education.

To many Americans, education is one of the religions they really believe in. It has its orthodoxy, its pontiffs, and its noble buildings. Education is the established church of the United States.

There is much truth in this observation by the late British educator, Sir Michael Sadler. We Americans do have almost a religious faith in education. We want the highest quality instruction and the best possible educational opportunities for our youngsters. We recognize that the being of individuals and of our Nation depends upon true knowledge and a thorough understanding of basic principles which can be gained only through sound education.

There is increasing evidence, however, that too much attention is being paid to the external form of education, its pontiffs, and its buildings, while not enough is spent on fundamentals, truth, and understanding.

It is not enough simply to invest more money and more materials in the production of missiles, satellites, or other products of this scientific age. These are vital concerns, but these are end products; over the long term, our fundamental concern should be to invest sufficiently and wisely in the development of highly skilled and broadly responsible men who will make possible not only scientific and military progress, but advances in the humanities and in all the highest fields of mankind's endeavor.

While our ability to meet immediate national security needs depends upon effective use of the talents our society already has, we should be even more concerned with our rate of achievement—and with the Soviet rate—10 to 20 years from now. In large part the levels of achievement in the future are being determined in the classrooms now—today—both in the United States and Russia.

Schools now affect the welfare of the United States more than ever before in history, and this new importance of education has been dangerously underestimated for a long time.

The schools have become the chief instrument for keeping this Nation the fabled land of opportunity it started out to be. The committee members for the White House Conference on Education were right when they wrote: "As long as good schools are available, a man is not frozen at any level of our economy, nor is his son."

What is needed most is a new emphasis on the pursuit of learning, a new esteem for academic teaching and academic accomplishment. In many of our schools and homes we need more hard work in fundamental academic subjects, and higher academic standards. Good teaching and good scholarship should be highly prized by the student, the school, the family, and the community. And the rewards our society accords to good teaching and good scholarship should be much greater.

I do not believe we have made as much progress along these lines in this country as we should. Education has not had the priority it deserves. If academic accomplishment has not fallen into actual disrepute, it is at least suffering under indifference and lack of esteem.

More emphasis, more esteem for academic accomplishment cannot be obtained simply by Government order, or even by investing more money in education, as desperately needed as more funds are. Esteem for scholarship must be an attitude—the result of a sense of values of the people.

The Government can, however, provide some leadership. And I believe it can help develop an environment, a climate of opinion, which gives more encouragement to scholastic pursuits. Under our traditional system of education, the bulk of the funds and effort needed for education must be provided by local, State, and private sources.

Man's destiny appears to depend upon his acquisition and use of knowledge. Public concern is based, in short, upon a new sense of the relationship between the quality of education and the future of America.

The best education is that which does most to enable each student to develop his abilities and to serve society. It follows that education must be dynamic and diverse. High quality in education implies never-ending adaptation and improvement.

Education is a process of acquiring the knowledge, skills, and standards of a culture, and of learning to contribute to that culture, but no individual is fully educated who has received knowledge of extracurricular activities alone. It is quality of education in academic abilities with which most Americans are concerned today.

The ultimate measure of the quality of education today is its impact on individual pupils. It helps to develop a sense of purpose and of value as members of a community and fosters the pupil's understanding of themselves and their ability to direct their own affairs.

The quality of an educational enterprise is largely determined in each locality. High quality in a school depends directly on the character of the community at large and on the abilities and attitudes of the parents and the school staff. Thus, the taproot of quality in a school is a vigorous public commitment to education based on understanding of what education can do and what good schools are like.

It has long been an article of faith in America that public education, if universal and excellent, would help immeasurably to eradicate social ill, elevate the tenor of human life, and strengthen democracy.

As a society of liberty-loving people, America cannot fail its youth by neglecting the thing that counts most—a thorough education.

The International Cultural Exchange Program

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, January 13, 1960

Mr. HUMPHREY. Mr. President, many times in the past I have been proud to associate myself with the legislation on arts and culture introduced by Representative FRANK THOMPSON, JR., of New Jersey. In particular, I recall our bill passed by the 84th Congress to ensure that the President's international cultural exchange program would become permanent policy.

It is to the administration of that law—Public Law 860–84—that the distinguished Representative from New Jersey referred in a speech on the American Educational Theater Association on December 28, 1959. Representative THOMPSON said:

Under the current program of the President's International Cultural Exchange Program as administered by the Department of State, of 115 attractions which have been sent abroad, only a half-dozen or less than 6 percent, have been educational talent—university or college theater or music groups. * * * This program is so weighted with professionals that it might justly be called the 6 percent program rather than the President's international cultural exchange program. It should also be noted that there is no cultural exchange in the program at all.

Ambassador Llewellyn Thompson in Moscow and Ambassador Ellsworth Bunker in Delhi have requested the State Department to send young educational talent in the arts to Russian and India, hoping to repeat the success of Van Cliburn, for example. However, the administration has only talked about this exchange and no young talent has been sent to either of these countries.

Mr. President, I ask unanimous consent that this fine speech on recruitment of educational cultural talent for our exchange program be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the Record, as follows:

ADDRESS BY CONGRESSMAN FRANK THOMPSON, JR., OF NEW JERSEY, BEFORE THE AMERICAN EDUCATIONAL THEATER ASSOCIATION, DELIVERED IN WASHINGTON, D.C., ON DECEMBER 28, 1959

Dr. Young, Dr. Cole, Dr. Selden, Dr. Morrison, distinguished friends and guests, it is an honor and a pleasure for me to have this opportunity to discuss with such a select group some of the pressing problems and suggested solutions which this 23d annual

convention of the American Educational Theater Association must deal with. My remarks might well be titled "Democracy Needs a Broader Cultural Emphasis," since they are especially directed to the need for stimulating a more widespread cultural awareness in the United States and in sharing this enthusiasm with people throughout the world. I think it particularly important that we understand that our approach to the arts must be one of sharing them with other peoples, rather than one of using the arts for political ends. For if our primary purpose in our national policy is political we shall fail. Political results may very well follow as a result of sharing the arts, as indeed they have followed the educational exchanges authorized by the Fulbright and Smith-Mundt Acts. But in the arts as in education, it must be primarily a matter of exchanges, and this is something that is entirely missed in Washington these days due to a belief that everything from breakfast cereals to our way of life can be "sold."

The American Educational Theater Association can exert a tremendous force for the stimulation of a significant cultural impact which could be felt both in this country and abroad. Through positive action your association in effective cooperation with other cultural organizations, can with imagination, purposefulness and hard work, effect a cultural renascence. This will require your wholehearted direction, support, and effort—for as Walter Lippmann has pointed out "the renascence will have to come from men of learning"—men who know, because they live the intellectual life, what a renascence would be. However, before we can achieve this goal of a fuller cultural awakening there are obstacles to be overcome. It is my desire today to discuss some of the areas, nationally and internationally, in which your particular kind of leadership is specifically required.

Just recently, for example, Richard B. McLanathan, who was the curator of the U.S. art exhibit at the Moscow Fair (now director of the community arts program of the Munson-Williams-Proctor Institute at Utica, N.Y.), reported to the United States Information Agency and other Government agencies that he found throughout Europe and the U.S.S.R. that people were looking to the United States for cultural leadership. People are looking for evidence that the United States will not only take up Mr. Khrushchev's challenge regarding economic competition, he said, but that we also will demonstrate more fully than we have done so far that we have "a lot to spare in the aesthetic and cultural field as well.

Mr. McLanathan further reported, I am told, that people throughout the world believed that the United States and its allies could withstand any economic or political pressures which the Soviet Union and its satellites might exert. We can do this, they are convinced, only if we are strong culturally. According to Mr. McLanathan, the people of the world believe the United States and the U.S.S.R. offset each other in the economic area. Their decision to follow either the United States or the U.S.S.R. ultimately will depend, he thinks, on the balance sheet evidence of cultural resources and leadership. History clearly documents the fact that civilizations are remembered more for their contributions to the fine arts, to music, the theater, to literature, to painting and sculpture and architecture than they are remembered by the battles which they have fought. It is my belief, and I know it can be documented, that one of the major ways in which we can turn reluctant and uneasy military allies—and the millions of uncommitted people of the world—into friends is to earn their respect through our own respect for our own cultural leadership and achievements in the deeply related fields of education, science, and the fine arts.

As we know, President Eisenhower is a leading exponent of this point of view. In his speeches in India, for example, he called for a massive interchange of mutual understanding through exchange of students. I might add, parenthetically, that he also took the lead in forming a very effective Committee of the Arts and Sciences for Eisenhower in the fall of 1956.

For a number of years, 10 in fact, the great value of exchanging students, the leaders of tomorrow's world, has been proved by the successful Fulbright and Smith-Mundt programs. A massive expansion of these and other programs will be a welcome and valuable step toward creating the international understanding so essential to a permanent peace. Dare we hope that the forthcoming budget message of the President will request the funds which will be needed to finance the President's massive exchange? I look forward anxiously to the opportunity to vote for such a program. My colleagues and I would, I am sure, be much more willing to appropriate the additional funds needed to implement these massive exchanges if the State Department shows the same good judgment it has displayed in the Fulbright and Smith-Mundt programs and work with and through our country's major educational organizations for the implementation of these new exchanges which the President has called for.

I am concerned, however, that the President has endorsed massive exchanges as a grand design because I question how well this will actually be carried out in the field of exchanges in the arts—your association's particular interest—as long as all public funds for cultural and artistic exchanges are channelled through one organization, the American National Theater and Academy, and no other organization, even the American Educational Theater Association, or the National Music Council which—like ANTA—has a congressional charter, is permitted to develop any know-how in this vital area because of the restrictive practices of the Department of State. Yet, at the same time, the leading educational organizations such as the American Council on Education and the National Education Association, and the Institute of International Education, are given a major role by the State Department in the Fulbright and Smith-Mundt programs.

To illustrate what I have in mind, under the current program of the President's international cultural exchange program as administered in the Department of State by Mr. James Magdanz of 115 attractions which have been sent abroad only a half dozen, or less than 6 percent, have been educational talent—university or college theater or music groups. In my opinion, and also in the opinion of such important national groups as the National Education Association, the National Association of Schools of Music, the National Music Camp at the University of Michigan, the Music Educators National Conference, the National Art Education Association—to name only a few—this program is so weighted with professionals that it might justly be called the 6-percent program rather than the President's international cultural exchange program. It should also be noted that there is no cultural exchange in the program at all, as there is in the Fulbright and Smith-Mundt programs. So we now find that many of the Nation's most talented performers, its young artists, who could be our country's most successful cultural ambassadors, witness Van Cliburn, are actually used less than 6 percent of the time.

For the record I will read from some of the glowing newspaper and official reports on the success of the performances of our university theater groups who have toured abroad just in case Mr. Magdanz and Mr. Robert H. Thayer, Special Assistant to the Secretary of State for the Coordination of International Educational and Cultural Relations, missed them. The reaction of people in Latin America, India, and parts of Africa was significant. These accounts prove beyond a shadow of a doubt the great and lasting impact America's talented young artists are making where ever they are given the opportunity to appear by our cloistered policy-makers.

"The visit of the University of Minnesota players to Sao Paulo was a success from every point of view," we are advised by the American Consulate General. "They attained a level of the best professionals in many countries in Latin America," according to the Diario de Sao Paulo.

The American Embassy, New Delhi, reported home that the Wayne State University Players were "a fine group and did an amazing job in the face of many vicissitudes while they were in Delhi. Their performances were excellent. They met people well and were eager and enthusiastic in their contacts with Indian students and other play groups. They made an outstanding contribution, with a grueling schedule, to the feeling of good will and in the advancement of knowledge about the American university drama."

The American Embassy in Ghana reported that the Florida A. & M. University Players "had a net effect favorable to the United States. * * * The players were quite effective in their social relations with Ghanaians before and after their performances, and left many fast friends behind them when they left Ghana." This report is supported by the comment in the Ghanaian that "Their visit is a fine example of what can be done by actors who love the theater and are willing to give their spare time to not only the glamorous side of it but also to the equally exacting tasks of stage management and general organization."

Clearly, talented groups of this type can be a major asset to the United States in its program to give the peoples of the world a broader understanding of America's culture and purposes. As you know so well, since you pioneered it, the Department of Defense sends a large number of college and university drama and music groups abroad to entertain our troops in distant theaters of operation. These groups are much more popular with our troops than most professional entertainers. When they are abroad on these tours why doesn't the State Department and the U.S. Information Service cultural affairs officers schedule them for appearances before young people of the countries in the countries they are visiting, including university audiences, thus saving tax money and spreading America's message at one and the same time?

I think it is significant to note that early in October at the very time that Mr. Robert H. Thayer (special assistant to the Secretary of State) was speaking in New York City to the President's Music Committee about the difficulty of including young educational talent from our institutions of higher education in the President's special international cultural exchange program he was advising Members of Congress that Ambassador Llewellyn Thompson had requested that such young educational talent in the arts be sent to Moscow. Ambassador Thompson was moved, no doubt, to make this request by the astonishing success of Van Cliburn, a Juilliard graduate, who, by the way, received absolutely no financial help

from the President's program. His expenses were paid with funds raised by the Institute of International Education from the Martha Baird Rockefeller Fund. Mr. Thayer also told us that Ambassador Ellsworth Bunker had requested that young educational talent in the arts be sent to India. What then becomes of the classic defense of the Department of State of its present program's virtual exclusion of young people: that American cultural affairs officers and top Embassy people have demanded the great professional groups and don't want educational talent? The State Department, by the way, has done nothing to date about these significant requests by the American Ambassadors in the U.S.S.R. and India except to study them.

The agreement for cultural exchanges with the Soviet Union includes a provision for "university exchanges of faculty and students," and clearly this agreement doesn't rule out educational talent in the arts. There is no reason why we cannot work out this particular type of exchange of educational talent with the U.S.S.R. and other Iron Curtain countries, just as we have with so many other countries under the Fulbright and Smith-Mundt programs where between 3,000 to 4,000 of the 35,000 to 40,000 exchangees during the past 10 years have been in the arts. That this is so is shown by a New York Times article of December 25, 1959, to the effect that one of the U.S. students who went to the Soviet Union last September is studying at the Moscow Musical Conservatory. The New York Times says:

"The U.S. Government is understood to be strongly in favor of continuing and enlarging the student exchange program. Officials remark that the American students during their academic year in Moscow or Leningrad are able to befriend more Russians than any American diplomat or news correspondent can do during his entire service in the Soviet Union.

"Young Americans and Russians are reported to be establishing personal contacts in lecture halls, libraries, cafeterias, and dormitories of Soviet institutions of higher learning with ease and eagerness. This alone, in the opinion of United States officials, would be sufficient for justifying the entire exchange program and advocating its expansion. * * *

"Kenneth Holland, president of the Institute of International Education here, declared that 'it is important for us to have students who know the U.S.S.R., even if they do not advance in their specific fields' in the course of their Russian year.

"Mr. Holland talked with many American students during a visit to the Soviet Union earlier this year. He said he was impressed with their knowledge of Russian affairs and had found that despite the limitations they were encountering their experience was invaluable."

If President Eisenhower's call for massive exchanges is to be carried out with maximum effect then the United States should embark upon a broad program to provide two-way cultural exchanges with all nations, with particular emphasis on young people. You will be pleased to know that Senator HUBERT H. HUMPHREY, Democrat, of Minnesota, Representative HARRIS B. MCDOWELL, Democrat, of Delaware, and I have introduced legislative proposals (S. 1827; H.R. 6876 and H.R. 7533) to put this type of program into effect. We want to see the Humphrey-Thompson Act (Public Law 860, 84th Cong., which made the President's special international cultural exchange program permanent) amended to specifically provide for more widespread cultural exchange of young artists and art groups, and we think that at least 50 percent of the funds appropriated for this program should be devoted to young Americans if the President's call for massive exchanges is to have any real meaning. We hope President Eisenhower will support this, and that he will call in his budget message next month for an immediate raising of the present picayune $2 million to an amount respectably nearer the $20 million which he annually requests for the Fulbright and Smith-Mundt programs.

I was very pleased to hear that the Young Democratic Clubs of America, at their recent national convention, adopted a resolution which urges the Republican administration to utilize the power they have been given not only to send throughout the world our large artistic groups and universally accepted artists whose appeal is primarily to the sophisticated audiences of the world's capitals, but also the groups with fine artistic merit who would represent our local creativity and to include in the exchange program, as was intended by the sponsors of the legislation, young artists of great merit.

I completely support the idea that we should create and help finance with Federal funds university circuits at home and abroad. Such programs would certainly more fully display our cultural achievements and assets as well as help us learn more about the people of other nations. Here the sharing of our cultural resources with the people of other nations, which I mentioned earlier, would have significant meaning and results. In my considered view, the question of whether one or another great American orchestra plays with that extra shade of polish, and is a fraction better in its technique than a similar great aggregation in Europe or the Soviet Union cannot compare with the importance of reaching and influencing the leaders of tomorrow's world through our young American student exchanges in all fields.

For this reason, the national showcase program which my colleague, Representative HARRIS B. MCDOWELL, JR., has recently espoused, and which passed the House of Representatives with the help of the leaders of the American Educational Theater Association in 1952 and was passed over without prejudice in the Senate at the same time, is a plan which has my wholehearted support. For years I have wanted to see our talented young American artists given more recognition on the national scene and particularly through a program in the Nation's Capital by which their talents could be displayed to the Nation and the world.

As a corollary, then, to a national showcase program there should be a worldwide Olympiad of the Arts and Sciences held regularly in Washington, D.C., which would afford competition between talented young people from all nations. Such an arts and sciences competition could sponsor contests for awards in piano, cello, violin, youth orchestras, choral and chamber groups, ballet, folk dancing, and other forms of the dance such as ballet in which the U.S.S.R. excels, painting, sculpture, readings, and drama and poetry presentations. It is also desirable that under this program comparable talent competitions in the Nation's Capital be held in mathematics, physics, biology, and the other sciences. These Olympiads should be judged by an international jury of renowned artists and specialists in the various fields. The winners would immediately attain international recognition and be awarded substantial prizes. It is quite reasonable to assume, I have been advised by Dr. Oliver J. Caldwell, Assistant Commissioner for International Education, U.S. Office of Education, a long-time and able advocate of the proposal for a worldwide Olympiad of the Arts and Sciences, that such an international Olympiad program, if carefully planned, would be as significant as the Nobel Prize Awards in the years to come. As President Eisenhower said at Delhi University in India:

"More enduringly than from the deliberations of high councils, I believe mankind will profit when young men and women of all nations and in great numbers study and learn together. In so doing, they will concern themselves with the problems, possibilities, resources, and rewards of their common destiny.

"Through the centuries nations have sent their youth armed for war to oppose their neighbors. Let us in this day look on our youth, eager for a larger and clearer knowledge, as forces for international understanding; and send them, one nation to another, on missions of peace."

As we go forward, then, along this great highway into the future to a less troubled era I believe we can be resourceful enough to find the best possible methods to surmount any roadblocks which may be planted by those with axes to grind. I have in mind, for instance, the fact that the American Educational Theater Association already has a committee for U.S. touring by foreign university dramatic groups. I understand that this committee is at work seeking private engagements in the United States for educational groups from other countries, and it should have—if it is to really accomplish its great objectives, both status and public funds comparable to the program the American National Theater and Academy carries on for the Department of State.

A word about the little matter of the double expense in presenting performances of professional foreign artists in our country because of union policy that American artists must be paid during such a performance even though these American artists are not performing in the attraction. Here a bit of statesmanship is required on the part of top State Department officials. My, my, if they can't develop a policy to surmount such a roadblock, how can they possibly negotiate successfully with other nations.

My own suggestion, for what it is worth is as follows. If there are to be standbys, then why not react to this situation by providing, under the President's cultural exchange program, that such matching funds be utilized in a way similar to the funds of the music performance trust fund which is managed by representatives of the American Federation of Muiscians, AFL–CIO, the broadcasting industry, and the public. Standby funds could and should be used to provide increased employment of American artists and, at the same time, cultural attractions could be offered under the fund's auspices throughout the United States. Cooperative arrangements could undoubtedly be worked out by the Department of State, with the blessing of the Congress, between the theater and music industry, the Federal Government, and such powerful unions as Actors' Equity Association, the Associated Actors and Artistes of America, AFL–CIO, the American Guild of Musical Artists, and the American Federation of Musicians, or whatever the unions involved. All it takes is good will on both sides and I know this is present.

In my opinion, if we are to capture the imagination and the minds and hearts of the peoples of the free world as well as the millions of uncommitted peoples—the United States must more definitively supply the energy, the resourcefulness, the creative power and talent which is ours to give than it has done so far. If this is to take place then several steps must be taken by the American Educational Theater Association in cooperation with other national educational organizations concerned with the arts in education. You must work together toward—

1. The establishment of a permanent division at the State Department in the Bureau of International Cultural Relations to handle the massive exchanges in the arts which must be developed as a central and integral part of this massive exchange program which

President Eisenhower has called for. Such a permanent division must be headed by a distinguished educator, and must be staffed by leaders drawn from the arts departments of our colleges and universities. At the same time, the Advisory Committee on the Arts established by the Humphrey-Thompson Act (Public Law 860, 84th Cong.) must be reorganized and strengthened with the addition of leading educators from our college and university art departments. For several years now, every time the White House appointed people to an art commission in Washington, the District of Columbia Auditorium Commission, and the Advisory Committee on the Arts at the State Department are examples, the names of George Murphy and Robert Montgomery—from Hollywood via the Republican National Committee turned up. The names conspicuous for their absence, even from the Advisory Committee on the Arts of the National Cultural Center were those of Dr. Howard Hanson, director of the Eastman School of Music, and president of the National Music Council, other officials of the National Music Council, and distiguished art educators generally. At the present time the official directly in charge of the President's cultural exchange program at the Department of State is Mr. James Magdanz who has no background at all in the arts. He is a former budget officer, and no doubt a good budget officer. However, many of the present limitations of this vital program, for instance, its virtual exclusion of educational talent, is directly due to an astounding lack of familiarity with today's significant fine arts programs in our Nations' colleges and universities on the part of leading State Department officials. (H.R. 6876, THOMPSON; H.R. 7533, MCDOWELL; and S. 1827, HUMPHREY, go to the heart of the problem sketched here.)

2. The status and quality of our cultural affairs officers abroad must be sharply raised, and legislation will be offered soon to do this.

3. The establishment of a worldwide Olympiad of the Arts and Sciences and a national showcase program in our Nation's Capital has been developed by Representative MCDOWELL and will be introduced early in January 1960 by several sponsors in both Houses.

4. The establishment of a Federal Advisory Council on the Arts in the Department of Health, Education, and Welfare. Sponsors include Senators HUBERT H. HUMPHREY; PAUL H. DOUGLAS; and JAMES E. MURRAY; and Representatives EMANUEL CELLER; JOHN V. LINDSAY; JAMES G. FULTON; SEYMOUR HALPERN; STUYVESANT WAINWRIGHT; LEE METCALF; CARROLL D. KEARNS; EDITH GREEN; DOMINICK V. DANIELS; ROBERT N. GIAIMO; CARL ELLIOTT, committee chairman; and JOHN A. LAFORE, JR., and FRANK THOMPSON, JR.

5. The establishment of the position of Special Assistant to the Secretary of State for the coordination of International Educational and Cultural Relations has passed the Senate under the sponsorship of Senators J. WILLIAM FULBRIGHT and HUBERT H. HUMPHREY. House sponsors include Representatives WAYNE L. HAYS, STUYVESANT WAINWRIGHT, JOHN V. LINDSAY, JAMES G. FULTON, and FRANK THOMPSON, JR.

6. If the American National Theater and Academy is to continue in the future to enjoy its special privileged status as sole professional manager of the State Department's cultural exchange program with other nations then ANTA's reorganization must be sought. As you know, ANTA was chartered by the Congress in 1935 as a theater organization and it is undoubtedly rendering as great a service to the American theater and to American drama as the National Music Council—likewise chartered by the Congress—is rendering to American music.

When the State Department selected ANTA in 1954 for the important role of professional manager of the President's cultural exchange program which was authorized by the Congress in July of that year, ANTA set about creating advisory panels in music, the dance, and so on and more recently has established academic screening committees to advise it on outstanding talent in our colleges and universities in the performing arts. These latter committees are: The overseas touring committee of the American Educational Theater Association, and the academic screening committee of the music panel. After 5 years the time has come, I am convinced, to expect ANTA, in fairness and justice to the other art fields, to elevate these advisory panels and academic screening committees to a position where they are an integral part of ANTA itself, and in full charge of their respective fields of interest in the arts. These panels and committees should, at the same time, be broadened to provide the American Educational Theater Association, the National Music Council, the Music Educators National Conference, and the National Association of Schools of Music and other similar groups a more significant role in keeping with their importance in our society. ANTA would be a true arts council.

Alternatively, the American Educational Theater Association and the National Council of the Arts in Education should be contracted with directly by the State Department to manage our developing program of educational exchanges in the arts of the theater. For ANTA to continue to manage our cultural exchange program for the State Department without such significant internal changes would be comparable to the Department of Defense contracting with General Motors to manage its entire procurement program covering everything from submarines and airplanes to tanks and trucks. You can well imagine what giant aircraft companies like Douglas and Boeing and great automobile manufacturing companies like Ford and Chrysler would think of this. If it became known that the Defense Department was even considering establishing the kind of arrangement the State Department has with ANTA the outcry occasioned by Defense Secretary Wilson's remark that "What is good for General Motors is good for the country" seem like a lark by comparison.

There are other areas directly relating to the arts fields which I want to discuss with you also—and briefly because of the time limitation. For several years I have urged that the status of our cultural affairs officers be raised and given a status equal to that of cultural affairs officers of other nations. I have introduced legislation to effect this change. We must create a career foreign service system in the U.S. Information Agency equal to that in the Department of State—of which it was originally an integral part to insure the ability to recruit high caliber people. Abbott Washburn, Deputy Director of the U.S. Information Agency, recently urged the need for legislation to correct the present deplorable situation. He pointed out that—

"The system under which we continue to operate is unsatisfactory for a number of reasons. Americans in our overseas service may hold appointments only as Foreign Service Reserve or Foreign Service Staff officers. Chiefly because of the lower ceiling on staff salaries, the Agency's most important and valuable officers—our public affairs officers and other top officials overseas—hold appointments as Foreign Service Reserve officers which in no sense meets our needs for a career service system. Reserve appointments are authorized under the Foreign Service Act for temporary service not to exceed 5 years. While Reserve officers are accorded the same salary and allowances as Foreign Service officers, the limitations on tenure make the Reserve category an antithesis of a career service. In addition, Reserve officers have no job security. Under the law, they may be separated at any time for any reason.

"As you know, many of our posts are located in areas where work is demanding and living is hard. Moreover, the work, itself, whatever the location, requires experience, expert knowledge, and a high level of ability and character."

Cultural affairs officers are, indeed, key men in the long-range program of presenting America's cultural image to the world. They surely deserve to be recognized as permanent career officers. I intend to continue to push for legislation which would accomplish this necessary change.

When the Congress convenes I am very hopeful, too, that we will act quickly to establish a Federal Advisory Council on the Arts. In my opinion this would represent a significant cultural step forward on the part of the Federal Government. A Federal Advisory Council on the Arts would formally recognize the essential role of the Government in promoting the arts. "There should be a Federal advisory agency as provided in several bills now pending before Congress," a resolution adopted by the Democratic Advisory Council on December 7, 1959, says, "with general authority to assist in formulating plans to develop the cultural resources of the United States, and to promote general appreciation of the beauty and educational value of works of art, literary and musical compositions and of the contribution of performing artists in all fields."

It is interesting and significant, I think, from a long-range point of view, in our Nation's cultural development that the bills in the Congress to establish a Federal Advisory Council on the Arts, and to carry out much of the legislative program I have outlined in my remarks today, now have the support of strong elements in the Democratic Party at the national level. The Young Democratic Clubs of America at their Toledo, Ohio, national convention in November 1959, and the Democratic Advisory Council at its New York City meeting on December 7, 1959, endorsed the bills in the Congress in support of the fine arts.

It will be interesting and important to observe if the organizations of the Republican Party follow suit, with regard to the fine arts legislation in the Congress—much of which has been sponsored by individual members of the Republican Party—including the bill for a Federal Advisory Council on the Arts which President Eisenhower first recommended to the Congress in his message on the state of the Union in 1955. The fine arts must have bipartisan support, just as our foreign policy does. Unfortunately, the Republican Party has tended to regard the arts in a more personal light as a handmaiden of political advantage. I need only remind you that the Committee of the Arts and Sciences for Eisenhower (CASE) established in the fall of 1956 had as its purpose, not the advancement of the fine arts, but the election of a leading official of the Republican Party. Such a committee can only discount the great purpose which the fine arts have in any democratic society. Certainly Thomas Jefferson and the other Founding Fathers never conceived of the arts in this particular context.

We in the Congress would deeply appreciate hearing much more than we do at present from the cultural leaders of our States and districts just as we presently hear from representatives of labor, agriculture, commerce, and industry. How many of you have contacted those sponsors of fine arts legislation in the Congress to tell them you appreciated their introduction of fine arts bills in the Congress? I'll wager not many, yet

this is an essential part of the democratic process.

The need for greater understanding and support of the cultural activities of the Federal Government must be developed at the grassroots level, and must be given wider publicity. I would hope that the American Educational Theater Association will, as a part of its work here in its annual convention, adopt strong resolutions in support of some of the matters which I have discussed with you today in order that we as a nation may move forward in 1960 along the hard and difficult road to artistic and cultural maturity.

More of our citizens must come to know about the forthcoming $60 million fund drive for the National Cultural Center and the exciting plans of Architect Edward D. Stone for it which are now sorely threatened by a road-and-bridge complex developed by the Republican-controlled city government of the District of Columbia which doesn't have to account to the voteless citizens of Washington for its actions and which has had no firm direction from President Eisenhower who appointed its members. There is the added riddle of what the National Cultural Center will do about the educational fine arts. Despite the law which specifically lists the educational fine arts, including even the children's theater, there is little evidence that the present movers and shapers of the National Cultural Center have any plans for educational theater. Few of the country's leaders in educational drama and music have been appointed to positions of influence, and few men of wealth have been apopinted to the board of trustees. We can only hope for the best, but the American Educational Theater Association should certainly call for appointments of leaders from the fields of the educational fine arts to the Advisory Committee on the Arts of the National Cultural Center, and condemn by an outright resolution the present plans for a bridge-and-road complex which the Commission of Fine Arts has found unacceptable.

I would like to say a word about the 45-room hospitality mansion which the American Council on Education, with which the American Educational Theater Association is affiliated, has purchased with Ford Foundation Funds ($500,000). The AETA is a real grassroots group and the Nation's most representative and powerful theater group. Certainly the AETA should have a special position at the new headquarters of the American Council on Education commensurate with its special and deserved position in our country's cultural life. In the past there has been no adequate headquarters for the reception of such special groups as were intent on learning about America firsthand, such as professors, students, corerspondents, and others from nations across the face of the earth. Certainly in such an exciting program the American Educational Theater Association must and should have a role equal to that of the recently formed Institute of Contemporary Arts which is local and confined to the District of Columbia in its operations.

In closing, let me say that we must turn the spotlight on the arts by dramatizing across the Nation, through all the various media of communication, the exciting possibilities of our cultural resources. The stage is set for action, the players are on hand—only your direction will assure effective performances. The times in which we live demand that democracy's show must go on.

Economic Dictatorship in Automobile Financing

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 13, 1960

Mr. MULTER. Mr. Speaker, when this Congress reconvened on January 6 I introduced two measures which I believe are long overdue and which I hope will be enacted upon during this session.

The bills are H.R. 9356, to supplement the Sherman Act and the Federal Trade Commission Act by prohibiting automobile manufacturers from engaging in the businesses of financing and insuring automobiles purchased by consumers, and H.R. 9357, to fortify the antitrust policy of the United States against concentration of economic power and the use or abuse of that power to the detriment of the national economy by preventing manufacturers of motor vehicles from financing the sales of their products.

In this connection, I commend to the attention of our colleagues the following report published in September 1959 by the American Finance Conference, Inc., of Chicago, Ill. It is a report on hearings conducted by the Subcommittee on Antitrust and Monopoly of the Senate Judiciary Committee on Senate bills 838 and 849 which are identical to the bills which I introduced in the House.

ECONOMIC DICTATORSHIP IN AUTOMOBILE FINANCING

During the late winter and early spring this year, seven august U.S. Senators sat in panel as a subcommittee to decide on the wisdom of two bills which had been introduced in the U.S. Senate. Despite the fact that the philosophy behind these bills is vital to the business life of every small businessman in the Nation, little interest was stirred up. Most businessmen, other than those immediately involved in the bill, seemed apathetic and completely lacking in understanding of the importance to them, and their immediate futures, of Senate bills 838 and 839.

The subcommittee which was meeting in February and April was the Subcommittee on Antitrust and Monopoly of the Committee on the Judiciary. Chairman was Senator Estes Kefauver, Democrat, of Tennessee, and the other members were Senators John A. Carroll, Democrat, of Colorado; Everett Dirksen, Republican, of Illinois; Thomas C. Henning, Jr., Democrat, of Missouri; William Langer, Republican, of North Dakota; Joseph O'Mahoney, Democrat, of Wyoming; and Alexander Wiley, Republican, of Wisconsin.

The bills relate to automobile financing, and specifically seek to divorce General Motors Acceptance Corp. from the corporation which owns it outright, General Motors. They also carry provisions which will stop other automobile manufacturers from developing wholly or partially owned finance companies. This provision is pointed directly against Ford, which announced early in the year that it planned to set up a finance subsidiary to handle automobile time-sales paper for its dealers, as GMAC does for General Motors dealers now.

Excluding the financing of cars alone by banks, credit unions, etc., witnesses showed that GMAC currently does 41 percent of all financing of automobiles. The next three largest companies, between them, do 32.5 percent. The remaining 26.5 percent is divided between the 400 or 500 regional and local finance companies.

Is this, then, merely a fight in the finance business, with small finance men making a last-ditch fight for survival? Testimony showed that was not the case. Here was a classic example of the largest corporation in the Nation using its fantastic power and pressures to maintain a highly profitable subsidiary, and through this tremendous power, virtually eliminating competition in great divisions of the automobile business, always to the detriment of its competitors and ofttimes to the detriment of the consumer. Seriously injured, also, it was brought out, were many of the dealers who sell one of the many lines of General Motors cars, for they found themselves robbed of free choice in selection of financing plans or companies in which to discount the customers' paper.

Here was a test case for every small businessman, no matter what his line of business, throughout the Nation. He, too, could suddenly find that General Motors, or one of its counterparts, had decided to enter his field and through the great power they exerted, preempt half or more of the market. He, too, could suddenly find that to stay in business he had to direct part of his normal sales of accessories to the large corporation, or risk loss of his right to do business, at worst, or subtle discrimination, at best.

As witness after witness testified, the small businessmen of the Nation and the millions of people dependent on them for employment and livelihood, failed to realize the importance of this matter to them.

Finance men were, of course, vitally interested. So were automobile dealers, and they flooded the Senators with mail, mostly in favor of divorcement.

Witnesses told an interesting story. Independent finance men expressed bewilderment. One after another told of operating a successful business, a business which met with favor and had happy long-time relationships with the automobile dealer customers and the general public—but with General Motors dealers representing approximately half of the market, none, or very, very few, were among his dealer-customers. Many of the Ford dealers in his area were devoted customers; he got a good share of the business from Chrysler dealers, Studebaker, American Motors, the foreign car dealers—yes, he got his share of those. But General Motors dealers—well, they were scared to even discuss financing with him. Sometimes he got the feeling they didn't even like to have him seen in their showroom.

There were a few, of course, who would give him secondary paper—doubtful accounts that GMAC didn't want to handle. But as to regular customers—it was a rare independent finance man who reported having many General Motors dealers as regular customers.

Senator O'MAHONEY made an important statement at the opening of the meeting. He said, in part: "I am inclined to believe

if we really believe ourselves to be the leaders of the free world, we must realize that we gain nothing in freedom for people by merely transferring from political dictatorship to economic dictatorship, and I hope, Mr. Chairman, all of those who are called upon to testify here will realize that what we are actually trying to do is to find a way in which actually to preserve free enterprise. That means competition.

"We talk about free enterprise, but I have noticed that most of the leaders of the giant corporations, when they talk about free enterprise, mean enterprise which is free from Government regulation of any form.

"I do not want to crush big business. I do not believe anybody on this committee wants to crush big business.

"We are represented as being hostile to business. We are not hostile to business. We are seeking ways and means of making effective the constitutional regulation, in the public interest, of commercial affairs so that the door will constantly be open for new enterprises to come in, and so that it will be impossible for a few individuals, through their banking connections, their board of directors connections, and their economic power, to control and regulate the business of the United States on which all the people depend."

Senator WILEY, a few moments later, made the following comment: "* * * I think the gist of it" (Senator O'MAHONEY's talk) "is very definite; wherever there is power that gets into the hands of a few, it corrupts and injures the many.

"We have got to see to it that power itself is exercised with judgment and discretion."

Then came a parade of witnesses. Those in favor of a passage of either bill concerned themselves primarily with four points:

1. That GMAC, due to its size and its ownership by General Motors, was able to borrow money more cheaply and advantageously and with greater leverage—i.e., at a rate of much greater profit—than any of its competitors, thereby giving it an unfair advantage in competition.

2. That, due to its connection with its parent company, General Motors dealers felt it necessary to do business with GMAC if they wanted to retain their franchises (in which many had invested their lifetime earnings), and wanted good service and good delivery schedules from General Motors. Witness after witness testified to his belief that General Motors dealers were "scared" to place their good installment paper anywhere but with GMAC.

3. That, due to this situation, GMAS operated on an acquisition cost, that is, a cost of obtaining accounts, far lower than any competitor could obtain, since General Motors dealers understood, without much sales effort, that they were expected to place their paper with GMAC.

4. That, despite their greatly lower costs of operation, GMAC rates to the consumer were ordinarily no lower, and occasionally were higher, than the rates offered by the independent finance company. It was explained that the local automobile dealer sets the rates oftimes obtaining whatever above his cost for the paper he felt the individual buyer could be talked into paying. It was explained that the dealer kept the difference between the GMAC rate to him and what he charged the customer, as additional profit for himself.

Those opposed to the bills centered their arguments around the fact that GMAC was an efficient organization, which none denied; that its divorcement from General Motors might cause a shortage of lending money available; that, in its present form, it was a stabilizing influence on loaning rates; and that legislation to limit power in this case was not desirable.

First of the independent finance company men to appear as a witness was Edwin P. Latimer, president of the American Discount Co., Charlotte, N.C. In his opening statement he said, "The manufacturer-owned finance company from the date of its creation is placed in a superior position in various phases of the finance business. It is in a position to obtain its money in desired quantities at lower cost because of its parent-company relationship. Equally important, it obtains its business at a lower acquisition expense. Lastly, it enjoys a natural closeness of business relationship with the manufacturer's dealers that must be developed at great expense by the competing finance company."

He went on to show figures that told that in the Southeast States, where he operates, although General Motors' portion of the new car market was 47 percent during a recent 5-year span, he could only obtain 7.82 percent of his business from General Motors dealers.

"It is my opinion," Mr. Latimer went on to say, "that the 'built-in' interlocking controls of GMAC by General Motors prevented our company's volume of business from fluctuating on a scale commensumate with the national automobile sales figures."

He explained how the manufacturer-owned finance company requires the dealer to protect it against poor credit risks, by binding the dealer to absorb losses. This allows the manufacturer-owned finance company to be disinterested in the customer's ability to pay. In some cases, they purchase sales contracts without even making a prior investigation.

"We, as an independent sales finance company, must and do accept the responsibility for safeguarding the customer's credit by controlling down payment and terms in accordance with his individual needs and capacity," he testified.

Another witness to testify in the early sessions was David B. Cassat, president of Interstate Finance Corp. in Dubuque, Iowa. He told of the deals whereby Ford and Chrysler undertook to coerce their dealers to deal with finance companies in which they had a financial stake, prior to the consent decrees entered against them in 1938, and how at that time those two companies were forced to divest themselves of any financial interest in the automobile financing business.

He explained how General Motors fought the Antitrust Division of the Department of Justice for 16 years, until the case was finally settled in 1952. Nevertheless, today, he showed on charts he presented to the committee, GMAC is getting 41 percent of the retail automobile financing. When questioned, he explained that retail financing was the desirable part of the financing business. All finance companies had to do wholesale financing, i.e. lend the dealers money to buy automobiles from the factory, and hold title to the automobiles until they were sold, as an accommodation to the dealer and in order to qualify for his retail business, but that wholesale business was virtually profitless.

He showed that C.I.T., second largest finance company, had receded in percentage of the total volume of automobile paper since the 1952 decree, and now only did 13.9 percent of the business. Commercial Credit, next largest, did 9.45 percent, Associates Investment did 8.87 percent, Pacific Finance 2.14 percent, General Finance 1.45 percent and all of the other finance companies in the Nation, about 400, between them had dropped to 23 percent.

Turning to the subject he headed "Debt and Capital;" Mr. Cassat explained that the ratio of borrowed funds to equity capital is of prime importance to any sales finance company. The more borrowed funds a sales finance company is able to employ in relation to a given amount of capital in financing its portfolio of installment receivables, the greater the leverage will be on its equity investment. Consequently, the borrowed funds ratio is a vital factor in determining the net return on the capital investment of a sales finance company.

He then showed that GMAC had a ratio of 15.05-to-1 in 1957, while the three largest other companies are given 6.71-to-1, and smaller companies even less.

In discussing GMAC's method of operation, Mr. Cassat said that the variable charts which GMAC furnishes its dealers allow the dealers larger commissions where it is deemed necessary by GMAC, in order to keep competition at a minimum. "Their rates vary with the market they are in, and the local climate," he said.

He pointed out in conclusion that, with the dominance of GMAC becoming more pronounced each year, firm after firm was being forced out of the sales financing business. Since 1952, the American Finance Conference, trade association of the independent sales finance industry and representative of about 90 percent of the volume the independent firms do, has lost 62 members net, most of whom resigned because they were going out of the business.

David D. Steere, chairman and president of Allied Finance Co., Dallas, Tex., and president of the American Finance Conference, was the next witness. He read a prepared statement in which he testified that he was only able to purchase 14.8 percent of his new car retail business from General Motors dealers, despite the fact that they had 47 percent of the total volume of sales during 1958. His wholesale business—floor planning—for General Motors dealers only amounted to 9.3 percent.

Of the 231 General Motors dealers in the area he serves, 83.5 percent carry their floor plan with GMAC and 74.4 percent sell their retail paper to GMAC, he reported.

He then cited some of the troubles and delays independent finance companies encounter with General Motors when they try to take a General Motors dealer away from GMAC. Telling of one delay he said, "In my opinion, this unnecessary delay was instituted to discourage the dealer and to give GMAC time to try to sell the dealer on returning to them."

He concluded with the statement that, "General Motors can put enough pressure on their dealers to control the financing if they want the account. It is this monopolistic practice that will be cured by Senate bills 838 and 839, and I hope that Congress will pass them, in the interests of free enterprise."

Second day of the hearings brought to the witness stand Francis J. Conway, president of Thorp Finance Corp., of Thorp, Wis. He explained the two groups of sources for retail automobile installment credit, one group being composed of commercial banks, credit unions, small loan companies, and similar concerns, where the customer goes and makes a loan of money with which to purchase his car. The second group is the sales finance companies. Here, the customer who purchases a car from the automobile dealer expects the dealer to make the arrangements for financing the installments, and the note, in most cases, is discounted by the dealer with a sales finance company. He said, in the latter case "we compete with other sales finance companies in the opportunity to do a credit business with automobile dealers."

He told the committee he felt their problem was "whether it is in the best interests of the country to permit the largest sales finance company in the United States to continue to enjoy the advantages of association with the largest industrial corporation in the United States."

Asked whether divorcement of GMAC from General Motors might in any way affect the ability of ordinary individuals who cannot borrow money at a bank to be able to get a car without worrying about the installment paper, Mr. Conway was very definite in his answer of "No, sir."

A banker also testified to the fact that GMAC has a near monopoly on the financing of General Motors dealers and their accounts. Charles B. Whiteside, vice president and director of the Merchants National Bank of Fort Smith, Ark., told the Senators that he favored passage of the bill.

He said that while he purchases about a million dollars worth of automobile sales contracts a month for his bank, he has no General Motors dealer accounts at all. He has solicited their business continually, but has found it impossible to get any of it. The other two banks in Fort Smith are also engaged in the automobile finance business, but they, too, have been unable to crack the General Motors accounts, he stated.

He told the story of a dealer, who had been a good customer while selling another make of car, who finally got a General Motors franchise. Mr. Whiteside's bank encountered great delays in trying to arrange financing for him in his new connection. Then, a week before he was to receive his new cars, "a General Motors representative called on him and explained to him that all good General Motors dealers did their finance business with General Motors Acceptance Corp., and that General Motors preferred it that way. Further, that General Motors dealers using General Motors Acceptance Corp. wholesale and retail financing received more cars and had no trouble with special orders."

He concluded the story by saying, "We haven't had any business from him since that day."

Later, on the same day, Senator O'MAHONEY made a stirring speech in which he stated:

"I am inviting GMAC and General Motors directors to realize that what we are trying to do now in this legislation is to stop the trend toward economic dictatorship in America. We cannot successfully fight political dictatorship if we allow economic dictatorship to dominate a dozen businesses across the country." Referring to this particular industry, he added, "* * * it is a great instance of the evil result of concentration of economic power upon free enterprise."

Final witness of the day was L. Walter Lundell, chairman of the board of directors of Universal CIT Credit Corp. He made a number of points showing that a monopoly exists.

"GMAC, by reason of the fact that it is a wholly-owned subsidiary of General Motors Corp.," he said, "has controlled this market and has virtually closed it to the many hundreds of independfent finance companies who would like to compete effectively for this business."

He added: "(1) The fact that GMAC is a member of the General Motors family exercises a potent sales influence which gives GMAC unique benefits. Such a relationship means lower acquisition expense and lower overhead, organizational and personnel costs, relative to other finance companies.

"(2) GMAC, as a member of the General Motors family, can borrow about twice as much money in comparison to its capital base as the largest independent finance companies, and this advantage is even greater when related to the smaller finance companies. This borrowed money can then be employed by GMAC at a lower rate than competitors, and still earns for GMAC as great, or greater, return to capital than any competitor. The advantage which GMAC has through being owned by General Motors is specifically demonstrated in certain loan agreements which provide that were GMAC to be divested from General Motors, the borrowing ratios presently in effect would be reduced."

He also explained that this does not mean lower rates for the consumers who use financing. "What rate the consumer will pay," he said, "depends upon local competitive conditions and represents the bargain the dealer and car buyer have struck between themselves."

Discussing the possibility of the entry by other automobile manufacturers into the finance business, he said this would lead to further concentration in the financing of automobiles, where the business is now done by hundreds of finance companies and banks. For consumers, it would very substantially reduce the range of alternatives for financing, Mr. Dundell stated. "The time to prevent this is now," he warned the committee.

"Under pressure for sales, credit standards, could deteriorate, thereby contributing to economic instability and inflation, which would be very damaging to the Nation's economy."

The first opponent of the bills before the subcommittee was heard on the morning of the third day. He was F. W. Misch, vice president-finance, Chrysler Corp., Detroit.

He stated that he believed that the presence of automobile manufacturers in the field of financing in no way reduced competition, and that eliminating them from the field would not promote competition. He felt, he said, that the antitrust laws now in effect are broad enough to guard the public interest against undue concentrations of economic power.

He also expressed concern that dealers in the more sparsely settled areas might have difficulty getting financing if GMAC was made an independent company, rather than a subsidiary of General Motors. He also felt that, while competition in the metropolitan areas kept the prices of financing at a reasonable level, this competition did not exist to the same extent in areas which were less readily accessible to finance company employees. Without the beneficent influence of a General Motor's owned GMAC to set price levels which others had to meet in these rural areas, they might go much higher, he said.

Principal witness against the passage of the bills was, however, Theodore O. Yntema, vice president-finance, Ford Motor Co., Dearborn, Mich., who was accompanied by Ford's general counsel, William T. Gossett.

While Dr. Yntema's testimony covered the full gamut of automobile financing, it returned, time and again, to the fact that Ford was suffering a competitive disadvantage. General Motors dealers, he pointed out, received both various forms of compensation and opportunities to make profits beyond those on the markup of the automobile, from General Motor's subsidiary, GMAC, while Ford could not offer these additional compensations and opportunities. He plaintively stated that even passage of these bills would not alleviate the situation for Ford, since he was sure General Motors would delay enforcement of these laws through extended legal action, and that, even if they failed in the courts, it would be many years until the influence General Motors has exerted on its dealers to use GMAC wanes entirely. His exact phraseology, in a letter he wrote later summing up his testimony, was: "Passage of the bills would continue GM's competitive advantage for years while the statute is tested in court and, even if the statute is upheld, for years thereafter due to close relationships that have developed between GMAC and GM dealers."

His reasoning was that, therefore, the independent finance companies and commercial banks should suffer additionally from other major automobile-manufacturer-owned finance companies, rather than have Ford get what would only be gradual relief from the competition from which it is now suffering.

He then admitted that "The only effective protection that I know the consumer can have is from competition. Now, there may be honest differences of opinion as to just how that competition should be provided."

Senator KEFAUVER, in discussing this and other items of Dr. Yntema's philosophy a few minutes later, remarked: "It seems to me that if General Motors Acceptance Corp. was spun off, you might have more competition and lower rates. Of course, they would offer the same service to everybody, then.

"You, with your great financial resources, might be able to get into the finance business and put up all the money and suffer the losses that would be with it. Chrysler might be able to."

But "we have got two other [automobile] companies that are trying to survive. If every [automobile manufacturing] company has to have its own finance company, it is going to make much more difficult new entries into the business.

"I must say it is a little bit discouraging when those you are trying to help and do something for come around and advocate the retention and even the extension of a concentration of power that is already very, very tremendous, so big that the Department of Justice is apparently very much concerned about it. But that is apparently what we have here today."

In responding to Senator KEFAUVER's statement, Dr. Yntema did say, "If I can make one final comment, I think it is quite possible that in the short run, if you could get the spinoff of GMAC, in the short run we might get some benefit from it."

The committee adjourned for 6 weeks, and then resumed hearings in April.

First witness they heard after adjournment was Thurman Arnold, former head of the Antitrust Division of the U.S. Department of Justice, and presently a practicing attorney in Washington. Mr. Arnold stated that he was appearing in two roles, as a representative of an automobile financing company and as a vitally interested citizen, since it had been under his administration that the indictments against General Motors, Ford, and Chrysler were brought in.

He stated his philosophy: "The evil of the great corporation lies not in its size but in the temptation to use its power over the product which it alone can efficiently make to swallow up other businesses which can be carried on locally. * * * At the time that the General Motors prosecution was brought, the United States was rapidly becoming a land of absentee ownership. Local dollars were being siphoned to New York. Opportunities to build up local capital were being rapidly destroyed. The West and South had become colonies of the industrial East."

He stated the whole theory and the motive behind the attack on the passage of S. 838 and S. 839 by Dr. Yntema and Ford in two paragraphs:

"Mr. Yntema of Ford appears to be of the opinion that it is a fine thing for everybody if General Motors owns GMAC. It is good for Ford to be forced to the great expense and difficulty of breaking into a new market with its own finance company, in order to put Ford in the position of being able to compete with General Motors in the sale of automobiles. It would be a bad thing to equalize Ford's position by making GMAC independent. He does not explain to me satisfactorily why he thinks so. However, that is his position."

A little later, he says, "I agree with the testimony of Mr. Yntema of Ford that control over a finance company gives the manufacturer who has it the competitive advan-

tage over a manufacturer who does not. * * * If it be true that Ford believes what it says now—that ownership of GMAC by GM together with a lesser participation in the financing market by Ford is a good economic situation for Ford, then Ford in signing the divestiture decree of 1939 made the most incredible blunder in judgment since the charge of the Light Brigade."

In answer to the charge that this legislation might be special legislation, aimed solely at the automobile industry, Mr. Arnold pointed out that "the Government has itself in a procedural trap by virtue of the consent decrees of 1952 which make General Motors immune from prosecution. These decrees are res adjudicata. They cannot now be altered. Legislation is required to make General Motors, Ford, and Chrysler subject to the same laws as apply to other American corporations. This is not, as is charged, special legislation to treat the automobile companies differently from other industries."

Mr. Arnold said that the Ford attitude was that by establishing a finance company and concentrating power in the hands of the big motor manufacturers, the public would benefit. When questioned by Senator KEFAUVER on this point, Mr. Arnold explained: "I know of no section of administered prices that ever goes down. Of course, that is the theory of the cartel system, if you get these industries together they will always charge a fair price, nobody will go broke, they will always have security and be able to lower prices.

"It is completely in contradiction not only with the facts, but with every American tradition."

During the final session, two witnesses appeared. The first, who made a brief statement, was R. L. Mullins, president of the Wolfe City National Bank, Wolfe City, Tex. Mr. Mullins explained he was also chairman of the legislative committee of the Independent Bankers Association of America.

He said, "In recent years it has been almost impossible to obtain automobile retail paper from General Motors dealers. Only in rare instances is a borrower able to place his paper with our bank even if he wants to do so."

He also told the committee that as far as the banks of the country are concerned, he was quite sure they were able and willing to finance more automobile paper, if they could get it.

He concluded with this statement: "In my opinion, the GMAC manufacturer-finance combination is against the public interest. If GMAC has reached a point of efficiency where it can serve the purchasing public better than local banks and smaller independent finance companies, I fail to see where that efficiency will be impaired by legislation which would have the effect of making it stand on its own feet unaided by General Motors."

The final witness of the hearing was Paul C. Jones, president of the American Security Division of A.S.C. Corp., of Marion, Ind.

Mr. Jones made a number of points in most telling fashion. Some of the principal points concerned rates to the consumer, dealer profits, and leverage.

On the question of rates Mr. Jones stated, "Others have claimed for GMAC what GMAC has never claimed for itself, because GMAC knows it is not true, and realizes that any such claim by them would prove embarrassing because facts repudiate it.

"In the statement General Motors filed with you, dated February 27, 1959, no claim was made that GMAC financing assured low rates to time buyers. The facts are that GMAC permits the GM dealers to charge the maximum the law will allow in States where there is rate legislation, and in other States, according to statements made on several occasions by the GMAC president, they will permit charges for new cars as high as $9 per hundred per year.

"This is definitely not a policy of low rates to the public."

He also pointed out that GMAC sees to it that the GM dealer has five sources of income when he finances his cars through GMAC. Mr. Jones referred to these as "five separate pocketbooks:"

He explained that they are (1) The mark-up on the new car, (2) the normal reserve for losses on time sales set up on the books of GMAC, (3) the overage or pack charged to time buyers when the charges reach or approach the maximum set by law, such overage is then credited to or paid to the dealer by GMAC, (4) the commission paid auto dealers on insurance included and paid for in the time sales contract, (5) the income so long as the dealer remains a GM dealer, from the repairs and parts replacements under losses under such policies.

Under the GM mobility of subsidy plan, all these incomes are under GM control and passed on to the dealer from GM or its subsidiaries, Mr. Jones said.

Other manufacturers, without finance and insurance subsidiaries, furnish only one income, the mark-up on the new car. This exclusive position, Jones points out, enables GM to control its dealers. Additionally, three of the five incomes are delayed future incomes, to come from GM's subsidiaries to the dealers. "In addition to control over the dealers, this setup places General Motors own dealers in an enviable position with respect to competition with the dealers of Ford, Chrysler and other independent dealers * * *. With these advantages, the dealers would be foolish to switch franchises from General Motors to competing franchises, and for the contrary reasons, good dealers of Ford and Chrysler and independents are attracted to take on GM franchises. This condition is one of the chief reasons for failures of new automotive manufacturers." Jones said that there was "restraint in trade" prevalent in the competition for dealer outlets by auto manufacturers because of the setup.

In discussing the question of leverage and telling how GMAC, due to its ownership by General Motors, can borrow a far higher amount in ratio to its capital than even the largest of the independent finance companies—possibly three times as much—Mr. Jones filed a very important document with the committee. It was a copy of a special loan agreement between the large insurance companies and GMAC, and it stated that so long as General Motors owns GMAC, GMAC may issue subordinated debenture bonds to the ratio of 200 percent of its common net worth, but in the event of separation it would have to reduce it to 150 percent.

He showed figures to prove this unusually large borrowing ratio and numerous other discriminations from which independent finance companies suffered, but GMAC did not, were entirely due to the ownership of GMAC by GM.

This, then, is where the matter stands. Nearly 25 pounds of recorded testimony and exhibits are in the hands of the committee. But this is not just hundreds of pages of words and charts and figures. It is, instead, the evidence that will cause the committee to resolve the question of large corporation dictatorship; of protection for the small, independent businessman (finance company, auto dealer, and others involved); of whether free competition is not the very best thing for the protection of the consumer; and, finally, of whether free competition or cartel operation is most likely to bring prices to the consumer down.

More than a hundred thousand people—automobile dealers and their employees, those who operate independent finance companies and those who work in them—await the action of the committee on Senate bills 838 and 839 with tremendous interest and the knowledge that their very livelihood is threatened.

For the public at large, a stake almost as great exists, for by this legislation will be determined whether or not large, monopolistic enterprise, not proved to be in the welfare of the public, shall be allowed to continue.

Security With Solvency

EXTENSION OF REMARKS
OF
HON. JOSEPH S. CLARK
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Wednesday, January 13, 1960

Mr. CLARK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able article entitled "Security With Solvency," written by our colleague the Senator from Missouri [Mr. SYMINGTON], and published in the November 26 issue of the Reporter magazine.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SECURITY WITH SOLVENCY—A DEMOCRATIC LEADER'S CRITIQUE OF THE UNBUSINESSLIKE "BUSINESSMAN'S ADMINISTRATION"

(By Senator STUART SYMINGTON)

Can the United States maintain an adequate defense and insure the well-being of its own people without jeopardizing its economy? This question arose time and again during the recent session of Congress—a session in which concern for a balanced budget and fear of deficit financing dominated nearly every debate on public expenditures.

It is a vital question. To provide security—in the broadest sense of that term—while maintaining national solvency poses a challenge to our skill in self-Government. With the great burden that our defense program makes necessary, we have reason to make all the economies that are possible by sound and able management of our Government programs. I believe it is possible for Republican and Democrat alike to agree on this even though they may still disagree about whether the present level of Government expenditures is a sacrosanct figure revealed from on high as the absolute measure of the Nation's needs.

HOW MUCH IS WASTED?

From its beginning the Eisenhower administration has paid lip service to the concept of security with solvency and, as a businessman's administration, promised to conduct the affairs of Government on an efficient, economical basis. Judged by its own criteria, it has been a colossal and expensive failure. It has not only cut into the bone of essential programs without achieving necessary economies; its mismanagement has positively contributed to wasteful expenditures that could have been used to good purpose. Despite rumblings of protest from many in a position to know, the policies and programs of the present administration are wasting tens of millions of the taxpayers' dollars every week. Billions of dollars are being squandered that otherwise could be invested in the public facilities needed to keep abreast of our growing population. As a result, worthwhile programs for schools, dams, highways, medical research, etc., are dismissed by the administration as contributing to budgetary imbalance.

When a government finds its expenditures crowding its revenues, and senses popular disapproval of tax increases, it can embrace one of two solutions. The first is retrenchment. This has been the answer of the present administration, which has drastically pared social-welfare programs and decreed no new starts in public facilities.

The second solution is more difficult. It involves more patient effort, discipline, and leadership. It means that the conflicting interests which pull government programs in different directions must be met with decisions instead of wasteful compromises. It means the constant weeding out of inefficient practices in government departments. It involves rejection of the prevalent notion that waste must be tolerated as an inevitable part of the cost of any public enterprise.

The application of management principles to government is difficult, but its dividends are great. The money thus saved, I believe, could go a long way toward providing America with the investments it needs.

Let us consider four areas of present expenditure: agriculture, government finance, foreign aid, and defense. I select these four because they make up some $62 billion of this year's expenditures, or about 80 percent of the total budget. These four areas pose a common indictment of the waste brought on by the Eisenhower administration's decisions, or just as wasteful, its failure to make decisions.

1. In agriculture

Since assuming office in 1953, Ezra Taft Benson has spent more money than was spent by all of the previous Secretaries of Agriculture put together since the department was established in 1889. He has managed to do this without raising farm income or lowering food costs to the housewife. The farm problem has grown into what has been called "the most critical, perilous, unresolved domestic problem facing the United States."

The $31 billion spent on the farm program since 1952 has involved increases in many areas. Administrative costs of the price-support program since that year have multiplied more than tenfold from $34 million a year to $364 million. The number of employees in the Department of Agriculture has increased from 66,000 to 85,000.

But the greatest increase in spending—running into billions of dollars—comes from the government's failure to manage agricultural surpluses properly. This in turn results from failure to understand the business operation of the typical family farmer who operates the great majority of the farms of America.

The administration has followed a policy of lowering price supports on the theory that this would reduce production. Any true understanding of the way farmers operate would show that it has the opposite effect. Farmers have fixed costs—mortgage payments, farm machinery, installment payments, and the like—most of which have increased with the cost of living and the cost of money. In order to meet these higher costs when price supports are reduced, they must produce more. Unless there are effective controls on production, they take advantage of technological advances to increase production as much as possible.

Under the administration's policies this is precisely what has happened. In each of the last 6 years, farm production has increased, leaving the Government holding an inventory of farm commodities which has cost over $9 billion and which by January 1961, will be over $12 billion. Storage costs alone on this inventory amount to a billion dollars a year.

This sad situation was foreseeable and correctible. Why then did it happen? The unavoidable evidence is that the administration has stooped to play politics with the farm program time after time, has refused to impose meaningful production controls, and, despite continuing criticisms by Congress, has never come up with a concrete program to correct the situation.

Instead, makeshift actions have only aggravated the problem. Last year, for example, with Government warehouses and bins stuffed with a billion and a half bushels of surplus corn, the Secretary of Agriculture recommended a corn program that not only removed all limitations on production but actually increased the price support on more than 90 percent of the corn produced in the United States. The department now estimates that its new program will result in the record-shattering production of 4.5 billion bushels this year; at least 500 million additional bushels will end up in Government warehouses.

This year, Congress passed a wheat bill that would have reduced wheat production by 20 percent and cut down Government wheat inventories by hundreds of millions of bushels. The savings to taxpayers would have been at least $260 million annually—enough to build 6,500 needed classrooms. But the President vetoed the bill.

The handling of this enormous food inventory has been mismanaged. The administration, by its own admission, has negotiated and signed contracts for the storage of grain without first studying what this storage would cost. It has sold commodities from Government stocks to private companies at a low price, and then allowed those same companies to sell them abroad at much higher prices, in transactions the Government itself financed.

The irony is that the administration's policies have hurt the farmer, particularly the small farmer, instead of helping him. In fact, though farm families constitute 12 percent of the Nation's population, their share of the national income has now fallen to 3.5 percent, a new low.

2. In Government finance

By January of 1958, the Nation had already been through the first 4 months of what was to prove a prolonged economic recession. Some of the clearly predictable effects of a recession upon Government finance are shrinkage of anticipated tax revenues and increased demands for expenditure upon the Government. These were not reflected in the budget for the next fiscal year, to begin in less than 6 months, that the President submitted to Congress on January 13. Instead, it contained an estimate that the Government would be operated at a budget surplus of about $500 million. This estimate turned out to be in error by approximately $13 billion. Instead of a surplus of $500 million, the Government incurred the largest peacetime deficit in the country's history, even though Congress appropriated $617 million less than the President had requested.

During the past 5 fiscal years, the Federal Government has been operated at a net deficit of about $17 billion. This also is far above any deficit ever experienced in this country over a comparable period during which we were not at war. Despite the widely held belief to the contrary, this deficit was not the fault of Congress, which in these years appropriated $10.6 billion less than the President requested.

The increased Government borrowing resulting from these years of deficit has increased the national debt from $266.1 billion at the end of the fiscal year 1953 to the present figure of about $290 billion. If the taxpayer is to be protected, such a large debt must be managed with great care. Like any prudent business concern, the Treasury should try to finance its debt at the lowest possible interest rates.

But from the beginning, the Treasury of this administration has violated this simple rule of debt management. Early in 1953, the Treasury Department raised the interest rate on Government bonds to 3¼ percent. This was substantially above the minimum interest rate needed to sell the bonds. Even 2 years later, in spite of a general upward trend of interest rates, potential buyers oversubscribed a 40-year Government bond issue offered at the lower rate of 3 percent.

This imprudent practice has been followed time and again during the last 5 years. Offerings of the Treasury at lower rates than the present limit were oversubscribed by the public, but the Treasury continued its policy of issuing a far smaller amount of bonds than the evidence showed the market would absorb. Only last March, for example, the Treasury opened the subscription books for a 4 percent 12-year bond. The public offered to buy $1.5 billion worth, but the Treasury had limited the subscription to only $619 million. Again in February, 1958, investors made bids totaling $6 billion on a subscription of a 3 percent 8½-year bond. But the Treasury had limited the sale to only $1.5 billion.

Of course, no one can state with absolute certainty what the money market will accept. But the administration has shown a continuing hesitancy about getting a good bargain for its bonds. Its own sense of insecurity has created insecurity in the market—has, in fact, helped push up the price of money. When the Treasury appealed to Congress this June for authority to increase interest rates, it did so despite the fact that many times during the last 2 years it passed up the chance to refinance the debt at lower rates.

With such management, is it any wonder that the interest cost of the national debt has increased from $6.6 billion in the fiscal year 1953 to an estimated $8.6 billion for the fiscal year 1960? If our financial management had been conducted on a businesslike basis during the past 6 years, I believe the interest burden to the taxpayer would be at least a billion dollars less a year.

The other important phase of financial management is the collection of taxes. There is a great deal of evidence that if our collections were handled more efficiently we could be raising billions more in taxes at current tax rates. In fact, earlier this year, the Commissioner of Internal Revenue told Congress that $25 to $26 billion of income each year was not being reported by taxpayers. The Commissioner also testified that every new tax-enforcement agent brings in, in 1 year, 10 to 15 times his salary for searching out this unreported income.

Faced with such a sure prospect of increased revenue, any prudent businessman would work hard to collect it. But not this administration. Since 1952, it has actually cut 3,000 enforcement personnel from the staff of the Internal Revenue Service. The staff is so small today most returns cannot even be checked to see if they were computed correctly. Fewer than 5 percent are given a thorough audit. Nevertheless, on the grounds of economy, this year the administration, in a prize example of false economy, continued to oppose all but the smallest increase in funds for additional enforcement.

3. In mutual security

Over the past few years reports have come from abroad about great waste in the administration of our mutual security program. These reports have come not just from the opponents of foreign aid. Senator FULBRIGHT, perhaps its greatest champion in the Senate and as knowledgeable a man on international relations as we have, has cited various examples of his own. They include a $5 million hospital in France that was built but never opened.

Most of this waste is not due to corruption, and bad management by our oversea personnel is far from the whole explanation.

Many of our foreign-assistance programs have gone wrong because the people in charge of them could not plan projects beyond the limiting 12-month period. Public-works projects start, then stop and hang in abeyance waiting for word from Washington whether the new budget will allow them to proceed. Underdeveloped countries have been reluctant to request loans for the most important wealth-producing projects, such as dams and railroads, because these require longer term financing than our aid program has offered.

Largely for this reason, the Senate Foreign Relations Committee proposed this year to put the Development Loan Fund on a long-term basis, with authority to borrow from the Treasury. Such long-term planning is one of the simplest requirements of any successful business. If a private corporation could not plan confidently beyond a 12-month period, its development would be bogged down in uncertainty and waste. It would be judged guilty of exceedingly bad management.

This principle of fiscal foresight is already recognized in other programs of our government. At least 13 public agencies borrow from the Treasury in this manner. Nevertheless, the administration opposed granting such authority to the Development Loan Fund. As a result, we will spend almost a billion dollars a year in this field without the kind of long-term planning that will make it effective and economic.

4. In Defense

For our own military forces we are now spending about $41 billion a year—more than half our total budget. Nearly $5 billion more is being expended annually for such additional national security items as atomic energy, military assistance to other countries, and strategic stockpiles. Not many Americans realize how heavy is the price the taxpayer is paying for the duplication, service rivalry, inefficient organization, and resultant waste now characteristic of our defense operations.

One example: During fiscal 1959 alone, the three services together spent more than $4 billion for the development, production, and manning of a continental air defense system against possible enemy bombers. In other words, we spend almost $11 million a day for defenses against a small number of Soviet bombers. But these defenses are useless against such modern offensive weapons as long-range ballistic missiles or shorter-range guided and ballistic missiles launched from submarines.

By far the greatest waste in government today can be traced to the obsolete organizational structure of the Department of Defense, an organization that cannot possibly function efficiently. Most of our prominent military leaders, including General Eisenhower until he became President, have asserted that unless our defenses are reorganized on the basis of progress rather than tradition, this Nation could well go broke.

As an illustration, we are currently being obliged to support a variety of air forces: the Army air force, the Navy air force, the Air Force air force, the Marine air force, plus the Military Air Transport Service. In addition we support, in whole or in part, various reserve components such as CRAF (civil air reserve) and the Civil Air Patrol. Instead of one group of land combat forces, we support two, the Army and the Marine Corps, plus the reserve components for both of them.

As a result of the waste all this duplication entails, the taxpayer is getting a very small combat force at very high cost. These various organizations are in active competition in weapons systems, in the bidding for skilled personnel, and in the struggle for the most desirable engineering and production facilities.

Despite the fact the science of warfare has changed more in the last 15 years than in the previous thousand, we have not conducted a genuine weapons-system evaluation since the end of the Second World War. That failure in itself has cost the American taxpayer tens of millions of dollars a week. Hundreds of millions of dollars have been spent on each of many specific weapons systems. Then the projects have either been drastically curtailed or canceled. In most cases the cancellations and curtailments have not been based upon evidence that the weapons systems were not needed; they have been the result of the overriding priority given fiscal objectives by this administration.

To cite just a few of the numerous examples:

The Navy spent almost $400 million on the development of the Seamaster (P6M)—a long-range amphibious bomber. This project was canceled in August of this year, during the early stages of the preparation of the fiscal 1961 budget.

The Regulus II is a Navy supersonic air-breathing missile, which the Chief of Naval Operations called the best of its kind in existence. It was developed, proven, and then produced in small quantities. After several hundred million dollars had been spent, the project was canceled during the last stages of the preparation of the fiscal 1960 budget.

The Air Force and the Navy spent about $250 million on facilities and materials for the development of fuel applications of boron. After such expenditures, the new facilities have been left idle, and the project has been reduced to a small-scale research operation.

It is not hard to understand why this start-and-stop financing takes place. Each service is trying to prepare itself to wage any possible future war by itself. The duplication and waste resulting from such loose management is costing us billions.

Failure to reorganize for the nuclear and space age has compounded the waste of funds and skills. A prominent member of this administration warned that unless the friction and duplication between the National Aeronautics and Space Administration and the Defense Department were eliminated soon, the taxpayers would be losing at least $3 billion annually in that field alone.

Last spring, after examining the Government's organization for space activities, a Senate subcommittee issued a unanimous report with nine specific recommendations for improving administration. It stated: "Failure to act promptly on the above-listed inadequacies will not only result in additional waste of time, money, and skilled personnel, but also will impair both our national security and our international prestige." The final conclusion in this unanimous report was: "Space activities within the Department of Defense cannot be managed effectively by changes in the organization and administration of the space program alone. Such changes can only be effective if they are an integrated part of a further unification of the services within the Department of Defense."

This present ineffective organization and management brings into disrepute the entire military structure of the country. Direct and indirect derogatory publicity degrades the competence and missions of the rival services. But what is more important, it does not give us the security we should be buying with such a large expenditure.

The transition to the nuclear space age will not be cheap. But a first step that any prudent management should attempt is to make certain that the Government's dollar is being well spent.

The savings possible in the four areas I have discussed could total $10 billion. Among other things such funds could finance:

The slum-clearance and urban-renewal program of the U.S. Conference of Mayors ($600 million).

The expenditure of the original Murray-Metcalf aid-to-education bill ($4.4 billion).

Twice the Senate's recommendation for medical research ($800 million).

A doubling of authorized funds for hospital construction under the Hill-Burton program ($420 million).

The maximum Senate-committee programs for depressed areas ($400 million) and modernization of airports ($115 million).

Governments have no profit-and-loss guidelines, nor are they as limited in the ways they can meet the demands of creditors. The concessions and compromises of the political process often induce duplication and flabby practices. I believe, however, that our Government could perform its proper functions, far more effectively and with solvency, if in our approach to the problem we would emphasize better management instead of retrenchment. With a hard new discipline, and with a policy of taking the people in as partners in knowledge of the true nature of our problem, it can be done.

Mr. McGEE subsequently said: Mr. President, I ask unanimous consent to have printed in the RECORD an article entitled "Security With Solvency," written by the distinguished junior Senator from Missouri, the Honorable STUART SYMINGTON, and published in the December issue of Reporter magazine.

Mr. CLARK. Mr. President, will the Senator yield?

Mr. McGEE. I yield.

Mr. CLARK. I may advise the Senator from Wyoming that I placed that article in the RECORD earlier today.

Mr. McGEE. Then, Mr. President, I withdraw my request and only reiterate, in commendatory language of my own, the wisdom of reading with care Senator SYMINGTON'S forthright, direct assault on some of the embarrassing fiscal policies which confront the country today.

Testimonial Dinner Tendered Louis G. Feldmann, Commander in Chief, Veterans of Foreign Wars of the United States, Hazleton, Pa., December 12, 1959

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 13, 1960

Mr. VAN ZANDT. Mr. Speaker, on Saturday, December 12, 1959, nearly 600 friends of Louis G. Feldmann, commander in chief of the Veterans of Foreign Wars of the United States, packed Genetti's Pennsylvania Room at Hazleton, Pa., at a testimonial dinner in his honor. Guests representing all walks of life and from every section of the United States were in attendance and joined in

paying a well-deserved tribute to one of Hazleton's prominent citizens.

It was my privilege to deliver the following address at the testimonial dinner.

ADDRESS BY REPRESENTATIVE JAMES E. VAN ZANDT, MEMBER OF CONGRESS, 20TH DISTRICT OF PENNSYLVANIA, AT THE TESTIMONIAL DINNER HONORING LOUIS G. FELDMANN, COMMANDER IN CHIEF, VETERANS OF FOREIGN WARS OF THE UNITED STATES, DECEMBER 12, 1959

This is indeed a happy occasion when we can gather to pay a well-deserved tribute to a local boy who has made good in so emphatic a way.

Hazleton, Luzerne County and Pennsylvania, are justly proud that the Veterans of Foreign Wars of the United States has honored Louis G. Feldmann by electing him as commander in chief.

We are taking this opportunity to tell Lou Feldmann that we are glad of the honor that has come to him, that we confidently accept his leadership, and that we intend to aid with all our power the efforts of the Veterans of Foreign Wars of the United States, under his command, to promote loyalty among Americans and peace and good will throughout the world.

It is an accepted fact that invariably every successful man owes a debt of gratitude to a woman whether it be his mother, wife, or sweetheart for the encouragement he receives in the daily battle of life.

Therefore, it is fitting that we pause in this tribute to Lou Feldmann and salute his good wife, Ann, who keeps the home fires burning as Lou moves through the air and over the highways and byways of the Nation.

The Veterans of Foreign Wars of the United States, as we all know, is one of the major veterans organizations of the country, numbering almost 1½ million members.

The Veterans of Foreign Wars with other similar veterans organizations, represents a large segment of the American population since the veteran population today numbers approximately 23 million persons.

In fact, veterans, with their immediate families, have recently been computed to comprise approximately 45 percent of the total population of the United States.

As veterans we have no interests and no wishes that separate us from the local and national community.

Like our neighbors, we receive the benefits and share the burdens of government.

We are of many races, creeds, and national origins.

We are of varying economic positions, and belong to different political parties, and to different schools of thought in many other respects.

Nevertheless, we share a common citizenship, and a common intensity of American patriotism.

The love of country that we all share, we have had occasion as veterans to prove by our deeds—yes, we have proved our love of country by labor and obedience, by bravery in the face of danger, by undergoing hardships and imprisonment, sickness and wounds, in the service of America.

With this history, we join to give effect to our concern for the general good of the Nation, to exercise our influence, to give leadership to the community, and particularly to the young.

In fact, we of the veterans organizations wish to make of our group a citadel of patriotism whose first concern is the welfare of all citizens.

It is, therefore, most fitting that the Veterans of Foreign Wars of the United States, should have chosen for its commander in chief such a man as your friend and my friend, Louis G. Feldmann, whose character and career are typical of the ideal citizen.

Like many of you, Lou Feldmann is my own good friend and longtime associate.

Therefore, I can speak of him with much pleasure because like you, his neighbors, I know and admire his many fine qualities.

Lou Feldmann's career has been divided, as his professional life now is, between the two towns of Wilkes-Barre and Hazleton.

He was born in Wilkes-Barre, and spent his childhood there, attending St. Mary's Parochial High School.

Then he went to the University of Pennsylvania, earning the degree of bachelor of science in economics and then staying on for graduate work.

He studied law at Duquesne University, Pittsburgh, where he received his law degree.

As you know, he now lives in Hazleton, and practices law in both Hazleton and Wilkes-Barre.

Between the study of law and the practice of it, however, occurred the same essential interim occupation that commanded the attention of so many of us in the early 1940's.

With the strong sense of civic responsibility already evident in his choice of economics and law as studies, Lou Feldmann could not hold back from the fight upon which our national existence depended.

As a result, early in World War II he enlisted as a private in the U.S. Marine Corps.

Lou's talent for leadership was soon recognized, and he was assigned as a drill instructor at the Parris Island Marine Base, where he had the responsibility of training thousands of recruits for combat duty.

On January 13, 1945, he went overseas with Company G, 9th Regiment, 3d Marine Division, for service in the Asiatic-Pacific theater of operations.

Upon the conclusion of the war in the Pacific he was returned to the United States and discharged with the rank of sergeant.

Of course as we all know, the rank of sergeant in the Marine Corps—as the marines would say—compares favorably with that of a general or admiral in other branches of the Service.

What the marines have in mind is that the authority of a sergeant in the Marine Corps is unequalled regardless of rank or raitng in our Armed Forces.

If you doubt this interpretation let me suggest that you talk to any leatherneck after graduation from basic training at either Parris Island or San Diego.

So tonight we salute you, Sgt. Lou Feldmann.

Returning to Lou's biography he resumed his interrupted civilian occupation, and soon passed his bar examinations, after which he was admitted to the Pennsylvania bar.

As we all know our honored guest ex-Marine Sgt. Louis Feldmann is an attorney of high professional standing and reputation, being a member of county, State, and national bar associations, and admitted to practice before the Supreme Court of the United States.

In his professional career, Lou has behind him an excellent record of public service, as district attorney of Luzerne County from 1951 to 1955.

Such a career is enough to keep any man busy, and reduce his community and organizational activity to a minimum, but Lou Feldmann has been so active in organizations, local, State, and national, that some people would probbaly be surprised to hear that he is a practicing lawyer.

Here in Hazleton, he is a member of the advisory board of the Salvation Army.

Chairman of the board of Catholic Charities, and a member of the Hazleton Educational Council.

He has been president both of the Hazleton Kiwanis Club and of Hazleton Mental Health, Inc., an organization devoted to the problems of mental health and their solution.

In 1956, at the request of Gov. George M. Leader, Lou served as a member of a State conference concerning mental health.

Strongly conscious of the danger to our country inherent in the current tendencies of juvenile delinquency and neglect by parents and other adults of their social and civic responsibilities our distinguished guest has given of his time and energy in touring the Nation in behalf of an energetic and practical approach to these problems.

He has gained national prominence in urging wider participation by citizens in public affairs on both the community and national levels.

In short, he has pleaded for a sympathetic and positive approach to the problems of youth.

But, though these activities would seem to make a more than full career for any man, it is within the organization of Veterans of Foreign Wars of the United States that Lou Feldmann has been most active and outstanding.

Shortly after his return from overseas duty in World War II he joined the local post, No. 589, of the VFW and was soon elected its commander.

Proving his outstanding leadership he later became commander of the Anthracite Counties Council.

The representative of Pennsylvania VFW then recognized Lou's ability and understanding of the veteran problem by electing him as judge advocate of the Department of Pennsylvania, then vice commander of the Department of Pennsylvania, and finally in 1950 he was elected commander of the Department of Pennsylvania.

In 1951–52 he served as a member of the national council for administration, representing the Departments of New York and Pennsylvania.

In 1957, he was elected as junior vice commander in chief.

He became senior vice commander in chief in 1958.

In September of this year at Los Angeles the delegates representing nearly 1½ million oversea veterans selected him unanimously as their leader.

Therefore, tonight we honor Lou Feldmann as the commander in chief of a group of fighting men who compose the Veterans of Foreign Wars of the United States.

In bestowing upon Lou Feldmann the highest honor possible the membership of the VFW recognized particularly the extraordinary leadership that he demonstrated for 8 years as chairman of the VFW National Loyalty Day committee.

As chairman of this committee he distinguished himself as the leader of a group of patriots in the battle against communism in America and in the promotion of loyalty and responsible citizenship by our people.

As a symbol of this patriotic ambition—through Lou Feldman's efforts—it was my privilege to sponsor in Congress Loyalty Day legislation and to have the pleasure of seeing the measure enacted into law by proclaiming May 1 annually as Loyalty Day.

Like most veterans, our friend Lou Feldmann is well aware that our patriotism, like our family feeling, is best if it spreads out beyond narrow limits.

Therefore, he has been a leader, as chairman of the VFW Loyalty Day committee, in promoting the VFW pilgrimage projects that, in 1955 and 1957, were carried out in conjunction with President Eisenhower's "people to people" world friendship program.

Scores of VFW members visited countries of Europe and Latin America, under these projects, helping to promote better understanding between the United States and other free nations.

Under Commander in Chief Louis G. Feldmann, it is comforting to know that we can look to the Veterans of Foreign Wars of the United States to continue as a mighty sentinel in the United States, yes. A mighty sentinel advocating responsible thought and feeling for meeting the problems of a divided world, and for leading the free world both to greater freedom and to security and peace.

The Nation needs, I believe, more men of the energy, the high morality, the sense of neighborhood and public responsibility that characterize Louis G. Feldmann.

When I contemplate his character and career, I am reminded of the noble words of the poet, Josiah Gilbert Holland, in his prayer for great men to meet the needs of our country in a time of little men and widespread corruption and selfishness:

"God give us men. A time like this demands strong minds, stout hearts, true faith and ready hands; men whom the lust of office does not kill; men whom the spoils of office cannot buy; men who express opinions and a will; men who have honor; men who will not lie."

International Travel: Present and Future

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Wednesday, January 13, 1960

Mr. JAVITS. Mr. President, the encouragement of international travel has a special significance this year in the light of President Eisenhower's recent proclamation of 1960 as "Visit U.S.A. Year," and the contribution this program can make toward our peace mission in the world.. Also, as a corollary, tourism to the United States helps us with a reduction of our international balance-of-payments deficit. Our tourist deficit—that is, the difference between the sum our tourists spend abroad and the total expended by foreign visitors here—amounts to about $1.3 billion.

In this connection, the information contained in the Holiday News Letter issue entitled "International Travel: Present and Future," by H. H. Kelly, is particularly relevant. I ask unanimous consent, therefore, that it may be printed in the Appendix of the RECORD.

There being no objection, the news letter was ordered to be printed in the RECORD, as follows:

INTERNATIONAL TRAVEL: PRESENT AND FUTURE

(By H. H. Kelly, former director of the Office of International Travel and for years chief representative of the United States at many international meetings)

Before crystal-gazing into the future of international travel from the U.S. viewpoint, the basic fact to look at is the long-trend rise in our travel abroad during the last 12 years—an amazingly smooth curve showing an increase of 10 percent every year since 1947 except one, the Korean war year of 1951. Barring widespread war or depression—and there's much less fear of these today than there was a year ago—the line should continue upward in 1960 and the years beyond.

TEN PERCENT MORE

What this means in people and money is impressive: In 1959, more than 1,500,000 U.S. residents traveled to countries overseas, and millions more visited Canada and Mexico, spending a record $2.3 billion in the process. Next year should see at least 10 percent more—and so on into the foreseeable future. Foreign areas in which our travelers are spending their money are: Europe and Mediterranean, 38 percent; Canada, 22 percent; Mexico, 22 percent; Caribbean, 11 percent; South America, 3 percent, and rest of world, 4 percent.

On the inward trek, 250,000 foreign visitors came to the United States from overseas, plus several millions from Canada and a lesser number from Mexico, and spent close to $1 million. The trend here has been more erratic, ranging from 5 to 11 percent annually, but always upward.

The total outbound and inbound volume makes international travel today one of our biggest import-export businesses. With the appetite for travel growing everywhere, with exploding population and increasing personal income and leisure time, someday—but anyone can make his own predictions on the soundest of grounds. It should be noted that estimates given above are based on properly conservative Government statistics which omit certain classes of travelers and therefore always understate the annual travel volume.

Here are detailed facts that bolster the optimistic outlook:

VISIT U.S.A. PROGRAM

More advertising of the United States

Most notable is the recently strengthened policy of the U.S. Government to encourage foreign visitors to pay us a call, as exemplified by the "Visit U.S.A. 1960" program proclaimed by President Eisenhower in 1958 and now actively under way. Officially appointed committees of eminent citizens are at work directing the program. An impressive 4-pound portfolio of U.S. tourist attractions is being distributed by the National Association of Travel Organizations (NATO) in several thousand copies to more than 100 foreign countries, in cooperation with the Departments of Commerce and State here and our embassies and consulates abroad—and this means that there'll be more advertising of the United States throughout the world next year than ever before. The project demonstrates growing official interest in two-way travel, chiefly induced by long effort on the part of NATO, and while it's tagged initially to 1960, it may be expected to continue and broaden in years to come. Despite its official sponsorship, the U.S. Government has as yet provided no special funds for helping to carry it out.

One problem looming up is that of providing a friendly personal welcome in this country for adult visitors, as distinguished from students and other officially sponsored persons. A hospitality committee of the "Visit-U.S.A." program is working on the matter, and helpful voluntary organizations like the Meet-Americans Club of Washington, D.C., are begining to appear. Some knowledge of one or more foreign languages, even rudimentary, will be needed by those who want to make a good impression on the visitors from abroad, and the U.S. program will give a real impetus to this long-desired objective.

IN THE AIR

"Fares commensurate"

The jet age has opened brilliantly, and within little more than a year has revolutionized all prior concepts of space-time in travel. With double speed and double capacity, the present 600-mile-per-hour jets are rapidly pushing piston-engine planes off the main global routes—and design engineers already are talking of 2,500-mile-per-hour types. In a decade, air transport has gained the dominant position in overseas travel. Just how dynamic has been its contribution is shown by a single comparison, viewed against the background of the expanding total market: in 1959, four times as many U.S. residents went overseas by air as by sea, compared with a 50–50 proportion in 1949. The next objective here is to establish fares commensurate with the increased capacity and efficiency of jet planes and still consistent with the economic realities of high-volume versus low-volume routes. U.S. carriers are leading the drive in this direction, with the assistance of a limited number of their foreign conferrers. If and as international air fares are lowered, successive new strata of the travel market will be tapped—to an illimitable future.

ON THE SEA

Five new U.S.-flag passenger vessels had their first full year of operation in 1959—four in the South American trade, with single-trip-lift capacity totaling 1,700 persons, and one in the European trade, with 900-person capacity. Only new ship in sight for 1960 is the nuclear vessel *Savannah*, 13,400 gross tons, due for delivery in March. Built by the Government at a cost of $31 million, it will be operated by a U.S.-flag carrier as a show piece to demonstrate our advances in the peaceful uses of atomic energy, and its 60-passenger space (it holds 9,000 tons of cargo, too) will probably be used on official voyages to many parts of the world for some time to come. Congress has authorized two new superliners—one for the North Atlantic run (2,000 passengers, $125 million) and one for the Pacific (1,400 passengers, $75 million)—but, under current governmental-economy policies, has not yet appropriated the necessary funds for construction.

Ambitious plans by American entrepreneurs for 6,000-passenger low-fare ships on the North Atlantic are still classified as gleams in the eye. If financing is ever found for them, they will probably be built abroad and be operated under a foreign flag. In general, U.S.-flag operators do not seem to be improving their competitive position against either air-transport or foreign-flag carriers, although certain individual ships remain outstandingly successful, and winter cruises to warmer waters are increasingly popular. It's still too early to see what the St. Lawrence Seaway may produce in the way of tourist travel by ship.

ON THE HIGHWAYS

Farsighted conveniences

Highway travel is predominantly personal rather than commercial, and every man is something of a king in his own car. Millions of U.S. motorists use the roads into Canada and Mexico every year, and their number will grow steadily. The new Inter-American Highway—3,200 miles between Texas and the Panama Canal—should be nearing completion by the end of 1960. It will definitely be open for all-weather traffic as far as Costa Rica, close to the southern end of the route, and any motorist can have at his command the new thrill of travel in the deep Tropics.

Elsewhere in many parts of the world, striking growth is taking place in the improvement of existing roads and even in the building of express highways and long-distance tunnels (like the one under Mont Blanc in the Alps). Hundreds of thousands of U.S. motorists will find pleasure in driving in foreign countries, most of them in rented cars, aided by the farsighted conventions of the United Nations to which this country is a party.

As for commercial transport, leading bus companies are offering ever better and more luxurious services into Canada at surprisingly reasonable rates, and service down the Inter-American Highway may not be far distant under a treaty now being considered by the organization of American States. In many foreign countries, bus companies offer excellent long-distance service, as well as local sightseeing. One of the most promis-

ing aspects of travel abroad is the rapid development of the drive-yourself business, and American rent-a-car systems now have branches in scores of foreign cities.

ON THE RAILROADS

International rail passenger movements are naturally confined to the lines having connections with Canada or Mexico, and they have been hard hit by the private automobile and the airplane. The volume handled is hardly any longer a factor in the general picture, although some roads do a commendable job with crack trains, seasonal travel and tours. On the other hand, the Association of American Railroads has shown a public-spirited interest in international progress by taking active leadership in the Pan American Railway Congress Association (headquarters in Buenos Aires, with 10th Congress scheduled for Brazil in October 1960) and by holding membership in the International Railway Congress Association (headquarters in Brussels). Travel promotion plays a part in the activities of these organizations, but the main emphasis is on freight movement, in which the United States excels.

As a marked contrast to the North American situation, the government-owned railroads of 13 Western European countries this year have demonstrated anew their aggressiveness in developing tourist traffic by introducing a revolutionary "Eurailpass"—a first-class ticket, good for unlimited travel for 2 months, at a price of $125, issued only to bona fide residents of the Western Hemisphere. American travel agents, who get a $9 commission per ticket, already report many thousands of sales. The United Kingdom railroads offer somewhat similar arrangements. (Few persons may remember that the American railroads tried out in 1939–40 a "Grand Circle" ticket in connection with the New York and San Francisco fairs—$90 for a coach seat, potentially good for up to 8,000 miles of travel. The plan was not continued.)

INTERNATIONAL PROGRAMS

Global survey

On the intergovernmental front, the chief project in sight for 1960 is a thorough study by the United Nations secretariat of the development of international travel, under instructions from the U.N. Economic and Social Council. All 82 member-nations of the U.N. are expected to contribute facts and suggestions for a report which ECOSOC will consider early in 1961. The long-term vistas in this global survey are large.

International official travel bodies will continue their useful efforts. The 70-nation International Union of Official Travel Organizations (IUOTO) will hold its 15th annual assembly in Buenos Aires next November, immediately following the eighth Inter-American Travel Congress in Rio de Janeiro. The International Civil Aviation Organization (ICAO), always the leader in attacking the travel redtape problems under a joint program developed with the support of the international air lines in the International Air Transport Association (IATA), will have an intensified program of air-facilitation standards and recommendations following a conference in Rome this month. A special meeting of government officials is being planned for February in El Salvador, aimed at eliminating redtape obstacles to travel on the Inter-American Highway. Other important bodies like the Pacific Area Travel Association, Caribbean Tourist Association, and Europe Travel Commission will meet in annual sessions. The sum total of all this official effort is formidable.

Tremendous sales effort

In the field of private enterprise, influential organizations like the American Society of Travel Agents (2,000 experienced travel agents here and abroad), National Association of Travel Organizations (over 500 State and city travel promotion bureaus and travel industry organizations), and the American Automobile Association (over 6 million motorist members) will press forward their objectives with large emphasis upon foreign travel, spearheaded by capable executives and energetic committees. Over and beyond these cooperative programs will be the tremendous sales efforts of American business—transportation companies, travel agencies, advertising agencies, magazines and newspapers, guidebook publishers, research organizations, tourist resorts, hotels and motels, radio and television, movies—whose combined expenditures in promoting international travel (for a proper reward, naturally) are many times greater than those of all the official agencies.

U.S. GOVERNMENT

New travel legislation was not extensive in 1959, but was certainly helpful. Congress lengthened the validity of the U.S. passport to five years—three years original period, two years renewal—and amended the Tariff Act to permit the duty-free entry of bona fide tourist promotion literature from foreign countries, which will eventually make possible reciprocal benefits for us under a 1954 United Nations protocol. Next year there's an excellent chance that Congress will eliminate the wartime excise tax of 10 percent on domestic travel—after nearly having done so in the last two sessions. Also, it may increase the duty-free allowance for U.S. residents returning with purchases from trips abroad, and for foreign visitors bringing gifts to friends in this country.

The regulatory agencies are showing increased sympathy with travel problems. Spectacular improvements have been made in expediting the issuance of U.S. passports since 1955, despite a large increase every year in the number handled; the Department of State reports over 733,000 passports issued or renewed this year—with $5½ million deposited in the U.S. Treasury as a result. Visa, customs and health procedures are also being steadily streamlined and speeded. Near the end of 1959, the Bureau of Internal Revenue issued its long-awaited regulations on income tax declarations for foreign visitors, which in effect relieve them from examination upon leaving this country, provided they have earned no money while here, are bona fide tourists (B–2 visa), and have been here not more than 60 days. This examination requirement of long standing, like the former fingerprinting of alien visitors, always held the United States up to criticism abroad. Now it is ended.

Government-industry cooperation

One of the few clouds in the generally bright sky of 1959 was a reduction in congressional appropriations for the U.S. Department of Commerce program, which had been gaining momentum for several years. A direct effect will be a curtailment in the valuable Commerce statistical services to the travel industry, and particularly a loss of detailed figures on travel to and from individual foreign countries. There will be a lot of hard thinking and planning on this situation in 1960, and indeed on the whole question of the U.S. Government's proper role in international travel development. The comprehensive and authoritive Randall Report, which President Eisenhower transmitted to Congress in 1958 without recommendation for legislative action, undoubtedly will receive new and serious attention. The travel industry's objective will be to persuade Congress of the fundamental value of international travel, on both economic and social grounds, and of the desirability of giving it some greater measure of government support. Thought will also be given, in many quarters, to the possibility of creating some new and more consistent type of Government-industry machinery to meet the needs of 1960 and beyond. If our 2-year deficit in international balance-of-payments continues, Congress may be moved to act promptly.

The International Cooperation Administration will keep on with its rather limited program of technical assistance projects in the field of tourism, bringing trainees to this country and sending experts abroad, and may expand it if well-justified requests are received from foreign countries. Its biggest single job to date in this field, the Pacific Area Travel Development Project, undertaken in cooperation with the Department of Commerce, should be completed in 1960.

The Department of State will continue its international educational exchange program, now well established in national policy and highly regarded as a means of giving officially-sponsored visitors an opportunity to study thoroughly the American way of life in specialized fields, and reciprocally sending qualified U.S. citizens to work for a time abroad; in 1959, 6,000 persons have been covered by the program under arrangements with 70 foreign countries. The U.S. Information Agency likewise will maintain its libraries and information centers in many key cities abroad, and will carry on its People-to-People program in which there are potentially-useful travel and transport committees.

As a minor economic point, but an important political one, there will probably be a further modest expansion of the east-west travel movement. The present annual volume is small: a few hundred persons from the Soviet bloc to the United States, a few thousand in the reverse direction. Developments here rest on much weightier considerations than travel alone. So does the situation relative to Communist China—but this does not prevent the conviction, that, if and when relations with the latter are restored, the greatest stimulus in all history to travel in the Pacific area will be generated.

ACCOMMODATIONS

Problem urgent

Construction of new hotels and motels, and the general improvement of all types of facilities and services for tourists in foreign countries, are among the chief needs and opportunities in the whole travel field. Much has been accomplished in recent years, notably by American hotel interests which have promoted and helped establish magnificent facilities at a number of cities on the main travel routes, but the tempo of new building seems to have slowed down in 1959. The problem remains urgent, while the volume of travel continues to rise and to produce increasing numbers of unhappy guests, especially in the peak season and in big cities. Foreign investors don't show much enthusiasm for taking the iniative and shouldering the financial burden in providing for assured future demand, and governments may have to step into the breach. U.S. and international lending agencies are receiving many applications for assistance, but their generally conservative attitude toward the hotel business and their stringent loan requirements make difficult any broad and rapid expansion program. Some help might be given in the private sector if Congress enacts the legislation it has been considering on facilitating American private investment abroad through tax concessions.

Promising factors

On the other hand, motels are increasing, particularly in Western Europe, and this movement comes largely from the local grassroots, as it should. Finally, measures to protect the health of travelers and to provide safe food and water will receive increased atention next year in many countries.

Currency controls are rapidly diminishing as economic conditions improve overseas. Most significant action in 1959 was the

United Kingdom's raising of the dollar allowance for foreign travel from $280 to $700 per person per year, and other countries are following suit. This, of course, will be a real help to the "Visit U.S.A." program, considering that foreign residents can buy their transportation in local currencies.

Group travel is another promising factor and should expand steadily with the development of new and tempting offers by travel agencies, transport lines, sales incentive plans, and the like. "Visit U.S.A." will stimulate interest in foreign countries in bringing groups here. The Olympic games at Rome and the "Passion Play" at Oberammergau will be group targets abroad—and some 3,000 church members will attend the Baptist World Congress in Rio de Janeiro next June.

CHANGES IN OFFICIALDOM

Management changes were unprecedented in number during the last 12 months, but there's no indication that these will continue in any comparable volume next year. Departing from their functions for one reason or another have been the government directors of tourism of Argentina, Ceylon, Chile, France, Gibraltar, Italy, Mexico Morocco, Portugal, Rhodesia and Nyasaland, Singapore, Switzerland, Tunisia, Turkey, Venezuela, Vietnam, Yugoslavia, and the United States—18 in all. And in the U.S. family there can be added three more—Alaska, Hawaii, and Puerto Rico. Many of these were veteran laborers in the vineyard. Such changes bring inevitable loss of continuity in contacts and experience, but the hope is strong that new blood will produce new ideas and energy.

THE BIG QUESTION

The imponderable in the United States for 1960, as it has been for several years past, is one of national policy: Should the Government take a larger part in the future expansion of international travel, both inbound and outbound—or should it continue to depend on private enterprise to foot the bill? Is the promotion of travel to be classed with the sale of automobiles and refrigerators—or does travel have certain social and cultural aspects which tie it closely with the national interest? Has the time now come to give more weight to the successful experience of all important foreign governments in selling their travel attractions to the U.S. market, and useful lessons be drawn therefrom.

Only Congress can now answer these questions. That there's a growing awareness of them is clear, and the election year of 1960 may bring them into even sharper focus. On this point, two final facts: Potential presidential candidates in the Democratic Party have recognized travel as a factor in international relations; and the 1959 report of the Republican program committee contains this noteworthy statement, "One of the greatest hopes of eventually gaining peace with justice is in the free exchange of ideas by travel and cultural exchange among all countries."

Peace Offensives

EXTENSION OF REMARKS
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 13, 1960

Mr. GATHINGS. Mr. Speaker, we have learned that the marvelous faculty called woman's intuition is generally good common sense accelerated by the spark of inspiration, and a splendid example of this is found in the editorial written by Mrs. Dorothy Stuck, coeditor of the Marked Tree (Ark.) Tribune, entitled "Peace Offensives."

Mrs. Stuck, who is a distinguished editor and civic leader in eastern Arkansas, points out a lesson each of us should have learned from recent history and calls to our attention the continuing need to keep up our guard.

It is a pleasure to call to the attention of Members Mrs. Stuck's thoughtful editorial:

PEACE OFFENSIVES
(By Dorothy Stuck)

As we move into 1960 there is more talk of the possibility of easing world tension and a more comfortable peace than at any time in the last decade. Impetus for this talk comes, of course, from the olive branch gestures of Nikita Khrushchev in his American visit and in the obvious success of President Eisenhower's recent tour.

Now more than ever before from the men in the street to some places of important Government responsibility there is an undercurrent of feeling that perhaps "Russia really doesn't want war."

This may be true—we doubt that Russia does relish the prospect of nuclear war; but there is no doubt in our mind that the Kremlin overlords would trigger that conflict if they thought they had the West thoroughly duped and unprepared for it.

This can be the only reason for a Communist dominated nation talking sweetly of peace. They are waging an effective "peace offensive." It is a well planned and conceived offensive designed to lull adversaries into a sense of false security and an off-guard position. This done, the Communists sit higher in the bargaining chair and can force dangerous concessions from weakened nations, who by virtue of their unpreparedness must concede.

Twenty-five years ago this week, on January 2, 1935, daily newspapers carried this small news item:

"Berlin—Reichsfuhrer Hitler gave diplomats of world powers assurance yesterday of Germany's peaceful intentions under an international golden rule and then received the homage of Nazi storm troopers and hundreds of civilians. He said that no country wants peace any more than Germany."

How true that was. Germany did want peace while it built a stronger army and strengthened its defense industries. It wanted peace to delude its avowed foes into unwary attitudes. Then came Munich, the rape of Austria, and, finally, a war that caught Europe and the rest of the Western World with every flank exposed.

History is supposed to teach us valuable lessons. The trouble with those lessons is that human nature does not alter enough with the passage of time and history's lessons. Give men a period of peace and security and they forget the discipline of self and government necessary to protect that peace and security. They want to take more than they give; they want to ignore the veiled threat and take the sugary phrases that hide it.

We can look now for more talk about cutting down on our foreign aid. The Russians are hoping for this, they'll step in where we step out to take over underdeveloped nations. We will hear calls for lower taxes—and heaven knows we could use those—but if they mean weakening our defenses so the Communists can push us over we'd better do without a shiny new car or mink stole—neither would last very long before an exploding hydrogen bomb anyway.

We'll hear more talk about "The Russians don't want war." That's true, neighbors, the average Russian doesn't want to be cannon fodder any more than the average German or American of any age or time. But, unfortunately, the average man doesn't push the button that starts a war—he never has or will. The men who push those buttons are the Napoleons, the Hitlers, the Stalins, and the Khrushchevs who want to rule the world—all of the world.

That includes you and me, our children and grandchildren. The only time we can have a part in stopping them, short of dying, is in times like right now. We can urge our own American peace offensive mounted on a strong platform of preparedness and sold through a continuing program of aid and friendship across the world.

Congress is going into session. The time to let it know how you feel about peace offensives is now.

The Federal Highway Program

EXTENSION OF REMARKS
OF
HON. HARRY FLOOD BYRD
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Wednesday, January 13, 1960

Mr. BYRD of Virginia. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an exchange of correspondence between the Secretary of Commerce, the Honorable Frederick H. Mueller, and myself, in regard to the Federal highway program.

There being no objection, the correspondence was ordered to be printed in the RECORD, as follows:

OCTOBER 21, 1959.

HON. FREDERICK H. MUELLER,
Secretary of Commerce,
Washington, D.C.

MY DEAR MR. SECRETARY: The law requires you to make a new estimate of the Federal highway program situation in all its aspects and report your findings and recommendations to Congress immediately after it is convened in January 1961.

This letter is in anticipation of that report. My observations are based on long experience in positions closely connected with the Federal highway program since its inception and 50 years of work for sound progressive highway systems.

I have operated toll roads at a profit when that was not easy. As a Governer, I have planned public highway systems, financed them and administered them. I have helped legislate for them at all levels of government—local, State, and Federal.

Congress in the recent session enacted legislation increasing the Federal gas tax and diverting general revenue to the highway trust fund. As chairman of the Senate Finance Committee, I was called upon to help steer this bill to passage.

I want you and the country to know that I did this job reluctantly; there were two reasons:

1. The legislation was essential to preserve the fiscal integrity of the Federal Government which had been impaired by reckless highway financing policies recommended by the administration and enacted by Congress in 1958; and

2. Both the 1-cent gas tax increase and the general fund diversion were for temporary periods—the gas tax increase to July 1, 1961, and the diversion from that date for 3 years thereafter.

Anticipating your report, I trust you will find: This temporary gas tax increase should not become permanent or the introduction

to further increases, temporary or permanent; this temporary diversion of general revenue to the highway trust fund should not become permanent or the introduction to further raids on general revenue taxation, temporary or permanent; that these are special assessments to pay for the sins of profligacy which should come off fully and finally when they expire, if not before; and that with maximum efficiency and economy and a minimum of nonessentials and profiteering, continuing sound progress can be made in meeting our highway transportation requirements on a pay-as-we-go basis.

To me hard experience has proved two fundamental guides to sound, progressive public highway development; they are separate but complementary; they are:

1. No highway system in this country will ever be perfect, or even complete. Highway transportation requirements are not static; they change continually, sometimes rapidly, in terms of location, use, speed, structure, safety, etc., and

2. It is wise to build highways to developing needs on a pay-as-we-go basis. This is the best way to keep abreast of continuing change and build the most modern roads for highway dollars.

I have seen the hazards in trying to anticipate requirements too far in advance and build whole systems too fast on borrowed money. Such practices use highway funds to pay interest instead of building roads, open up wasteful crash program pitfalls, and produce highways which are obsolete before they are paid for.

Mindful of recent experience, I should hope your report will follow these guides. Your Under Secretary, Hon. John J. Allen, Jr., on October 8, said "* * * Past legislation made it possible, unwisely, for us to incur more liability than we have resources to pay;" and "* * * We have just been through the 'morning after' the 1958 binge."

He was referring to the fact that last year, in the name of recession, Federal spenders abandoned the highway pay-as-we-go policy and gorged themselves on authorizations and allocations knowing full well they were exceeding the ability of the trust fund to meet the bills.

No one involved with the suspension of the highway pay-as-we-go policy or the exploitation of the suspension can escape blame for what was done. The administration approved it. Congress enacted it. States were amenable and let the contracts. Contractors bid on the proposals. They all knew they were bankrupting the fund.

Our great highway programs were never before precipitated into such an inexcusable mess. The trust fund was broke and the integrity of the Federal Government was impaired. State highway programs all over the country were seriously disrupted and threatened with chaos.

In further anticipation of your report: I hope it will search out any troubles building up in our Federal-State highway programs as the result of the Interstate System legislation with its 90–10 matching formula—the Federal Government putting up $90 for each $10 supplied by the States.

This is in contrast with the 50–50 matching formula for construction on the so-called ABC system, the backbone of American highway transportation facilities. The temptation to take $90 for $10 is great and the evils of this temptation may be devious.

This is temptation gilded with tremendous Federal funds available to the Interstate program. More than $9 billion has already been made available in 5 years for 90–10 matching. The program now seems to be of indefinite duration. And to date the Interstate activity has shown many of the loose and wasteful characteristics of a crash program.

It would be unfortunate if some States, seeking more Federal dollars for less State money, yielded to the temptation to divert their funds from 50–50 ABC roads to 90–10 Interstate projects. Among other considerations, this could overlook the high cost of many Interstate projects where 10 percent may exceed 50 percent of the cost of many ABC projects.

In addition, the States forever must bear the full cost of maintenance for these expensive and complex Interstate System roads. And this is a big permanent cost item which must be calculated in the use of State highway funds in the future.

Rights-of-way acquisition costs are proving to be a tremendous item, running to billions of dollars in the Interstate program. The temptation to grab land, hike prices and profiteer is inherent in such a multibillion dollar, multiyear, 90–10 program. And there is the possibility of collusion and fraud.

Witnesses took the fifth amendment more than 200 times in Senate hearings on land-grabbing on only a few projects in one State. There is evidence in some cases elsewhere that courts have been at least generous with 90–10 money in condemnation cases.

The Comptroller General of the United States has found need for better rights-of-way acquisition policies and better application of existing policies by both the Federal and State Governments. In a program of this magnitude this is especially important for the protection of both the public and the property owner.

Highway engineers generally are highly competent in their profession. They are usually dedicated to building the best if not the ultimate in good roads. But there is temptation to regard this mutlibillion-dollar, multiyear, 90–10 interstate program as a windfall and a license to go all out with dream designs without limit on expenses.

The Comptroller General has reported that "examination in 11 selected States disclosed considerable variation in design." I suspect this is the Comptroller General's cautious way of saying he has found what he regards as extravagances in so-called geometric design.

I understand geometric design, loosely defined, in contrast with structural design, embraces everything in the highway area which can be seen. In a program of the Interstate System dimensions this is a vast field for expensive highway gingerbread and nonessentials.

There is reason to exercise closest vigilance over all possibilities for irregularity in such a vast undertaking as the interstate program offering so many opportunities for lucrative practice. The need for such vigilance becomes even greater when the program is rushed.

I am sure you are aware of the comment and advice of the Comptroller General on such matters as qualification of bidders, advance information on engineering estimates, overpayment on bond-financed projects, etc. And there is need to watch overlapping with the urban renewal program involving another set of Federal grants along with loans.

Administration of the Federal-State highway programs is extremely complex. Jurisdiction, financing, and engineering frequently are split at all levels of government—State, local, and Federal.

I hope your report will deal frankly with the size and expedited schedule of the Interstate System and the possibility of overtaxing the financial, technical, and administrative facilities at all three levels.

I hope strengthening financial control throughout all levels of government will not await your 1961 report.

I am advised there is good working relationship and cooperation between the Bureau of Public Roads and the U.S. General Accounting Office, and between both Federal agencies and the State governments. This is encouraging. I hope it will be maintained and increased. Otherwise, I fear for the entire program.

I am writing to you in this manner and at this time because I have deep interest in our highway system, and as matters now stand I have deep concern.

I sincerely hope that you and the States will get on top of this interstate program, shake all excessive costs, planning and crash aspects out of it, and report in January 1961 that reasonable progress can be made at reasonable cost.

You will recall that the Clay Commission in 1954 estimated the Interstate System basically would cost $23 billion. This estimate was revised to $27.6 billion in 1955. Now the program has been revised and the estimate raised to $39.9 billion to complete 40,000 miles in the system.

This is an increase of $16.9 billion, or more than 73 percent in 5 years. And State highway officials have testified that only about a fourth of the increase has been due to the 12-percent rise in costs of materials and labor. The rest has been due largely to change in designs and expansion of the program.

On the basis of the kind of experience we have had with the Interstate System to date, it is not difficult for me to foresee costs rising to a point in excess of $50 billion by 1975, the presently scheduled completion date.

The present estimate is too much. I trust you find it can be reduced.

With my high personal regards.

Faithfully yours,

HARRY F. BYRD.

NOVEMBER 13, 1959.

DEAR SENATOR BYRD: This is in further reply to your letter of October 21 which I acknowledged briefly on October 22 expressing my general accord with your philosophy of highway policy. I take this opportunity to comment further on your very fine letter.

The events of the past year have taught many of us a great deal about highway problems, and have shown us the need for more thoughtful consideration of the fundamental background of highway policy. These considerations, of course, have been common knowledge to you for a long time, and as I read your letter I began to realize fully the depth of experience from which you speak on highway policy; an experience that spans the entire period of Federal highway aid at the three levels of our American system of government.

During the past year, as you have observed, our main problem was to get out from under the chaos resulting from the Federal-Aid Highway Act of 1958, an act which suspended your provision for pay-as-you-go financing and which raised authorizations for highway aid far beyond the revenue capacity of the highway trust fund. You will recall the sponsorship of that legislation by members of the majority party of the Congress, against your advice and the warnings issued by spokesmen of this Department during the hearings. You will also recollect the misgivings of the President when he finally decided to approve the bill, in order to avoid the greater evil of not having any highway legislation. Early this year the administration promptly sought to put the highway program on a sound financial basis through a tax increase proposal. A part of what you describe as an inexcusable mess was caused by the procrastination of many responsible leaders of Congress in facing the highway issue. It was only the determination of the administration and the support of conservative leadership including your own valued support that finally brought about a change in attitude in the final days of the session.

We cannot afford to allow another such highway crisis. To avoid another such affair we must bend every effort to improve the direction of highway policy and to revamp the entire system of financial management. The entire administration is dedicated to an effort to bring about these improvements in the highway program.

From our experience of the past session we all realize that the highway program has become so big that the former methods of highway policy determination no longer suffice. It cannot, as in former years, be considered exclusively the affair of one committee in each House, or of one Bureau in the executive branch. Highways and Federal highway expenditures touch the fiscal policy of the Nation in a major way, they touch the basic formulation of Budgets and appropriations, and they affect our national transportation policy as well as our whole manner of national living.

In the Congress highway policy has become a major concern of the Committee of Finance and Ways and Means, the Appropriation Committees, and from these important committees the concern of the leadership of the entire Congress. In the administration, highway policy has claimed an increasing share of the attention of the Secretary of Commerce, the Director of the Bureau of the Budget, the Secretary of the Treasury, the White House staff, and the President himself. Each major development in highway policy is a serious public issue for which our national leadership is now held responsible.

In the narrower field of management there is also a new factor which affects highway administrative actions, including the historic Federal-State relations in this field. The new element is Trust Fund financing.

Whereas in former years, a small highway program was guaranteed by the vast resources of the General Fund of the Treasury, the present large highway program is guaranteed by a rather limited group of special tax revenues. Inherent in such a financial arrangement is the need for a tighter process of financial controls in which the scope of programs of construction is geared specifically to forward estimates of available cash in the Highway Trust Fund. The Circular Memorandum which I attached to my previous letter may serve as the first step in the development of such a system of financial controls, in addition to its present function of meeting the immediate crisis in the Highway Trust Fund. This Department is cooperating with the staff of the Bureau of the Budget in perfecting this "controllership" system of financial management.

In addition to the financial management improvement just noted, the Department and other parts of the administration are doing important work in the broader field of highway policy evaluation with the objective of putting our national highway system on a sounder basis.

I should first mention the study provided in section 210 of the Federal-aid Highway Act of 1956, which is in addition to the cost estimate for the Interstate System which you noted in your letter. The section 210 study, due in March 1961, is intended to provide recommendations for a sounder policy for financing highways, including the appropriate amounts, the distribution among jurisdictions, the types of revenues, and the equity of their assessment among groups of taxpayers. This study was intended to overcome the most serious deficiency in the 1956 Highway Act, the lack of an adequate financial structure for the augmented highway construction effort. The revenue structure thrown together in 1956 has not been adequate to carry us through even this initial period, and even without the added difficulties posed by the 1958 Highway Act, we would have had to reduce Interstate apportionments this year. The 1961 report will raise serious questions, not only with respect to financial resources, but also of program emphasis due to financial requirements and proper responsibility among jurisdictions and user groups for highway costs. Some of these problems are being reconsidered in the administration even now.

The White House staff, the Bureau of the Budget, and this Department are engaged in a general progress review of the interstate highway program, seeking to determine if the present program emphasis is in line with the original intent or if new factors have developed which require modification of the program. We are concentrating in the difficult area of urban construction. Here we are looking both at the responsibility of the 90–10 interstate program for specified types of construction and the engineering standards and criteria that are being used. Out of this administration study we hope to gain some insight into the problems you raised in your letter, whether there are extravagances in geometric design and whether some of the costs of specific designs are more properly chargeable to other programs than the Interstate System.

While we are busy with our evaluations of strictly highway matters, we in the Department are not unmindful of our responsibility for national transportation policy in the executive branch and the relation of highways thereto. In his last budget message the President charged the Secretary of Commerce to make a fundamental study of national transportation policy to assure that none of our activities in the transportation field are working at cross-purposes. One of the important phases of that study, now nearing completion, is an evaluation of the methods used in programing public investment in transportation facilities, both from the standpoint of sound methods and relation to general transportation needs. You should be pleased to know that our principal consultant on this phase of our project is from the University of Virginia.

The field of transportation policy, particularly the part where public investment is essential, requires an unrelenting effort in behalf of sound management. The sums involved are a constant temptation for self-serving ends, while the technical nature of much of the activity tends to remove it from the immediate attention of the legislative leader or the administration policy leaders. I believe that the Department of Commerce is in a unique position to make a contribution to sound management in these fields, being specialized enough to supervise the technical aspects of these programs and yet concerned enough with the general policy to see that the public interest is served. As Secretary of Commerce, I hope to be able to perfect our departmental machinery to serve both ends.

This coming session of Congress may see many attacks made on the objectives of sound policy in the highway field. With the preparations I have described, the administration and the Department of Commerce will not enter this expected battle unarmed. From your past record in behalf of sound management, I know you will join with other stalwart supporters of sound policies to fend off the attacks on our solvency, regardless of the odds. Let us hope that our combined efforts can be used effectively to preserve a sound highway policy.

Sincerely yours,

F. H. MUELLER,
Secretary of Commerce.

Baiting the United States—Now Panama Joins the Game

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article which appeared in the U.S. News & World Report of December 14, 1959. Once more I am sorry I can say to my colleagues I told you so. I predicted this in 1956 and again in 1957 and 1958.

The article referred to follows:

BAITING THE UNITED STATES—NOW PANAMA JOINS THE GAME

BALBOA, C.Z.—Serious trouble for the United States is building up now over the Panama Canal—the biggest, most important single U.S. investment overseas.

Two recent attempts by Panamanian mobs to invade the Canal Zone are viewed here as symptons of bigger troubles to come.

Extreme nationalists—abetted by Communists and followers of Cuba's Fidel Castro—are gaining more and more influence in the Republic of Panama. They are talking openly of grabbing the canal from the United States sooner or later.

The present government, headed by President Ernesto de la Guardia, Jr., apparently prefers that the canal remain in American hands. But De la Guardia is under mounting pressure not to be outmaneuvered by the extremists—so he is demanding costly concessions from the United States.

THREAT OF NATIONALIZATION

The way many people here see it, any further concessions that the United States makes will only whet the Panamanian appetite for more. And in the background, there's always the threat of nationalization. Those who advocate grabbing the Canal are only a noisy minority now. But the feeling is that they will grow in strength.

Panama is a gnat-sized country—but it is proving to have a real bite. The Panama Canal is the lifeline of the United States, not only as a main artery of American commerce, but as a key bastion in the U.S. defense.

Current agitation here in Panama has brought together some strange bedfellows—right-wing conservatives, Communists, rich merchants, left-wing students, and others.

A large share of the unrest is blamed on politicians. Canal-baiting is an old tradition in Panama. It's a sure road to public office—and to the wealth that public office brings in this country. Said one American with long experience here: "The politicians have always been successful in diverting the people's attention from the sordid conditions of their lives by playing up the Canal problem."

Many Panamanians are touchy over the fact that the Canal, ruled by a foreign power, cuts their country in two.

To the poor and unemployed, the Canal has always stood out as a shining island of prosperity in their midst.

Part of the agitation is traced to just plain greed. Americans living here say that some Panamanian merchants are seeking by one way or another to turn the Canal Zone into a "captive market" for their wares. But there is a new twist to the current unrest, a new element.

A NASSER-LIKE GRAB?

Nasser's successful grab of the Suez Canal in 1956 touched off widespread repercussions here. One nationalist, asked if he thinks Panama eventually might succeed in grabbing this waterway, said: "Why not? Egypt got Suez."

Castro's influence, also, is being felt here. Placards praising the Cuban dictator were carried in the most recent of the two riots. Two visiting newsmen from Cuba were accused of lending a hand in stirring up the mobs.

Castro is considered here as something of an old hand at grabbing U.S. property.

Along with everything else, the Communists are involved in the current unrest. Known Panamanian Reds and fellow travelers were spotted egging on mobs during both of the November riots.

Panama's Communist Party is regarded as weak and poorly organized at the moment. But Moscow is pouring millions of dollars into subversive activities in Latin America. For Moscow's purposes, the Panama Communist Party is the most strategically situated of them all. Many people here feel it's only a matter of time before the Soviet Union pours financial and other help into Panama's Communist Party on a big scale.

MASSED ATTACK

The United States is under fire right now from just about everyone in this country of 1 million people. Even De la Guardia's government, though conservative in makeup, used the left-led mobs in its campaign to wring more money out of the United States.

When the mobs gathered along the border of the zone on November 3 for the first of the attempted invasions, American officials pleaded in vain with the Panamanian Government for troop protection. For most of the day, American troops and Canal Zone police were left to battle the rioters alone.

Eighty persons, including many U.S. soldiers and police, were injured. Much property was destroyed. One mob marched on the U.S. Embassy, tore down the U.S. flag and hoisted the Panamanian banner in its place.

When the second mob erupted on November 28, the Panamanian National Guard was out in force and dispersed the demonstrators. But by then things had changed. The United States had agreed to discuss the Panamanian complaints. Said one American: "They accomplished their purpose, so they gave us protection at last."

Panama holds that the United States has only the right to maintain the canal it dug. The United States, however, stands by the 1903 treaty which gives the United States, in perpetuity, all rights and powers in the zone "as if it were the sovereign" and specifically excludes Panama from the exercise of such rights there.

WANTED: PARTNERSHIP

What the Panamanian Government now is seeking is a bigger slice of the pie, plus an acknowledgement by the United States that Panama is a partner in the canal.

The demands include a greater share of canal revenue, higher pay for the canal's 10,000 Panamanian workers and the granting of more purchasing contracts to Panamanian firms.

Other demands include that Panama's flag be flown alongside the Stars and Stripes in the Zone, that Spanish be made the official language there, and that some sort of joint administration be set up.

As far as the demand for more revenue is concerned, canal officials point out that, in 1955, the United States raised its annual payment to Panama to $1,930,000 a year. It had been $430,000 a year.

Officials add that Panama and its citizens receive directly and indirectly an estimated $63 million a year from the payrolls and other expenditures by the Canal Company and U.S. military installations here. The canal, in addition, draws an estimated $10 million worth of tourist business to Panama each year.

The current budget of Panama, the highest in history, comes to only $60 million.

U.S. WAGES HIGH

Government demands that the Canal Company, which is owned and operated entirely by the U.S. Government, should pay higher wages to Panamanian workers drew sarcastic comments from U.S. officials. They pointed out that the company pays 20 to 180 percent higher wages than either the Panamanian Government or private Panamanian employers. No employee in the zone makes less than 50 cents an hour. Some employees of the Panamanian Government are reported to earn as little as $15 a month.

Panama's National Assembly recently adopted a law setting the minimum wage for the country at 40 cents an hour. The Assembly acted after demonstrators occupied its chambers during a hunger march. Panamanian business groups now are planning to fight the 40-cent minimum wage in court on the ground that it is unconstitutional.

Said one U.S. citizen here: "They don't want to raise their own wages, but it's fine as long as Uncle Sam pays."

There is also an argument over the purchase of food and supplies for sale to zone residents in stores operated by the Canal Company. Panamanians say the company does not give them a fair share of the business. U.S. officials, in turn, say Panamanians want to make the zone a vast captive market.

The official organizers of the demonstrations that became riots last month were two Panamanians, Aquilino Boyd and Ernesto Castillero. Boyd, 38, a handsome lawyer, and a former foreign minister, is running for president as a candidate of a small right-wing party. Castillero, 40, is a professor at Panama University. Both men came from aristocratic families; both studied in the United States. Both want the United States to give Panama a 50–50 split of the gross revenue of the canal—which would mean about $23 million a year more for Panama.

Said Boyd: "The canal helped make the United States the world's richest country. The United Fruit Co. pays Panama $4 million in taxes, but from the canal we get only $2 million a year. Panama shouldn't have to subsidize the richest country in the world."

The Boyd-Castillero team has little chance of winning the forthcoming elections. But it has no monopoly on the business of denouncing the United States. Clearly, in this country, the United States faces long and serious trouble, with no end in sight and the canal itself at stake.

National Advisory Council on Education Could Provide a Vigorous National Educational Effort

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Wednesday, January 13, 1960

Mr. NEUBERGER. Mr. President, the Washington Sunday Star on December 6, 1959, published a very thoughtful and informative article entitled "Need Is for More Prestige—A Council on Education?" The article discusses the fact that since the passage of the National Defense Education Act in 1958, broader education legislation has foundered on the rocks of economy, segregation, and religion, encouraged by public apathy and some confused thinking. The article refers to a proposal by the New York Commissioner of Education James E. Allen, Jr., and the distinguished senior Senator from Kentucky [Mr. COOPER] creating a permanent National Advisory Council on Education by the President, which would be somewhat similar in character to the Council of Economic Advisers.

Mr. President, today we are short some 135,000 classrooms. Over 200,000 teachers are paid less than $3,500 a year, with a yearly average of $4,500. Thousands of local school districts have reached the end of their taxing resources as they attempt to solve financial problems created by a public school enrollment of 36 million children, rising 4 percent a year. Only the Federal Government has both the ability and the wealth to correct this situation. It is our responsibility to insure that this power is effectively utilized, and that this urgent need by the States in the field of education is met.

CONTINUING IMPETUS NEEDED

In the past there have been numerous commissions, committees, and conferences to study our educational needs and recommend methods of dealing with the crisis in our classrooms. These groups have prepared a multitude of surveys, studies, and assessments indicating problem areas and possible solutions. The work of these groups has been extremely valuable in pointing out the pressing demands and presenting corrective programs. But the worth of such efforts has become largely academic because they have not been followed with adequate and effective action. Creation of a permanent council of educators and leading citizens would give continuing high-level impetus, guidance, and direction which could lead to a vigorous national effort required to bridge the deficiencies in our educational system.

Mr. President, such a council on education would: First, make an annual assessment of the goals, progress, and deficiencies of education in the United States, and its findings would be submitted to the President and Congress; second, would recommend to the President legislative proposals to be enacted by the Congress; third, would propose action that could be taken by the States in order to carry out its general recommendations; fourth, would act as a high-level body to coordinate all Federal departments and agencies concerned with education; and fifth, it would utilize the prestige of the White House to keep public attention focused on improving our educational system.

SCHOOLS ESSENTIAL TO OUR PROGRESS

Education is vital for the preservation of our democracy; it is essential for keeping our industry and economy sufficiently strong; and it is basic to the de-

velopment of our human resources. It is needed to prepare our youth to be participating members of our social order, as well as to inspire our youth to the higher things of life. Education is the important tool in developing the skills and abilities of our youth which is vitally needed by our communities, States, and the Nation.

I ask unanimous consent, Mr. President, that the article in the Sunday Star, written by George W. Oakes, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Evening Star, Dec. 6,

NEED IS FOR MORE PRESTIGE—A COUNCIL ON EDUCATION?

(By George W. Oakes)

Since the passage of the National Defense Education Act in September 1958—a measure designed for specific purposes—broader education legislation has foundered on the rocks of economy, segregation and religion, encouraged by public apathy and some confused thinking.

Yet the problem remains and the basic facts are well known:

A public school enrollment of 36 million children, rising 4 percent a year.

One hundred thirty-five thousand too few classrooms.

Too few qualified teachers serving on too low a pay scale ($4,500 a year average).

In the prevailing public attitude, which Dr. James Bryant Conant describes as lacking a "sense of urgency," many educators believe that the President could take a step that might help bridge the gap between what is being done and what most authorities agree is required.

New York Commissioner of Education James E. Allen, Jr., and Senator JOHN SHERMAN COOPER, Republican of Kentucky, have proposed recently the creation by the President of a permanent National Advisory Council on Education, somewhat similar in character to the Council of Economic Advisers. Many leaders in education consider that such a top Government group could spur us to raise our national sights on education. Senator COOPER makes the point that this device might make us move faster to translate our national educational requirements—economic, defense and cultural—into action in local school operations.

CONTINUING IMPETUS NEEDED

Although there have been many temporary Presidential committees in recent years which have made significant studies and recommendations, no permanent council of educators and leading citizens exists to give continuing high-level impetus, guidance and direction to a vigorous national educational effort in order to put these ideas into effect.

The addition of another permanent Presidential council to the ever-growing Federal bureaucracy would be justified, in the opinion of its proponents, by the following unique functions it would perform:

1. It would make an annual assessment of the goals, progress, and deficiencies of education in the United States—in our public and private schools, colleges, and universities. Its findings would be submitted to the President and Congress and would be published. For example, it might point out the need to maintain a balanced curriculum in the schools by emphasizing the importance of the humanities as well as increasing study of the sciences. Or it might stress the view held by top educators that raising the level of teaching may be even more essential than the addition of more classrooms.

2. The Council would recommend to President legislative proposals to be enacted by Congress.

3. The Council would also propose action that could be taken by the States in order to carry out its general recommendations.

4. The Council would act as a high-level body to coordinate all Federal departments and agencies concerned with education.

5. Finally, the Council would utilize the prestige of the White House to keep public attention focused on improving our educational system as an urgent national problem. Leading educational organizations, as well as Government officials, feel the need for national leadership to stimulate public awareness of our educational deficiencies.

ANOTHER GROUP AUTHORIZED

Legislation enacted in 1954 authorizes the Secretary of Health, Education, and Welfare to appoint an Education Advisory Committee. There are reports that Secretary Flemming may do so soon. However, such a committee could not command the respect and attention even within the Government itself or throughout the country that would be shown a higher level Presidential Council on Education.

Both Commissioner Allen and Senator COOPER would oppose the establishment of a national curriculum or administrative control over education. But the Senator would expect the Council to work with State and local education officials to raise academic standards and the quality of teaching. In fact, the Council could encourage State education officials to prepare a number of specific plans to improve the curriculum which might stimulate changes by local school boards.

Such a council would require a membership of 12 to 15, perhaps two-thirds leading citizens with recognized cultural interests representing varying points of view and the remainder educational statesmen like Dr. Conant.

To be effective it is essential that the President be sincerely committed to the principle of a top level group selected not for political reasons but on the basis of understanding of our educational requirements. A council determined to provide national leadership with genuine White House support could attract the highest caliber membership. It could exert an influence not only on administration policy but on education activities of Government departments and agencies much more successfully than a departmental committee.

WHITE HOUSE GROUP FAVORED

For some time the American Council on Education has favored a White House group that would advise the President on all levels of education. Annual Federal expenditures on higher education alone now run around $2 billion and affect more than 20 departments and agencies. Some observers claim that there is little coordination among these programs and there is now no Federal agency capable of achieving coordination of policies and procedures. Education is somewhat submerged in the Department of Health, Education, and Welfare because the great preponderance of personnel and funds are devoted to its other two activities.

Some proponents of a national advisory council are convinced that its functions would expand as Federal involvement in our educational system increases. They would favor a National Board of Education with supervision over the Office of Education and power to appoint the Commissioner of Education, somewhat similar to the board of regents in New York State.

In any case it might be desirable to place the Office of Education under the Council in order to avoid administrative confusion and to provide necessary staff support.

Although the Office has gained status in recent years and has attracted higher caliber personnel, especially since it was given responsibility for the National Defense Education Act a year ago, it does not rank with an independent agency like the National Science Foundation, also deeply engaged in scientific education. In addition, it is worth noting that its top pay scale is lower than the education departments of several States or even large cities.

Political Science and Physical Science

EXTENSION OF REMARKS
OF

HON. CHARLES S. GUBSER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 13, 1960

Mr. GUBSER. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following address to the Third Industrial Nuclear Conference at Chicago, Ill., by Hon. CRAIG HOSMER, member of the Joint Committee on Atomic Energy:

POLITICAL SCIENCE AND PHYSICAL SCIENCE

In commencing a talk, the usual order of things is a salutation of some kind. Most commonly "ladies and gentlemen" suffices. Perhaps semi-unrelated circumstances at this particular time might indicate I should start out by addressing you as "comrades." But I cannot bring myself to that.

Possibly the most accurately descriptive salutation I could use today, to this group, would be "pioneers and adventurers," since in the true and large sense—and both in relation to the economics of peaceful applications of atomic energy and the vast horizons for man's betterment just beginning to appear from the light of new knowledge—you are, indeed, and in the true sense, this modern day's "pioneers and adventurers."

Before discussing it, however, I would like to express my appreciation to the directors of the conference for permitting me, representing the membership of the Joint Committee on Atomic Energy, to express my personal views on these matters of mutual concern. And, particularly, to thank Dr. Alvin Weinberg for so graciously exchanging our speaking dates here to accommodate my schedule to be with the Joint Committee at the International Atomic Energy Agency's General Conference. Al's stimulating analysis of the problems of "Burning the Sea Versus Burning the Rocks" is a treat for which I apologize for your having to wait 2 more days.

His discussion—this Industrial Nuclear Conference—in fact, any real awareness of the nonmilitary applications of atomic knowledge were not grasped by a stunned world when in 1945 this great new force burst so explosively and destructively to public view.

It came not in a gradual, evolutionary manner as have other vital forces which are part of our civilization—in a manner which man could prepare his institutions and his thinking to control, direct, harness, and accept as part of his culture—it came, rather, as a full grown technology—suddenly, from behind a secrecy curtain—to confront a vast audience—a world, which was more prepared, even, to accept a man from Mars as reality, than the apparently terrifying monster it found before it.

Fortunately, the so-called monster, for the first 5 years of its public life, at least, had a kind and benevolent keeper—the United States of America.

During these years the world knew that its destructive power would not be irrespon-

sibly unleased upon it. During these years the awareness gradually grew that this great new force need not necessarily be a monster unless man made it so.

During these years—and since—man's "political scientists" have had opportunity to develop doctrines and philosophies which may fit this great force developed by man's "physical scientists" into our civilization and its cultural patterns as a factor for great good, rather than one for great evil.

I have emphasized the words "physical scientists" and "political scientists" because ask a physical scientist the question: "Where are scientific discoveries taking us?" and he will say he does not know. Often as not, he will tell you, "Ask the statesmen, the legislators, and the politicians."

Science can inform the culture to which it belongs, can contribute the tools to enhance understanding, can constantly remind of the universal nature of knowledge and of knowledge's refusal to be fettered. But it cannot take over control of a democracy without destroying the democratic spirit. The rules and regulations have to be worked out, in the main, by students and practitioners of the law, the political scientists.

Underlining this point of view—and in pleading both for public understanding and for public courage as our power over nature increases—Teller and Latter, in their book "Our Nuclear Future," explained it thusly:

"The real source of important decisions in our country is the people. We believe that this is rightly so, and we believe that it is not proper if scientists take over any essential part of these decisions."

And so, as it has been enunciated in theory—so has it been put to practice in our country.

Hardly had the wraps of military secrecy been taken off the atom, when in 1946 the Congress of the United States, representing the people, created within itself the Joint Committee on Atomic Energy as the legislative instrumentality to deal with the task of interweaving nuclear science and political science.

The task has proved both constant and complicated in the past. Undoubtedly it will continue to merit those same adjectives for many years to come.

Without exhausting, but merely hinting at some of the factors which make it so, let me list now—and later examine—just a few of them.

First, proper allocation of responsibilities between Federal, State, and local governments.

Second, adequate provision for health and safety.

Third, maintenance of proper economic relationships in a competitive society.

Fourth, protection of the public's stake in the Government's investment.

Fifth, the necessity for accelerating peacetime uses of atomic energy.

Sixth, considerations of defense and international relations.

And, incidentally, let me caution, that although these and many more factors may be conveniently listed as separate items, they are, in fact, often as numerous, interdependent and interrelated as the parts and pieces of a nuclear reactor.

The political scientist in conceiving workable legislation and policies often faces a task in his work comparable in complication and exactitude to that of the naval reactor designer about which Capt. R. V. Laney told the Joint Committee:

"Each naval reactor project has a specific end in view. Because the building time for the ship and for the reactor, and the reactor plant components are different, the ship is partly built when the plant and its components are still being designed. The ship's characteristics are frozen in advance. Her power requirements are very sharply defined. The myriad of part, pieces, controls, and equipment must, the first time they operate in unison, operate correctly. There is a very high premium on success."

And so, indeed, there is a very high premium on success for the highly complicated operations in the field of political science carried on by the Joint Atomic Committee.

It was for this reason, combined with necessary weapons security that the committee was established as a Joint Committee of both the House of Representatives and the Senate, composed of nine members from each body, rather than as separate committees of each body as is the normal procedure. These considerations also had something to do with the size of the Joint Committee, which is about half the number of members of the usual congressional committee.

This kind of organization has led to infrequent changes in committee membership and has permitted the buildup of a tremendous reservoir of knowledge and practical experience amongst its membership, five of whom have served on the committee since its inception.

Our chairman, Senator ANDERSON of New Mexico, combining position, knowledge, long experience, seniority, and legislative skill is one of the world's acknowledged leaders in this field. And, I can pay him this tribute sincerely, since we are members of opposing political parties.

By law, the Joint Committee is required to make continuing studies of the Atomic Energy Commission and of problems relating to the development, use and control of atomic energy.

The committee also has a duty to investigate and report to the Congress—and thus to the people—recommendations with respect to matters within its jurisdiction. It is in compliance with this requirement that the Joint Committee regularly holds hearings which, to the greatest extent possible within the bounds of security, are open to the public—and thus give the public at large an opportunity to become knowledgeable of the available facts and special problems in the atomic energy field.

Not all of our hearings can be open, of course. Security requirements necessitate that about half of them be held behind closed doors in executive session. In most instances, however, when executive sessions involve major policy decisions, after deletion of classified information, a record of the committee's deliberations is published and distributed.

Realistically, the Joint Committee would still perform an invaluable public service if it performed no further function than such dissemination of authoritative information to the American public and to the people of the world—information which permits laymen to stabilize their hopes and their fears at some realistic point between the depths of utter despair and the heights of unreasonable expectation, which, too often, have alternately characterized the public approach to problems of the nuclear age.

At this point—after such a buildup for the Joint Committee—I would be less than candid if I did not make the frank admission that neither is the Joint Atomic Committee's chambers a latter-day temple for 18 living gods—nor do the committee's 18 members regard themselves as such—at least, there is an honest division of opinion on the matter.

The ground to be covered in exercising the committee's responsibilities is of such magnitude that, in carrying out other legislative duties, members may be well informed, although they may not always be as expertly informed upon particular matters at hand for action as they would like to be.

This gap is filled reasonably well in two ways: By the breaking down of the committee into several subcommittees, allowing certain specializations amongst members, and, by the assistance of an able committee staff, supplemented from time to time by outside consultants and expefts from various government departments and agencies.

Although the Joint Committee has often exercised remarkable vision and imaginative leadership in formulating national nuclear policies—an outstanding example of which was its insistence upon development of nuclear fusion—it has sometimes overlooked action on more mundane and less dramatic problems, which, nevertheless, deserve attention.

In this category—and purely as a personal opinion—I submit the organizational problem of the Atomic Energy Commission itself, as well as the Joint Committee's relationships with the Commission.

Perhaps I am wrong, and again I emphasize it is my own, and not the committee's opinion, but possibly we should be thinking in terms of an atomic energy agency, or even a department—rather than an Atomic Energy Commission to direct the executive department's administration of atomic energy functions.

From the management standpoint, multiple membership bodies generally have proved less able to direct effectively than where a single head is provided, with perhaps an advisory board to assist in policy matters as distinguished from sharing exercise of administrative authority.

Again, expressing personal opinion, I sometimes feel that as between members of the Joint Committee and members of the Atomic Energy Commission, there exists only a shadowy and blurred understanding of which policy matters are to be decided by the committee and which by the Commission, even sometimes as to what are matters of policy and what are matters of administration. This needs clarification by force of law rather than force of personalities and custom.

A need also exists for a clearer definition of the relative precedence between the Chairman of the Atomic Energy Commission, the Secretary of State, the Secretary of Defense, various ad hoc committees, advisers and others in speaking with and advising the President on atomic energy matters.

Unfortunately, my criticism as to these points, and other which I have not mentioned, are subject to a fatal fault—I do not have the authority of pat solutions at hand to backstop them. But perhaps, the validity of the criticism, as well as the solutions if any are needed, could become apparent if our committee finds time to delve into the matter by way of its usual complete and thorough hearings procedure.

The process of these hearings is a somewhat interesting one. Some of you have testified before the committee—always with skill, but often with trepidation—others may have been in one way or another influenced by their outcome.

Annual hearings are held in connection with the AEC's yearly expenditure authorization. Also, the Atomic Energy Act requires during the first 60 days of each session of Congress hearing to receive information concerning the development, growth and state of the atomic energy industry. These are the so-called "202" hearings named for the section of the act requiring them. It is the chairman's prerogative to select additional subjects of inquiry, either in support of particular legislative proposals, or of a more general nature.

The committee staff carefully lines up the panel of witnesses. It aims at obtaining the best informed experts who should be heard, as well as permitting those who insist upon being heard to testify.

The somewhat anomalous position of the Joint Committee—being a creature of neither House, but of both—has thus far prevented it from obtaining a regular room for

public hearings. As a consequence rooms must be borrowed from other committees, accounting for your inconvenience and ours in shifting between numerous rooms during the course of any extensive hearing.

Usually, before the hearing starts, the committee meets in executive session for a preparatory skull session. During the hearings, those of you who have attended, have noted that seldom does a witness proceed very far before he is interrupted by questions and possibly even a longwinded discussion among the committee itself.

This may be either on the subject at hand, or all too often—being the political animals we are—on something more related to the day's political headlines. Nonetheless, it is usually a fairly well informed discussion, irrespective of the subject.

I can assure you that the Member of Congress is not—repeat, not—a member of our committee—and this really happened—the one who listened very intently to a learned briefing on atomic energy—then, being the question period, asked:

"Doctor, what is the native habitat of the atom?"

Following a hearing, the staff prepares a draft report summarizing the information obtained and setting forth the committee's proposed conclusions and recommendations. I believe you would be amazed to see the care and attention committee members devote to this document. Many, many long hours are spent refining them around the green-clothed table in the somewhat shabby committee executive room in the Capitol at the base of the cornerstone laid by President George Washington.

Every effort is made to write a report that is acceptable to all members, that is fair, knowledgeable, and of benefit to some phase of our nuclear effort. Only when a somewhat fundemental divergence of philosophical opinion arises, do we issue a report containing separate or supplemental views to those expressed by the majority of members.

Well, so much for the processes of these political scientists—I would like to turn now to those complicated factors with which they deal that I listed earlier.

The first two I mentioned concern problems of health and safety and the proper division of responsibilities between Federal, State, and local governments under our constitutional system. These I will discuss together, both because of their interrelation and because discussing them together is a particularly forceful way to emphasize that solving most problems of the nuclear age is not a matter of totally new concepts, but rather, one of adapting old institutions and old cultural patterns to new forces.

In their wisdom and their fear of power concentration, the Founding Fathers not only split and divided the functions of Government between legislative, executive, and judicial branches of the Federal Government, but made a further division of power between the Federal Government and the States.

Development of nuclear weapons was clearly a function of the Federal Government under its constitutional responsibility "to provide for the common defense." Under conditions through 1945, it was clearly a Federal responsibility to corral and nationalize every gram of fissionable material going into these devices, from mining the ore to the finished product.

All aspects of the production flow, including the health and safety of workers and the public at large, were thus clearly an exclusive function of the Federal Government.

With the advent of peace and the projection of atomic matters into the civilian side of our life, this clear-cut delineation of exclusive Federal authority faded—and faded fast.

If nuclear materials were to be utilized in civilian pursuits, they had to be placed in civilian hands. The law had to be changed, and it was changed to permit this.

In civilian hands, health and safety consideration pertaining to fissionable material came to an area where the States and other subdivisions—not the Federal Government—commonly exercised the major health and safety responsibilities. Pressures built up for such a shift of responsibilities to the States.

In order to exercise them, State and local authorities had to acquire knowledge and techniques that theretofore had been a Federal monopoly. This was permitted.

On the other side of the coin, certain factors appeared mitigating against this transfer to the States. American business and industry, seeking to employ the new technology throughout the country, could not stand a burden of complying with 50 separate, differing State health and safety regulations, let alone the multitudinously complex situation if all America's town councils were to come up their own unique ideas of what is safe and what is not safe conduct with regard to atomic energy—and each town cop could, in his turn, decide whether or not industry was complying.

It seems almost impossible that an answer could be found adapting our old institutions to this kind of situation. Yet, it is being found, gradually applied, and, I think, rather successfully.

Congress has just passed enabling legislation and today—at AEC headquarters in Germantown—groundwork is being laid for the initial transfer of regulatory authority over AEC licensed isotope applications to the States as rapidly as each State can show it is equipped to do the job and agrees to do it.

In order to avoid nonuniformity, it is required that a State's regulation must be either identical or compatible with AEC's. There must also be an adequate, trained staff at the State level, which AEC will help to prepare through recruitment and training programs. Once an official transfer is accomplished, there will be no dual, Federal-State jurisdiction in the field covered.

From this pattern of responsibility shift in the field of isotope application, it is easy to project similar shifts in the future with respect to reactors, fuel processing and in other appropriate areas.

Turning now to two more of the difficult factors faced by the political scientists in adjusting our lives and institutions to the nuclear age, we again find that discussing them together is more valuable and more feasible than trying to analyze them separately. They are the economic relationships of nuclear industries in a competitive society, and, the protection of the people's vast investment required to bring about the nuclear age.

To date, some $25 billion have been invested in nuclear science by the people of America. This does not include other billions buried in related Government programs. It is just the money appropriated to date to the Manhattan District, and its successor, the AEC.

How, and in what manner can the knowledge and the hardware so expensively acquired be utilized so that the people receive back the maximum return on their public dollars?

Can, and should, this return be made in dollar amounts, or is it better and more practical that it filter back, somehow, through improved living standards, better food and medical care, better and possible cheaper products of industry, and in other ways?

Should the Government seek to monopolize, say, the nuclear-electricity production field, and recoup those $25 billion by a surcharge over the cost of power production?

Could it do so if it wanted to?

How, and in what manner, can this Government pass on to competitive American industry knowledge and technology of nuclear application in a manner that gives no one corporation a practical monopoly, but stimulates amongst industry the normal competition basic to a free enterprise economic system?

These questions open up a Pandora's box of problems that make the Federal-State jurisdictional question elementary in comparison. Yet they are the questions that inhere in—and require either the answering or the ignoring—each time Congress deals with almost any aspect of industrial development of atomic energy by free, competitive enterprise.

In these regards, applications involving radioisotopes have been amongst the easier with which to deal.

Cost of production, plus capital and overhead price tags can be calculated and affixed to products supplied by Government installations. Thus a fair return to the public treasury can be assured.

Although general industrial, medical and other peacetime isotope applications are expensive, their price in relation to most of American industry's ability to pay is not exorbitant. There is also the practical assurance that when it is paid, the investment will make a profit. Thus, in this field, the factors exist which stimulate competition and stifle monopoly, all to the good of the American public which enjoys the fruits of this remarkably productive economic system.

But when you get over into other atomic energy applications by American industry, the situation changes. For instance, economic production of electricity from nuclear fuels. It is a tremendously expensive proposition, not only in the research and development stages, but in capital plant costs. Some of the needed research and development already has been done in Government laboratories or under Government contract. Industry may build on that—but how—and how much should it pay for it?

Even if some one industrial giant could carry the whole accomplishment from beginning to end—with its own capital—acquiring its own patents, the result would be that giant's monopoly, which is contrary to the interests of a competitive society. How is this to be avoided?

I have raised more questions than I have answered on these points—simply because there seems to be no universally applicable solutions that can be painted on with a legislative brush. Each time Congress has dealt with the subject, whether it has been on the question of patents, of the various reactor demonstration rounds in the nuclear power program, or otherwise, it, too, has had to leave to time the answer to parts of both the economic competition and the protection of the public's stake questions.

This has not been wholly because those problems are, in and of themselves, insoluble. But often because—in a broad view of the national interest—their solution has deserved a lesser priority than the fifth complicating factor I listed in the political scientists' labors—that involving a necessity to accelerate peacetime uses of atomic energy.

That point needs no belaboring before a group such as this. There is not only a humane necessity that mankind be brought all the peaceful benefits of the atom at the the soonest possible moment, but there is a vitally compelling necessity to do so in this era of deadly competition for survival between us, the inheritors and beneficiaries of Western civilization, and those behind the Iron Curtain to whom freedom, liberty, and justice are evils to be ruthlessly exterminated.

Thus it is that many of our programs, much of our public expenditures, and an overriding consideration in our approach to peaceful atomic energy application, stems

from this basic, though regrettable fact of international life. These positive and peaceful applications of nuclear force are as fundamental to ultimate victory as is the effective capability to use that power in weapons configurations if should ever the need arise.

My mention of the committee meeting almost half its time in executive session is ample indication that defensive weaponry and international relations deserves a major position in the list of complications confronting the political scientist dealing with nuclear science.

What precise part the Joint Committee plays in the weapons program neither can—nor should—be discussed outside its constantly guarded committee room. It is suffice to say that not only is the membership currently and fully informed of all developments—technical, tactical and strategical—but it also exercises a considerably inventive leadership as regards them.

There is full appreciation that without the added power of nuclear weapons capability the free world cannot match the Communist bloc's overwhelming manpower superiority in the use of conventional weapons.

It was upon this premise that the committee took the leadership in suggesting—and assumed the burden of obtaining public concurrence—to the recent exchange of information with NATO allies which will allow them effectively to use nuclear weapons supplied by the United States if hostilities should break out. Yet, which does not afford the nonnucular power technical information which might permit them to join the Nuclear Club.

At the same time ,the committee has exercised its influence with respect to test-ban negotiations, and related disarmament negotiations, so that within the requirements for sufficient strength to resist either nuclear or conventional blackmail by the U.S.S.R., this Nation cannot only follow, but as well proudly lead in the effort to relax world tensions.

In conclusion let me say this: I have dwelt long upon the political scientist's place and responsibilities in this modern age of unique opportunity and unique danger. I have done so simply because I lack the technical background to discuss with you, the physical scientist, your own work, on your own terms, in your own language. Your work—the physical scientist's work—is that which is true and basic to mankind throughout the ages past and the ages to come.

My work—the political scientist's—is more transitory in effect, and as a consequence less meaningful to mankind.

I salute you for your accomplishments—I thank you for your dedication.

The Versatility of Jennings Randolph

EXTENSION OF REMARKS
OF
HON. EDMUND S. MUSKIE
OF MAINE
IN THE SENATE OF THE UNITED STATES
Wednesday, January 13, 1960

Mr. MUSKIE. Mr. President, last summer I had the privilege and pleasure of visiting the great State of West Virginia as the guest of our distinguished colleague, JENNINGS RANDOLPH. I enjoyed a weekend there with him among his constitutents, and had the privilege of addressing a great gathering of Democrats at a Jefferson-Jackson Day dinner.

I was impressed by the high esteem in which our colleague is held among his people. At the time I was in West Virginia I met the editor of the Fairmont Times, a distinguished gentleman who obviously also held a high opinion of our colleague. I note in the January 11 issue of the Fairmont Times an editorial paying tribute to our colleague's qualities as a public servant. I think it is appropriate, in this year when he will be seeking reelection, that there be inserted in the Appendix of the RECORD a copy of this editorial, and I make that request.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE VERSATILITY OF JENNINGS RANDOLPH

In many years of public service and in private business close to the seat of the National Government, U.S. Senator JENNINGS RANDOLPH has made himself a man well informed in a wide variety of fields. His ability has long been well known, but his range of interests struck us in two speeches he made in Fairmont within a period of 3 days.

Appearing at a luncheon to launch a new television station in central West Virginia, RANDOLPH, although a member of the company's board of directors, did not devote himself to platitudinous best wishes. He gave a thoughtful analysis of television's responsibility to the viewing public.

Had more people in high places accepted the responsibility of which Senator RANDOLPH spoke, the chances are the entire industry would not have found itself in its present plight, with public confidence shaken by revelations of payola, rigged quizzes and the like.

Then, to a different audience, the Veterans of Foreign Wars, the Senator spoke on the theme of communism. He warned that the United States is still the prime target for Soviet espionage and suggested some principles for combating the menace.

It is knowledge such as the senior Senator has exemplified in these two instances that, among many other reasons, has prompted widespread support for his candidacy for a full 6-year term. The Clarksburg Exponent heralded his announcement with the statement that West Virginia needs the services of the distinguished resident of Elkins.

The exponent goes on to say: "As he did when he was a Member of the House of Representatives, JENNINGS RANDOLPH as a U.S. Senator has demonstrated his interest in affairs of Government with particular emphasis on matters of Government which affect West Virginia. His efforts for betterment of West Virginia have been reported regularly in the public press and his work in this respect has been influential in helping the State's economy.

"JENNINGS RANDOLPH understands West Virginia's unique problems as do few people on the Washington scene. He has visited the various parts of the State so often that he is at home wherever he goes, and he has a corresponding understanding of the problems of each particular area.

"Senator RANDOLPH is one of the Nation's best orators and on numerous occasions since he entered the chambers of the U.S. Senate he has argued for the needs of West Virginia.

"We feel confident that JENNINGS RANDOLPH will receive the Democratic nomination and that he will be reelected by an overwhelming majority of the votes cast. West Virginians know that he has represented them faithfully in Washington and that he will battle diligently for their best interests. The State's need for JENNINGS RANDOLPH as one of our U.S. Senators is far greater than Senator RANDOLPH's need for the job, and we feel that the Mountain State residents will vote accordingly."

Happy 93d Birthday to You, Dr. Townsend

EXTENSION OF REMARKS
OF
HON. JAMES C. OLIVER
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 13, 1960

Mr. OLIVER. Mr. Speaker, today, Wednesday, January 13, marks the 93d birthday of Dr. Francis E. Townsend, the father of the Townsend plan for retirement pensions for our senior citizens.

It has been my privilege to know and work with this great American over the past 25 years. These years, Mr. Speaker, have found him working tirelessly and courageously for justice for our elderly people. Many congressional leaders over the years have attributed to Dr. Townsend substantial credit for the Federal recognition through congressional action of the principle of social security for the American people. Knowing of his great contribution to the action and work necessary to arouse the people in support of any proposal in the general welfare, I can personally testify that this contribution of his has been even more than substantial. The elderly citizens of America owe Dr. Townsend a debt that can never be repaid.

It is only rarely that a man crusades as he has crusaded for a cause in the interests of people without hope of personal gain for himself or family. Dr. Townsend has been this type of a champion. He conceived of the idea that the great resources of America could and would support a social dividend for the retirement income of all of our citizens. He believed that this income, since it would be immediately and fully expended by its recipients, would serve as the continuing stimulus which our economy needs to employ our full resources, both human and material. In part, his idea has been proved during the recent recession. Many economists have stated that the built-in stabilizer of social security payments made a great contribution to the stability of personal income, thereby acting as a cushion for the decline in our economy, during 1957–58. Certainly, more stabilization through the larger pension payments of the Townsend plan would have been even more effective.

Having been one of the 97 Members of Congress who voted for consideration of the Townsend plan in the 76th Congress, I feel that Dr. Townsend has been justified in every way in making the efforts which he has made and in the observations which his organization has made available over the years to the citizens of the Nation, as well as the Congress of the United States.

Sincerity, strength of one's convictions, sympathy for one's fellow beings and dedication to a basic cause in the interests of the American people, together with devoted and unwavering action to reach the objective, symbolize the crusading stature of a man.

Dr. Francis E. Townsend measures up to these specifications and far beyond in my estimation. I have been and am

proud to have been closely associated with him and his work. On his 93d birthday, I extend my warmest personal regards and rededicate myself to his goal.

Happy 93d birthday to you, Dr. Townsend, and may there be enough years left for you to see the realization of your dream; namely, justice for all of our senior citizens.

Edwin F. Chinlund

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Wednesday, January 13, 1960

Mr. JAVITS. Mr. President, I invite to the attention of the Senate the passing of Edwin F. Chinlund, a distinguished businessman, lay religious leader and civic leader in New York. We must take note of so useful a life as a model to every citizen. He is honored especially in New York for his perceptive leadership in the modernization of our courts.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the article published in the New York Herald Tribune of January 12, 1960, regarding his passing.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

EDWIN F. CHINLUND DEAD, MACY'S FINANCE CHAIRMAN

Edwin F. Chinlund, 69, chairman of the finance committee of R. H. Macy & Co., Inc., died yesterday in his home at 45 Gramercy Park.

Mr. Chinlund retired in 1956 as vice president and treasurer of Macy's. Since 1942, he had headed up the nonmerchandising activities of the company. These included acquisitions, leases, new ventures, mergers and financial matters. He played a key role in Macy's postwar expansion program, including the development of shopping centers.

In 1939, he became president of Postal Telegraph when the company came out of receivership. He was mainly instrumental in bringing about the merger of Western Union and Postal Telegraph in 1942.

HEADED COURT GROUP

Mr. Chinlund was chairman of the Committee for Modern Courts, which worked for the passage by the 1959 legislature of a constitutional amendment providing for a reorganization of the State courts. This must be passed again by the 1961 legislature and voted on in the election of 1961.

Born in Chicago, Mr. Chinlund began his career as a certified public accountant. He was a partner of Arthur Anderson & Co. in 1925 when he left to become controller and later vice president of International Telephone and Telegraph Corp. In 1937, he returned to partnership in Arthur Anderson & Co. but left again to become president of Postal Telegraph.

Mr. Chinlund was a member of the board of directors of the General Public Utilities Corp., General Telephone & Electronics Corp., Scandinavian Airlines System, and Western Union.

He was a member of the boards of directors of the Foreign Policy Association, the Gramercy Park Association, the Jackson Laboratories Association, the Public Health Research Institute, the National Urban League, the Hudson Guild Settlement House, and Roosevelt Hospital.

IN RETAIL GROUP

He was a member of the New York State Retail Merchants Association, the Citizens Budget Commission, the American Institute of Accountants, and the Controllers Institute. He was a member of the Century Association, the Union League Club, and the Blind Brook Country Club.

For the last 28 years, Mr. Chinlund had maintained a summer home on Martha's Vineyard. He was a member and former commodore of the Vineyard Haven Yacht Club. Last summer, he organized the Martha's Vineyard Boat Line Committee, which had as its objective the bringing of adequate and low-cost steamship service to the island.

Last month, Mr. Chinlund was honored by King Gustav Adolf VI of Sweden, who designated him as a Knight of the Royal Order of Vasa for his contributions as a director of the Scandinavian Airlines System.

AIDED GRAHAM CRUSADE

During the Billy Graham crusade in New York in 1957, he was treasurer and a member of the evecutive committee. He was a member of the Middle Collegiate Church and a member of the board of directors of the Protestant Council of the city of New York.

Surviving are his wife, Mrs. Helen Chinlund; four sons, Edwin C., Harold C., Thomas J., and Stephen J. Chinlund; a daughter, Mrs. Arnold K. Brown, Jr.; three brothers, Dr. Emil, Theodore, and Victor Chinlund, and four sisters, the Misses Mildred, Anna, and Ruth Chinlund, and Mrs. Ellen Sanblom.

A funeral service will be held at 10 a.m. tomorrow in Grace Church, Broadway and 10th Street.

TV and Honest Advertising, Testimony of Mr. Philip Cortney Before Federal Communications Commission

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 13, 1960

Mr. PATMAN. Mr. Speaker, on January 7, 1960, Mr. Philip Cortney, president of Coty, Inc., New York, N.Y., appeared before the Federal Communications Commission and testified about the need for honesty in TV broadcasting and advertising. During the course of his statements, Mr. Cortney made reference to the fact that the Federal Trade Commission is undertaking, lately, a number of cases in which it is charged that some persons involved in the TV and radio scandals are engaged in false and misleading advertising. However, he pointed out that according to the Chairman of the Federal Trade Commission, there is a difference of opinion on the staff level of the Commission as to the Federal Trade Commission's jurisdiction of sponsored TV shows if the show was deceptive but the commercial was not. In that connection, he called attention to the fact that the same agency, whose duty it is to fight unfair competition, is accusing record manufacturers of giving illegal payolas to radio diskjockeys, but is not proceeding against other parties to the same transactions. In other words, in these agreements and other actions resulting in illegal payolas, the Federal Trade Commission has seen fit to proceed against only some of the persons who have entered into the payola agreements and transactions. These partial proceedings have been undertaken despite the fact that the Chairman of the Federal Trade Commission has acknowledged that:

These payoffs are unfair methods of competition forbidden by the FTC Act because they have the capacity to suppress competition and to divert trade unfairly from respondents' competitors.

Mr. Cortney appropriately has inquired why the Federal Trade Commission has proceeded against only the record manufacturers and failed to include in the same proceedings other parties in agreement with the record manufacturers in the making of illegal payolas.

Mr. Speaker, in view of the importance and timeliness of this subject, I wish to extend and revise my remarks by including in the RECORD at this point the testimony he presented to the Federal Communications Commission, January 7, 1960.

STATEMENT OF PHILIP CORTNEY, PRESIDENT, COTY, INC., BEFORE THE FEDERAL COMMUNICATIONS COMMISSION

I greatly appreciate the opportunity to appear before you in these hearings on the question of how we can best guarantee that radio and television will fulfill its vital responsibility to the American people.

The television quiz scandal may prove to have been a blessing in disguise, if it should lead to a real change in the television industry. It would be unforgivable if the occasion to give the right answers to some of its fundamental problems were lost. Television is the most powerful medium of mass communication and of extreme importance to our Nation.

The impact of television on our Nation is so considerable that it can influence our morals, our thinking, and our culture for good or for bad. It is up to us to make certain that this greatest medium of communication is made to serve the public interest.

It is being asserted that we get our television broadcasts free. Is this true? I doubt that we obtain anything in this world without paying a price for it. Who is paying the billions of dollars of advertising to the TV stations if not the American public? The degrading of our taste, the corruption of our morals, the juvenile delinquency to which many of the TV programs make such an outstanding contribution are too high a price to pay for the so-called free television. In a recent remarkable speech on the subject "What More Is Left To Accomplish?" Gen. David Sarnoff, chairman of RCA, stressed the point that the only valid achievement of science and education is its effect on the individual human being. He warned us that we run the danger of confusing democracy with mediocrity, and that we may grow softer, more pleasure-loving, content to squander our increasing leisure on the trivial if not on the harmful. General Sarnoff admonishes us to embrace heroic goals and dedications and to accept the hard disciplines of the good life. We better heed his advice if we wish to respond successfully to the material and ideological challenges surging from the East and the Far East. Because of its terrific impact, TV will have a considerable influence, for good or bad, on the kind of men we are bringing

up to defend our moral values, our heritage, and our way of life.

Let me now tackle the fundamental problems of TV as I see them.

(1) The TV stations obtain operating licenses on the condition that they defend the "public interest." However, as far as I know, the words "public interest" in this context are not clearly defined. As long as advertising remains the only source of income of the TV stations, we cannot leave it to them to interpret the meaning of the words "public interest." Some definite guidepost would seem to me essential.

(2) The second question or problem is: "What are our people entitled to expect from its radio and television systems?" What is the public interest in this respect? It appears that television considers entertainment, or what goes for entertainment, as its main duty and purpose. Worse yet, under the guise of entertainment, TV is glamorizing violence, corrupting our youngsters through an abundant diet of sadism and crime, and is degrading the public taste.

Do our people really need so much entertainment or so-called entertainment as it is being made available by TV stations nowadays? Is quality not sacrificed to quantity, or rather to trivialties and many variations on the same few themes, often deplorable?

Would this national resource called TV not be put to better use on providing programs of information, documentaries, education, good art and civilized entertainment? Would this kind of programing not serve better the public interest? President Eisenhower recently remarked at Gettysburg that people in democracies must develop understanding of basic issues. Indeed, a democracy means a choice, and choice presumes education if we are to act as enlightened citizens and rise above our own selfish short-term interests, so that free government may survive in our country. TV could make a great and valuable contribution to the understanding of the basic issues and toward the goal of making our people act as enlightened citizens.

Entertainment is a legitimate part of life to relieve us, from time to time, from the pressures of reality and from thinking. But let me ask again whether we need as much so-called entertainment as is being fed to us and particularly so much cheap entertainment, which is debasing our taste. Defenders of "freedom of taste" contend that we should give people what they want. First of all, how do we know what the people really want? Desires are created and then satisfied, and this process is spoken of as if it actually gave the viewer a choice. Those responsible for the programing of television would do well, and it is their duty, to find a way for the public to express its inward wants. But even if we assume that the TV industry is right in its opinion that the taste of great masses is a low one, is it not their duty, is it not in the public interest that they utilize a great deal of the TV time and effort to elevate the public taste? If we are to be guided only by what the people want, or presumed to want, we may have to feed many youngsters and adults with pornographic or obscene programs. Would such programs have a worse influence on our people than the constant exhibition on TV of violence, sadism and crime?

We should keep constantly in mind, when discussing these problems, the unique power of TV, not comparable to any other medium, and as is the case with any exessive power, its capacity for corruption.

The public interest clearly requires that we make TV an influence for a good society and not an evil one. At this point some people may wonder whether I am advocating control of the programing by the Federal Communications Commission, or blasphemy, even censorship. I share the opinion that the FCC has the power and the duty to make certain that the public interest is protected in the way the television facilities are used. As to censorship, I am opposed to Government censorship. But Mr. John Crosby is right in maintaining there is now complete censorship of the airways by the advertisers. The truth is that television is dominated and controlled by a handful of advertisers with the largest advertising budgets.. So long as the advertisers have direct control over the programs it is not easy to scare the people with the danger of censorship.

(3) This brings me to the core of one of the TV problems. The only source of income for the TV stations is advertising. Broadcasting is a business dedicated to acquire the largest mass audience in order to sell profitable advertising to the sponsors. For all practical purposes television is operated primarily for private profit. As Mr. Walter Lippmann so aptly said, television has become the servant, the prostitute of merchandising. Worse yet, the major networks have surrendered the control of their facilities to substantial advertisers whose main criterion for presenting a program is what is supposed to be most popular. This situation leads to programs of low taste or to fraud in the case of advertisers whose acquantance with the moral law is very remote.

I admire Dr. Stanton's statement to the effect that his network will accept the entire responsibility for both content and quality of the programs. Until the TV scandal we were living in a kind of irresponsible world. A shocking fraud was perpetrated on the American people, huge dishonest profits were made by means of what District Attorney Hogan called a fraud, and yet our Government seemed unable to call anybody to account. We punish a hungry man who may be tempted to steal a loaf of bread, and we seem helpless against people who make big money by fraud and deceit. This is a perfectly unjust and intolerable situation, because cynicism breeds cynicism and dishonesty breeds dishonesty.

It seems to me that the position taken by Dr. Stanton is a very sound one. The licenses are granted to the stations which accept the unqualified responsibility to defend the public interest. This responsibility cannot be delegated to anyone. Hence it is up to them to control the programs and to bear the entire responsibility for both content and quality of the programs.

My recommendation, therefore, is that the advertisers should take their hands off TV programs. Businessmen who buy advertising in newspapers and magazines exercise no control over the editorial and entertainment sections of those media. Let's adopt this same practice for radio and television and let the networks and stations be responsible for entertainment and editorial content. The businessmen should limit themselves to honestly selling their products and services. I would urgently recommend that the Federal Communications Commission consider the advisability of an amendment to the Communications Act of 1934 which would specifically make it illegal and punishable by law for any advertiser to exercise control over programs.

The aforementioned statement by Dr. Stanton and a similar one made by Mr. Kintner, president of NBC, should reassure us that the networks will endeavor to improve both the quality and the contents of their programs. Yet, I can't help feeling that if they were to do all that is expected of them in defense of public interest, they would find themselves in conflict with their economic interests which require mass audiences for the advertisers.

Therefore, I also propose that the following suggestions made by various persons should be given careful consideration as means of defending the public interest:

(a) The creation of a National Advisory Board on Radio and Television. The main purpose of such a board will be to examine whether the industry is adequately serving the public interest, and to issue recommendations or reports whenever they think these to be necessary.

(b) Pay-TV network. It is worth trying.

(c) I am also in favor of a TV network which should be operated for public service and not for profit. Such a network would have to be subsidized and endowed. In its program of information, education and entertainment it should be concerned with quality and good taste and not with making profits.

Only by constant vigilance and experimentation shall we find the right answer to the basic question on how to utilize the broadcasting resource for the good of the Nation.

(4) Another broadcasting problem is the honesty of advertising. Too many advertisements make exagerrated or even false claims. Too many commercials are in poor taste, when they are not an offense to both taste and intelligence. It is up to the stations and networks to watch the quality of their commercials, as they should do on the quality of the programs. It is up to the Federal Trade Commission and to the Federal Communications Commission to fight deceit and fraud in advertising.

District Attorney Hogan called the rigged TV quizzes a form of fraud which indeed they were. Yet the FTC took the position that they were helpless against this form of fraud. A strange situation indeed. Apparently the Government is able to fight small deceit but not a big fraud.

Mr. Kintner, Chairman of the FTC, has indicated that there was a difference of opinion on the staff level of the Commission as to the Federal Trade Commission's jurisdiction over sponsored shows if the show was deceptive but the commercial was not. Yet the same agency, whose duty is to fight unfair competition, in accusing record manufacturers of giving illegal payolas to radio diskjockeys, made the following statement: "These payoffs are unfair methods of competition forbidden by the FTC Act because they have the capacity to suppress competition and to divert trade unfairly from respondents' competitors." But, Gentlemen of the Commission, isn't this comment equally applicable to TV and the rigged TV quiz shows?

I was therefore happy when your Chairman recently stated that governmental power to control deception would be broadened and that a new law could be written to declare that the buyer of the product advertised has been cheated by such things as rigged shows even if the advertising itself was not deceptive. However, I respectfully submit that a real offense in the case of the rigged TV quiz shows was unfair competition, and I was interested to read in the report to Attorney General Rogers that the Federal Communications and Trade Commissions appear to have authority adequate under existing law to eradicate most, if not all, of the deceptive and corrupt practices in broadcasting which have been disclosed.

(5) I wish to draw attention to one more problem, created by TV, which has so far been ignored or neglected. I am referring to TV as an instrument of monopoly or restraint of competition. There is no doubt that vigorous competition is a matter of public interest. Let me make clear at the outset that I am not against bigness in business. I only wish to draw your attention to the tremendous power of TV in affecting the sale of merchandise. The use of TV has become a "must" in mass-merchandising. But not only is TV extremely costly but the best hours of TV, which enjoy the largest audience, are

naturally preempted by those able to spend the greatest amount of money on advertising. The air channels which constitute a network are scarce and therefore the number of good hours for advertising very limited. The competitive situation and capabilities of the small advertisers were much more favorable before the era of TV.

I don't know the remedy to this situation created by TV. My only hope is that the Government will face the issue squarely and not dodge it. I regret to state that at times some of our Government agencies show a zealousness completely in disproportion with the importance of the infringement of a particular law. Yet, to cite just one example, there is, and the Government knows about it, a real monopoly for the use of nail polish in the beauty shops of America, and the authorities seem helpless to put an end to it. Why this should be the case is not very clear to me.

Attorney General Rogers stated in his report that the spectacle of corruption in the broadcast industry presents a larger issue which is beyond the area of legislation or law enforcement. Indeed I doubt that honesty and morality can be obtained by legislation. The fundamental remedy is in our homes, schools and churches.

However, a caveat to my fellow businessmen seems to me appropriate. Business is central in our society. Precisely because business is central in our society, the businessman have a great role to play as active guardians of the free market economy which is being challenged today as never before. Money gives them power, which implies a great sense of responsibility, because money without morality and honesty can corrupt. The businessmen should have the good sense and character to face their responsibilities toward society; otherwise it will disintegrate and free enterprise will perish. The right answers to the TV problem depends as much on them as they depend on the Government and the public at large. This is why I am pleased that I was invited to appear at these hearings to express the views of at least one businessman and advertiser.

Stevenson and Red China

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Wednesday, January 13, 1960

Mr. SCOTT. Mr. President, this is in the nature of a plea that American public figures be aware of the impact of their statements upon our friends and allies abroad.

Last month, the United Daily News of Taipei, Formosa, carried an editorial commenting on Mr. Adlai Stevenson's recent article in the magazine Foreign Affairs. Mr. Stevenson suggested recognition of Red China, if the Reds grant certain concessions.

These suggestions have shocked the people of the Republic of China, and the newspaper asks whether his utterance is a reflection of his personal opinion or that of the American Democratic Party. I think Mr. Stevenson owes the people in free China at least that much explanation.

I ask unanimous consent to have printed in the RECORD the text of the editorial.

To clarify my own position in this matter of recognition of Red China, I ask unanimous consent that an article which I wrote recently and which appeared in the Philadelphia Bulletin and other newspapers, be printed in the Appendix of the RECORD.

There being no objection, the editorial and article were ordered to be printed in the RECORD, as follows:

A COMMENT ON STEVENSON'S RECOMMENDATIONS CONCERNING U.S. POLICY TOWARD THE FAR EAST

Mr. Adlai Stevenson, leader of the American Democratic Party, recently published an article in Foreign Affairs, a quarterly magazine, dealing with the current American foreign policy. In this article, the two-time U.S. Democratic Presidential candidate, aside from making an overall review of the present American foreign policy, advanced some absurd recommendations concerning American policy to be pursued in the Far East.

Mr. Stevenson said: "World peace appears an unattainable goal as long as Communist China is barred from international society." "It is clear that no general control of disarmament has any value unless it includes Communist China, and it is difficult to see how Red China can accept international control when it is not formally a member of international society." He further suggested: "The West, through Soviet Premier Nikita Khrushchev, explore the possibility of peace in the area threatened by Red China through a broad settlement of issues—including Formosa—by negotiation, not by force." As to how this goal can be reached, he suggested that both sides make concessions. The concessions he expected the Chinese Communist regime to make include the following: (1) Accept the international disarmament control; (2) end the threat of force against Formosa and infiltration and subversion in southeast Asia; (3) accept a peaceful settlement on border controversy with India; (4) agree to a free election under UN supervision in Korea; and (5) agree to a plebiscite held under UN supervision for the inhabitants of Formosa to determine their own destiny. In exchange for these Communist concessions, he suggested that the West: (1) End American embargo on Red China's admission to the United States (not to confused with diplomatic recognition); (2) persuade the Chinese Nationalist Government to evacuate from Quemoy and Matsu; and (3) include Korea and Japan in the atom-free zone and area of controlled disarmament. In other words, Mr. Stevenson's recommendations imply a sacrifice of Quemoy and Matsu, of the government of Free China in Taiwan and of our right of representation in the United Nations as a means of inducing the Peiping Communist regime to give up its expansion policy and achieving an over-all settlement in the Far East.

Back in September of 1952 when Mr. Stevenson first took part in the American Presidential election, he proposed in a speech he made in the State of Oregon that, upon cessation of the Korean war, the United States accord diplomatic recognition to Red China. In another speech he made in a Democratic Party meeting held in Chicago on September 16, 1953 upon his return from a global tour, he said: "If we are to negotiate with Communists, we must have sincerity." Since then, we have not heard Mr. Stevenson utter any strong opinion in regard to China. We presumed that he, after he had been twice defeated in the American Presidential election, must have realized the true desire and wish of the American people, and that he therefore refrained from making any further utterance on the China problem. The fact that he made the above-mentioned recommendations in a recent speech shows that he still adheres to his appeasement policy toward the Communists. It also shows his lack of farsightedness and personal prejudice toward China. His recommendations are even worse than the contents of the much-critcized Conlon Report recently published by U.S. Congress.

We do not wish to evince our disrespect toward a prominent party leader of our most close ally nor shall we criticize him with stinging words. Nevertheless, we do regret that Mr. Stevenson as a leading figure in American politics should have advanced such absurd recommendations of policy toward a nation to which his own country is allied by a mutual defense treaty. Whether his utterance is a reflection of his personal opinion or that of the American Democratic Party as a whole, we solemnly say that such opinion is erroneous, unrealistic, and impracticable.

SENATORS DEBATE FOREIGN POLICY—SCOTT SUPPORTS STAND ON CHINA

(By Senator HUGH SCOTT, Republican, Pennsylvania)

The foreign policy of the United States is a continuing thing. Its principal objective—and it may seem strange that this needs saying—is to protect and further the best interests of the United States.

The vast body of Americans and most leaders of both political parties have supported the basic objectives of American foreign policy as they have been enunciated by President Eisenhower over the past 7 years.

But our foreign policy has its critics and they come bubbling to the surface most vigorously during election years when some candidates are forced to reach far out into left field in order to create issues.

Since we have very important elections scheduled for November of 1960, all citizens would be well advised to observe carefully criticisms which do arise on foreign policy and judge the statements accordingly.

I remember when I was running for election to the U.S. Senate last year I had to defend some administration policies which by now are generally accepted as being the wisest that could have been followed at the time. "The island of Quemoy is threatened but the issue transcends the value of one island off the China coast," I said in one Pennsylvania address, "The issue is whether the Reds will be able to shoot their way into all of Asia. The Communists understand strength and we are showing that in the Formosa Straits."

Those who, a year ago, urged that we yield the tiny island of Quemoy to the Red Chinese because it was a "liability" are very silent today. Our policy of meeting force with force sobered up the trigger-happy Communists.

Instead they turned their guns and saboteurs on countries like Tibet, Laos, and India where opposition was not so certain nor so dangerous to the Communist aims.

IN DIFFERENT FORM

The Red China issue is coming up again, but in a different form.

Some people are urging our Government to grant diplomatic recognition to Red China (which we have not done since that regime came into power after a bloody revolution in 1949), and to agree to admit that country into the United Nations. (The Republic of China on Formosa, not the Red regime, is a U.N. member.)

These people maintain that recognition of the Red regime in China would tend to bring it into the "family of nations," that this would exert some control over the Reds' actions, that evidence of good will on America's part would tend to encourage good will on the part of the Reds, that the Russians would begin to "come around" and why not the Red Chinese?

All of these arguments are false and I am strongly opposed either to admitting Red China into the U.N. or to granting them diplomatic recognition.

Red China is still at war with the United Nations. It still has not yet accounted for some American prisoners. In addition to barbarism against its own people, it has been guilty of grossly immoral international actions. If we did swallow our moral and ethical principles and grant recognition to the Red Chinese, what would we be accomplishing?

We would enhance their prestige. We would be delivering a body blow to the Republic of China on Formosa. We would shake the confidence of those independent nations in Asia which still have the courage to resist the Communists.

When Great Britain recognized the Red Chinese regime, this did not stop the Communists from confiscating immense British investments. And India, which has been scrupulously neutral in the East-West disputes, has for its good intentions only a growing border conflict and dead Indian soldiers.

GREATEST THREAT TO PEACE

The Red Chinese regime today is in no mood for negotiation. It wants conquest.

This regime, because of its expansionist aims and fanatical policies, constitutes probably the greatest single threat to peace in the world today.

When the leaders of a nation—any nation—act like civilized human beings our Government is ready to cooperate. President Eisenhower has said repeatedly that he is willing to go anywhere at any time—if by so doing he could promote the cause of peace.

In the past several months we have seen considerable evidence of that policy. When Mr. Khrushchev indicated that he wanted to talk over some problems which are causing international tensions, the President immediately invited the Russian Premier to visit the United States.

General Eisenhower now plans to visit Russia himself in the near future. But we need real evidence of good intentions and the Red Chinese leaders have only to indicate their sincere desire to negotiate and they will not have to look far to find our representatives.

PROSPECTS FOR THE FUTURE

We must understand that just as there is continuity to American foreign policy, so is there continuity to international problems.

The "cold war" with which we have lived for some 14 years will probably continue in one form or another for many years more.

This is not a pleasant thought. It is like being told by a doctor that we have chronic bronchitis.

We could disregard the condition or we could seek fast cure-alls. Either course of action would be foolhardy and might kill us.

Or we could learn to live with the condition and put our minds and energies to work in an all-out effort to solve the problem over whatever period of time it might take. This is the philosophy of the Eisenhower administration and I subscribe to it.

When we examine the record of President Eisenhower's two terms of office—which American voters will be doing intensively during the coming year—we must list his success in preserving world peace and justice as perhaps the greatest accomplishment of his years as President.

General Eisenhower extricated this Nation from the Korean war, kept us at peace while not yielding at any point to international communism, and now has brought the world closer to a realistic settlement of major international issues than it has been at any time since World War II.

Address by Hon. John W. McCormack, of Massachusetts, Before the AFL-CIO Legislative Conference

EXTENSION OF REMARKS
OF
HON. JOHN H. DENT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. DENT. Mr. Speaker, this House of Representatives has been blessed by having many good and great Members.

The mark of a great public servant is the ability to be able not alone to think and act in the public interest but even more so to be able to so express himself that little doubt is left as to his position on any public subject or under any given circumstance.

Recently I was privileged to be in attendance at a meeting where the great bulk of American labor was represented.

Many speakers graced the speakers' list and all of them were capable, able, and articulate. However, it remained for a Member of the U.S. House of Representatives to make the greatest contribution in oratory, in facts, in logic, and finally in sound commonsense.

I speak of our esteemed, able, and forthright majority floor leader, the Honorable JOHN MCCORMACK, Democrat, of Massachusetts.

His speech is so full of the kind of advice and information so badly needed in today's confused atmosphere of politics, labor, and the people's problems that, under the unanimous consent of the House, I include it in the RECORD in order that all the Members can have the same privilege granted to all of us who heard Mr. MCCORMACK deliver it at the conference held at the Willard Hotel, this city, January 11, 1960:

ADDRESS BY HON. JOHN MCCORMACK, DEMOCRAT, OF MASSACHUSETTS, BEFORE THE AFL-CIO LEGISLATIVE CONFERENCE, WILLARD HOTEL, WASHINGTON, D.C., JANUARY 11, 1960

President Meany, my fellow Americans and outstanding leaders of labor from the various sections of the country, ladies and gentlemen and friends. I have a great admiration for Congressman FORD and he and I are personal friends, so that any remarks that I make, of course, have no direct application to him, particularly on the level of friendships. I just want to make a few observations before making some brief remarks about his speech of admonitions to labor and his very fine general platitudes about rededicating ourselves—everyone here is a dedicated American—and also about the modern Republican philosophy of government. If any exists, I fail to see it.

I do not feel strange in this gathering because I come from a working district and a working family. I think the philosophy of government and practical operations that you entertain and I entertain are the same. I think an examination of my voting record would show that fact. My voting record is the result of my own thoughts and considerations about our Government in practical operation. For years, I stood shoulder to shoulder with the late Franklin D. Roosevelt agreeing with him and his philosophy of government and also a great former President Harry S. Truman.

Broadly speaking my philosophy of government is to strengthen the family life of America. I think that's the dedicated duty of a legislator and I did that as a member of the Massachusetts Legislature and in my 31 years as a Member of Congress. The very strength of any government or any society is based upon these little units called the family life. Your family, my family, the other person's family, and the strength or weakness of a government is dependent upon the strength or weakness of family life, those little units that collectively make up the very broad foundations of any government and in our case of American government and American society.

I can go back to when I first came here, when 5 cents an hour was paid to human beings in wages in certain sections of the country. I can go back to the dramatic fight of minimum wage, when we tried to get a minimum of 25 cents through and it was riddled to pieces on the floor of the House under the leadership of Mary Norton, great legislator, great girl, recently passed away. It was riddled so badly, we voted to send it back to committee, rather than pass it. Then a couply of months later we got another bill out and finally got it through, struggling to get something on the statute books that represented progress. I can remember social security; I was one of those who drafted it. I remember all those fights. In many of these fights—damaging amendments, that's where the damage is done. The thing to watch in Congress are the amendments that are offered. And the motion to recommit with an amendment which, if adopted, would destroy, practically destroy the bill and let only a title go through.

My philosophy of government in practical operation is that government functions for the weak. The strong don't need it. That doesn't mean we destroy the strong, but we lift up the weak. And the weak is a broad class. It isn't only those out of a job. It might be the small and independent businessman, if he is discriminated against by too many contracts being given by the Defense Department, for example, to a certain large group of companies. It might be the failure to pass an adequate small business administration act.

The philosophy of the government of Roosevelt and Truman was to look forward, to recognize that government is not a status quo institution, because when government becomes status quo it begins to decay and disintegrate. With all regard to my dear friend, the record of the Democratic Party shows that we're the party of the people. I can't say that for every member of the Democratic Party—I wish I could—but I can say it for the great majority of the Democratic Party. We are the party of the people and the party of progress.

The record of the years that have gone by clearly show that fact. Minimum wages, starting at 25 cents, now a dollar; and when President Eisenhower recommended the last increase to 90 cents, we made it a dollar. I am confident we can get another increase through this session, if there's teamwork all around.

My dear friend talks about the national economic growth. I agree with him. I remember, not too many years ago, when Harry Truman said the goal is a $500 billion national economy and my Republican friends laughed and stomped him. It is now up to $485 billion. And if we didn't have the tight-money policy carried on to the extent that it is, the high-interest policy, the tight-money policy, our national economy today would be $550 billion, in my opinion.

My dear friend didn't talk about business. I don't know many businessmen who vote Democratic. They have a right to vote Republican, but when my friend admonished, particularly labor in Michigan, for supporting the Democratic Party, I didn't hear my dear friend make any references to the big businessmen throughout the country who

vote Republican. They have a right to do so as individuals. Nevertheless, whatever is goose for the gander is also goose for someone else.

I think you are more interested in knowing—coming down to 1960—about this session of Congress. Knowing some of the things that might happen, some of the things I'd like to see happen and without proper assistance might not happen. Now the Republican Party has its responsibility. The Republican Party owes an obligation to the people to act constructively, to constructively oppose, constructively propose, and constructively criticize. That's the role of a minority party under the constitutional role of the Government, not to be a blind party of opposition. Each individual Republican is elected by the people of the district they represent, Republicans, Democrats, and independents in the Congress, and they have their individual responsibility to vote and not hide behind the cloak that this is a Democratic Congress. Whenever they pass over their responsibility, they are simply adopting the roles of a party of blind opposition, not the role properly that should be adopted by a minority party, not under parliamentary government, not under constitutional government such as we enjoy.

The most important question confronting us is the survival of America. What good is a constitution, what good is anything, if we have Communists in control of our country? We got to have an America not only for ourselves but for the generations to come, the youngsters who are walking the streets now. Their fate is involved in what is being decided today. Not only you and I of today, but the generations to come, that of young Americans, their fates and their lives. The kind of life they are going to lead—your children, your children's children—is being decided today and history is being made while you and I are sitting here. The first thing we've got to do is to preserve America; to be sure we maintain this government of laws of ours and it doesn't turn into a government of men. That depends upon human leadership, wisdom, sagacity, ability, foresight, vision, courage.

So far as I am concerned, if I'm going to err in judgment, in the world of today, I'd rather err on the side of strength and on the side of wisdom. And I'd have felt happy if the President, in his message of a few days ago, had recommended more taxes for greater national defense. I think that would have appealed to the American people to make sacrifices and certainly it would have been the wisest thing to do, because America is second best in the world today. We are certainly second best, particularly in the field of outer space.

One of the things we can bring up this session—one of the things we should bring up is civil rights. The Democratic leadership is determined to bring up a bill this year. The President recommended it strongly in his message. In all our hopes and plans for a better world, we all recognize that provincial and racial prejudice must be combated as it goes along. He says "I hope there will be among the matters to be seriously considered in the current session—civil rights legislation."

While I am talking on civil rights legislation, let me make this observation which cannot be contradicted. The first civil rights bill that ever passed Congress since the Civil War, close to 90 years, was passed by the 85th Congress, a democratically controlled Congress. We had a split in our party. You know it; I know it. But it put it through just the same with the democratically controlled Congress. Yet only 4 years before in the 83d Congress, controlled by the Republican Party, both in the House and the Senate with President Eisenhower in the White House, complete control of our Government, not divided control, complete control, the Republican Party did not even report a civil rights bill out of committee in the House and the Senate.

So we have the fact that the 86th democratically controlled Congress put the first bill through, even with a division. The Republican Party, 4 years before, with their promises contrasting with their performances, failed even to report a bill out of committee.

Civil rights is now out of the House Committee on the Judiciary before the Rules Committee. You and I know the practical situation. There are eight Democrats and four Republicans, four Democrats from the North and four Democrats from the South; there are Republicans from the North. The Republican Party is a sectional party. If we get three Republican votes in the Rules Committee and they ought to give them to us, we can get that rule or resolution out of the Rules Committee. And if that resolution comes out of the Rules Committee, Speaker Rayburn and I will bring it up immediately thereafter for consideration by the House of Representatives. The Republican Party has their responsibility, we have ours. If they don't give us those three votes, we will have to resort to a discharge petition.

Only this morning JOHN BYRNE, who is the chairman of the Republican policy committee, said he was confident there would be civil rights legislation this session, but he held there was no reason to rush special tactics. The old delay. What they want is to try to have the Senate act on the bill. I know what they want. They know if the Senate acts first on the bill, the Democratic leadership has more difficulty in bringing that bill out under Senate rules than if the House passes the bill. If the House passes the bill first, the Democrats, under the rules of the Senate, have much more freedom in calling it up for consideration of the Senate than if they are forced to take the Senate bill.

Another important bill we expect to get up this year is an increase in the minimum wage and an extension of its coverage. We'll get it out of committee, but again when it goes to the Rules Committee, we need seven votes. On that bill, the Democratic leadership does not ask the Republicans to give us three votes. All we ask is that they give us one Republican vote on the Rules Committee. On that we have six Democratic votes. We are sure of six Democratic votes. Another bill is the depressed area bill. That bill has passed the Senate. We brought it out of the House committee. It's now before the Rules Committee and all we ask our Republican friends who have a responsibility, is to give us one vote, just one vote in the Rules Committee. That's all we want.

Another housing bill is to be reported out. You remember the housing episode of the last session. The President vetoed the bill we put up to him. It wasn't as broad as I would like, but we didn't want to put something before him that would be vetoed. Then nothing would go through. So we tried to consider the thing practically. But the President vetoed the bill, so we put another bill up to him which he signed. It was identically the same as the first bill he vetoed with one exception. We deleted $50 million in loans for classroom facilities in colleges and universities of our country. We put that in there so that they could borrow money from the Government at reasonable rates of interest in connection with the scientific field in particular in connection with this great race in science that is going on now between our country and the Soviet Union.

We are going to have a housing bill and all we need is one vote from the Republican members of the Rules Committee. That housing bill will include urban rehabilitation and community facilities. We are going to bring up a school construction bill. We will try to improve the social security law. But we need one vote—one Republican vote—in the Rules Committee. We've got six Democratic votes. I can state that with confidence. All we ask JERRY, again, is one vote—one Republican vote on the Rules Committee.

Water pollution, important to many parts of our country, purifying the streams and rivers of our country, not only connected with business but with the health of our people, the bill has passed the House, passed the Senate, come back to the House to go to conference, objected to in the last session. We have to go the Rules Committee to get a rule out to take to the Speaker's desk to send to conference. We have six Democratic votes and all I ask of our Republican Party is to assume their responsibility to the people. Show their good faith by performance, not by promise, and give us one Republican vote on the Rules Committee.

We are going to increase the money for a revolving fund for small business administration. Well, I think we might get one or two votes, Republican votes, in the Rules Committee on that. Another bill is the unemployment compensation standardization bill. We are going to try to get it out of committee. We need your help. We would like to get 2 Republican votes in the Ways and Means Committee out of 10.

Is that asking too much? Are there not two of them that feel that they represent the people? Are there not two of them that come from laboring districts? Or districts where the people are essentially workers? We need two votes—Republican votes in the Ways and Means Committee. We could have gotten it out last session if we had gotten two Republican votes. Again when the bill comes out we are going to do everything we can, but we need your help. We need the teamwork we have a right to. We would like to get two Republican votes in the Ways and Means Committee, and when it comes to the Rules Committee all we ask is that they give us one Republican vote. Is that asking too much? You, the people, that's the minimum they should give us.

There is going to be health legislation, extending the Hill-Burton Hospital Act. Additional hospitals are a crying need of our country. The Hill-Burton Act has done immeasurable good and should be broadened. Furthermore, we are going to try to increase the appropriations—and in this I say Jerry fought shoulder to shoulder for the increases—increase the appropriations for medical research in the field of medical research.

Last year, we increased the President's budget, I think about $75 million. We have as chairman of the Subcommittee on Appropriations one whom I consider one of the greatest Americans I've ever met, one of the greatest legislators I've ever met, one of the finest gentlemen I've ever met, and thank God we have him there. I refer to JOHN FOGARTY of Rhode Island.

JOHN FOGARTY's name will go down in history as a man who has done more to contribute toward increased appropriations for further medical research, beneficial to the health of our people here and people abroad, unfortunate human beings who are sick, holding out to them the hope of the future. He has made a greater contribution than any Member of Congress that I have ever served with. JOHN FOGARTY's name, in my opinion, will go down in the legislative history of our country as making one of the greatest contributions in this field than any legislator in the entire history of our country.

Now, I want to make another observation, on the broad scale. I'm alarmed, my friends, at the complacency and the apathy that exists among our people. It reminds me of the days before Pearl Harbor under Hitler. When you talked about Hitler then, they thought you were a warmonger. Now if you

talk about communism, some people look at you blankly. I'm capable of interpreting the thoughts of people from my years of experience. Oh, they give me a polite hearing when I talk about communism. I'm not talking about labor, I'm talking about the people generally, they listen to me with attention but I cannot get across an idea to the great majority of those I'm addressing. They're living in a dream world of hope. That was the world we lived in before Pearl Harbor. When we tried to put a bill through to extend the selective service 3 months before Pearl Harbor, it passed the House of Representatives by a vote of 203 to 202. Every Member who voted against that bill was just as good an American as John McCormack who voted for it, who led the fight for it.

I wouldn't want to see another day like that come in the history of my country where the margin was so close on a bill that it might involve the very preservation of our country. Complacency and apathy existed widespread, you know that as well as I do, in the days of Hitler before Pearl Harbor. We find in America today the same spirit. Complacency and apathy, dangerous because that's construed by the dictator as weakness and fear just as Hitler did. When they allowed him to get away with the Ruhr they said they hoped he would be satisfied. He wasn't. Then he moved into Sudetenland. Oh, he will be satisfied, we hoped so. He wasn't. Then he moved into Austria. They said they'd let him get away with it, they hoped he would be satisfied with it. He wasn't. Then he moved into Czechoslovakia. They let him get away with it. Then Munich, and after that, the raping and the invasion of Poland. I hope we don't take that journey again.

Throughout the country there is today that complacency and apathy, and it's growing. Right at our back door we find communism attacking us in the Caribbean. If you think there's nothing to that, you'd better awaken. The situation is very acute there. I was one who opposed Khrushchev addressing a joint meeting of Congress, and I think that's one of the finest things I did during my 31 years as a Member of the Congress. I'm not afraid of him.

I say negotiate them and negotiate them. I've told the Assistant Secretary of State to keep on negotiating with him, but I didn't think Khrushchev should be permitted to travel the country, using the United States as a sounding board for the circulation of Communist propaganda throughout the world. I said it before the fact. I'm not saying that now after the fact, I said that before the fact.

We have to realize that the only thing that the Communists respect is what they fear. The one thing they fear is military power greater than they possess themselves. There's the record. You know the record of the Republican Party. There are some progressive members in it and I take off my hat to them. But the progressive element of the Republican Party is liquidated for political purposes. They have no influence. As a matter of fact, I think one of the contributing factors in Rockefeller's announcement—I said so last January—I said then he wouldn't let his name go into the convention because I knew the Old Guard was in control of the Republican Party though the great rank and file of the Republicans throughout the country in spirit supported the Old Guard. Last January I expressed the opinion because Rockefeller was too progressive, and would not be accepted. I think that's one of the main reasons that he made the decision he did because in his trips throughout the country, he couldn't separate the professionals in the party, the Old Guard from the people—the rank and file of the Republicans. He realized he was running up against a stone wall. You have the record of both parties. I'm not appealing to you to be Democrats. It's a matter of which party serves the American people the best. With all of our weaknesses, the great majority of the Democratic Party are representing the people. The great majority of the Republican Party represent the vested interest in big business. I'm not saying all of them do, it wouldn't be fair, but the great majority does. I see it on the floor of the House. You see it. We have the record of the past.

We are not going to confine ourselves to the program I have just stated to you. We need help, we need one Republican vote in the Rules Committee on most of these measures with the exception of civil rights, where we need three. We need a couple of Republican votes in the Ways and Means Committee on the unemployment compensation standardization bill. We need help from you, we need help from other interested Americans who are interested in progressive, visionary, forward-looking government. We also need help from the American people.

America is strong. If the day ever comes when the Soviet Union can hit us, and we lose our retaliatory power they'll not wait for us to catch up. We are already 3 to 5 years behind in outer space. We might be 5 to 7 years behind when they unfold what they plan in the Pacific.

We've got to preserve America—not as Democrats, not as Republicans, not as independents, but as Americans. We have much to do; we must work together and when we come on to the legislative level, the best interests of America calls for progressive government. The record of both parties shows that the Democratic Party is the party of progress.

Sincerity in the White House

EXTENSION OF REMARKS
OF
HON. PRESCOTT BUSH
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Wednesday, January 13, 1960

Mr. BUSH. Mr. President, I ask unanimous consent that there may be printed in the Appendix of the RECORD an editorial entitled "Sincerity in the White House," which was published in the Bridgeport Post of January 12, 1960.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SINCERITY IN THE WHITE HOUSE

There are certain things worth noticing about President Eisenhower's career in high office as he enters the last full calendar year in office. Despite the fact that he won twice by tremendous popular majorities, he has been recently subjected to sharp criticism in opposite political quarters.

Although some complaints of administration program and policy are made, Mr. Eisenhower is often personally assailed for an alleged failure of leadership. Senator HUBERT HUMPHREY says this frequently, though he does not state where and when the President's leadership failed. There are others who hold he delegated too much authority, failing to exercise inherent powers of the Presidency.

To weigh such attacks is the job of future historians. Mountains of evidence will have to be considered, all of which is not yet available to them. And there is much evidence on the other side of this view, too.

Whatever the reactions to his career may be, there is wide acknowledgement that he has always operated from a high sense of duty. There can be argument over what his duty includes, but little if any with the idea that he performs his duty as he sees it, faithfully.

After he was stricken with a heart ailment in 1955 he told the voters frankly that if they elected him again he would have to spend much time away from his desk recovering his strength. His recuperative powers worked speedily, and while he has been careful of his health, he did not remain away as much people thought he would.

His recent 22,000 mile trip abroad and the coming trip to South America indicate his complete willingness to take certain health risks in the interest of the cause of peace which is so firm in his mind. He has confounded the prophets of doom who saw his second term election as a virtual death sentence. Few men who have gone through his ailments would find themselves able to do the work of the Presidency.

Historians will tell us and future generations how well or how badly he performed as President. But one thing all know today—he seeks as earnestly as he knows how the security and welfare of close to 180 million Americans entrusted to his leadership. It is going to be difficult for anyone campaigning to succeed him to prove that he did not lead during his two terms in office.

We do not have to wait for future historians to tell us of Ike's sincerity.

Divisive Hatemongers

EXTENSION OF REMARKS
OF
HON. GORDON H. SCHERER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 13, 1960

Mr. SCHERER. Mr. Speaker, in view of the current deplorable anti-Semitic activities it is my feeling that all Members of the Congress should have the benefit of an article appearing in the December 3, 1959, issue of the American Israelite.

This timely discussion of the Federal Bureau of Investigation's fight on divisive hatemongers was written by one of Cincinnati's outstanding citizens and lawyers, Mr. Irwin S. Rhodes. He is a prolific writer in the field of law. At the present he is chairman of the Committee for Preservation of Historic Legal Documents, Cincinnati Bar Association; chairman of Committee for Preservation of John Marshall Papers; and director of legal documents section, American Jewish Archives.

The article follows:

Anti-Semitism, as we all know, aims to destroy the civil, religious, and political rights of Jews.

Little wonder then that, during the last year, the professional anti-Semitic pamphleteers, with few exceptions, have attacked the Federal Bureau of Investigation as Jewish oriented or Jewish controlled.

How else can they explain that the Government has called on its most dependable and highly prized investigating agency to ferret out the facts of law violation in the field of civil liberties?

This is also the anti-Semites' method of getting new followers in areas not directly involving Jews.

These gentlemen, by shrewdness or instinct, know their enemy.

They know that on their road to destruction of civil, political, and religious rights

of the Jews, as well as other minorities, stands this gallant corps of public servants. To destroy the Jew, they must discredit and destroy the FBI. They attack from the right; the Communist and leftist oriented elements from the left. Together, they converge upon the FBI with their battle cries.

The Thunderbolt (September 1959) prints a letter in which the FBI is referred to as a "Jew controlled, Red, race-mixing outfit"; to Mr. Hoover as "that obnoxious traitor" who "praises these Jewish groups (ADL, NAACP, AJC, etc.) in his book, 'Masters of Deceit.'"

Mention is made of the "FBI-ADL combine," and of "the hatemongering Jewish ADL" as Mr. Hoover's "boss." Elsewhere, the Thunderbolt speaks of "the Jew B.I. frame-up," and refers to Mr. Hoover as the "NAACP-ADL stooge."

Right (February 1959) states that "the once-respected Federal Bureau of Investigation has joined the criminal Zionist underground.

Women's Voice (October-November 1958) prints an open letter to Mr. Hoover stating that "the communist-Jews have used you to the point of no return," and that FBI men acted "like communist-Jewish secret police."

The Sun Work Shop and the Broom (June 1959) headlines an article "FBI works for Jew rackets," calls FBI agents "Edgar Hoover's secret police," designates the U.S. Commissioner as "Jew-owned," and Mr. Hoover as "America's No. 1 master of deceit." It advertises the free pamphlet of the National State's Rights party entitled "FBI Gestapo Exposed."

It has been my good fortune in pursuit of an interest in law enforcement and legal history to meet quite a number of FBI men, from the highest echelon to the messenger. I feel proud to feel that I can class many of them as friends.

Never in my contacts with organizations in other fields, legal, scholastic or business, have I encountered a more uniformly qualified, diligent and devoted group, yet imbued with the human instincts of courtesy, friendliness and decency. There is an espirit de corps reflected in every man and woman in the organization which combines all these qualities.

It is often said that an organization reflects the character of its leader. If such is the case, no man could have a finer living tribute to himself than John Edgar Hoover has in the daily operation of the FBI. Mr. Hoover has the unswerving trust, admiration and affection of every person far enough advanced to look above his immediate superior.

But above and beyond personal loyalty, one senses in FBI personnel a devotion to a cause—the ideal of a law-abiding community.

The FBI man is on the more active and intense level of human contact, constantly investigating and exploring on the human level.

To him there is the constant challenge of meeting and often anticipating the criminal, of finding the facts of law violation, and of sifting them not as a judge, but with a sense of fairness and truth. His immediate task is to detect lawlessness, but his ultimate goal is to make lawlessness impossible.

Crime reports, improvement in investigating methods and detection techniques, cooperation with local law enforcement and judicial agencies, education of personnel and the public, all point in this direction. The cause is public in nature, and it is great. The FBI men know it, respect it, and are devoted to it.

The FBI, though enmeshed in a welter of work, is mindful of the public it serves. The doors to its regional offices are open for any citizen to enter. Those who have complaints of law violations are courteously interviewed; those with helpful information to offer are welcomed and encouraged.

There is in the FBI an intense group loyalty. The pressures from without, of the criminal and subversive elements, naturally leads to cohesiveness and mutual coperation. The FBI knows that it is on its own against tremendous forces of evil. It is terribly outnumbered. As one FBI man puts it, "We are a minority group ourselves."

Its entire task force is a mere 6,000 special agents. Office clerks number some 7,300. This handful of people must spread its services over the entire United States, continental as well as insular, in the varied and arduous phases of Federal law enforcement and preservation of national security. With mobility and efficiency, the men operate from headquarters in Washington and 53 field offices scattered strategically in principal cities of the United States and Puerto Rico. In one way or another, they serve daily everyone of us. These 6,000 men enable us 180 million Americans, to go about our daily lives in far greater safety and security than would exist without them.

It must be remembered that the FBI, wide though its duties may be, is limited to the law enforcement and internal security tasks which we wish them to have and delegate to them. Theirs is strictly a limited jurisdiction to act only where Congress has passed a law requiring them to act, and then also under the supervisory control of the Attorney General.

Because of growing need and in recognition of its ability, the FBI has been delegated tasks of law enforcement in some 150 investigative matters. These vary from bank robberies to antitrust matters, from kidnaping to crimes on the high seas, from escaped prisoners to selective service, from Indian reservation affairs to espionage.

The FBI's job is a constantly widening one, not due to its own desire or action, but because of the public need.

Thoughtlessly enough, the resulting need for increased means is often overlooked. The FBI personnel remains comparatively limited, and the job of the FBI man is constantly more complex and exacting. This sturdy group, however, seems to thrive under the pressure.

These men are highly selected from a constant flow of prospects who wish to join their ranks. Qualified men may enter as special agents. What is inspiring, however, is the attention given youths of 18, high school graduates, who may enter the ranks often as messengers, and fit in a thorough education by night through college and graduate school.

At 25 they may be qualified to become special agents. This process is encouraged.

Every FBI man must be not only physically fit but mentally trained. Physical requirements are approximately those of West Point. He must be able to meet at any time the most rigorous experiences. He learns the art of self-defense and straight shooting, together with the other specialized sciences in the field of crime detection, at the FBI Academy, and keeps himself proficient throughout his career.

Educationally he must be a graduate of a State-accredited resident law school and also possess at least an associate in arts degree, or its educational equivalent, from a resident college.

FBI men are universally well groomed and self-respecting. They are mentally alert, interested in people, and, for the most part, good conversationalists. They are men who can meet a criminal at his low level, or a captain of industry with ease.

Regularity of work hours, and accountability to superiors are strict needs of the tightly knit organization. On the other hand, no man's time is his own. He is constantly on call; and an emergency, of which there are many, may put him on 24-hour duty.

The public gets its ample money's worth in services performed by the FBI. In fact, it gets back more in dollars each year than is spent on operations plus valuable services not measured in money.

For the fiscal year ending June 30, 1959, the cost of operations derived from direct appropriations to the FBI was approximately $112 million. During the same period, the fines, savings, and recoveries in cases in which the FBI expended investigative efforts were over $135 million. To this gain must be added the immense value of free services rendered by the FBI to local law enforcement agencies, in police training at the FBI National Academy and at local police schools, the aid of its laboratories and files in identification, the coordination and training at local levels in regional enforcement conferences.

Salaries to officeworkers and similar routine personnel are at the level of other Government workers, and probably competitive with industry. In the higher echelons, however, starting perhaps with special agents, the compensation is meager for the services performed and the abilities required.

The FBI, however, holds its men. More than one-half of its special agents have 10 or more years continuous service, and the monthly turnover average for investigative personnel in fiscal year 1959 was less than four-tenths of 1 percent. To these men, the FBI is a way of life which most of them would not trade for any other.

A predominant trait among FBI men is a warmth of human feeling. These men are pressed for time and must avoid contacts with antisocial persons, or those who may hope for unjustified favors. They seek and are happy with the friendship of all of us who live normal lives.

They are for the most part family men with problems of housing, children, schools, and home life. Their wives must adjust themselves to the vagaries of uncertain hours, and periodic shifts from one city to another.

The FBI in personnel is a cross section of origins and faiths. Religious affiliation has no part in its selection or advancement. No man seems to know or care if his fellow worker is a Jew, Catholic, or Protestant. Personally, I know of a Jewish agent, well regarded and of long service, graduate of a leading law school, and connected with a Jewish family of high standing. The fact that he is a Jew is either not known, or is of no particular interest to his superiors and his coworkers.

As a Jew, however, I am pleased to know that one of the eight assistant directors of the FBI is a Jew. He is a man of outstanding ability and has held this position of trust for many years.

Jewish organizations have recognized the importance and value of the FBI in their struggle for human rights.

Philip Klutznick, then president of B'nai B'rith, in his report to his board of governors for 1959, expressed the views of Jewish organizations generally.

"Over the years B'nai B'rith has carefully followed the work of this Federal law-enforcement agency (FBI). Invariably, in our contacts with it, we have noted the steadfastness of Mr. Hoover and his associates to protect the liberties of all individuals, without distinctions of race or creed. Nothing can be more representative of the institutions of democratic government at work."

"B'nai B'rith and others in the Jewish community therefore have cause to appreciate that in troubled times such as these the Nation possesses an effective public servant in Mr. Hoover, and the agency he heads, the FBI. Their proven record is a guarantee that those civil liberties which have made our Nation great will continue to command respect and observance in the years to come."

The criminal would seek to destroy the FBI by the gun; the anti-Semite would destroy it by the word.

The gun, dangerous though it be, can be met and bested by the training and marksmanship of the FBI men themselves. The word, however is more insidious; it undermines determination, creates doubts, saps the energy.

The evil word of propaganda can be met only by a wide and sympathetic understanding of the FBI and the giving to it of moral support and encouragement in its mighty work. This must come from the public generally, but from no group more especially than the Jews.

I have no fear for the fate of the FBI. Its men, however, should not be forced to spend, for defense of themselves, the time and energy which is so sorely needed for the defense of the rights and liberties of all.

Federal Participation in Higher Education

EXTENSION OF REMARKS
OF
HON. JOSEPH S. CLARK
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Wednesday, January 13, 1960

Mr. CLARK. Mr. President, as we approach consideration of education legislation this year, including aid for construction of college and university classrooms, laboratories, libraries, and other academic facilities, it may be of interest to Senators and Members of the other body to note the extent of Federal participation in higher education at the present time. This participation has been summarized in an article by George W. Oakes in the Washington Sunday Star of November 22, 1959, which I ask unanimous consent to have printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

U.S. SCIENCE AID AS HIGH AS 90 PERCENT IN SCHOOLS

(By George W. Oakes)

More than half of the operating budget of some of our leading private universities is now financed by Federal funds because of the great scope of Government-sponsored research programs.

Since the war the Federal Government has assisted the universities—State and private—to expand their scientific and medical research in the national interest to the point that 70 percent of all university research is being federally financed.

The great preponderance of these funds goes into research projects for national defense required by the Air Force, Navy, and Army as well as the Atomic Energy Commission. They involve programs as diverse as antimissile missiles and new methods of training troops in the use of the rifle.

Aside from the military importance of research, millions of dollars of Federal funds are channeled into the universities for basic scientific research required by the National Science Foundation. In addition, there has been such an increase in federally sponsored medical research that more than two-thirds of all university medical research is paid for by the Government.

These vast amounts of Federal funds—about $450 million was spent on all forms of university research in 1958—have created a revoluntionary change in the relationship of the Federal Government to higher education. This is true for research in the physical sciences—chemistry, physics, geology, geophysics, etc.—where the Federal Government pays about 90 percent of the bill.

THIRTY PERCENT FEDERAL FUNDS

Here is the way it works at a private university like Princeton:

Thirty percent of the total operational budget comes from Federal sources. This excludes millions spent on the costly construction of elaborate scientific equipment and facilities, essential to the conduct of basic research, which most universities would find it extremely difficult, if not impossible to finance on their own.

Half of the Federal operational funds go for the maintenance of the Forrestal Research Center, mainly concerned with thermonuclear research, such as attempts to harness the hydrogen bomb and high energy physics. The Forrestal Center, an integrated unit of the university, contributes to the scientific departments by attracting outstanding faculty members to Princeton, by helping shape the scientific course of study and by training graduate students.

In addition, another 15 percent of Princeton's operating budget, also derived from the Federal Government, is used for scientific research programs in physics, chemistry, astronomy, biology, and mathematics.

In universities such as MIT large-scale federally sponsored special research projects, which have only an indirect relationship to the university proper, are responsible for the fact that Federal funds probably account for considerably more than half the university's operating budget. For example, MIT's project Lincoln—a highly classified defense program—may be responsible for perhaps 70 percent of all the professional staff employed by the university.

USEFUL TO UNIVERSITIES

Although such projects are mainly undertaken for patriotic reasons, they are useful to the university in several other ways than prestige. The MIT teaching faculty derives benefit from contacts with the Project Lincoln staff because much of the special work is necessarily of a nonclassified nature concerned with basic and applied research. Also the university may use these facilities to train its graduate students at least on a part-time basis. The scientists working on such a project benefit from the university library, intellectual contacts with other faculty members and the general academic atmosphere.

At Johns Hopkins University, about $25 million out of a total 1958 expenditure of almost $40 million came from Federal research contracts and grants. Most of this was spent on two major projects—the Applied Physics Laboratory and the Operation Research Office—both of which are virtually specialized programs and in fact are located apart from the main university in Baltimore. The $14.3 million for the Applied Physics Laboratory financed a Navy project concerned with guided missile technology and aerodynamics, while the Operation Research Office enables the Army to study defense techniques. A total of $2.3 million of Public Health Service grants were given to the university for biological and medical research in its own medical school.

Here at George Washington University 90 percent of the $4 million available for research in 1958 was federally financed. However, only about one-quarter was spent on direct support of the university's educational program, mainly for the medical school.

Most of the Federal funds—$2¼ million—were used by the university-administered Army human resources research office. In this program psychologists are developing better training methods. Through their work, for example, the Army saved 6 weeks in training men to operate a missile radar system. Most of the advantages to the university of such a special project are peripheral—some of the psychologists employed on them teach part time at the university and graduate students can consult some of the project's leading scientists. Also successful administration of a special project helps build the university's national reputation and attracts other Government research grants, like those from the National Institutes of Health, which are directly integrated into the medical school.

A major problem raised by the extensive federally financed research programs operated by the universities is the question of cost. Many universities are convinced that on balance they lose money because the Government does not adequately compensate them for their overhead expenses. It is extremely difficult to allocate the cost of heat, light, janitor service, library facilities, etc., that are fairly chargeable to special research projects conducted on the campus. This is one reason why it is felt that the more Federal research projects, the greater the drain on other university funds.

After the war a number of universities located large Government research projects in vacant buildings. Then when sizable increases in enrollment began to develop, the universities had a shortage of classrooms and had to construct new buildings to compensate for those filled by Federal research programs.

Nevertheless, the universities are under competitive pressure to accept Federal research projects because the Government usually makes the offer to a distinguished professor. If the university to which he belongs refuses the project, he will threaten to resign and take the project to another university. For example, the Defense Department offered a large university a half-million-dollar synchrotron if it built a $750,000 building and provided a high-priced staff. The physics department threatened to resign in a group unless the offer were accepted and the university's finances did not get into balance again until a private donor agreed to pay for the already completed building.

COMPETITION FOR MANPOWER

In the case of the large federally financed research centers, the high salaries they offer tend to compete for the scarce outstanding scientists and trained manpower thus weakening many educational institutions.

One of the biggest questions now troubling both university and Federal officials is whether, as the universities accept more responsibilities, such as Government research programs, in an uncritical manner they may lose the ability to control their own destinies.

Recently Dr. John W. Gardner, president of the Carnegie corporation, warned university officials that "if the university is to avoid the more obvious hazards—of scattering its energies, of accepting trivial assignments, of playing technician when it should be playing statesman—then it will have to take the lead in appraising its outside responsibilities and in formulating a clear conception of its own role."

Payment in Lieu of Taxes

EXTENSION OF REMARKS
OF
HON. HAROLD T. JOHNSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 13, 1960

Mr. JOHNSON of California. Mr. Speaker, under leave to extend my re-

marks in the RECORD, I include the following resolution from the Board of Supervisors of Siskiyou County, Yreka, Calif.:

Whereas Siskiyou County, in the State of California, is an area in which over two-thirds of the land is Federal property; and

Whereas the economy of the county is vitally affected by this large amount of territory which is not on the tax rolls; and

Whereas a bill known as S. 910 has been introduced and will soon go to the Senate floor, and House bills H.R. 5731 and H.R. 6078 have also been introduced, in an attempt to secure relief for hard-pressed counties by payments in lieu of taxes on Federal property: Now, therefore, be it

Resolved by this Board of Supervisors of Siskiyou County, Calif., in regular session this 8th day of September 1959, That the board strongly urges the passage of this vital bill; and be it further

Resolved, That a copy of this resolution be sent to Senator THOMAS H. KUCHEL, Senator CLAIR ENGLE, and Mr. HAROLD T. (BIZZ) JOHNSON, Member of the House of Representatives.

Dated this 8th day of September 1959.

W. C. EALY,
Chairman of the Board of Supervisors.

Attest:

RACHAEL N. CORDES,
Clerk of the Board of Supervisors.

Jack Lotto Continues To Unmask Communist Apparatus

EXTENSION OF REMARKS
OF
HON. GORDON H. SCHERER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 13, 1960

Mr. SCHERER. Mr. Speaker, over the years Jack Lotto has done a magnificent job in regularly and accurately reporting to the American people the current program and activities of the Communist apparatus and its front organizations. As a result of his fine efforts the general public has gained a broader understanding of the operations and machinations of the Communist conspiracy.

His recent column, which appeared in the Cincinnati Enquirer on Sunday, January 3, and in other papers throughout the country, is of particular importance to the Members of the Congress since it deals with the current efforts of the Emergency Civil Liberties Committee to abolish the House Committee on Un-American Activities of this Congress. I am, therefore, including it in the RECORD so that the Members of the House may have the benefit of Jack Lotto's research and conclusions:

REDS PLOT TO SHACKLE EFFORTS OF HOUSE COMMITTEE THAT PROBES THEIR ACTIVITY IN UNITED STATES

(By Jack Lotto)

Pro-Communist wreckers are teaming up in a unified campaign to kill or shackle the House Un-American Activities Committee.

The cooperative Operation Abolition is the most ambitious knifing job ever devised to destroy the antisubversive congressional committee.

The program is being guided by Frank Wilkinson of Los Angeles. Wilkinson, an identified Communist Party member, is executive secretary of an organization called the Citizens Committee To Preserve American Freedoms.

He and other known pro-Communists are now working to weld all separate and scattered kill-the-committee groups into one carefully coordinated operation.

Wilkinson is one of the organizers of the notorious leftist Emergency Civil Liberties Committee. He is out on bail pending appeal to the Supreme Court on his conviction and 1-year sentence on a contempt of Congress charge. The charge stemmed from his defiant refusal to tell whether he ever was a Communist Party member.

The U.S. Congress describes Wilkinson's so-called citizens committee as a "major adjunct * * * of the Emergency Civil Liberties Committee."

Wilkinson recommended recently that a cooperative venture by various pro-Communist groups would be a more effective way to sell the American public its "abolish the committee" pitch.

Plans already have been drawn up to work together with a new civil liberties group which held its first rally in New York last month before taking the show on a nationwide tour.

The pretext: "Defending" the civil rights of 30 defendants in congressional contempt cases who refused to talk about Red affiliations.

Among the proposals by the Wilkinson group is establishment of a Washington lobby operation, where the pro-Communists could coordinate abolition activities nationally and maintain constant contact with Congressmen.

Another activity pushed by the citizens committee:

Sending delegations to see Congressmen while they are home during the congressional recess. The lawmakers will be urged to introduce resolutions to abolish the Un-American Activities Committee. They also will be asked to speak on the House floor against the committee and its alleged repressive methods.

Finally, the legislators will be harangued to vote and speak against additional appropriations for the committee when Congress reconvenes.

Committee Chairman FRANCIS E. WALTER, Democrat, of Pennsylvania, said he considered Operation Abolition an attempt to "cripple the antisubversive programs of Congress * * * and create a general climate of opinion against the exposure and punishment of subversion."

Hubert Ellis

SPEECH
OF
HON. JOSEPH W. MARTIN, JR.
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. MARTIN. Mr. Speaker, I deeply regretted the death of our good friend and colleague, Hubert Ellis, of West Virginia. He was a rugged American patriot, who served his country well in both war and peace. Serving overseas as an artillery lieutenant in World War I, he was closely associated with veterans' affairs. Following his election to Congress in 1943, he was elected to membership on the Committee on Veterans' Affairs where he rendered outstanding service. He believed our country had a continuing obligation to the men who fought to defend American and was intensely interested in their welfare. He was deeply devoted to the progress of West Virginia and was an able advocate wherever its interests were concerned. In the death of Hubert Ellis, West Virginia and the Nation have lost an outstanding citizen. Those of us who were privileged to serve with him have lost a dear friend. I extend my deepest sympathy to his family.

Our Economy and How It Will Affect Our Banks in 1960

EXTENSION OF REMARKS
OF
HON. HARRY FLOOD BYRD
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Wednesday, January 13, 1960

Mr. BYRD of Virginia. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, an address made by Mr. Harold G. Brown, president of the Shenadoah Valley National Bank of Winchester, Va., before the Rotary club of that city.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

OUR ECONOMY AND HOW IT WILL AFFECT OUR BANKS IN 1960

(Address by Harold G. Brown)

As part of today's program I have been asked to discuss our economy and how it will affect our banks in 1960.

This report must be brief because of the time allotted.

May I preface my remarks by saying frankly that I do not know what our economy will be for the whole of 1960, nor do I think anyone else knows. One set of conditions will produce one set of results; another set will produce entirely different results.

Many of you have already read the numerous prognostications that have been made for our national economy for 1960. Practically all are most optimistic on their face. A detailed study, however, brings out the "ifs" and "ands" that might change their predictions. But we must realize that no report is worthwhile without considering all angles that may affect the final results.

Locally, I think business will be good by normal standards even though our agricultural and horticultural interests are not what we desire. We have strong diversified industries and businesses with satisfactory payrolls. We have outstanding stores that attract customers from a wide area. Our hospital and our medical center are a great asset to Winchester and our trade area. Our new college is expected to open in September and will add to our cultural assets. We have good churches, schools and a fine community in which to live. A good newspaper and radio station supply us with the news. Our utilities requirements are amply provided. We have an aggressive chamber of commerce.

Due to our strategic location, and history, and the national advertising we receive from our Apple Blossom Festival, we have a growing tourist business, as well as an increasing number of desirable people who are retiring and coming here to live.

Our banks are in a strong condition and offer excellent facilities and services. They have ample funds to take care of all reason-

able credit requirements. Locally and nationally banks should have a good year in 1960. I think it is important, however, to discuss our economy as a whole and how it will affect all of us this year and in the year to follow.

Nationally, all forecasters say business will be good for the first 6 months of 1960. The majority say it will be good for all the year. Recently we have read and heard about the Roaring 60's, the Sizzling 60's, and the Prosperous Decade of 1960 to 1970. In fact, there is so much optimism from so many people that thoughtful men are beginning to ask the question: "Can it be true that we have only a few problems in Government, in labor, in business, in finance, and in our lives, and that all of them can be solved quickly and easily?" I do not think so. All of my business life of 40 years has been spent in banking. If my experience has taught me anything it is that you cannot follow the crowd in everything if you want to be right. There is too much optimism today for all of it to be warranted. The present optimistic enthusiasm reminds me of that prevalent in the spring of 1929.

If you will study the 1960 edition of "Business Trends and Progress," which shows in easily understandable charts the ups and downs of business in this country from the time Andrew Jackson was President in 1835, through 1959, you will understand what I mean. This chart is available at our bank if any of you would be interested in examining it.

Is it not true that the most all of us learn in life is learned through experience? What happens to our national economy in 1960 and subsequent years will affect all of us locally in time. Therefore, we are much interested in what will happen. Let us mention some of the things that we must consider when we discuss our economy as a whole.

The favorable factors mentioned in all newspapers, magazines, on television and radio are:

(1) The settlement of the steel strike. (May I say in passing that the Republican administration bought 16 million labor votes in making the settlement.)

(2) Larger employment, higher wages, and more borrowing will give consumers a record buying power.

(3) The expanded investment by business firms in new plant and modernization of equipment.

(4) The buildup in inventory which was reduced during the steel strike.

(5) Postponed production in the last part of 1959 that will come in 1960—since the steel strike is now settled.

(6) Technological advancement and rising national production.

(7) World economic improvement and increased foreign trade.

(8) The liquid condition of most corporations.

In studying our economy as a whole, we find the unfavorable factors are:

(1) The settlement of the steel strike on the basis on which it has been settled. The highest-paid workers in the world will receive a substantial increase in wages and other benefits, thereby causing an increase in the price of steel. The rise in the price of steel will mean increased cost of many things the public buys.

(2) The National Labor-Management Foundation stated last week that the labor union monopoly is one of the greatest threats facing the American people. Two unions practically control the transportation of our country; another, steel production.

(3) The labor unrest and strikes that will continue to plague us in 1960.

(4) The inflation spiral will take another upward turn this year.

(5) The continued erosion of our dollar which has decreased in purchasing power from 100 cents in 1939 to 47 cents now.

(6) Our national debt is at its highest point in history.

(7) The U.S. Treasury faces another year of heavy debt refinancing and continued deficit financing.

(8) U.S. Government and other high-grade bonds are selling at prices to give the highest yields in 30 years. Bond prices and yields reflect the growing demand for borrowed money. Interest rates are likely to increase during the year.

(9) Stocks are selling at prices that give the lowest yields in 30 years. Many stocks are selling to yield less than 2 percent, while U.S. Government bonds today are selling to yield 4½ percent or better. These conditions do not make financial or commonsense. Nineteen hundred and sixty may be a year of danger for investors in the stock market. A great number of people are trying to outguess other people.

(10) A presidential election—with all that politicians do and say that make or hurt business.

(11) The foreign situation with all its uncertainties.

(12) The loss in our exports and the increase in our imports—causing a great reduction in our gold reserve.

(13) Keener competition both at home and from abroad—making it more difficult to make profits.

(14) The largest debts in the history of our country now owed by the U.S. Government, State and local governments, businesses, and individuals—with the large cost of carrying these debts.

(15) The continued drop in the prices of farm products—now at a 19-year low.

(16) The large tax burden which continues to increase.

History has a way of repeating itself. If we study our financial history, we will find that once again we are at a crossroad.

The year 1960 is a year of decision. The most prosperous country on the face of the earth is faced with the largest debt in its history and there are more deficits to come. Our dollar is gradually losing its purchasing power. Inflation continues to grow. We have sinking foreign trade, dwindling gold reserves and a Government that continues to spend and give away like a drunken sailor.

If you have not already done so, be sure to read Sylvia Porter's article in yesterday's (Wednesday, January 6) Richmond Times-Dispatch, entitled "How Long Will Boom Last?" It will be most enlightening to all of you, but particularly to those of you under 40 years of age.

Babson has said there are two fatal mistakes to avoid. One is becoming convinced that prosperity will never return. (It always does.) The other is thinking that prosperity will never end. (It always has.)

Gentlemen, I say to you, consider all the facts and do some hard thinking of your own. It will help you in formulating your plans and in making decisions for 1960 and 1961.

Poor's Investment Advisory of January 11, 1960, says:

"Steel setlement: The steel settlement was made on terms stated to have been 'proposed by Vice President NIXON and Secretary of Labor Mitchell.' In other words, it was made under political pressure. It was not the economically justified noninflationary settlement that the steel managements strived so hard to get. They took it rather than face the risk of faring worse under possible congressional legislation invited by a renewed strike. The basic problems posed by abuse of monopoly union power remain unchanged. In the effort to halt wage-price inflation in this key industry the retreat by the managements was in effect dictated by politics.

"Who won? If there is anything for the public to rejoice about it is that uninterrupted steel production is assured by a 30-month contract, and that the settlement could have been worse. It is at least less inflationary than the long series of previous steel settlements. As pointed out by Roger M. Blough, chairman of the United States Steel Corp., the industry's hourly employment costs as a whole had for 20 years been rising at an average of about 8 cents a year, or four times as fast as shipments per man-hour; whereas under the new agreement they will rise a little less than twice as rapidly as man-hour shipments. Steel prices are expected to rise later on. That will not be good for the economy or the industry, which must meet competition from other materials and from lower cost foreign steel. The union proclaims a victory for itself. It will not seem so to steelworkers who would need continuous employment for some years just to make up their wage losses during the strike."

International Court of Justice

EXTENSION OF REMARKS
OF

HON. NORRIS COTTON

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Wednesday, January 13, 1960

Mr. COTTON. Mr. President, the Senate may soon be called upon to reconsider the reservation which was attached in 1946 to the ratification of the Statute of the International Court of Justice. The reservation gives this Nation the power to detremine whether a matter lies essentially within our domestic jurisdiction rather than within the jurisdiction of the Court.

I recently received an interesting memorandum which discusses this question and sets forth the principal arguments on each side. It was prepared by Robert H. Reno, an attorney, of Concord, N.H., who is a member of the American Bar Association's special committee on world peace through law, and I believe it will be of value to Members of the Senate and the public. Therefore, I ask unanimous consent to have the memorandum printed in the Appendix of the RECORD.

There being no objection, the memorandum was ordered to be printed in the RECORD, as follows:

MEMORANDUM ON THE SELF-JUDGING ASPECT OF THE U.S. DOMESTIC JURISDICTION RESERVATION WITH RESPECT TO THE INTERNATIONAL COURT OF JUSTICE

In 1946, when the United States adhered to the statute of the International Court of Justice, it did so with the reservation that the statute would not apply to "disputes with regard to matters which are essentially within the domestic jurisdiction of the United States of America as determined by the United States of America."

By virtue of the last eight words, which were added to the reservation as a result of action on the floor of the Senate, it has been left to the United States itself, rather than to the Court, to determine whether any dispute to which it is a party involves a matter within its domestic jurisdiction. Even though we might not ever do so, we have

thus asserted the right to use, as a complete defense to any case brought against us in the International Court, the fact that we ourselves had determined the case to be a domestic matter. In other words, we have reserved a veto power with respect to the jurisdiction of the International Court.

This is the so-called self-judging domestic jurisdiction reservation. Five other nations, of the 38 which currently accept the Court's compulsory jurisdiction, have adopted this same reservation. They are Mexico, Liberia, Pakistan, the Sudan and the Union of South Africa.

The reservation creates, as a matter of law, a reciprocal right, on the part of any country against whom the United States might bring an action in the International Court, to use as a defense a determination by that country that the case involved a matter within its domestic jurisdiction.

The problem is not as great as it might seem. By the terms of the statute of the Court of International Justice, the Court's compulsory jurisdiction is limited to international legal disputes. Therefore no reservation is necesary to avoid consideration by the Court of political or sociological disputes. Furthermore the statute of the Court itself excludes domestic disputes.

The problem has nothing to do with whether domestic disputes should be within the Court's jurisdiction. Clearly they are not intended to be; and they should not be. The problem is limited to whether the United States should continue to reserve to itself the right to judge for itself, after it has become involved in a Court proceding, whether the dispute is with regard to matters which are essentially within the domestic jurisdiction of the United States.

ARGUMENTS FOR THE SELF-JUDGING ASPECT OF THE DOMESTIC JURISDICTION RESERVATION

Arguments that have been or might be advanced in support of the self-judging aspect of the reservation include the following:

(a) It is unclear how the Court would decide a close question as to whether a dispute is essentially within the domestic jurisdiction of the United States. This is especially true in view of the dependence of the meaning of "domestic" on the development of international law, and, in turn, the uncertainty of international law as to many doubtful questions.

(b) The United States frequently has a different point of view from most other nations as to what is essentially domestic. The difference in outlook between the United States and less developed countries in Asia, Africa, and Latin America is frequently sharp. The difference between its outlook and that of Iron Curtain countries is usually fundamental. This cuts both ways.

(c) The United States, as a party before the Court, is in the hands of 15 judges, of uncertain quality, 14 of whom reflect other judicial philosophies or systems of law, and might be subject to political pressures.

(d) The United States needs some form of veto power in order to prevent vital political and economic disputes from being regarded as legal disputes.

ARGUMENTS AGAINST THE SELF-JUDGING ASPECT OF THE DOMESTIC JURISDICTION RESERVATION

Many able scholars have severely criticized the reservation ever since it was first under discussion. It is logically offensive to most lawyers, jurists, philosophers, and statesmen because it violates the age-old precept that no man, no nation, should be the judge in its own case.

There are also practical objections, some of which are:

(a) Because of the reciprocal nature of consent to the Court's jurisdiction, the self-judging domestic jurisdiction reservation enables any other party to a suit brought by the United States to determine that the matter is within its domestic jurisdiction and thereby prevent the United States from utilizing the Court.

Thus, the United States, which has a larger stake in investments abroad and in military bases abroad than any other nation, has prevented itself from utilising, in its own behalf, the International Court of Justice. This does not seem to make good sense. It is especially damaging to the United States, at least potentially, with respect to countries which take a far more expansive view of their domestic jurisdiction than does the United States.

(b) The reservation served as a precedent for six other nations which filed similar reservations, thereby crippling the Court and very likely causing other nations not to adhere to the optional clause at all.

Moreover, as stated by the Secretary-General of the United Nations in the introduction of his annual report for 1956–57, the attitude represented by this type of reservation may render the whole system of compulsory jurisdiction virtually illusory." The legal adviser of the Department of State himself said, on April 26, 1958:

"There can be little doubt that reservations of this type have tended to minimize the number of disputes determined by the Court, particularly in view of the possibility that a state which does not have such a reservation may, when sued by one which does, invoke the doctrine of reciprocity."

(c) The reservation, according to at least two of the judges on the Court, may be held to nullify the entire United States declaration under article 36. The pros and cons of this have been much discussed.

(d) The self-judging reservation has also become the prototype for similar U.S. reservations in numerous treaties, thereby not only:

(1) Afflicting our treaty practices with a creeping paralysis, but also

(2) Weakening substantially, by our own precedents, our bargaining power with other nations.

This is exactly opposite to the course recently espoused by Vice President NIXON.

(e) Because of such considerations as those listed above the executive branch of the United States Government finds itself in the difficult position of being obliged (vis-a-vis the legisaltive branch) to assert at least the possibility of a determination of domestic jurisdiction as a defense, rather than leaving that determination to the Court, even in cases such as Interhandel. As any litigator knows, such a technical defense frequently weakens the position before the Court of the party making the defense and may even decrease its standing before the Court in future cases.

(f) In view of the United States veto power, under article 27(3) and 94 of the United Nations Charter, over ultimate enforcement by the Security Council, the really vital interests of the United States are protected regardless of any action the Court might take.

CONCLUSION AND RECOMMENDATION

It is the conclusion of the American Bar Association Section of International and Comparative Law Special Committee that the self-judging domestic jurisdiction reservations have impaired the effectiveness of the International Court of Justice, and the reservation of the United States has impaired its leadership of the free world. The special committee feels that complete withdrawal of the self-judging reservation would not expose the United States to undue risks. Although the committee believes that the self-judging reservations should be withdrawn at the first favorable opportunity, it recognizes that its withdrawal would have broad international ramifications involving problems beyond the competence of the special committee. Without expressing an opinion as to the manner and timing of the withdrawal, the committee has suggested the possibility of (1) having all nations with self-judging reservations withdraw them at the same time, and (2) obtaining as many new adherences as possible to article 36 of the statute of the International Court to be deposited simultaneously with the withdrawal of the reservations.

The views of the Special Committee on World Peace Through Law, and of a large majority of the lawyers who attended its regional meetings in 1959, are substantially the same.

The American Bar Association itself has consistently advocated acceptance by the United States of broad compulsory jurisdiction of the International Court of Justice under article 36 of its statute. Therefore the recommendations and conclusions of the two special committees are consistent with the position of the association as a whole.

(This memorandum is based on a "Report on the Self-Judging Aspects of the U.S. Domestic Jurisdiction Reservation With Respect to the International Court of Justice," published in August 1959 by a special committee of the American Bar Association Section of International and Comparative Law. Members of the special committees were Eugene D. Bennett, Harry LeRoy Jones, Richard F. Scott, John R. Stevenson, Sedgwick W. Green, and Lyman M. Tondel, Jr., chairman.)

ROBERT H. RENO.
Member, 1958–59, American Bar Association, Special Committee on World Peace Through Law.
CONCORD, N.H., *January 4, 1960.*

Proposed New Veterans' Housing Program

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. TEAGUE of Texas. Mr. Speaker, I have today introduced a veterans' housing bill which I hope will revitalize the veterans' housing program.

The bill which I am introducing makes substantial changes in the veterans' housing program. These changes have become necessary since the veterans' housing program is becoming inoperative as a result of the administration's hard-money policy. Last year the Congress raised the interest rate on veterans' home loans from 4¾ percent to 5¼ percent. This action did very little to improve the supply of mortgage financing for veterans' home loans. The rapid rise in interest rates resulting from the policies of the administration exceeded the increase in interest rates authorized by the Congress. Very little additional mortgage financing became available as a result of the interest rate increase. The situation has become progressively worse. High discounts are being charged throughout the country in connection with veterans' loans. These discounts range upward to 12 points and increase the interest yield to the lender to rates of 6 percent and above.

Interest rates have increased rapidly as a result of the administration's hard-

money policy, and are now in conflicting with the usury laws of the various States. Suits are now pending in local courts to determine whether the high interest rates being charged, together with large discounts, are a violation of State usury laws. This has resulted in many institutional lenders withdrawing from the mortgage financing field until the issue is settled. The administration has offered, as its only solution to the shortage of mortgage financing funds for veterans' home loans, increases in interest rates. It is apparent this is not the solution, since lending practices based on present high interest rates are now being questioned in the courts as violations of State lending laws.

In a recent survey by the committee, the loan guaranty officers of the Veterans' Administration in offices throughout the country have estimated that if the current tight money condition continues the Veterans' Administration will make only about 150,000 home loans in 1960. These same offices estimate that if mortgage financing were available, with moderate or no discounts, the veterans' home loan program would increase to 368,000 loans during 1960.

There is no prospect that there will be a change in the near future in the Administration's hard money policy and there appears to be little likelihood an increase in interest rates would produce the desired result. The bill which I have introduced makes several major changes in the housing program and seeks other sources for veterans' home loans.

This bill authorizes the Administrator of Veterans' Affairs to issue debentures for sale with maturity varying from 10 to 30 years at an interest rate of not less than 4½ percent. These debentures will be offered for sale to the general public; however, they are designed to appeal to the major private trust funds of the Nation, such as union trust funds, welfare trust funds, private estate trust funds, and trust funds developed through the retirement programs of the various States and municipalities for public employees. The debentures to be issued by the Administrator of Veterans' Affairs will be guaranteed both as to principal and interest by the U.S. Treasury. The funds obtained through the sale of debentures will be utilized by the Administrator of Veterans' Affairs for veterans' home loans.

The bill provides that the Administrator of Veterans' Affairs may loan these funds any place in the United States where a shortage of mortgage financing exists. The maximum loan is to be $17,500. Discretion is left with the Administrator of Veterans' Affairs as to downpayment; however, 100 percent loans are permitted under the bill. The bill authorizes the Administrator of Veterans' Affairs to charge the veteran borrower a 1-point fee at closing. Builders or sponsors who receive a commitment will be required to pay a 2-point fee for a fund commitment or fund reservation under the bill. These funds will be deposited by the Administrator of Veterans' Affairs in a revolving fund to protect the Government from loss. The bill provides that the Administrator may sell debentures at 4½ percent. The interest rate for the veteran's loan will remain the same as provided in the existing program—5¼ percent. The Administrator will have available the margin of three-quarters of 1 percent to offset his administrative costs in placing and servicing the loans.

The bill provides that the Administrator of Veterans' Affairs may sell not to exceed $5 billion in debentures in any one fiscal year. It provides that the Administrator may invest not to exceed 25 percent of the national service life insurance fund in the debentures. The bill extends the housing program for World War II veterans until February 1, 1965, so that the World War II program will be scheduled to expire on the same date with the program for Korean veterans.

This bill does not alter the guaranteed home loan program in any way. Private lenders may continue to participate in the veterans' guaranteed home loan program. It is intended that the program of home loans to be made by the Administrator of Veterans' Affairs through funds obtained by selling debentures will supplement the guaranteed home loan program which is presently operating through private lenders for World War II and Korean veterans.

It is expected that early hearings will be scheduled on this legislation since the outlook for mortgage financing for veterans' home loans is very bleak for 1960 unless a solution can be found. The direct loan program, which has depended on appropriations directly from the Treasury, will not be continued past its scheduled expiration date of July 25, 1960. It is not expected that this program will be necessary if funds become available through sale of debentures.

The Late Honorable Richard M. Simpson

SPEECH
OF
HON. VICTOR A. KNOX
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. KNOX. Mr. Speaker, the passing of our good friend RICHARD M. SIMPSON, is a great loss to the Congress, to the Commonwealth of Pennsylvania, and to our Nation. That he has left our midst is a tragedy to the causes of good government, human liberty, and economic opportunity.

DICK SIMPSON was characterized by his integrity, commonsense, and an unswerving devotion to the principles in which he believed. Those principles are better principles today because of the fact that this American lived.

During the past 7 years that I had the opportunity to know this great patriot, I found him to be a public servant who was devoted to the concept of responsibility; responsibility in office, politics, and in his personal life. It can be truly said of DICK SIMPSON that he thought more of his obligations than he did of his privileges. No finer quality could any man possess.

As a member of the Committee on Ways and Means and the Republican congressional campaign committee, I became closely associated with DICK, and I profited time and time again by his wise counsel and by his high courage.

I realize full well the futility of our words at this time to alleviate the sorrow of the Simpson family; however, I want to bring my humble words of condolence to them in the hope and belief that their faith in the will of our Heavenly Father will fill them with the spirit of acceptance and peace that join the faithful now and in eternity.

Some Comments on Stabilization and Economic Cooperation

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 13, 1960

Mr. JACKSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by the Honorable John Davis Lodge, U.S. Ambassador to Spain, before the members of the American Club, Castellana Hilton Hotel, Madrid, October 15, 1959:

SOME COMMENTS ON STABILIZATION AND ECONOMIC COOPERATION

In an exchange of letters with Generalissimo Franco early last month, President Eisenhower stated:

"I should like, also, to congratulate you on the bold new economic program already auspiciously begun and on your membership in the OEEC. This constitutes another important link in forging the European unity to which you refer."

If Spain's stabilization program is so important that it can be a matter of keen interest at the high level of our Chiefs of State, I hope you will not mind if I give you some of my comments on Spain's economic evolution, although I know that you heard a talk at your last meeting by our friend Juan José Rovira on the same general subject.

Incidentally, since I have referred to the exchange of messages between Generalissimo Franco and President Eisenhower, which took place at the London meeting of the President and Secretary Herter with Foreign Minister Castiella some 6 weeks ago, I should like to take a moment to tell you a little about that London meeting which, as you may know, I attended.

President Eisenhower, who was in fine health and spirits, received Mr. Castiella at the London residence of our Ambassador to Great Britain, John Hay Whitney. The Foreign Minister handed Generalissimo Franco's letter to the President, and the President read it with evident satisfaction. The opening words of that letter were particularly thoughtful and welcome to our President and to Americans generally, for they expressed thanks for the President's "sacrifices and efforts to assist our Western World and lead it along the path of peace and understanding, and in particular for the aid and benefits which Spain is receiving from the United States under your administration." He was also particularly pleased with the

letter's expressions of understanding and support for the President's decision to meet with Mr. Khrushchev in the United States.

The President shortly afterwards gave his reply to Generalissimo Franco, to which I have already alluded, and which was carried to the Spanish Chief of State by Mr. Castiella.

The tenor throughout the talks both between the President and Mr. Castiella and later between our Secretary of State, Mr. Herter, and Mr. Castiella was most cordial. While they ranged over a wide field of world problems of concern to both countries, the accent was upon mutual understanding, friendship and confidence. I was delighted, as were all concerned, in the evidence thus manifested of the long strides which have been taken in recent years toward Spain rejoining the family of Western nations in furtherance of our common objectives and in defense of our common cause.

Mr. Castiella then left for the rest of his series of top level talks with Western statesmen, which included meetings with British Prime Minister Macmillan and Foreign Secretary Selwyn Lloyd, and with French President DeGaulle and Foreign Minister Couve de Murville. I saw him again, some days later, back in the summer capital of San Sebastian and he was delighted with the obvious success of these talks.

The "bold, new economic program" to which President Eisenhower referred is a course of action which is intended to have far-reaching consequences of a highly beneficial nature for the Spanish economy and for the people of Spain. So important is the new economic course recently charted in this ancient and storied land that many clearheaded Spaniards say it marks the most significant single step taken by the Spanish Government since the civil war.

It is a course which bids fair not only to restore Spain's economic equilibrium, which was shattered by the civil war and whose recovery was retarded by post-civil war events, but also to reorient Spain into closer alinement with the main currents of Western thought and action.

Spain's involvement in the post-war effort toward European economic cooperation augurs well for the achievement of Western European unity. This unity is one of the major objectives of Western diplomacy and will, as it becomes a reality, constitute a mighty bulwark in defense of our common cause.

The U.S. Government and private banks have had a major part in making possible this new course. The organization for European Economic Cooperation (OEEC) and the International Monetary Fund (IMF) were also major contributors. Accordingly, it would appear highly important that we all have a clear understanding of what this new economic program means for Spain, not only domestically, but also with respect to her international position.

SPAIN'S EFFORTS TO ACHIEVE ECONOMIC RECOVERY

First of all, let me recall to you that American aid to Spain started sometime before 1953. Actually, the American Congress voted its first aid to Spain in 1950. This aid together with that provided under the subsequent agreement of 1953 gave the Spanish people their first opportunity since the war to try to achieve some of the progress which was already well underway in other European nations. For, while economic development is primarily a country's own responsibility, it has been amply demonstrated that at certain times most countries, including even major powers, require outside assistance. I like the apposite reference to the effects of the aid program made by my friend José María de Areilza, the Spanish Ambassador at Washington, in his admirable speech in Bilbao on September 10. He compared the Spanish economy to a ship at drydock, checking its hull and repairing the damages that the war and the post-war had left in its structure. For that ship, he said, American aid was like a powerful tugboat, pulling it to the river mouth and allowing the ship time to get underway with its own boilers. As a result of this combination of the efforts of the Spaniards themselves and American aid, the period from 1951 to the present has been one of great economic growth in Spain.

While still chronically short of funds and raw material resources, Spain concentrated on the improvement of basic industry and transportation. Many millions of dollars in both foreign exchange and pesetas were poured into powerplants, railroads, steel, cement, and other factories which are basic to industrialization. The growth of industrial production and the improved standard of living were reflected in the increase in the national income of approximately 4.25 percent per year, a rate somewhat higher than that achieved in the United States during the same period. However, as a normal concomitant of rapid economic growth in conditions of insufficient capital resources and production, Spain experienced the same type of inflation which hit many countries in similar circumstances. Since a high level of imports is required for rapid industrialization, Spain also suffered from an unfavorable balance of payments and its foreign exchange holdings dwindled away despite the sizable grants of aid from the United States.

INTRODUCTION OF STABILIZATION PLAN

Although the Spanish economy had not reached a crisis stage and though its external and internal debts were far lower than those of many another country, the Government decided to take corrective action before an extreme stage was reached. What made it possible for Spain to consider measures for economic stabilization was its recent membership in the International Monetary Fund, and the willingness of other western European nations to help Spain and accept her as a full member in the Organization for European Economic Cooperation (OEEC). In February 1959 the Spanish Government undertook formal negotiations with the IMF and the OEEC which culminated in the economic stabilization program announced on July 20 of this year.

Both the IMF and the OEEC provided economic assistance to Spain to help her through the inevitable economic adjustments incident to a stabilization program. The IMF provided a credit of $75 million; the OEEC made available a credit of $100 million. In addition to this help from these two multilateral organizations, several European nations agreed to grant Spain several years to pay back some $45 million owed them for trade debts. At the same time Spain was negotiating loans from U.S. private banks for another $70 million, and the U.S. Government announced that our assistance to Spain in the form of economic aid grants, sales of agricultural surplus commodities for Spanish pesetas, and development loans from the Export-Import Bank would total $130 million in the year beginning July 1, 1959. An additional $5 million was voted by the U.S. Congress so that, altogether, Spain was able to count on some $425 million in foreign assistance to help her reestablish her economy on a sounder basis.

The IMF, like many multilateral economic organizations, came into being in 1946 largely through American initiative. Its funds, some $9 billion which will soon be augmented, were provided by all the member nations for several purposes, among them, to facilitate the balanced growth of international trade and to provide members with the opportunity to make readjustments in their balance of payments without resorting to measures destructive of national or international prosperity. This organization provides not only financial assistance but, perhaps more important, technical advice. These are now available to Spain.

The assistance of the Organization of European Economic Cooperation (OEEC) was not available to Spain until it was voted into membership on July 20 of this year as a major step in the stabilization program. On that day, after long and careful consideration, Spain was unanimously accepted as the 18th member of the OEEC and the first new member since that organization was created 11 years ago, to strengthen the non-Communist world through economic cooperation. Like the IMF, the OEEC received a heavy proportion of the funds made available to Spain from the United States.

RISK AND STAGES IN THE NEW PROGRAM

Any fairminded person must, it seems to me, give Spain great credit for agreeing to undertake the difficult and perhaps, as in the case of some member nations, politically unpalatable measures which were worked out with the IMF and the OEEC. Other countries better endowed than Spain with natural wealth have recently stated their unwillingness to take the risks involved in the readjustments which must be made. All countries are aware of the problems which may arise from the relaxation of economic controls, the elimination of subsidies, the budget balancing, and the other sound economic measures which are required. It can be considered remarkable that so shortly after its admission into the IMF, Spain was able to complete a program for stabilization which received not only the approval but the financial support of the IMF and the OEEC.

Immediately after the program was announced, the Spanish Government began to issue the many degrees required to bring about the changes desired. There is no need to recall to you the measures adopted, with which you are all familiar, and which are already beginning to be reflected in Spain's foreign exchange balances. Internally, the reduction of subsidies, together with reduced spending, will permit Spain in the near future to have a truly balanced budget. An important feature of the liberalization undertaken is the elimination of discriminatory practices against the United States in international trade. Instead of working under bilateral trade agreements, most Spanish imports will now represent purchases in the best market available on a worldwide basis, in terms of quality and price, regardless of the currency of payment.

NEW OPPORTUNITIES FOR FOREIGN INVESTMENT

In what may be a historic step, Spain has changed its law of 1939 which generally limited private foreign investment in Spanish industry to 25 percent of the capital of the firm concerned. The new law generally permits foreign investment of 50 percent in Spanish industrial enterprises, and establishes improved conditions for foreign investors in respect to the repatriation of capital and earnings. Together with the petroleum law adopted in December 1958, which authorizes 100 percent foreign ownership of oil exploitation enterprises and which accounts for the presence here today of a number of new members, the foreign investment law, if properly implemented, may help change the industrial and commercial pattern of the entire country. In terms of international relations, these two new laws indicate the abandonment of the policy of economic self-sufficiency which was the keystone of the present administration's economic policy in its earlier days and was one of the factors which prevented Spain from becoming a greater trading partner of the United States and Europe. Internally, too, Spain has undertaken to eliminate or reduce many of the controls over the econ-

omy and to curb monopoly practices and price fixing, so as to encourage renewed growth from a wider and a sounder economic base. Another change which appears to be implicit in these actions is the shift to greater reliance on private initiative rather than on state-run enterprises to meet consumed needs.

SIGNIFICANCE AND PURPOSE OF THE NEW PROGRAM

What is likely to be the significance of all this new internal and external economic activity. If the program is successful the implications for Spain and for the free world can be enormous. The adoption of the economic stabilization plan in itself is an expression of mutual confidence between Spain and the leading western powers. This bold new departure which eschewed the more bizarre solutions proposed for similar problems in some countries, could be based only on satisfactory experiences of the recent past and the hope of even greater economic cooperation and trade expansion in the western pattern.

We can thus look forward to Spain's eventual complete integration into European-American economic cooperative arrangements, from which it has been separated by attitudes and ideas rather than by geography or lack of mutual interest. Indeed, it is becoming increasingly clear that economic frontiers no longer coincide with political boundaries. In this vein, it is to be anticipated that Spain will some day adhere to the General Agreement on Tariffs and Trade (GATT). Some eventual adjustment to the Common Market or the "Outer Seven" economic arrangements also appears to be likely. There is in Western Europe today an inexorable current toward closer economic and political cooperation among nations and toward the formalization of this cooperation in terms of international organizations and multilateral treaties. Spain is now riding this current and it is to be hoped, for the sake of all concerned, that Spain is on the road to full and equal partnership in the western European community of nations.

With a determined execution of the plan, after what may be a brief though intense transitional period of readjustment, the Spanish people should be able to foresee increased production, a sound currency, stable prices, a higher standard of living and a shift from an economy of scarcity to one of relative abundance. The collateral consequences of such an economic result may well be historic in terms of the increased general health, vigor and welfare of the gallant Spanish people.

The purpose of the new funds recently provided to Spain is to furnish the necessary cushion for this interim period of readjustment. Of course, it is too early to predict how successful the entire program will be, as Minister of Commerce Ullastres pointed out recently in Washington. The Spanish Government is in the process of issuing implementing regulations which will further the objectives of the stabilization plan. It must come to grips with the problem of increasing agricultural and mineral production, at least to the point of meeting internal demands and reducing import requirements. The production of exportable goods must be increased to enable Spain to earn more foreign exchange. Something more can be done to increase foreign exchange earnings from tourism. This is a magnificent country for tourism, not only for its splendid monuments of the past but also for its warm and friendly people. The former protectionism and controls which acted as a damper on the expansion of production and trade may tend to disappear as the benefits of a freer, more competitive economy begin to be enjoyed. Almost all countries which have gone through stabilization plans have experienced difficulties which could be met only by internal flexibility, sound judgment, international good will and mutual confidence between the people and the government.

It is to be hoped, therefore, that a climate of confidence will prevail until the Spanish program has borne fruit. It is also to be hoped that Spain will at last be enabled to emerge once and for all from its relative isolation of recent years and assume the international responsibilities to which it is entitled, not only because of its historic participation in the development of western culture, but also because the noble and friendly Spanish people have much to contribute to the massive effort which must be made if we are to meet the common—the stirring—challenge to our generation.

Accomplishments Under the New Education Act

EXTENSION OF REMARKS

OF

HON. J. W. FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Wednesday, January 13, 1960

Mr. FULBRIGHT. Mr. President, during the congressional recess an article appeared in the Washington Sunday Star of October 18 which I wish to call to the attention of my colleagues in the Congress and to readers of the RECORD.

This article, written by Mr. George W. Oakes, is an excellent progress report on the accomplishments resulting from the first year of operation under the Defense Education Act. I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A STUDY OF ACCOMPLISHMENT: OUR FIRST YEAR UNDER THE NEW EDUCATION ACT

(By George W. Oakes)

Appraisal of the accomplishments under the National Defense Education Act, in its first year of operation, finds educators and officials agreed that considerable progress has been made.

In brief the act, signed in September, 1958, has resulted in:

More emphasis on language study.

Improvement of science and mathematics instruction.

Stimulation of the abilities of talented school children.

Easing the financial burden of college students.

Increasing the numbers of qualified college teachers.

"Better teaching of foreign languages probably is the biggest single step forward under the act," according to Office of Education officials. Various programs now in operation will help considerably to correct the decline in foreign language instruction which, oddly enough, has occurred during the last 40 years, just at the time this country rose to a position of world leadership.

LANGUAGE INSTRUCTION

School and college foreign language teachers are learning new methods of instruction, in such ways as these:

1. Last summer 925 elementary and secondary school teachers of French, German, Spanish, and Russian attended 12 special six or eight week institutes on the campuses of universities in Michigan, Texas and Colorado. They concentrated on the latest audiolingual methods of teaching modern languages which involve first hearing the language through audio aids, then speaking it and finally writing it. Foreign language teachers have been particularly lacking in modern methods of instruction.

Most teachers took French and Spanish. The demand for admission to the institutes was so great that 5,000 teachers who applied could not be accepted. As a result, next summer 35 courses will be held for 2,200 schoolteachers in the same languages, plus Italian. In addition,. full academic year institutes are now being held in four universities for 95 schoolteachers of French, Spanish, and Russian to offer them a more concentrated course of study.

2. Audiovisual laboratory equipment is being installed in public elementary and secondary schools. Federal funds are made available on a maching basis to the States who—with the local school authorities—determine how and where the money is spent. A foreign language laboratory for beginners in a junior high school costs between $3,000 and $4,000. State allocations of Federal money are decided on the basis of the number of students and the average income per child of school age. Consequently the poorer States with large school populations benefit the most.

ENCOURAGING THE STATES

3. The stimulus of Federal activity has had the additional benefit of encouraging the States to speed up their own efforts to improve foreign language teaching. Only four States had supervisors of foreign language instruction before the act got underway. Now 27 States have 32 supervisors.

4. Several research projects are being financed by the Federal Government to develop new methods of teaching foreign languages. For example, the University of California is experimenting with new visual aids on basic grammatical problems of Spanish.

5. The act is encouraging the study of unusual languages not commonly offered, but required by persons in Government, industry, and education. There are 50 languages spoken by millions of people in various parts of the world that are not even taught in the United States.

CENTERS ORGANIZED

Nineteen university language centers have been organized on a full academic-year basis. The six highest priority languages to be studied in these centers are Arabic, Chinese, Hindustani, Japanese, Portuguese, and Russian. Related area studies are also included. Fellowships for advanced study in the same six languages have been awarded to 171 graduate students planning to enter college teaching.

Badly needed new science and mathematics equipment is being installed throughout the public-school system. Probably more than $50 million to $60 million of Federal grants will be spent before next June by probably every State and Territory. These new facilities should raise the level of science and mathematics teaching considerably and supply most of the required modern equipment during the next 3 years of the act.

This money is provided on a matching basis for the purchase of new (and remodeling of old) science and mathematics equipment, including laboratories and instructional materials.

A general science laboratory for 28 junior high school students costs between $8,000 and $10,000 for furniture and equipment; $18,000 to $20,000 is needed for a new high school chemistry laboratory.

As an indication of the scope of the program in Washington, District school officials believe that their science and mathematics equipment requirements will be covered

adequately during the 4 years of the Education Act.

Only 8 States had 11 supervisors in science before the act took effect. Now 24 States have 54 science supervisors. An even larger percentage increase took place among State staff members whose duties are to consult with local school authorities in mathematics instruction. The States also have set up courses to train teachers in the use of new science and mathematics equipment.

In addition, teaching of the sciences in the private schools has been substantially aided by Federal loans for the purchase of science and mathematics equipment.

One of education's problems has been to prevent the waste of talent by finding outstanding students in the Nation's 25,000 public schools. Through proper guidance, these able students can be persuaded to exert their best efforts in school by taking challenging courses and then they can be encouraged to seek a college education.

A major reason why approximately 100,000 topflight high school students do not continue their education is that probably less than half receive adequate guidance and counseling. Dr. James B. Conant's recent report on the American high school stressed the importance of correcting this situation.

FOR HIGH SCHOOL AIDS

Last summer, under the Education Act, 50 short-term institutes were conducted by various universities for 2,200 high school counselors. This experience in improving the qualifications of these counselors for their specialized duties was so successful that next year 70 summer institutes will be held.

The $60.5 million of college student loan funds in the new act and already allotted by the Federal Government, is likely to have an explosive effect by converting students to pay for their education on credit. Although the detailed figures are not yet available to substantiate this view among educators, they expect that the 1,400 recipient institutions, representing 88 percent of our total college population, will drain this new source of loan funds.

Money is given to the States according to their full-time college enrollment and, in a revision of previous policy, will be granted to each college on the basis of need. The Federal Government puts up $9 for each $1 from a college.

The program's popularity has surprised many educators for only 4 years ago the total lending operations of all colleges and universities was less than half the amount the Federal Government supplied in the past academic year.

It remains to be seen whether the $1,000 a student may borrow at 3 percent for 5 years will influence poor but able students to seek a college education rather than to go to work in order to support their families. Many educators believe it will mainly reduce the large number of good students who drop out of college for financial reasons. In addition, a loan will enable college students to spend more time on their studies rather than taking so many part-time jobs in order to meet expenses.

FELLOWSHIP PROGRAM

The act's graduate fellowship program, aimed at reducing the shortage of qualified college teachers, got underway last month when 1,000 fellows out of 6,000 applicants took up residence in 123 graduate schools. Each fellow receives $2,000 plus $400 for each dependent. The students are intentionally spread throughout the country in order to strengthen the smaller graduate schools and take the pressure off the large universities.

At present only 10 graduate schools grant 38 percent of all Ph. D.'s; $2,500 per graduate student is granted to each institution to help finance the additional expense. Although the program is not directed toward science, nearly half of the graduates are working in scientific and technical fields.

In administering the act, the Office of Education has attracted as many educators of national reputation as its pay scale, in many cases below comparable jobs in some States, would permit. The Office's personnel was increased by 300 to a total of about 1,000 in order to operate the program.

The Republican Nominee for President

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Wednesday, January 13, 1960

Mr. SCOTT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the Wall Street Journal which appeared in the Washington Post on Wednesday, January 6, 1960.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FROM THE WALL STREET JOURNAL

When Governor Rockefeller withdrew from the race for the Republican nomination, the tenor of some of the comments was that the people's candidate had been run over by a juggernaut of professional politicians manipulated by Vice President NIXON.

This was nonsense. If professional politicians have any common binder it is a devotion to realism; they want a winner. They would have come to Mr. Rockefeller's side if they had detected any enthusiasm for him among the people. They stuck to Mr. NIXON because they think him a better candidate to put before the people next November.

Nevertheless, the comments are interesting. They reflect, perhaps unconsciously, the prevalent line among certain intellectual liberals, regardless of party, that nothing about Mr. NIXON can be good.

Now this phenomenon, too well known to need laboring, is in a way curious. For none of the explanations usually given seem to fully explain it. One possible reason for the dislike of Mr. NIXON is his personality. He is rather introverted, self-contained, and plainly studied in his efforts to make friends with people. This may make it difficult to warm up to him. But it is a quality that should, if anything, draw sympathy from other intellectuals who, as a group, tend to share it.

Another reason often given for disapproving of Mr. NIXON is the memory of that famed TV appearance with the dog. Yet a bit of corniness is not held against a Stevenson pictured with a hole in the sole of his shoe, and anyway all that was so long ago that only an irrational emotionalism could recall it against the mature man of today.

A more plausible explanation is Mr. NIXON's role in the anti-Communist drive, and especially in the Hiss case. Certainly it is true that a large part of the intellectual community interpreted the attack on Alger Hiss as an attack on the whole intellectual community. That it was successful made it only the more unpardonable. Yet that, too, was years ago, and though some resentment remains, it can hardly account for the present vehemence against Mr. NIXON.

The reason usually given in public by the liberals is that Mr. NIXON represents the "Old Guard" of the Republican Party, the diehard conservatives who would supposedly turn back the clock.

Yet Mr. NIXON is in fact no darling of the conservatives, in the Republican Party or elsewhere. Twenty-five years ago the Whittier College yearbook labeled him "always progressive and with a liberal attitude" and if there be such a thing as the "Old Guard" in the GOP it would find Mr. NIXON today far too liberal on such matters as foreign aid, international involvement, and welfare legislation.

Sometimes the accusation is that Mr. NIXON has no political convictions whatever. This hardly squares with the accusation that he is too conservative. But beyond that, it is unconvincing because the same people will turn to any rival of Mr. NIXON's although even less may be known about the newcomer's political philosophy.

We suppose these things can explain some of the dislike of Mr. NIXON by the liberal left but something more seems needed to account for the prolonged campaign—it is almost a vendetta—to discredit him in the whole intellectual community. For dislike to be so virulent it must be tinged with fright. Whatever else Mr. NIXON may be he is one of the most capable and experienced men on the political scene. And in spite of everything that has been said about him, he has managed to survive and to grow steadily in public stature. His whole career has shown him to be intelligent, tough, and durable.

Now Mr. NIXON may not be a conservative in the usual sense. He may even be quite liberal on individual political issues. But he is definitely not a liberal of the familiar stripe, always ready to join whatever is the liberal crusade of the moment.

Indeed, his political stature with the public does not rest so much on political ideology, liberal or conservative, as simply on the impression he gives people that he will bring a wide experience and a tough intelligence to the practical problems of politics and government.

So the suspicion grows that the real reason RICHARD NIXON frightens the liberals so badly is precisely because he may well win the next election. And the fear is that if he does, then this practiced politician may prove to be, far more than any philosophic conservative, a formidable foe of the liberal left.

The Case of the Vanishing Farmers

EXTENSION OF REMARKS
OF
HON. GLENN CUNNINGHAM
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 13, 1960

Mr. CUNNINGHAM. Mr. Speaker, under leave to extend my remarks, I submit for inclusion in the RECORD the following editorial which appeared in the December 8, 1959, edition of the Omaha Daily Journal-Stockman:

THE CASE OF THE VANISHING FARMERS

Politicians should have a field day over the case of the vanishing farmers after results of the agricultural census, currently being taken, are revealed to the public. Of course, farmers have been vanishing, if you choose, for years, and the politicos have never shown any reluctance to make what capital they could over that fact. But this time they may figure they've really got an issue that can blast the opposition out the door, down the hill, and right off the political map.

Why? Well, farmers are going to "disappear" in wholesale lots in this census, we learn, though long-time trends to fewer farmers will have continued at about the usual rate. The difference will come, however, from the Census Bureau's new definition of what constitutes a farm and what constitutes a bona fide farmer.

The old definition of a farm for census purposes, as readers may recall, was a place of more than three acres that produced commodities worth at least $150, whether these products were sold or not; or, if less than three acres, it had actual total sales of products worth $150.

In recent years, census officials have become increasingly unhappy with this catch-all definition. Citizens who worked in cities but established country homes on a few acres near town suddenly found themselves classified as farmers, even though they sold none of the eggs or vegetables grown for their own use. The old definition also failed to mirror statistically the growing number of rural people who now have full or part-time jobs in town.

The Bureau's new definition now being used boosts the acreage qualification and requires that a rural resident actually sell something. In place of the old 3-acre, $150 production minimum, property must now be 10 or more acres in size, with actual farm product sales of at least $50 a year. Or, if the place is smaller than 10 acres, actual sales must exceed $250 a year.

The expected result is that farms will total only about 4 million or so, down some 500-000 from the original estimate for 1959, plus about 100,000 more dropouts which represents the annual toll taken by long-term trends toward bigger and fewer farming units.

So far as farm people are concerned under the new definition, Federal statisticians believe the new total will drop to about 16 million (farmers, wives, children, grandparents, and the like)—a hefty 4 million or more below the estimate under the old definition.

Well, this should enliven, if not enlighten, the campaign just a bit, especially among politicans with a special flare for figures and percentages. Lo, the poor vanishing farmer can be publicly mourned and bereaved in great numbers and laid to rest amid downpours of vote-shed tears—and all because of a definition.

Views on Indian Termination Legislation of Ex-Gov. Charles A. Sprague, of Oregon

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, January 13, 1960

Mr. NEUBERGER. Mr. President, a very thoughtful and informative column on the whole question of Federal termination of Indian tribes was published in the Salem (Oreg.) Statesman of January 5, 1960, under the byline of ex-Gov. Charles A. Sprague, who is one of Oregon's most distinguished journalists.

Because of the interest in Congress regarding the termination legislation which affected both the Klamath Indian Tribe of Oregon and the Menominee Indian Tribe of Wisconsin, I ask unanimous consent to have printed in the Appendix of the RECORD the column by former Governor Sprague.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

(By Charles A. Sprague)

Klamath Indian termination proceedings have claimed little space in the news since Congress passed the bill recommended by the Department of the Interior committing the Government to acquire forest and marshlands from the withdrawing members. The Fish and Wildlife Service will take over the marshlands next year. Some parcels of grazing land have been sold, Indians themselves purchasing most of the offerings. Four forest land units to be operated on a sustained-yield basis will come up for bid-opening on January 20. It is reported that three corporations have submitted plans for sustained-yield management, as required under the law, to become eligible as purchasers. That three companies have submitted plans is proof of the interest of private corporations in these forest lands. If their bids match or exceed the base price as determined by the appraisal they will acquire the land and the Government will not have to make the purchase.

Some 23 percent of the tribesmen elected not to withdraw. Their property, chiefly forest, is being managed by the trust department of the U.S. National Bank of Portland. It makes sales of timber, but not of land, which is retained in Indian ownership. The nonwithdrawing group has appointed a subcommittee to work with the trustee, also an educational committee to encourage children to prepare themselves by education so they can earn a living and not depend on per capita distributions of revenues from tribal assets.

Thus it appears that, after a great deal of discussion and some contention, the termination process is moving along so that sometime in 1961 the Federal Government can withdraw its special services to the Klamaths.

Likewise termination of the Menominees, an Indian tribe in Wisconsin, ordered in the act of 1954 along with the Klamaths, is working out far better than was deemed possible. There the tribe owned valuable forest lands and operated a sawmill. As with the Klamath timber it was realized that forced liquidation of the timber would damage the economy of the tribe. Wisconsin's Legislature created a special study committee which worked for 4 years to prepare a plan which would suitably bridge the change from government supervision to tribal management.

The legislature enacted special legislation creating a Menominee county embracing the tribal lands, and granting a special tax subsidy to make it possible for the forests to be operated on a sustained-yield basis. The Indians have set up a corporation to manage the tribe's business. Indians receive certificates of ownership, but the voting of shares is held to a voting trust for a number of years. Provision is made so that absentee members can turn in their stock certificates for payment after a term of years.

One individual who deserves great credit for the success of the Menominee program is George Keyote, a Menominee himself, who left his good position with the Bureau of Indian Affairs to guide the tribe in establishing itself as an independent going concern. His leadership offers a good example for the Indians in other tribes which are looking forward to independence from Federal supervision.

Experience with the Klamath and Menominee termination has shown the inadequacy and shortsightedness of the plan prescribed by the act of Congress ordering the termination. The government just can't pull up stakes and leave a tribe with assets to its own devices. Careful planning is required, in cooperation with State and local governments, and with the Indians themselves. Threatened catastrophes were narrowly averted through congressional action in response to local insistence in the case of the Klamaths, and through State action in the case of the Menominees. This experience should serve as a lesson for future terminations so they may be worked out with better coordination.

Inflation—Smoke or Fire?

EXTENSION OF REMARKS
OF
HON. J. ARTHUR YOUNGER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 13, 1960

Mr. YOUNGER. Mr. Speaker, I was particularly struck with the logic of a paper by Yale Brozen, professor of economics at the Graduate School of Business, University of Chicago, on the subject of inflation.

Under leave to extend my remarks in the RECORD, I wish to include this paper:

INFLATION—SMOKE OR FIRE?[1]

(By Yale Brozen, professor of economics, Graduate School of Business, University of Chicago)

What is the record on inflation? Inasmuch as the inflation problem is an issue in the political arena, let us look at the record in terms of the last 6 years of Democratic national administration and the first 6 years of the present Republican national administration. From January 1947 to December 1952 the consumer price index rose by 24.4 percent. From January 1953 to December 1958 the rise was only one-third as large, amounting to an 8.6 percent increase. While the record of this administration has not been good, it is a better record than that of the previous administration.

The issue of monetary policy and inflation was supposed to have been removed from the political arena when the Federal Reserve Board was established as an independent agency. Members were appointed for 14-year overlapping terms in order to insulate them from political pressures. The Board was given great powers which could be used to control the quantity of money in circulation.

By controlling the quantity of money, it controls the price level. From January 1947 through December 1952 the manner in which the Board used its powers resulted in a 19 percent increase in the quantity of money. From January 1953 through December 1958 it used its powers to restrict the rate of increase in the quantity of money. From January 1953 through December 1958 it used its powers to restrict the rate of increase in the quantity of money to 9 percent. As a result, we had less inflation in the last 6 years than we did in the preceding 6.

In order to better understand the relationship between the quantity of money and inflation, a simple tool of analysis economists use to link up the various factors controlling the price level is helpful. This tool, known as the equation of exchange, is usually written in the following form: MV=PT.

The symbol M stands for the quantity of money in the hands of the public. It in-

[1] Address delivered before the Aurora (Ill.) Chamber of Commerce, Jan. 23, 1959. Reprinted in the Wall Street Journal, Mar. 30, 1959; Appraisal Journal, July 1959; Graduate School of Business Association Newsleter, autumn 1959.

cludes both demand deposits and currency outside of banks and the Treasury. The symbol V stands for the income velocity of circulation. Income velocity is defined as the average number of times a year each dollar is spent for final goods (goods which are sold to a final purchaser in a given year). Obviously, the total number of dollars multiplied by the average number of times a year each dollar is spent for final goods equals the total amount of spending for final goods. The quantity MV is the total amount spent by all people for the things they buy and keep in a year (or in whatever time period is used for calculating V).

The symbol P stands for the average price at which final goods are sold, and T stands for the number of final goods sold in all transactions occurring in the course of a year. The average price for which each item is sold multiplied by the number of items sold in all transactions is the total amount received by all sellers of final goods. The quantity PT is the total receipts in a year of all such sellers.

Whenever a dollar is spent it is received. Expenditures of dollars, therefore, must equal receipts of dollars. Since MV is the total amount spent in a year for final goods and PT is the total amount received for final goods, the two are equal. Amount of dollars spent=Amount of dollars received, or MV=PT.

As we can see from the equation, increases in the price level can result from increases in money (or its velocity of circulation) or from decreases in the volume of goods offered for sale. Since, aside from a slight decline in production in late 1957 and early 1958, and other temporary dips, the volume of goods offered for sale has been rising, we would expect the price level to decline if there were no increase in the volume of money or its velocity. The price level has not declined because the volume of money (and velocity) have been rising more rapidly than the output of goods.

For example, in the period from 1940 to 1950, the volume of goods offered for sale rose by 54 percent. But the price level rose by 94 percent. It would have dropped had there been no rise in the quantity of money in the hands of the public. The quantity of money increased in this period from $39 billion to $110 billion, an increase of 180 percent.

We might well ask, "Why did the quantity of money increase so much, and why did we allow it to do so if we were truly interested in avoiding inflation?" Or, to rephrase the question into a more pertinent one, "Why, did the Federal Reserve Board pursue a course of action which pumped 70 billion additional dollars into the hands of the public from 1940 to 1950? Were they not interested in preventing inflation?"

Some people would argue that the inflation was caused by unions pushing wage rates up and by businessmen passing on the cost increases to the public in higher prices. However, our studies at the University of Chicago indicate that it was the increases in the quantity of money which came first. (See Milton Friedman, "Studies in the Quantity Theory of, Money.") With more money in their pockets, consumers tried to buy more goods. Since the stock of money they had could purchase more goods at current prices than could be produced, shortages developed or prices were bid up to levels which absorbed all the money consumers wanted to spend. Some of you certainly remember those days in the late 1940's when you attempted to buy an automobile and found that your name would be placed on a list and you might get delivery in 18 months to two years. In these circumstances, some of us bet dealers $500 they could not deliver a car next week. We gladly lost those bets. In effect, we bid higher prices to obtain the goods we wanted to buy with our larger stock of money.

With higher prices offered by consumers for goods, manufacturers were eager to produce more. They tried to hire the men to do the job, but shortages of labor developed. In non-union industries, employers offered higher wage rates in order to attract additional men. In unionized industries, employers offered wage increases in their bargaining sessions. You seldom heard of an employer asking a union to accept a decrease in wage rates, although that was common practice in the bargaining sessions in the early 1930's. As a matter of fact, you will find that, in the post-World War II decade, non-union industries raised wage rates more than unionized industries.

The answer to the question of what caused inflation is really the answer to the question of "Why did the Federal Reserve Board follow the course it did in the 1940's?" The primary reason was that the Federal Government had a large deficit in this period. It offered bonds for sale to the public to finance the deficit. Because the interest rates carried by the bonds were very low, ranging from three-eights to 2½ percent, insufficient funds were obtained to cover the governmental deficit. In these circumstances, the Federal Government turned to the Federal Reserve for help in its financing. Rather than offer higher interest rates or increase taxes to pay its bills, the Federal Government, in effect, asked the Federal Reserve to buy the bonds and to provide banks with more funds so that they also could buy them. Since the Federal Reserve banks are fiscal agents for the U.S. Government, and, also, since they felt it was their patriotic duty to assist with the financing of the war, they responded. In doing so, they undertook actions which increased the stock of money from $39 billion in 1940 to $94 billion in 1945.

They might have stopped increasing the stock of money in 1945 since the war was over. However, the U.S. Treasury had become accustomed to selling bonds at low interest rates. It did not want to raise rates to the point where the public would find purchases attractive. The administration, therefore, exerted great pressure on the Federal Reserve to keep buying bonds and to keep manufacturing money to buy the bonds. As a consequence, the quantity of money continued to rise, by another $16 billion, to $110 billion in 1950. And the inflation continued.

Marriner Eccles, the former Chairman of the Board of Governors of the Federal Reserve System (and still a member), and other members of the Board constantly protested against this policy. They felt helpless to change the policy in the face of pressure from the administration. Finally, a blowup came in 1951.

Secretary of the Treasury Snyder, in a January 18, 1951, luncheon speech, announced that refunding of U.S. debt would continue at the 2½ percent long-term rate. The attempt to maintain this rate in the last 7 months of 1950 had made necesary Federal Reserve purchases of Government securities which increased bank reserves and, consequently, brought on an 8-percent increase in the stock of money. It was becoming obvious that the Federal Reserve had become an engine of inflation. With Snyder presuming to speak for the Federal Reserve, the System had either to declare its independence or continue as a subservient arm of badly managed Treasury policy. Eccles presented the Federal Reserve's case in testimony on January 25 before the Joint Committee on the Economic Report.

In an unprecedented move, Truman, on January 31, asked the Federal Reserve Open Market Committee to meet with him at the White House. The next day, the White House announced that the Federal Reserve would continue to peg the Government bond market. Since the Open Market Committee had not agreed to this policy, Eccles released the minutes of the White House meeting, giving the lie to the White House statement.

A final result of all this was an accord between the Treasury and the Federal Reserve in March 1951. The Treasury agreed to the dropping of the Federal Reserve pegs in the Government bond market. The Federal Reserve agreed to maintain an "orderly" market (whatever that may mean).

Since March 1951 inflation has proceeded at a very moderate pace, compared to the earlier pace. But it has continued, however moderate the pace may now be. The Federal Reserve has continued to pump money into the economy in its attempt to maintain an "orderly" bond market and to ease the Treasury's problems in raising funds to pay off maturing issues.

Now what is the moral of this experience? First of all, inflation is not possible and will not occur without an increasing quantity of money. Second, the quantity of money will not increase unless the Federal Reserve either provides extra money or makes it possible for banks to increase the stock of money by providing them with more reserves or by cutting required reserve ratios. Third, the Federal Reserve increases the stock of money primarily as a result of the pressures exerted on it to assist in financing governmental deficits and, secondarily, to assist the Treasury in refinancing maturing debt when the demand for funds is strong and the Treasury would have to offer more attractive interest rates to get the money from noninflationary sources.

In essence, the only way we are going to avoid inflation in the future is by avoiding deficits in governmental budgets. Even in the absence of deficits, there will still be moderate inflationary pressure from the roll-over in Government debt unless the Government runs a surplus in order to ease the Treasury's problem in handling the roll-over.

A surplus in the budget is desirable for two reasons. It would ease the upward pressure on interest rates in capital markets. The Treasury's refinancing problems in connection with maturing debt would become less pressing and the heat would be off the Federal Reserve to manufacture more money to assist the Treasury.

A second virtue of a surplus is that the flow of funds for financing the purchase of new, more productive machinery would be increased. The holders of maturing bonds would use the funds to invest in the securities of business firms. The more available funds are to these firms (from noninflationary sources), the more rapidly they will modernize their plants, and the sooner they will rehire high-priced labor not worth employing on low-output, obsolescent equipment. The more rapid growth in our stock of capital which would occur with a surplus in the Federal budget (assuming it is not created by raising taxes which reduce the rate of saving) would lead to a more rapid growth in production. This, too, would help restrain the rate of inflation.

To turn back to the question of the prospects for continued inflation, we should examine the prospects for balance or surplus in the Federal budget. The President has proposed a balanced budget for the fiscal year ending June 1960. The President may propose, but Congress disposes. The mood of the current Congress is evidently in favor of a conglomerate of spending programs beyond those in the administration's proposed budget. Even the proposed budget contains programs whose required outlays will be rising in the future. The various benefits accorded to veterans in the form of pensions will be rising from $1.1 billion next year to $3.6 billion a few years from now. Additional obligational authority has been asked

for the International Development Fund which will result in increasing outlays. Outlays on the highway program will be rising. Outlays on the urban renewal program will be rising because of commitments already made.

The only way the Federal budget can be kept in balance is by preventing new programs and discontinuing old ones. The proposed budget does not eliminate programs; it only nibbles at the expenditures for a few of the existing projects.

Many of the programs now in the budget and additional ones proposed to the Congress are political frauds which are designed to institute spending programs for which people would not vote if the proposals were presented separately on the ballot. The electorate has already provided, and will continue to provide funds on a local basis for those parts of the proposed programs which they feel are worthwhile.

The proposed Federal aid to education program is typical in this regard. A bill calling for $2.5 billion has been dropped into the congressional hopper. If passed, this will be but the beginning of further Federal encroachment in an area which is being adequately handled by State and local governments.

The presumed excuse for Federal aid is the lack of money for education in the poorer States. Under the proposed program, money will be taken from the wealthier States and funneled to the poorer States. But the greatest need for funds is in the very States from which the money will be taken. School age populations have increased by 46 percent since 1940 in the 12 highest income States which would pay the largest part of the Federal-aid program. In the 12 lowest income Staes, which would receive the Federal aid, schoolage populations have risen by only 9 percent since 1940. In other words, the money will be taken from the areas that must expand school facilities and will be given to the areas that need much less expansion. The Federal-aid-to-education bill embodies a most shameful political hypocricy.

The cry of inadequate local funds to provide adequate teachers' salaries and school construction is based on myth. Average salaries for schoolteachers have risen from 12 percent less than the average of all wage and salary earners in 1946 to 13 percent more in 1958. Expenditures for school buildings have risen from $230 million in 1946 (and $934 million in 1949) to $3.4 billion in 1958. Annual outlays for the Nation's schools have risen from $4 billion in 1945–46 to $20 billion in 1957–58, an increase from 2 percent of the national income to 5½ percent. In 1954, the U.S. Office of Education reported that restrictions on bonding power and tax rates limited available resources of State and local governments for school construction to less than $5 billion. Somehow, with all these supposed limitations, $13 billion worth of school construction has been undertaken in the 1954–58 period.

The proposed housing bill, and Federal aid to airports bill, as well as the education bill are beyond the proposals of the President and must be stopped if the proposed balanced budget is to become an actuality. Furthermore, many Federal programs must be discontinued if we are to avoid deficits in the future. Federal Government grants for vocational education have accomplished their purpose. There is no need to continue this program. The proposed expenditure of $9 billion for improving navigation on inland waterways is in large part a boondoggle which should be killed. The justification for this expenditure is largely in terms of facilitating barge movements of petroleum products. We have found, in our research program at the University of Chicago that most of these products will move by pipeline, which is cheaper than barging, and that the expenditures are not justified by a realistic examination of traffic which will actually materialize on the proposed improved sections of the waterways. (See C. Haver and E. Renshaw, "The Future of the Illinois Waterway.")

The public power bloc is still trying to get a $490 million Hells Canyon dam built by the Federal Government although the job is already partly done by the Idaho Power Co. at a cost which will amount to only $130 million at its completion. The Idaho project will do a better job for recreation, downstream navigation and irrigation, and conservation than the Federal project, yet the doctrinaire advocates of public power are opposed to it. They prefer no project to a nongovernmental project built by a regulated public utility. The same group is trying to force through Congress a $1 billion appropriation to build large atomic plants, although these would be great, costly, white elephants producing power at double the cost of power from other sources.

If we are to prevent inflation, we must get sanity into the making of the Federal budget. If we are to provide the funds necessary for the capital formation required to raise our productivity in the race with Russia and win the cold war, we must stop draining the capital markets to finance deficits. We can reduce Federal outlays, increase the rate of growth in productivity, wage rates, and personal income, and reduce the rate of inflation if we prevent unneeded and economically wasteful Federal programs.

Rehabilitation Inventory

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, January 13, 1960

Mr. WILEY. Mr. President, the Nation, today faced with a great threat to its security and challeges to its progress posed by Communist advancement, requires the services and capabilities of all its citizens.

Fortunately, the average citizen in 1960 is a stronger, healthier individual than ever before in history.

Regrettably, however, there are large numbers of our people, approximately 24 million, who in one way or another have suffered physical impairment. As a result, they face special obstacles in reaching their goals in life.

To the credit of these individuals, as well as to fraternal, volunteer, and other organizations and agencies, and the Government, an increasing proportion of these folks overcome their handicap through rehabilitation programs. Daily they are proving that an individual, though suffering a partial handicap, can, by faith, a courageous spirit, and a willingness to work, develop his abilities to provide himself and his family with a substantial degree of independence, as well as make a constructive contribution to community life.

The Nation, I believe, can be proud of these individuals who are making a success of their lives.

With an estimated 24 million suffering impairment, however, the challenge is still great. Throughout the country, efforts must be encouraged to continue and expand programs to provide the facilities and opportunities for these folks to overcome handicaps and lead successful, fruitful lives.

Recently the New York Times published an informative article titled "Rehabilitation Inventory," by Harold A. Rusk, reflecting the scope of the challenge in this field. I request unanimous consent to have the text of the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times, Jan. 10, 1960]

REHABILITATION INVENTORY

(By Howard A. Rusk, M.D.)

NATION'S ACHIEVEMENTS IN YEAR HAILED, BUT IMPAIRMENTS STILL PLAGUE 24 MILLION

In rehabilitation, as in other fields, the first of the year is a logical time for inventory taking.

As we compare the debits with the credits this year, we find our resources have grown, but our needs have risen even more rapidly. This January we have the most complete and accurate figures that have ever been available on the extent of disability.

The collection and collation of incidence statistics on communicable diseases are long-established and precise procedures. Based on the weekly reports it receives from State health departments, the United States Public Health Service on any given day can provide fairly accurate and late statistics on the national, regional and State incidence of any of the major communicable diseases.

Up-to-date data of this type is essential to modern epidemiology and control of communicable diseases.

In contrast to our precise reporting methods for communicable diseases, prevalence rates of chronic diseases must be based on estimates, for it is not required that such conditions be reported.

If you develop arthritis or heart disease, this fact is a matter of concern primarily to you and your physician. Neither you nor he is required to report to any public agency the fact that you have this illness.

Until 1957, most of our statistics on diseases, injuries, and impairments in the general population were based on the National Health Survey carried out in 1935–36.

These figures were supplemented by additional data from a number of community studies in Hagerstown, Md.; Pittsburgh; Hunterdon County, N.J.; Kansas City, Mo.; New York City, and California. Some information was added also by supplements to the Census Bureau's Current Population Survey.

CONTINUOUS STUDY CITED

Since 1957, the Bureau of Census has been engaged in a continuous U.S. National Health Survey, gathering data through nationwide household interviews. As a result, we have far more accurate information on many health factors than ever before.

The survey, for example, shows that nearly one out of every seven Americans has a chronic or permanent health impairment. The impairments include such disabilities as paralysis, deformity, and total or partial loss of hearing or vision.

Significantly, these figures do not include persons in mental or long-term-care institutions. Nor do they include the healthiest segment of our population, our military personnel.

Blindness (defined as inability to read ordinary newsprint even with the help of glasses) was reported for 960,000 persons, a rate of 5.7 for each 1,000. In addition, 2,064,000 persons were reported to have significant visual impairments less severe than blindness.

About 109,000 persons were reported to be totally deaf, a rate of 0.6 for each 1,000. Other hearing impairments affected 5,714,000 persons.

Between 12 and 13 million impairments were reported involving some form of limited motion, including paralysis and other abnormalities of the bones, joints, or muscles of the limbs, back, and trunk.

A miscellaneous group of almost 1,400,000 impairments included such conditions as abnormalities of structure of the face, jaws, and skull; mental retardation; marked deviation from normal body weight and size; and absence of organs and sites other than eyes or extremities.

The impairments increased with advancing age from 52.9 a thousand persons at ages under 25, to 615 at ages 75 and over.

For all the impairments, the proportion caused by injury was 33 percent—41.8 percent for males and 22.2 percent for females.

REHABILITATION GAINING

Of the 24 million individuals with impairments, 82.2 percent had been attended by a physician at some time. Paralysis and loss of limbs and extremities had been medically attended in practically all cases.

This year the Nation could take some pride in the fact that the number of persons rehabilitated into employment through the State-Federal vocational rehabilitation programs reached a new high of 80,720. This was an increase of 9 percent over 1958.

These 80,720 newly rehabilitated persons will increase their annual rate of earnings during their first year of employment from about $25 million to about $156 million and will contribute about 121 million man-hours of work to the Nation's productive effort.

On the asset side of the ledger, the rehabilitation achievement is laudable and significant. Measured against the liability side of 24 million impairments suffered by Americans, it is not quite so impressive.

Congressman Charles Boyle

SPEECH
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 6, 1960

Mr. PHILBIN. Mr. Speaker, the news of the tragic, untimely passing of Congressman CHARLES BOYLE struck us all a stunning and a crushing blow.

Only a short time before that fateful night, we had seen him in our midst—on the floor and in the halls of this great representative body—vibrant, vigorous and in the full bloom of health and spirit—filled with the zest of life, immersed in his dedicated tasks and duties which he invariably faced and carried through with a seriousness of purpose, a wealth of knowledge, a driving determination, a gifted capacity and a lofty idealism that commanded the respect and admiration of every Member of the Congress and won for him widespread gratitude of the very many he had loyally served with such unfaltering zeal and effectiveness.

CHARLIE BOYLE was beloved by all his colleagues. He was instinctively kind and generous and intuitively responsive to the needs of the people.

Devout in religious beliefs and practices to which he was profoundly devoted, he possessed a broad, tolerant mind which encompassed and harbored in a very unusual degree love of his fellowman. In his generous heart he was the true, practical exemplification of the deeper, hidden meanings of the Fatherhood of God and the brotherhood of man.

A sound thinker, an eloquent talker, an articulate forceful advocate of forward-looking, humane causes, a brilliant lawyer, a painstaking, indefatigable worker, Congressman BOYLE during his tenure in the House served with conspicuous ability, sincerity and effectiveness.

CHARLIE BOYLE was stricken down at the very height of his powers, with the larger portion of a great and promising career still before him. His lamentable demise has left a deep void in this body and has brought genuine sorrow and sadness to all of us.

We cherished his noble character, his congeniality and warm, good fellowship just as we admired his ability and devotion to duty.

A great American and a great Christian gentleman has been called to his heavenly home. We join his bereaved family and many friends in mourning his loss.

But he has left a legacy of devoted service, and goodness, and kindness and warm fellowship here that will long be remembered, that will leave a deep imprint upon the memories and the annals of this great legislative body.

To his bereaved family, his friends and all those dear to him, with a heavy heart, I tender my deepest and most heartfelt sympathy. In their truly irreparable loss I pray that the Good Lord may solace them and bring them strength and courage to bear his passing with resignation to the divine will.

And may our beloved and dear friend and esteemed colleague, CHARLIE BOYLE, rest in heavenly and eternal peace.

Area Redevelopment Bill

EXTENSION OF REMARKS
OF
HON. CORNELIUS E. GALLAGHER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 13, 1960

Mr. GALLAGHER. Mr. Speaker, the flight of industry from many of our larger cities is a problem of increasing proportion. If we are to sustain these cities as healthy and profitable economic and industrialized complexes, it will be necessary that we establish programs for modernization and rehabilitation of facilities which have long since outlived their usefulness.

Unless we do this, we may find that before too many years these cities with their large populations will have reached the point of industrial decay where they will be unable to support the large number of our citizens who continue to live there.

These facts demand a prompt and realistic program such as would be authorized by the area redevelopment bill.

I am hopeful that this bill will be brought to the floor for a vote in the very near future.

The Academic Library and the Educated Man

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mrs. BOLTON. Mr. Speaker, increasingly we are being made aware of the central role which our educational institutions will occupy during the coming decade. More and more it is becoming apparent that progress in vital areas of the Nation's life rests upon the academic disciplines provided by our schools and colleges. One of these disciplines—the habit of serious book reading—was recently emphasized in an address by Mr. Ralph M. Besse, executive vice president of the Cleveland Electric Illuminating Co. and chairman of the Cleveland Commission on Higher Education.

Speaking at the dedication of Ritter Library, Baldwin-Wallace College, Berea, Ohio, on October 15, 1959, Mr. Besse observed that far too few of our college graduates acquire and retain the book reading habit. Without this discipline, he asserts, an education cannot survive in the midst of modern forces continuously adding to the complexity of human knowledge.

Believing that Mr. Besse's perceptive comments deserve wide reading, I am privileged to insert his address "The Academic Library and the Educated Man" at this point in the RECORD.

THE ACADEMIC LIBRARY AND THE EDUCATED MAN

(By Ralph M. Besse)

Dr. Bonds and members of the Baldwin-Wallace family, I am happy indeed to share with you today the thrill that comes when a quality improvement is achieved by an institution. And surely a library improvement is a quality improvement for any college. It is more than that—it is a quality improvement for the Nation, for improvement of our national culture depends on improvement in education.

The impact of education has been a dominant factor in shaping the course of civilization at every great turn of history. It has varied in content as the need required. Sometimes it has been religious education, sometimes political, sometimes social, sometimes scientific. But always the great steps forward in man's incessant climb have been firmly planted on the paths of education.

Our great church organizations recognized this in designing our religious foundations in America 300 years ago. Our constitutional fathers recognized it as a fundamental of democratic government. And our international competitors today are stressing education as the basis of both military and economic supremacy.

Education, indeed, has become a key factor in national survival—and survival is threatened by uncontrolled worldwide population expansion, by unlimited demand for limited resources, and by scientific developments that seem to have outpaced our ability to manage them.

In such a matrix we must either solve our problems of education or we will solve nothing.

It would be naive to infer that there is any single solution. The problems are vast, multiple, complex, and changing. If they are to be solved at all, the approach must be piecemeal in order to keep the scope of every improvement project within the grasp of its task force.

The dedication of this fine new facility, therefore, presents an excellent opportunity to examine one severable educational problem—the problem of optimizing the contribution of the academic library in the process of education.

The solution of this problem is magnified by three rampant forces which affect all educational problems:

The first of these forces is the increasing complexity and the increasing degree of difficulty in almost every field of knowledge. This is axiomatic in science. It is also true in other fields. Sociology must solve the problem of explosive growth of urban centers; economics is confronted with managed money, business cycle control and automation; history has in one generation added a world depression, a world war, and a world revolution in governmental philosophy. And so it goes through all ranges of thought and action.

A second force directed at our educational problems is the everincreasing additions to our total volume of knowledge. Someone has estimated that our total fund of knowledge is doubling at the rate of once every 11 years. Whole new fields are being added and the process seems to accelerate.

The third great force is the increasing rate of change in fundamental concepts and basic factual situations. It is a current application of Henry Adams' law of acceleration. More people in the world are now contributing to the world's knowledge than ever before. Much more money is being spent on all kinds of research than ever before. More trained scientists are now living than have lived in all previous history. Travel is faster. Communication is more widespread and international competition is more intense than at any time in history. The result is an acceleration in the development of the fundamental principles and theories in every field of thought. Knowledge of these developments is essential to a good education.

The existence of these forces makes the acquisition of the academic portion of our education more difficult each year. But it has a vastly greater impact on the problem of maintaining an education through the long stretch of after-college years when less time and less formal techniques are available for the process. In spite of the difficulty, the college graduate will produce an optimum result as a parent, a professional practitioner, and a community leader only if he leaves college with the skills, habits, and attitudes which enable him to remain an educated man.

How are we doing in this area of education?

The resident college attacks the problem of teaching on a triple front. It deploys its forces in three overlapping but distinct and severable areas of academic learning. These may be defined as the universe of the classroom, the universe of campus people and the universe of books.

The universe of the classroom involves the curriculum selected by the students, the grouping of students relative to courses selected, the faculty specialists assigned to teaching these courses, the laboratories, the textbooks and the required course reading. The universe of campus people involves the faculty as a body, the administration personnel, the student body somewhat stratified by class level and sex, and the miscellaneous activity programs, athletic, social, and cultural.

The educational performance of American resident colleges in the areas of classroom teaching and campus relations has ranged from poor to excellent. Even where the performance has been at its best every facet of activity in these areas is encumbered with baffling problems and challenging opportunities incident to the current forces playing on all educational functions. These are beyond the scope of today's subject.

In the dedication of an academic library we are properly concerned with the problem of the resident college in its approach to education through the universe of books.

Here the educational result measured by its postgraduate consequence has been poor. It continues to be poor. It probably offers as great an opportunity for educational improvement as any facet of resident college education.

First, let us define the area of our subject. The universe of books in the academic learning process includes the course textbooks, and the required course reading. But it also includes the massive collection of written information additional to textbooks and specific course material. This latter collection is the academic library. This is the portion of the universe of books which does not overlap the universe of the classroom. It is what Carlyle called the true university. It is the only one of the three universes of academic learning which can survive college residence.

If knowledge of the importance of the library, skill in the use of the library and an established habit of reading the books in the library are not acquired by students during college residence, it is not likely that they will ever acquire them. It is the responsibility of the colleges to meet this challenge.

We are all familiar with the surveys which invariably show that many college graduates read no books at all after graduation. Most of them read too few books. Many who do read select their books poorly. And only a faint fraction of our college graduates have either a well-planned program or a well developed habit of continuous reading of good material.

Let me quote just one authority in support of these statements. He is Douglas Brush, writing in a recent issue of Daedalus, where he says:

"It is a painful fact of American life and education that, after leaving college, the majority of people virtually give up serious reading; and that, of the minority who do not, only a fraction pays any attention to literature new or old. At the time a survey was made in 1956, only 17 percent of American adults were found to be reading books, as compared with 31 percent in Canada, 34 percent in Australia, and 55 percent in England; 57 percent of our high school graduates and 26 percent of our college graduates had not read a single book during the preceding year; of the college graduates, 9 percent could not name the author of any 1 of 12 famous books in English, and 39 percent could not name more than 3; 45 percent could not name any recently published book."

These statistics sadly demonstrate that many who retain their degrees do not retain their education. An education can survive in the midst of the modern forces already described only if it is continuously maintained. It cannot be maintained without the book reading habit. Our resident college graduates do not have this habit. And, therefore, they have failed in their approach to learning through the universe of books. The colleges who sought to teach them have failed. The great facility of the academic library has not and is not being effectively used.

What's to be done about it?

The statement of the objective is simple—it is to so develop the student use and understanding of the academic library that the college graduate will carry a quality-book-reading habit through life.

What is needed to do this?

Step 1 is clear: The function of the librarian must be expanded to embrace a teaching responsibility in the universe of books. It is not enough to acquire, catalog, index, shelve, and account for the mere physical volumes. To paraphrase Archibald MacLeish, librarians have done well getting books for readers; they must learn now how to get readers for books.

This requires that librarians adopt the philosophy that they are teaching experts in the world of books, charged with the responsibility of making students effective and habitual readers and library researchers.

It requires that libraries be fully staffed so that time can be given to students as well as to books.

It requires that librarians have suitable professional training in order that all of their responsibilities may be fulfilled at the level of their highest potential.

And, finally, to get students to read, some continuous promotion is required. This involves time and money as well as skill. It is a selling process as well as an educational process. If the colleges want their students to read books, they must ask them to read them, generate their interest in reading them, explain the benefits of reading them, and help identify what they ought to read. This cannot be done effectively until the librarians of the academic libraries accept their share of responsibility for getting it done and their libraries are adequately staffed and financed to enable them to do it.

Step 2 in developing students' reading skills and habits is also clear: The teachers themselves must improve their library usage.

In the truly great graduate schools of this Nation there is a well recognized tradition that the graduate teacher must either publish or perish. Oddly enough it is not the material he publishes which makes him a qualified teacher. It is the fact that he must continue to learn in order to publish that produces the real result. An unchanging pool of knowledge grows stagnate just as surely as an unchanging pool of water. Teachers must improve their learning or it deteriorates. Graduate schools know this. Undergraduate schools have been slow to adopt it although many individual teachers are avid scholars as a matter of self-motivation.

But, too many college teachers are not good book readers although reading is essential to good teaching and the academic library is conveniently provided to make reading research possible. The library is a prime tool of teacher refreshment in every area of education. What is even more important relative to our theme is this: when the use of the library is a habit with the teacher, his practice tends to become contagious among his students. He is in position to infuse his courses with the love of books and the course value of their use. He is a persuasive example of the educational value of continuous reading.

If, however, a teacher does not use the adacemic library, there is a poor prospect that he will persuade his students to do so. And there is a good prospect that his teaching will be deficient.

So, the first step is to convert the teachers.

How can this be done? The publication technique has already been defined. It is a good one but it is not universally available. Other techniques should be developed. I do not purport to know what they should be. This is a problem which the faculty of every college might well undertake to answer for itself. If the analogy of industrial management is applicable, the answer will lie in

some combination of measurement of results accompanied by a reward or recognition proportional to the achievement. If teacher performance were in some way measured by the library use they stimulate in students, I suspect more library use would be stimulated.

The possibility of stimulating student library use opens a specific line of investigation. How can this be done? Again this question should be answered by teachers. And the teachers of any good college are capable of developing such answers.

There are several approaches that offer reasonable prospects of success.

First, students ought to be taught the importance of a good lifelong habit of good reading. A good many college graduates are never even told that this is a requisite of the educated man. Every teacher of every course should tell them—not once but often. The philosophy should become a campus tradition. It should become a kind of educational commandment. The reading habit should be known as the mark of the educated man.

In order to do this I suggest that at least four techniques be investigated.

First, every college student should be taught—specifically taught—both the values and techniques of good reading. If this is to be his basic method of maintaining his education for the rest of his life, he is entitled to know the best way to accomplish it.

Second, every course in college should include some library research assignments which involve the student in library processes and teach him that fields of knowledge tend to be vastly broader than his textbooks and specific reading assignments are likely to reveal. He should be examined on some things outside the covers of the textbook and the special reading list. He should carry from his classroom the concept that his teacher became versed in his subject only after the study of vast numbers of books and articles written by others.

Third, he should be taught how to use a library effectively as a tool of learning. The classifications, arrangements and indices which make a library useful are unknown to a shocking percentage of college graduates. This can and should be taught.

And, finally, techniques which make it easy and inviting to use the academic library should be developed.

Access to books is one of these techniques. Adequate library study space and the open stack are basic to this purpose. But they are not enough. I believe that a part of the academic library ought to be circulated among the places where the students and faculty spend their time.

When a teacher can point to a book in his classroom, the inquiring student is more likely to take it home and read it than he is if he must go—later on—to a library and search it out.

Books in the lounge room of a dormitory will be picked up. Books in the waiting room at a dining hall will be examined. The fear of losing books has been a great deterrent to the optimum use of books. We should consider books as expendable in the educational process. Some of them will disappear like the chemicals in the laboratory. But if they are made available the use will increase and the idea will grow that books are a vital part of education.

These are but suggestions. You who are charged with the education of our Nation's leaders are also charged with doing it well.

The men and women you release to the Nation must have more than the temporary ability to pass a senior comprehensive examination. They must have the ability and desire to keep their comprehensive knowledge forever current in the face of an ever increasing complexity of knowledge, an ever expanding volume of knowledge, and an ever accelerating rate of change in knowledge. These they will not have until you have solved the problem of promoting both better appreciation of the universe of books and more lasting skills and habits of teachers and students alike in the use of the academic library. Until this is done the belief that the baccalaureate degree is the symbol of the educated man remains in part a myth. If it is done, this fine facility we are today dedicating to the processes of education will take its proper place in making the symbol true. You have the tool; the product will be yours if you use it.

John H. Kraft's Great Contribution to the Nation, Farmers in Particular, by Developing Production of Sesame Seed and Popularizing New Sesame Product, Important Day in History of Texas

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 13, 1960

Mr. PATMAN. Mr. Speaker, sesame chips, as a new snack food, was introduced at the Texas delegation luncheon today to a group of about 50 individuals, including the 24 Members of the House and Senate from Texas.

Presentation of the sesame chips represents an important day in the history of Texas. Sesame seed are grown in the districts in Texas represented by Speaker SAM RAYBURN and Congressmen ROGERS, MAHON, IKARD, and PATMAN.

This new and flavorful snack food highlights a development of an increasingly profitable sesame seed crop for Texas farmers. There is a new pioneering development of a substantial sesame food processing industry in our State of Texas. The sesame chips that were served for the first time in Washington at the Texas delegation luncheon today came from Sesa-Kraft, Inc., at Paris, Tex., which is said to operate the world's largest processing sesame seed plant. There are other large fabricating and processing plants at Honey Grove and Muleshoe, Tex.

Mr. John H. Kraft is the president of Sesa-Kraft, Inc. Following is an interesting and informative article, which appeared in the September 1959 issue of Food, International Store Door Institutional Distributors' journal, entitled "John H. Kraft Popularizes Sesame Chips as New Taste Sensation":

JOHN H. KRAFT POPULARIZES SESAME CHIPS AS NEW TASTE SENSATION

When John H. Kraft retired as chairman of the board of Kraft Foods in 1956, he immediately started a second business career. He began to devote an increasing amount of time to a longtime favorite subject, sesame seed and the great benefits to mankind that could come from its proper cultivation and product development. Rapidly moving events prove that, in this specialized field, he is writing a new and brilliant chapter in the history of food merchandising.

He knew that sesame seed represented an ancient food of the Orient, a plant crop which, until recently, had been grown only in the Far East, then in Central America, and, subsequently imported into the United States. His research, until that time, had emphasized the fact that sesame seed had a unique flavor and a high protein food value.

According to the "1957 Yearbook of Food and Agriculture Statistics," published by the Food and Agriculture Organization of the United Nations, sesame oil is listed as No. 9 in tonnage movement of food products, an indication of its great and growing acceptance in various parts of the world.

Actually, it was some 12 years ago, that John H. Kraft first became interested in sesame seed, first became impressed with its fabulous potential as the basis for a host of food products. It was with this knowledge that he began acting as a spearhead in the rediscovery of sesame seed throughout the United States, and as a forecaster of its tremendous sales potential.

He was attracted to the sesame seed growing experiments which were being conducted by the Texas Research Foundation. This group was carrying out a search for a new and profitable crop that would help make for a more diversified type of farming, which could be substituted for some of the acreage then being devoted to production of cotton.

About that time, John H. Kraft came in contact with Roy H. Anderson, an agronomist for the Liberty National Bank of Paris, Tex., who was actively engaged in furthering research work of the Texas Research Foundation. Subsequently, Mr. Anderson joined up with John H. Kraft in the latter's new business venture, in the capacity of vice president.

As Mr. Kraft's interest in sesame seed and its new horizons grew, he organized the American Sesame Products Co., of Paris, Tex., and, later, changed this name to Sesa-Kraft, Inc. This change was made for one very important reason, so that the names of various food formulas, which were developed, could include the word "sesa" as an automatic "sesame" identification and association. In the case of the Sesame Snack development, which is the highlight of this article, the name "Sesa-Teez" was finally trademarked because it carried an automatic association with the name, Sesa-Kraft, Inc.

Substantial investment was made in a new Sesa-Kraft plant, and in the development of specialized machinery to accomplish new-type milling processes which overcame the age-old problems presented by the usually difficult dehulling and cleaning processes. The first milling operations were slow because there was no precedent or experience for production processing of sesame seed with modern machinery. In fact, up until then, all sesame seed used in this country was imported.

The immediately marketable sesame products are whole seed, oil and meal. Whole seed is used in making a variety of breads, cakes and candies. The oil, pressed from the seeds, is used as a salad or cooking oil, as well as in the manufacture of shortening, margarine, cosmetics and medicines.

Working with nationally known independent food laboratories, Mr. Kraft developed a unique process which brings out a distinctively pleasing sesame flavor and texture. This process, for which a patent has been applied, imparts a nutlike character and a crunchy texture to the seed. It served to broaden the field of application immediately, because pressing the seed in this manner made for broader usage by many branches of the food industry, as well as greater acceptance by the public.

Sesame seed has long been well regarded by food experts because it contains a high percentage of good-tasting, well-flavored protein. As such, it is a natural in the processing of many high-protein food products

and special high-protein diet foods. It should be pointed out that sesame seeds contain more of the valuable body-building proteins (referred to in medical circles as "body-building blocks") than any other seed grown.

A quick review of the great strides made by Sesa-Kraft, in its specialized fields, shows that it is today's prime factor in expanding domestic sesame seed production—is the principal purchaser of this new American farm product—is serving as a miller and converter of bulk seed to be used in food processing—and is becoming a substantial marketer of sesame seed, of sesame chips—as well as pioneering the development of a wide variety of sesame-based food products.

As a highlight of the research work being conducted by Sesa-Kraft, Inc., a report became available in 1957, which covered several years of fundamental nutritional research by the National Research Council of the United States and the Committee on Protein-Rich Foods of the World Health Organization. The report covered a study conducted in Costa Rica, El Salvador, Guatemala, Honduras, Nicaragua, and Panama.

It presented the findings of food-formula tests which were conducted among young children in certain underdeveloped areas where there was known to be a great protein deficiency. This, coupled with the lack of the right amounts and proportions of amino acids, was found to constitute a major nutritional problem. These tests conclusively demonstrated the value of sesame seed and sesame meal as high sources of protein. To this, is the added plus of an oil containing nonsaturated fats, which, medically, is reportedly of great value. This is the first diet study available where sesame seed was scientifically demonstrated to be a prime source of vegetable protein.

With this information, a completely new concept of sesame potential in the United States became apparent. First, products using a substantial amount of sesame seeds or sesame flour could capitalize on quick protein availability. Second, sesame would add new flavor, and new taste-plus values to baked goods, confectionery—could be used to intensify the basic flavor of other foods. Third, sesame oil contains nonsaturated fats, which medical research workers are coming to believe offers great possibilities in combating high cholesterol levels in the blood stream, said to be a contributing factor to heart trouble.

On the basis of this conclusive evidence, John H. Kraft authorized his Sesa-Kraft organization to develop information for food industries and, particularly, on food products where this new information about the health benefits of sesame would be of paramount interest * * * where volume usage would permit expanding the sale of sesame seed and its byproducts * * * and, where, of course, Sesa-Kraft, Inc. could become a prime supplier.

It was then that Sesa-Kraft, Inc. began to develop basic food formulas which they would own, control, and market—with the marketing to be done either by Sesa-Kraft, Inc., or by exclusive franchising arrangements with various manufacturers and distributors in the food industry who could assume the producing, marketing, and selling functions.

Mr. Kraft determined that four basic volume food categories were ideal for this new-ingredient approach. His indication of the compass course to be followed was supported by the size and extent of retail sales of basic foods like these in this country: $8 billion—baked goods (breads, rolls, pies, sweet goods, etc.); $2 billion—confections (candies); $1 billion—salad and cooking oils; $1 billion—corn chips, pretzels, etc.

The great and rapidly increasing demand for potato chips, for corn chips, for all types of snack foods, suggested that a sesame seed chip could quickly become a major contender in the snack field, that such a specialized food item had great sales potential.

Accordingly, a formula for a sesame-seed chip was developed and carefully tested in selected territories across the country. The enthusiasm evidenced by the public for the intriguing sesame flavor, together with the fact that 8 out of 10 buyers indicated their determination to buy them regularly, led to a decision by Mr. Kraft to market sesame chips on a national scale as quickly as possible. His initial plans called for setting up franchised territories and establishing his own sesame-chip processing plant. He planned to complete his distributing program by enlisting the interest and cooperation of service distributors.

A comparison of prepared snacks indicated that John H. Kraft's "Sesa-Teez" brand of sesame chips not only made delicious eating, but that they were extremely healthful, as a result of offering quick energy. Comparative tests proved them to be lower in calories, higher in protein, richer in iron and higher in calcium than most prepared snack foods.

In fact, comparisons made by a leading food laboratory pointed out that the "Sesa-Teez" brand of sesame chips contained more than four times the iron, six times the calcium and twice the protein of any other prepared snack. These figures served as the basis for advertising themes that the "Sesa-Teez" brand of sesame chips, which contain over 25 percent toasted sesame seed, were an "open sesame to extra energy" and that they were a "bonus to weight watchers".

Because Mr. Kraft's Sesame Chips were regarded as a "natural" supplementary-sale item for their regular line of potato chips and other snack foods, franchise agreements were quickly entered into with several regional chippers.

The Wise Potato Chip Co., of Berwick, Pa., whose products are carried by over 1,200 trucks, quickly secured distribution of "Sesa-Teez" sesame chips in its 16-State marketing area. A substantial advertising program was launched, and plans are ready to invade the New York metropolitan market in approximately 4 weeks from the time this article appears.

Nally's, Inc. of Tacoma, Wash., a manufacturer and distributor of a large line of food products, is responsible for the distribution of "Sesa-Teez" sesame chips in the States of Washington, Oregon, Idaho and Utah.

Jack's division of Raymond's Nut Shop, Kitchener, Ontario, has "Sesa-Teez" rights for all of Canada, as well as export to British commonwealths. Their Canadian setup includes distribution through regular food channels as well as store truck delivery routes.

A number of potato chip producers are completing plans to merchandise 5-ounce bags of "Sesa-Teez" sesame chips in their marketing areas. These concerns include Guy's of Kansas City, Golden Flake of Birmingham, Famous Foods of Detroit and Blue Star of Rockford.

According to Grant Smith, sales manager for Sesa-Kraft, Inc., territories not serviced by the above-mentioned potato chip producers are open to service distributors. He pointed out that these specialized distributors and wholesalers are being offered Sesa Kraft's 5-ounce bag of sesame chips, retailing at 29 cents, as well as the 6-ounce "expresso" carton which retails for 39 cents. Their distribution of these approved-by-consumer packages, he stated, is producing quick sales volume, new plus business, and repeat profits for store struck delivery wholesalers.

"It is important to note," Mr. Smith pointed out, "that Sesa-Teez sesame chips stay fresh much longer than potato chips." The reason for this, he stated, is due to the fact that Mr. Kraft's sesame chips "Contain a rare, natural, built-in antioxident * * * and that additional antioxident has been added * * * a happy combination which keeps the contents of the bags fresh for literally weeks longer than might be expected of many processed snack foods." He indicated that this stay-fresh-longer advantage represents a tremendous plus for service distributors who, for the most part, need only see to it that their retail outlets are regularly supplied with replacement merchandise, because any unsold bags or cartons are merely moved up to the forefront of display racks or shelves.

The new "expresso" carton used by Sesa-Kraft, Inc. (pictured in this article) [not printed in RECORD] is so called because of a new and revolutionary packaging principle, which is termed "expresso." This Swedish-developed packaging principle makes it possible to produce an air-tight and moisture-proof carton which greatly prolongs the shelf life of its sesame chip contents. It is said to be the most airtight and moistureproof carton ever developed for shelf display.

When the question is asked, "How can 'expresso' cartons be so completely air tight and moisture proof," the answer goes somewhat like this: The carton is made of 16-point board that has polyethylene laminated to its inside surface. The sealed edges are wax coated to prevent "bleeding" and to serve as an additional barrier to moisture. The carton is sealed at both ends by a combination glassine and polyethylene laminated film which is heat sealed to the inside flaps of the carton. Then, the ends are locked to prevent the film from being damaged as the carton is handled. The four-color, gloss printing is coated with varnish, a procedure that serves as an additional moisture-protective coating.

This type of packaging represents a new first in product protection. This comment is made because "expresso" construction makes the carton resistant to dampness, protects the Sesame Chips from drying out, maintains their crispness and freshness for an exceptionally long period of time.

Mead Packaging, Inc., of Atlanta, Ga., is producing the Sesa-Teez four color carton. The Mead organization also serves as the exclusive United States representative for "expresso" machines. Its engineers helped install this new-type packaging equipment in the Sesa-Teez production line.

Emmet J. Martin, former founder and executive vice president of National Distributors' Association, is serving the Sesa-Kraft organization as a marketing consultant.

The Sesa-Kraft seed processing plant is in Paris, Tex. The food plant is located at 8931 South State Street, Chicago. National sales offices are in the London Guarantee Building, Chicago, Ill.

Will E. Neal

SPEECH
OF
HON. JOSEPH W. MARTIN, JR.
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. MARTIN. Mr. Speaker, those of us who had the privilege of serving in this body with the late Dr. Will E. Neal have been saddened by the news of his death. A distinguished physician, he carried on the general practice of medicine in his home community of Huntington for more than 50 years. A deep interest in public affairs led him to stand for election as mayor of his city, an of-

fice which he held for 3 years. Further service in the West Virginia Legislature led to his first election to Congress. He served with distinction in the House for two terms. During this time his associates learned to appreciate his sterling character, his fine abilities and his devotion to the work of the House. West Virginia and the Nation have lost a fine citizen, and we, his former colleagues, have lost a good friend. I extend my deepest sympathy to his widow and family.

Gordon Canfield

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. CELLER. Mr. Speaker, I am pleased to record my affection and high regard for our distinguished colleague, Representative GORDON CANFIELD, of New Jersey. I insert the following statement which appeared in the Paterson Evening News, Paterson, N.J., Tuesday, December 15, 1959:

CANFIELD WON'T RUN FOR CONGRESS AGAIN—ENDS BRILLIANT REIGN—FOR HEALTH REASONS, HE'LL RETIRE AT CLOSE OF 1960

Representative GORDON CANFIELD, dean of the New Jersey congressional delegation and veteran of 19 congressional campaigns, today announced his intention to retire at the end of his 11th term, on January 2, 1961.

In a brief statement announcing his retirement plans, Congressman CANFIELD said today:

"I shall not run for reelection to Congress in 1960. I plan to retire at the end of my 11th term on January 2, 1961.

"While rapidly recovering from my recent illness, I must conserve my health. I will seek some association with private enterprise in the months ahead.

"One year hence I will have worked on Capitol Hill 37 years, my congressional service embracing periods of great war and severe strain.

"I have been thrilled to represent in the world's greatest free legislature one of our country's finest constituencies—Republicans, Democrats, and independents who have been very kind to me.

"In my work I have been fortunate to have a very loyal and efficient office staff headed by Walter P. Kennedy, of Paterson.

"I am very grateful to Lloyd B. Marsh, my party, all my friends and supporters. I shall continue to be an active party worker in the cause of good government."

SURGERY, THEN ILLNESS

Congressman Canfield in 1958 underwent surgery for a stomach ulcer, at the beginning of that year's election campaign. After a brief hospitalization, he returned to the hustings and carried on a vigorous campaign which won for him election to his 11th term and resumed his congressional duties.

The indispositions, however, convinced him and his family of the need to conserve his health.

FIRST ELECTED IN 1940

Congressman Canfield was elected to his first term as Republican Representative of the Eighth New Jersey Congressional District in 1940. He succeeded the late Congressman George N. Seger whom he had served as secretary for 17 years.

MADE FINE RECORD

Over the years he has forged a reputation for statesmanship and has been given wide recognition for his leadership as a parliamentarian. He has been noteworthy as a stanch supporter of programs aimed at strengthening the Nation's defense posture, a strong civil defense and an effective task force in the U.S. Treasury Department's Bureau of Narcotics and Customs Offices.

Canfield long has been an outspoken advocate of civil rights. One of his first acts was to drop into the hopper bills calling for an antilynch program and the abolition of the poll tax, on the first day of his first term in the House.

He has sponsored legislation to provide low and middle income housing and urban renewal programs and has played an important role in securing generous appropriations to provide low income housing and urban renewal projects in this district.

Legislation with a humanitarian accent has been Congressman Canfield's forte as a legislator.

Typical was his sponsorship of the Nation's first Federal Flammable Fabrics Act, introduced after a number of children lost their lives or were seriously burned by "exploding" cowboy suits. Once passed, he fought a dogged and successful campaign against industry moves to weaken this legislation.

ON HEALTH MATTERS

He was a forceful spokesman for measures affecting the health and welfare of the Nation and backed bills to provide funds for research into the dread ailments of mankind, such as cancer, mental illness, and others that baffled medical science.

Canfield often has remarked that in his early days on Capitol Hill he was "shocked to find the U.S. Government was spending more money on research into the ailments of cattle and hogs than it was for human beings." He has been credited as one of those most helpful in having this ironic situation corrected. Early after the first atomic bomb was dropped on Japan, he contacted President Truman, advocating a program of research into the uses of atomic energy in man's fight against disease.

Congressman Canfield's contributions in the war against illicit narcotics are spoken of with enthusiastic appreciation wherever narcotics fighters gather. He was successful in obtaining the first funds to permit the U.S. Bureau of Narcotics to send its agents out into foreign fields to cooperate with local police forces in halting the flow of illegal drugs into this country.

He has been given recognition by Dr. Harry J. Ansinger, U.S. commissioner of narcotics, in public statements and in various books and publications.

DEFENSE OF "THE LITTLE MAN"

As chairman during Republican control of the House and as ranking majority member under Democratic control, of the House subcommittee on Treasury-Post Office appropriations, Canfield has been a leader in the fight for improved postal service, better working conditions for postal employees. He fought a strong battle on the floor of the House during the 85th Congress and was successful in preventing drastic cuts in Post Office appropriations; cuts that would have curtailed service and would have brought the dismissal of hundreds of employees.

Through his efforts numerous families in this district have been reunited with loved ones after long separations, in concentration camps or kept apart by immigration restrictions. He has gained a reputation for championing the "little fellow." During one election campaign his political opponent attacked him as a legislator who only "did little things for little people." The charge backfired and the "little people" Canfield had helped, resentful of this attack on a man they esteemed, came storming to the polls to return him to office by a whopping majority.

The security of the Nation, the well being of the men and women under arms have been another of Canfield's special concerns.

HIS TRIPS ABROAD

In 1946, Canfield with a fellow Congressman Hugh Scott of Pennsylvania, gave up their between-sessions recess to make an incognito trip to Europe to learn firsthand how American troops were faring.

Canfield shipped as a seaman aboard a tanker carrying 470,000 barrels of high octane gasoline across the submarine-infested North Atlantic to Europe. He arrived in London during the height of the robot blitz and his was the first voice to bring to the world, via a BBC broadcast, that London itself and not merely southern England was being made the target of Hitler's buzz bombs.

In Europe he visited military installations where local servicemen were on duty and brought personal messages to them from loved ones at home boosting their morale immeasurably. Returning he carried back good news from their boys abroad to waiting and anxious parents.

In 1945 at the invitation of the then General Eisenhower he was with the first Congressional group to visit the infamous Nazi camps at Buchenwald, shortly after their liberation by General Patton's army. He was one of the first legislators to visit the Pacific Theater during World War II, and in January 1946 visited American troops in China and Japan. In 1950 when the Korean war was at its height, Canfield visited American troops on front line installations, within the range of enemy bombers and artillerymen. During his visit to servicemen stationed at Peiping he learned that inferior food was being served to American troops and took prompt official action to have this condition immediately corrected.

WARNED OF COMMUNISM

In 1946 after visiting Europe he returned to sound the alarm that "communism is on the march in Europe." He was among the first to sense this rising threat and was attacked by numerous well meaning individuals and some newspapers for what they considered "warmongering." Later events proved him right, as they did again in 1958.

It was that year, Congressman CANFIELD stood alone in the House to vote against slashing the Nation's defense budget. He saw these cuts as endangering our missile research programs and declared them to be dangerous for the Nation's security.

He fought unsuccessfully to stave off the slashing of the defense budget in appropriations committee hearings and fought a last-ditch action on the floor of the House. When his fellow legislators refused to listen, he stood alone, 1 against 395 Members of the House, to register his protest. Four months later Russia launched its first sputnik, simultaneously announcing to the world its superiority in the race to outer space.

FOUGHT FOR COAST GUARD

CANFIELD fought for and secured the first funds to activate the Coast Guard Reserve program, arguing that the U.S. Coast Guard is the Nation's first line of defense. For this he was dubbed the "Father of the Coast Guard Reserve," and has been honored by Coast Guard units both locally and on the national.

Two years ago he was awarded one or two citations, given by the Reserve Officers Association of the United States, for his contributions to the national defense.

He fought for Civil Defense funds and cooperated with the local CD unit (called the State's most outstanding) in obtaining equipment and funds for Civil Defense programs.

He has worked toward better conditions for the elderly through social security improvements and has backed legislation aimed at providing benefits for veterans and their families, and the handicapped.

He has been honored by being selected to serve on the boards of the military academies, the Air Force Academy, West Point, Annapolis, the Coast Guard and Merchant Marine Academies. He was appointed by House Speaker SAM RAYBURN, as a delegate for three successive years at the NATO Interparliamentary Conferences, twice in Europe and once in this country.

OFFERED HIGH POST

During the tenure of Republican JOSEPH MARTIN as Speaker of the House, CANFIELD was often called on to preside over House sessions when the Speaker was forced to be absent.

Several years ago he was offered a high executive post in the Federal Government. He declined, saying that he felt he could serve his party and country best by remaining in his congressional office.

CANFIELD was born in Salamanca, N.Y., the son of the late Carl A. and Florence Canfield. After graduating from high school he enlisted in the Signal Corps and served with the Regular Army in World War I. He worked as a newspaperman in New York State and with the Passaic Herald-News, from which he moved to become Congressman Segar's secretary. He studied law at night and completed his legal studies at National University, Washington. He is a member of the District of Columbia Bar Association.

The Paterson Congressman is married to the former Dorothy E. Greenwell, of Washington, D.C., and has two sons, Carl, a Paterson school teacher, and Allan, recent graduate of Rutgers University and first lieutenant awaiting assignment in the U.S. Army.

Douglas Gibbons Honored

EXTENSION OF REMARKS
OF
HON. JOHN V. LINDSAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. LINDSAY. Mr. Speaker, a distinguished New Yorker, Mr. Douglas Gibbons, was recently honored by the Eloy Alfaro International Foundation of the Republic of Panama, which conferred upon him a citation of honor for his philanthropic and humanitarian services in behalf of international world peace. The citation was presented to Mr. Gibbons by Lt. Gen Willis D. Crittenberger, U.S. Army (retired), on December 8, 1959. At the ceremony a personal message from Olmedo Alfaro, secretary-general of the foundation, was read.

The presentation speech was made by Dr. Herman Bayern who is the American provost of the foundation. Dr. Bayern spoke of Eloy Alfaro and of the foundation which was organized in his name. General Crittenberger conferred the Aloy Alfaro Grand Cross on Mr. Gibbons.

The award made to the Honorable Douglas Gibbons includes the motto, "Thus one goes to the stars," a most appropriate one in this case. The award reads as follows:

"Eloy Alfaro International Foundation—'thus one goes to the stars'—recognizing the special value of the services rendered by the Honorable Douglas Gibbons in support of the objectives of this institution, he has been awarded the Cross of the Eloy Alfaro International Foundation.

"In witness whereof, this diploma, with the seal of the foundation is presented in the city of Panama, Republic of Panama, on the 28th of January 1959."

Statement by Rabbi Eisendrath at Hearings of Federal Communications Commission

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. MULTER. Mr. Speaker, I am pleased to commend to the attention of our colleagues a statement by Rabbi Maurice N. Eisendrath, president of the Union of American Hebrew Congregations, before the Federal Communications Commission on December 15, 1959.

The hearings were called to adduce testimony on the state of American television and ways to improve standards.

Protestant, Catholic, and Jewish religious leaders, in addition to experts and specialists from within the broadcasting industry, appeared at the invitation of the FCC.

Rabbi Eisendrath's statement points up the fact that individuals and nations are fast losing the fundamental concepts of ethics and morality, without which none can long survive.

The statement follows:

STATEMENT TO THE FEDERAL COMMUNICATIONS COMMISSION AT HEARINGS IN WASHINGTON, D.C., BY RABBI MAURICE N. EISENDRATH, PRESIDENT, UNION OF AMERICAN HEBREW CONGREGATIONS

Mr. Chairman, ladies and gentlemen of the Commission, my name is Rabbi Maurice N. Eisendrath. I am the president of the Union of American Hebrew Congregations, the parent body of Reformed Judaism in the United States, embracing nearly 600 Reformed Jewish synagogues with a total combined membership of approximately a million persons. In my remarks here today I do not presume to speak in behalf of the members of our temples. I speak as an individual, although I will strive to reflect the concerns and anxieties which have been expressed to me increasingly by rabbis and other Jewish leaders in all parts of the United States. Neither will I presume to speak as an expert on television and on the many specialized, technical questions which fall within the purview of the FCC. I am a rabbi, a religious teacher, and I will seek to bring to bear the insights and the ethical ideals of the Judaeo-Christian heritage which ostensibly, at least, underlie our American way of life.

Permit me to express to you my profound appreciation for this opportunity to present my views to this important body. I take it that you have not invited religious leaders in order to put a sermonic froth on these hearings. I am confident that you would prefer—and my own definition of religion demands—a frank, unvarnished analysis of the situation as I see it and an equally frank set of proposals for what, in my judgment, must be done to rectify the wrongs which command our attention today. What follows then is not expert testimony but the soul-searching of a deeply troubled American who is anguished, as millions of Americans are anguished, by what we are becoming, and whither we are drifting.

In a sense it is fortunate that the television scandals have broken out. The quiz shows opened a Pandora's box in our national life and jolted a slumbering, complacent public into at least temporary attention. The question is: Where is the hope that is supposed to emerge from that legendary box at the end? Needless to say, these much-publicized quiz scandals, and now the disc jockey investigations, are mere symptoms, mere signals of a moral sickness which has pervaded the bloodstream of our national life. The Hebrew prophet Hosea, thousands of years ago, excoriated his contemporaries with words which are burning in their relevance to our Nation in its self-indulgent sleekness, depicting so prophetically and literally the plight of TV today.

"Hear the word of the Lord. For the Lord has a grievance against the people of the land. There is no fidelity. Only false swearing and lying, murder, stealing, and adultery. Bloodshed follows bloodshed. Therefore the land mourns and all that dwell in it languishes."

Where does responsibility lie for this slackness of spirit, this deterioration of the moral fabric which plagues so much of our land? We cannot isolate television and make it the scapegoat for all our national ills. We must all confess our complicity, our silence, our indifference to the truth that throughout our contemporary society men in high places and low mock at ethical standards and lie and cheat and steal in great things and small—on income tax returns, at congressional hearings and in political campaigns, as well as amid the councils of nations.

We talk of God, but the American people now worship at pagan idols of money, success, status, and comfort. We exalt individualism, but we have allowed individualism to be converted into a mean and narrow doctrine of the "survival of the slickest," "me first and the devil take the hindmost." We have prostituted the doctrine of "love thy neighbor as thyself" into the commandment "caveat emptor" (let the buyer beware). And implicit is the assumption "my neighbor is a dope."

What has happened to us? It seems to me that we have lost that sense of national purpose which, alone, can bind all Americans together through the ties of mutual responsibility. What are these national purposes today? Our greatest present goals seem negative in character—to stop the Communists, to beat them to the moon, to launch a bigger and better missile, to balance the budget. Is this the vision worthy of so historically and potentially great a nation? We seem somehow to have lost our sense of positive, dynamic mission in the world—the mission of changing the world in the direction of God's kingdom, of eliminating poverty and sickness and racism, of translating our religious principles into broad-visioned action throughout the earth, here and abroad; we have grown flabby, unwilling to make sacrifices, afraid of discipline, weary of the demands of a frightening and swiftly changing world. And so we lower our sights and our TV sets virtually scream at us the priorities of material comfort and private gain. And the only sin in securing all these mundane goals seems to be not lying, or deceiving, or demolishing a competitor, or defrauding the public—the only sin is in getting caught.

Frankly, I am less concerned about the scandals in television than I am with the fact that American television itself is a national scandal. The moral lapses of Charles Van Doren and others like him are of minor significance compared to the moral

bankruptcy of American television itself. With some noteworthy exceptions here and there, I submit that television has not been a formidable, positive force for good in American life. Too often, when the balance sheet is struck, it has been a varitable invincible factor in the widespread exploitation of crime and violence. It has glamorized patterns of behavior which are antisocial. It has contributed to the cheapening of human life and the desefisitization of the American people. It has pandered to the lowest and meanest tastes and emotions of the public. It has encouraged the American people to squander our leisure in a sodden, bleary-eyed stupor and to wallow in sticky sentimentality, sadism, callous cynicism, in violence, vileness, and vice. Again, with an admitted minimum of notable and noble exceptions—notable primarily because they have been so exceptional—it has exalted the shoddy and has beamed its message at the moron. Above all, at a time when America faces the gravest, most crucial and decisive ideological contest with a resourceful opponent, our mass media have failed to project the highest aspirations and ideals of the democratic spirit—the ideals which alone distinguish us from the totalitarian foe.

If this is a severe indictment—and it is—it is not as I have already implied, because I am unaware of the many fine efforts of high creative quality and the religious programs of significance which have appeared from time to time on each of the major networks. But I contend that the overarching evils I have recited are due to the absence of a standard which has yet to be set on the national level—a standard to which the aspiring might repair. Consider commercial television as it is presently practiced in the United States. The concern of the advertising agency and the sponsor is not thus to lift the moral and cultural standards of the public. Rather, in selling a product which, because it is not much different from the product of some competitor, no hawking, huckstering hard-sell representation—or misrepresentation is spurned to sell one's wares through exaggeration, fantastic claims, and counterclaims, through downright deception and flagrant denigration of another's product. So long as advertisers are the kings, cutting up, like so many apple pies, the airwaves which the American people have extended on public franchise to the television networks and stations, just so long will television cater to the lowest common denominator, and fill the screen with banalities which bespeak a contempt for the intelligence and integrity of the American public.

What can be done? I do not know any easy answers, but I would like to propose the following for your earnest consideration:

1. In 1951, as you know, a bill was introduced in Congress to create a national citizens' advisory board for radio and television, to be appointed by the President, to serve as a watchdog and to issue annual reports for the guidance of the President, the Congress, the FCC, and the public. Such a board, it seems to me, is urgently needed, not so much to ferret out specific abuses but to make a comprehensive survey examining the entire broadcasting system in this country. Further, it should aim at raising the cultural and educational levels of both television and radio. Its goal should be to make our broadcasting system a better vehicle of public interest than is presently the case.

2. In any such survey as I have recommended above, I would plead for a bold willingness to abandon the old and to confront the new. For example, prior to my coming to the Union of American Hebrew Congregations in 1943, I served for some 15 years as rabbi in Toronto, Canada. During that decade and a half, I derived much intellectual nourishment, as well as solid entertainment, through the programs made possible by both the Canadian Broadcasting Corp. and the private Canadian stations. While to suggest the establishment here of such a counterpart of the Canadian Broadcasting Corp. or of similar vehicles established by our sister democracies in Great Britain, France, and elsewhere would seem to some to be too drastic a departure from existing patterns, we dare not freeze our minds against the possibility that a U.S. Government-sponsored network might well be created in America to supplement our existing networks and to provide, as a public service, educational and cultural programing freed from the blight of commercials and the trauma of Trendex ratings. Shall the "Voice of America" be heard in every land but our own? Programs of quality are beamed throughout the world but, God forfend, we would call down upon our heads the shrieks of creeping socialism were we to target our own programs to our own people. We do not need to be propagandized into acceptance of our own way of life. But in creative terms, do we not deserve one network at least that we can call our own? Perhaps what the American people need, is not just a choice between tweedle-dee and tweedle-dum on channels 2, 4, or 7 or 9, but a genuine and meaningful choice made possible by the creative competition—or shall we say constructive supplementation?—of a Government network.

Of course, it will be necessary to study this possibility in all its many-faceted complexities, and it may turn out to be unfeasible or even unwise. I do not know. But I do feel strongly that we must be more adventurous in our planning and vaster in our vision than we have been thus far. Divested of all vested interest, we should consider seriously all means, including public subsidies, pay-as-you-go television—any and all proposals which might make good-quality programs consistently available to the public, by night as well as by day. May I say parenthetically I deem Government subsidies to playwrights, poets, and producers as valid as to pigs.

3. And, lastly, I would like to submit, with all due deference, that the Federal Communications Commission has started late to discharge the high responsibility entrusted to it by the U.S. Congress. It seems to me that the FCC has not been nearly vigorous enough in exerting the substantial powers already vested in it. At the very least, the FCC should make broadcasters responsible for what they broadcast and no longer permit them to hand over control to sponsors, producers, and advertising agencies. The FCC should insist that networks sell their programs on their merit and not, as is presently done, through forcing purchase of an entire block of programs in order to secure the one they want. The FCC should enforce the rules and standards set down in its own codes and regulations and should compel stations and networks to allocate their time to public service, religious programing, and other worthwhile facets of American life. And if the codes cannot effect these things, then let us strengthen them. Charles Van Doren has been pilloried and discharged for what happened on television. Many diskjockeys are now being burned in the oil of witch-hunting publicity. But has the FCC refused to renew the licenses of television stations which by sins of omission, if not commission, by negligence if not by complicity, have been at least equally culpable; stations which have been guilty of breach of contract by slipping 4 or 5 commercials into a single station break, which have filled the screen with bang-bang, pistol-packing, shoot-em up westerns? And might I ask further, has a single cent of advertising been refused from those who, wittingly or unwittingly, have perverted public idols and disillusioned a whole generation of youngsters, youngsters perverted not so much by Van Doren nor by payola-plagued diskjockeys, as by this whole miasma of what Walter Lippmann recently and rightly called the "prostitution of merchandising" which is dispatching our youth on to the skiddy road to juvenile delinquency? Regulation is not a panacea. But surely some stronger Federal regulation is now urgently required to save television from itself, to restore the public interest and to redeem American morality and morale. I congratulate you, ladies and gentlemen, that moves are now being made in this direction.

At the risk of abusing your gracious invitation to testify, I must confess, however, that I was not impressed with the statement that the FCC must avoid control of television programing because that would mean censorship and that would interfere with the constitutional protections of free speech. I, too, despise censorship, and I do not believe that those religious organizations which advocate censorship are serving us well. Yet, the truth is that we already have censorship in television—harsh, rigorous, and destructive. It is the censorship of the dollar, unchecked by the public interest. It is the censorship of supercautiousness and timidity which, because of this dollar dictatorship, stifles most controversial social ideas. We must be as troubled about what does not appear on the screen as about what does. Just last week it was revealed that Playhouse 90 had canceled a dramatic program about the Warsaw ghetto because the sponsor felt the subject was too depressing. In this same manner the whole question of Negro rights and race relations has been virtually blacked out in our national dramatic programs for fear of offending one geographical section in our country. It is the censorship of blandness which has sullied over the sharp and rebellious spirit which was once the quintessence of American genius. It is the censorship of vested commercial interests whose motif is: Thou shalt not offend a single viewer, because even the lowliest and the dullest can buy our toothpaste or our deodorant.

4. In utter frankness, and in the spirit of indignation which I believe is shared by millions of Amercans of all faiths, I have been sharply critical—of the networks, the advertisers, and the Federal Communications Commission. In fairness, I must not exclude myself from this indictment. Religious organizations must share in the general blame and guilt. Religious bodies have contented themselves too long with a negative and carping role, too often giving aid and comfort to those who believe censorship is the only solution. We have not sufficiently encouraged the good and creative programing of some brave producers. We have not been imaginative enough nor sufficiently generous with our admittedly limited funds in our own radio and television programing. We have not come forward with our own constructive ideas and suggestions about what should be done. We have not transcended what divides us to unite in beaming our common spiritual values to those who hunger for moral guidance. It should be a part of our high calling as religionists, of all faiths, to summon the moral stamina which will help the American people to put its own house in order—and to make the television screen worthy of a place of honor and dignity in that house.

In this task of making our broadcasting system and the magic of our mass media worthy of the best in ourselves, we—all of us—have work to do. Clucking over the salacious scandals and savoring the details of the onrushing drama of muckraking—these are human tendencies. But there is a great work that waits to be done. An ancient rabbi once said: "It is not incumbent

upon us to complete the task. But neither are we free to desist from it."

I thank you most sincerely for this opportunity to speak on matters which have long concerned and disturbed me and my coreligionists, as well as my fellows of all faiths.

Award of the Eloy Alfaro International Foundation to Gen. Anthony C. McAuliffe, U.S. Army, Retired, Now Vice President of the American Cyanamid Co.

EXTENSION OF REMARKS
OF
HON. JOHN V. LINDSAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. LINDSAY. Mr. Speaker, under leave to extend my remarks, I insert some of the proceedings of the award to Gen. Anthony C. McAuliffe of the Eloy Alfaro Grand Cross and Diploma by Lt. Gen. Willis D. Crittenberger, U.S. Army, retired, and Dr. Herman A. Bayern, American provost. This honor was conferred on General McAuliffe, who resides in my congressional district, in recognition of his many contributions to the common good, both in war and peace, and more particularly for his unselfish services to the public, especially his leadership in the domain of civil defense. Gov. Nelson A. Rockefeller appointed him to be chairman of the New York State Civil Defense Commission.

General McAuliffe has heretofore been awarded the Distinguished Service Cross, Distinguished Service Medal, with Oak Leaf Cluster, Silver Star, Legion of Merit, Bronze Star Medal with Oak Leaf Cluster, and two Presidential Citations. His foreign decorations include the British Distinguished Service Order, with Bar; the French Legion of Honor, and Croix de Guerre; the Belgian Order of Leopold, Croix de Guerre, and Fourragere; and the Dutch Order of William and Order of the Golden Lion.

This award was made at Squadron A Armory, New York City, on Thursday evening, February 22, 1959, by the representatives of the Eloy Alfaro International Foundation, Messrs. Crittenberger, Bayern, and Laurie. The presentation speech was made by Dr. Herman Bayern, American provost, who described Gen. Eloy Alfaro as the Abraham Lincoln of Latin America.

The award made to General McAuliffe includes the motto, "Thus one goes to the stars," a most appropriate one in this case. The award read as follows:

Eloy Alfaro International Foundation—"Thus one goes to the stars"—recognizing the special value of the services rendered by Gen. Anthony C. McAuliffe in support of the objectives of this institution, he has been awarded the Cross of the Eloy Alfaro International Foundation. In witness whereof, this diploma with the seal of the foundation is presented in the city of Panama, Republic of Panama, on the 26th of June 1959.

American Merchant Marine May Vanish

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 13, 1960

Mr. ROONEY. Mr. Speaker, under the permission heretofore granted by unanimous consent of the House, I include the following statement issued yesterday by Joseph Curran and Paul Hall, cochairmen, seafarers' section, Maritime Trades Department, AFL–CIO:

RESOLUTIONS FOR THE NEW YEAR

As the sixties begin, we look back and realize that if there is a continuation of the fifties, the American-flag merchant marine will vanish long before the sixties end.

There are many things that are needed that will prevent the continuing disappearance of our merchant marine. We offer the following as New Year's resolutions for anyone interested in the future of our merchant marine:

Carrying out of the 1936 Merchant Marine Act which states that a "substantial portion" of our waterborne import-export commerce will be carried in American-flag ships.

Establish a long-range ship replacement program for private U.S. shipyards designed to prevent block obsolescence of our merchant marine and to retain skilled workers in our private shipyards in conformity with the intent of the Merchant Marine Act of 1936.

Proper administration of Public Law 664 so that our ships carry at least 50 percent and up to 100 percent of our Government-generated cargoes. Push legislation that would eliminate all ships from participating in the carriage of this cargo that are not U.S.-flag or the flagships of the recipient nation.

Eliminate the so-called effective control concept which is the instrument of long-range destruction of the American-flag merchant marine.

Proper administration of present laws and where necessary, enact new legislation to prevent the transferring of American-flag ships to foreign flags and to bring under the American flag those flag ships owned by Americans.

Curtail the Military Sea Transportation Service's maintaining a merchant marine in competition with our privately owned and operated merchant marine.

Continue the operating and construction subsidy provisions contained in the Merchant Marine Act of 1936 in order to enable our American merchant marine to compete effectively with low-wage foreign competitors.

Improve and coordinate the Government methods of studying and acting on maritime problems with the goal of acvhieving a continuity of long-range maritime policy.

Initiate a program specifically designed to realize at least 50 percent of our ore and oil imports in U.S.-flag ships.

Establish a program that will rehabilitate our coastal and intercoastal shipping.

Enactment of legislation that will promote the American-flag merchant marine and our foreign commerce through the adoption of a single-rate system.

Amend the 1936 Merchant Marine Act so as to prevent any company from receiving aid from the U.S. Government that has foreign flag affiliations.

Establish a program to assist our U.S. flag tramp fleet.

Establish an adequate public relations program operated by the Maritime Administration to sponsor the American merchant marine.

Define through legisaltion the specific authority and responsibilities of the Federal Maritime Board and Maritime Administration under present legislation, and make the Federal Maritime Board and Maritime Administration direct arms of Congress thereby removing these functions from the Department of Commerce.

Cuban Land Reform?

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 13, 1960

Mr. FASCELL. Mr. Speaker, there has been much discussion in this Chamber and throughout the world concerning the Cuban revolutionary regime of Dr. Fidel Castro, now entering its second year. Attention has been drawn particularly to the regime's agrarian land reform policies and programs.

In an editorial January 7, 1960, the Key West Citizen, publishing in the city of Key West, Fla., comented on the observations of Wolf Ladejinsky, a leading expert on land reform. Mr. Ladejinsky responded to a request of our colleague, CHARLES O. PORTER, of Oregon, to comment on the Cuban land reform law. A former U.S. official, Mr. Ladejinsky presently is chief economic adviser to the Premier of South Vietnam.

According to the editorial, Mr. Ladejinsky views the Cuban land reform program as not well conceived and capable of doing harm rather than good.

I wish to insert in the RECORD this complete editorial, which I believe deserves the attention of this body:

ADVICE FOR CASTRO

Premier Fidel Castro of Cuba is not a man to seek outside advice. Most especially, he is not a man to seek advice from citizens of the United States. This country has become his whipping boy, a convenient object of blame for the troubles that beset his regime after a year in power.

Castro and his associates would do well, however, to pay close attention to the comments of Wolf Ladejinsky on the present Cuban land reform law. Ladejinsky, a former U.S. official, now chief economic adviser to the Premier of South Vietnam, is a leading expert on land reform. In his view, solicited by Representative CHARLES O. PORTER, of Oregon, the Cuban law is not well conceived and may do harm rather than good.

Ladejinsky notes especially that he does not believe the helter-skelter distribution of well-managed sugar estates will redound to the benefit of the peasantry and the state. He thinks that unless really effective land reform is undertaken by Cuba's leaders they will harvest political, social, and economic chaos. Castro ought to heed this wise counsel, whether or not he acknowledges it.

Let's Bring Social Security Up to Date

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 12, 1960

Mr. PORTER. Mr. Speaker, statistics tell us that 8.8 percent of our national population will be over 65 years of age this year. That percentage means 15,805,000 men and women.

In my State of Oregon the percentage of the population over 65 will be 9.2. Of a total of 1,863,000 persons, 172,000 will have passed their 65th birthdays.

These cold statistics concern human beings who have given generously and warmly of themselves. They have fought for democracy. They have helped pull our Nation from the depths of depression. They have unstintingly paid for improvements for all of us.

They have done more than their share. What have we done for them?

It is too easy to condemn the older citizen for not having saved enough money to retire. Well, how many of us have enough money to retire?

We forget that costs have jumped higher and higher. The adequate pension of the thirties and forties is hopelessly inadequate in the sixties, just as it was in the fifties. How much can the woman retiree at age 62 who receives $26.40 buy? How much can the man receiving the minimum retirement of $33 at age 65 purchase?

These questions should not have to be asked.

I believe there are inequities in the present social security laws. These laws are important and complex. It is vital that the system be operated on a sound and fair basis. The system must be under constant study. Here are some changes I believe should be made:

First. Elimination of minimum age for persons receiving disability insurance.

Second. End of discrimination in hiring and paying of persons because of age.

Third. Enactment of the Self-Employed Individuals Retirement Act of 1959 which passed the House March 16, 1959, and is now pending in the Senate.

Fourth. Removal of restrictions as to the amount of outside earnings a person receiving social security may have.

Fifth. Passage of the Forand bill for hospitalization for retirees.

Sixth. Increase in minimum social security payments at ages 65 and 62 which now are inadequate.

Seventh. Reexamination of the payment system under social security, bringing it up to date to meet current costs.

Throughout the country citizen groups are organizing to help improve existing conditions. In Oregon there are at least two such organizations.

I have never endorsed the program of any particular group. I do believe citizen groups can help point up inequities and can help the Congress write better legislation. I favor any steps through which citizens can inform themselves more fully and organize for political action.

I am concerned, however, when I receive letters such as was written to me last month by a constituent in Mapleton, Oreg. To set the record in order I am, under leave to extend my remarks in the RECORD, placing in the Appendix the communication from Mrs. Laura Atterberry, State secretary for the Social Security Clubs of Oregon, Inc., along with my reply to Mrs. Atterberry.

Changes in the existing law are needed. I am hopeful the Congress will be able to start making them this session.

The letters follow:

SOCIAL SECURITY CLUBS OF OREGON, INC.,
Mapleton, Oreg., December 14, 1959.

Hon. CHARLES PORTER.

DEAR SIR: The United Social Security, Inc., are going over the State showing letters supposedly written by yourself, WAYNE MORSE, and RICHARD NEUBERGER, endorsing their program to those who have a great deal of respect for your views.

——— ——— is now working the Florence area with copies of these letters, saying the original is with the president, Grover Slayter, at 1185 Chambers Street, in Eugene, Oreg.

We of the Social Security Clubs of Oregon, Inc., would like to know if you endorsed their program for $150 a month at age 62 and gave them permission to use it as they are really making money off our elderly people by getting them to join up at $10 a year membership for the first year, dues are not yet set for 1960, but their bill according to the letters are to get real consideration from our Oregon lawmakers in 1960.

——— ——— told, and we have it in writing also, an agent selling memberships receive $4 for from 1 to 10 memberships in a week, from 10 to 20, $4.50 each, and from 20 on they receive $5 each, ——— ——— told sold over 600 memberships in the month of November, we know the older people join because of the letters shown them as well as they are supposed to have a Washington, D.C., office.

Our organization, the Social Security Clubs of Oregon, Inc., would like to know if they have such letters from our Oregon lawmakers or if they have the right to use your good name among our voters to rob our old folks of $10 they cannot afford. Would you send me an article with your written permission to have it published in the Register-Guard and Siuslaw Oar on this matter.

Mr. PORTER, please have this stopped if untrue, for your sake and that of our elderly people, we need a more adequate social security, but not at the expense of our people who need every dime they now receive. I have worked with trying to get better benefits for our aged people for several years. I've yet to receive a dime for my services, our dues are $2 a year and we do not show letters from important people to receive the several hundred members we do have.

The United Social Security, Inc., is advertised as a nonprofit organization but the president gets a wage and each agent receives his commission, is that nonprofit? Please let me hear from you on this matter.

Respectfully yours,
LAURA ATTERBERRY,
State Secretary for Social Security Clubs of Oregon, Inc.

JANUARY 13, 1960.

Mrs. LAURA ATTERBERRY,
State Secretary, Social Security Clubs of Oregon, Inc., Mapleton, Oreg.

DEAR MRS. ATTERBERRY: Thank you for your recent letter relative to the United Social Security, Inc.

I have talked with members of the Social Security Clubs of America, Inc., and with members of the United Social Security Organization, Inc., which I believe you referred to in your letter. As you know, I am doing all within my power to correct existing inequities in the social security laws.

These laws are important and complex. It is vital that the system be operated on a sound and fair basis. It must be under constant study. Here are changes I believe should be made:

1. Elimination of minimum age for persons receiving disability insurance.
2. End of discrimination in hiring and paying of persons because of age.
3. Enactment of my Self-Employed Individuals Retirement Act of 1959, which passed the House March 16, 1959.
4. Removal of restrictions as to amount of outside earnings a person receiving social security may have.
5. Passage of the Forand bill for hospitalization for retirees.
6. Increase in minimum social security payments at ages 65 and 62, which now are inadequate.
7. Reexamination of the payment system under social security, bringing it up to date to meet current costs.

You mention in your letter that a campaign is underway to sell memberships in one organization and that my name is being used to endorse the program of this group. I have never endorsed the program of any particular group.

Citizen groups can help point up inequities and can help the Congress write better legislation. I favor any steps through which citizens can inform themselves more fully and organize for political action. Please let me know whenever I can be of any assistance.

Sincerely,
CHARLES O. PORTER,
Member of Congress.

The Late Thomas A. Jenkins

SPEECH
OF
HON. J. EDGAR CHENOWETH
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. CHENOWETH. Mr. Speaker, I was greatly saddened when I learned of the passing of our former colleague, the Honorable Thomas A. Jenkins, of Ohio. I knew that he had been ill and that his passing was not unexpected. However, we are never ready for news of this kind.

I first met Tom Jenkins when I came to this House in the 77th Congress. At that time he was looked upon as one of the outstanding leaders of the House, due to his long and brilliant service. I came to rely upon him for advice and counsel and always found him anxious to be of any help possible.

He had a brother who had formerly lived in Colorado, and who served as manager of the chamber of commerce in Pueblo, which is in my district. He was always interested in Colorado and matters affecting our State.

Tom Jenkins was a real friend and I shall cherish happy memories of our association together in Congress. I had the highest respect and admiration for his character and ability. He was a

genial person and I have greatly missed his presence with us.

I consider Tom Jenkins one of the most distinguished Americans it has been my pleasure to meet. It was a real privilege to serve with him in the House. His passing is an irreparable loss to all of us.

I extend my sincere sympathy to Mrs. Jenkins, the sister, and the other members of the family.

Dr. Edward Teller, Father of the H-Bomb, To Teach at the University of California

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. GEORGE P. MILLER. Mr. Speaker, Dr. Edward Teller, father of the H-bomb, is a dynamic individual who gets things done.

I commend to my colleagues for reading an article that appeared in the San Francisco Examiner on January 10, 1960. I wish there were more people who had the courage that Dr. Teller exhibits.

The article follows:

DR. TELLER TO TEACH "SIMPLE" PHYSICS AT UC

Dr. Edward Teller, father of the H-bomb, will teach a freshman course in physics at the University of California next semester in an attempt to present complex scientific developments so simply they will be understood by the "man on the street."

Teller, director of UC's radiation laboratory at Livermore, is stepping down from his pinnacle of advanced nuclear research to teach in a science kindergarten because he is convinced there is a great need, he said yesterday.

OWN ADVICE

"I have talked a lot about what we should be doing, and finally, I made up my mind to take my own advice—that is, to interest more of our young people in a thorough look at science," Teller explained.

"In this technological age, the man on the street regards science as something mysterious and the scientist as something of a magician.

"Important decisions with technical aspects are being made by people who are uninformed—by politicians who are uninformed and who sometimes don't even listen intelligently to scientific advice."

Teller plans to make his course so elementary that "even persons who have not had high school physics can take it," he said.

RAPS SCHOOLS

His announcement was made in connection with remarks on teaching methods in scientific fields. Summed up, he said, educators are producing bookkeepers, not mathematicians in American secondary schools and colleges.

"That youngsters should be required to do examples quickly under pressure is not mathematics," Teller declared. "Elimination of all numerical errors is not mathematics either. That is why I say that instead of making mathematicians we're making bookkeepers."

DEEP CONCERN

The square-shouldered, Hungarian-born scientist repeated his deep concern about the ignorance of Americans in the fields of science, mathematics, and foreign languages.

"We have very terrible shortcomings in these fields," Doctor Teller declared, in an interview in his home near the Berkeley campus, "and there could be very sad consequences."

"There is good evidence," he added, "that in Russia books on math and science outsell such books throughout the rest of the world. It's been an important part of their plan from the beginning. We're up against very tough competition."

He observed that American education is troubled by the inability of the many math and science teachers to kindle a spark of interest in students.

Too often, he said, they are content just to assign boring exercises. Many textbooks, he pointed out, are guilty on the same score. He criticized much of the homework given students as being designed just to keep them busy.

One way to expose more students to truly inspired teachers, Doctor Teller said, is through educational television. He called this a "powerful tool" by which one outstanding teacher can instruct hundreds of children at one time.

Thomas A. Jenkins

SPEECH
OF
HON. JOSEPH W. MARTIN, JR.
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. MARTIN. Mr. Speaker, an intimate association of more than a third of a century ended last month with the death of the late Congressman THOMAS A. JENKINS, of Ohio. We entered the House at the same time, the beginning of the 69th Congress after being first elected on the same day in November 1924. During the 34 years of his service, TOM JENKINS became one of my closest and most beloved friends. He was a man who possessed great talents, yet never lost the common touch.

TOM JENKINS came up the hard way. As a boy, he worked in his neighborhood coal mines to earn money for an education in college and law school. He understood the problems of the ordinary citizen and was ever mindful of their needs. His schooling for the public service was obtained as prosecuting attorney and as a State senator before being elected to the House. During his long service in this body, I watched his progress up the ladder of experience. He became a high ranking member of the great Ways and Means Committee and in the latter part of his service, I was glad to select him for service on the Joint Committee on Atomic Energy.

He was a plain man. He cared little for the tinsel of social life. The completeness with which he devoted himself to his work for his constituency, the State of Ohio and the Nation was an inspiration to many of the younger Members of the House.

A great public servant has gone to his reward. To his beloved wife and his sister, I extend my deepest sympathy.

The Suez Canal and the World Bank

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 13, 1960

Mr. FASCELL. Mr. Speaker, in this, a year in which many critical issues face the Congress of the United States and in which there will be less time than usual for consideration, there exists a danger that many important questions will not get the attention they deserve.

One such important question deals with the $56 million loan recently granted the United Arab Republic by the World Bank. The money was sought for the widening and deepening of the Suez Canal, and was granted despite the UAR's flagrant disregard of the Constantinople Convention of 1888 and other agreements whose purposes are to guarantee freedom of use of the waterway to the vessels of all nations.

There is widespread concern in the Nation today over this loan and the State Department's favorable attitude to it. There is concern because the State Department's posture in this matter seems to contradict the February 20, 1957, statement of President Eisenhower which said that if Egypt violates the U.N. armistice agreement or other international obligations, "this should be dealt with firmly by the society of nations."

The fact today is that Egypt will not allow passage of Israeli shipping through the canal. And, in return for its illegal blockade, the UAR receives $56 million from an international lending agency in which the United States is one-third owner.

Now, we all are aware that the Government of the United States has no direct relationship with the World Bank. U.S. participation in the Bank was authorized by the Congress and the United States holds about one-third of the stock; but the Bank is an independent institution, and there really is nothing the Congress can do with regard to the granting, or refusal of a loan.

At the same time, however, it would have been possible for the Eisenhower administration to make a realistic appraisal of the implications of an attitude favorable to the loan. The State Department has defended its attitude by saying that to inject noneconomical considerations into the World Bank's assessment of credit worthiness of an applicant would endanger the Bank's integrity.

This is a debatable proposition. However, I cannot help but believe that many people in the world find it difficult to square the United States announced

position of upholding the principle of freedom of transit through the Suez Canal with a position of no resistance to a loan of this size made to the nation that restricts freedom of passage.

Startling Example of Mail Subsidy

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 12, 1960

Mr. PORTER. Mr. Speaker, I believe the Congress must look to areas where postal deficiencies occur if it is to curb the postal deficit now before it.

I am now preparing a bill which would increase second class mail rates. I hope to introduce the bill soon and make comment as to the reasons for the suggested increases at that time.

Meanwhile, under the leave to extend my remarks in the RECORD, I include the following editorial which appeared in the December 13, 1958, issue of Labor:

STARTLING EXAMPLE OF MAIL SUBSIDY

The huge mail subsidies which wealthy magazine and daily newspaper publishers get from the Government are illustrated by a news report. It says that the weekly Life magazine, one of the immensely profitable Luce publications, may have to pay $1 million additional postage because it included a cook book order card in its issue of last October 20.

The report says the Post Office Department has served notice on Life that the inclusion of the card made the magazine ineligible for the low second-class postage rate for magazines and newspapers, so the issue should have paid the higher parcel post rate, which is not subsidized.

Here is just one issue of only one magazine, yet the subsidy amounts to $1 million. This would indicate that Life magazine may get as high as $52 million a year from the pockets of the taxpayers who provide the subsidy money.

Congress should consider this seriously next time postage rates come up for changes.

I asked the Post Office Department earlier to comment on the facts surrounding the October 20, 1958, issue of Life magazine for the mailing of which the Post Office Department is claiming from the publisher approximately $1 million in additional postage.

The January 29, 1959, reply from the Department's General Counsel, Mr. Herbert B. Warburton, follows:

POST OFFICE DEPARTMENT,
Washington, D.C., January 28, 1959.

Hon. CHARLES O. PORTER,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN PORTER: The Postmaster General has asked me to respond to your communication of January 9, 1959, in which you ask to be notified of the facts surrounding the October 20, 1958, issue of Life magazine for the mailing of which the Post Office Department is claiming from the publisher approximately $1 million in additional postage.

Life magazine, of course, is entered as second-class mail. Under the provisions of 39 U.S.C. 225, all matter of the second class can be examined at the office of mailing to determine whether it contains matter which is subject to a higher rate of postage If such matter is found, then the entire mailing is charged the rate of postage applicable to the improperly enclosed matter. The same law, however, provides that this particular provision is not to be construed as prohibiting the insertion in second-class periodicals of advertisements which are attached permanently to the issue in which they appear. The October 20, 1958, issue of Life magazine contained an advertising card offering for sale a cookbook published by Life magazine. This card did not meet the regulations of the Department in that it failed to be paged with the other pages of the issue. The Postal Manual, 132.49, provides that page numbers are not required in periodicals, but when numbers are not carried on pages of advertisements and the other pages carry numbers, whole numbers in sequence must be allowed for the pages of advertisements. In this particular case, the card was considered to be a page and did not comply with this regulation.

The matter is still pending before the Department. The attorney for the publisher has challenged the right of the Department to issue this regulation. The entire legal question is before this office for solution.

As requested by you, the clipping accompanying your communication is returned herewith.

Sincerely yours,
HERBERT B. WARBURTON,
General Counsel.

Anti-Semitism—Prank or Plan

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 13, 1960

Mr. FASCELL. Mr. Speaker, I take this opportunity to add my voice to the ever-mounting chorus of protest to the widespread and deplorable acts of anti-Semitism and/or vandalism which have sickened responsible people throughout the world.

Since the Christmas Eve desecration of the Synagogue of Cologne, Germany, the world has been witness to a series of actions which has touched the shores of this Nation and penetrated to the District of Columbia, the seat of freedom and democracy in the world today.

Some of our colleagues already have risen in this Chamber to lend official volume to the sickness at heart we all feel at these actions which deny the existence of morality.

On Friday, January 8, 1960, there were reports in the Miami Herald, Miami, Fla., and in the Washington, D.C., Daily News concerning acts of vandalism and of anti-Semitic natures. In Miami, Tampa, and Jacksonville, Fla., 14 painted Nazi swastikas were found; and in Miami 2 bomb threats were made against a synagogue. Four swastikas were splotched crudely on the same Jacksonville synagogue that was damaged by a bomb blast in April 1958.

In Washington, swastikas were smeared on the walls of two buildings in the Northwest section.

Now, it is not for me to say which of these despicable actions were planned to harass and deprecate, and which were acts of vandalism motivated by widespread publicity given preceding incidents.

However, it is for me and for all my distinguished colleagues to take note of these happenings, to protest against them and to explore thoroughly the problems they create with an eye toward answering the question, "What can be done about it?"

Address at Graduation Exercises of the U.S. Coast Guard by Fred C. Scribner, Jr., Under Secretary of the Treasury

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 13, 1960

Mr. CANFIELD. Mr. Speaker, I am very proud of the U.S. Coast Guard and Reserve and I desire to call to the attention of my colleagues in the House an address made by Mr. Fred C. Scribner, Jr., Under Secretary of the Treasury, at the graduating exercises of the U.S. Coast Guard Officer Candidate Class No. 3–59, at the Reserve Training Center, Yorktown, Va., on December 18, 1959. Mr. Scribner's remarks are most interesting and informative and they pertain to a service of which every American must be proud.

The address follows:

For personal as well as official reasons, I am grateful to you for your invitation and the privilege of participating in these exercises.

The presence of members of the Treasury Department on this program emphasizes once more the importance of your service and its training programs in Treasury tradition and operations.

The Treasury Department, of which we are all a part, has been quite properly described as responsible for more varied and diversified activities of major importance than any other governmental department in this or any other country.

As you are well aware, we collect the revenue. This means the collection of income taxes from more than 60 million Americans, as well as the collection of excise, employment, estate and gift taxes. Last year Federal taxes paid into the Treasury totaled nearly $80 billion. Through the Customs Service we grant clearance to all persons and commodity shipments entering the United States. In 1958 more than 150 million people, a record number, were cleared through Customs. We have the duty and the heavy responsibility of managing the public debt, which now stands at approximately $290 billion. Formulating and executing policies and programs in the international financial and monetary field is a Treasury function.

The Secret Service guards and protects the President of the United States and his family, and the Vice President, one of our most responsible duties. We operate the mint, the Bureau of Engraving and Printing, which prints all paper money and major items of a financial character issued by the United States, issue the checks for payment of Government bills, and keep the accounts of the United States. We do our best to

prevent the use and distribution of narcotics, we search out and prosecute counterfeiters, and carry out hundreds of other functions.

Through your Service we have responsibility for the enforcement of maritime laws and the provision of marine safety. The Coast Guard, from its earliest days, has been a strong enforcement arm of the Treasury which each of you now serves.

The Revenue Marine Service was authorized by the First Congress at the urging of the first Secretary of the Treasury, Alexander Hamilton, whose bicentennial we celebrated just a few months ago. That Service was essential in 1790 to guarantee the solvency of the new Nation by the prevention of tax evasion through smuggling. The Marine Service, with 10 cutters, the largest with a length of 50 feet and a beam of 17½ feet, did its job well. Ever since then the Coast Guard has been called upon to do difficult and essential tasks. It always responds.

Many changes have come to this Service since its first vessel slipped into the water, nearly 170 years ago. With admirable skill, this organization has met and adjusted to the changes that have come its way.

This Service has grown and remained vital because, through the foresight of its officers and those responsible for its course, it has, to a remarkable degree, kept pace with the needs and demands of those who travel by sea and in the air. It has adopted quickly those scientific developments which would enable it to function more effectively. From sail to steam, from wood to steel, from shore patrol and rowboat to radar and helicopter, from the sea to the air, you have rapidly and effectively adopted progressive changes which have kept the Coast Guard in the forefront of this country's military and service forces.

A vessel of the Lighthouse Service was the first service ship to use wireless. A revenue cutter, the *Grant*, was the first U.S. ship to employ wireless for tactical purposes. Radar was quickly and effectively adopted by the Service at the earliest possible date.

You played a permanent part in the development of the famous electronic system known as loran or "long-range aid to navigation," born shortly before our entry into World War II. Loran was of inestimable value in that effort. It now provides essential peacetime navigation assistance. The Coast Guard operates 59 loran stations in key spots around the world, with several additional stations due to become operational this year.

Since the undeclared war with France in 1798 through the hostilities in Korea, the Coast Guard has been an important part of the country's fighting forces. Vessels and men of your Service have written distinguished records wherever they have been called upon for combat duty. During the First World War, the Coast Guard suffered the greatest loss in proportion to numerical strength of any of the armed services. In World War II the Coast Guard participated in every amphibious operation by our military forces.

Equally great is your record of service to humanity in times of peace.

In the coastal areas of our country—yes, in all sections of our Nation—when disaster strikes, our people think at once of the United States Coast Guard and you are there promptly. You are there if the call is for a dangerous rescue far at sea. You are there when word comes that one of the hundreds of planes that daily approach our shores is in trouble and needs an escort. You are there if major floods require the rescue of marooned men, women and children. You are there when a helicopter is needed to bring a sick or injured seaman or fisherman from the sea for hospitalization. You are there when a small sailboat caught in a gust of wind dumps its amateur sailors into the sea.

One cannot live on the shores of New England and be very far from a Coast Guard Station. Your installations and men are known to us as neighbors and admired and respected as we admire and respect all who follow the sea. We know from first-hand observation your daily service to those who travel by sea and we witness your many rescue operations—some dramatic—but most unheralded and unnoted although of equal importance to those involved. Most significant of all, we know, too, that your aid does not ask the nationality or the religion of those who need your help. Perhaps more than anywhere else, the brotherhood of man is practiced at sea.

One can find no better example than the mission undertaken in April of this year by the cutter *Storis* dispatched to evacuate an injured seaman from the Russian refrigerator ship *Pischavaya Industriya* then 140 miles north of Dutch Harbor, Alaska. A successful rendezvous took place and the injured seamon was taken to Cold Bay and thence to the Elmendorf Air Force Base Hospital. This was another Coast Guard mission which made no inquiry concerning nationality or political belief.

You can take pride also in the world-wide service which you have rendered to others.

In the last decade the Coast Guard has assisted many foreign nations in establishing, developing and training organizations similar in purpose and scope to our own. Foreign representatives have studied at Coast Guard schools, training stations and installations and there learned new techniques and new programs to take back and put into effective use in their own lands. Vessels from your Service have been supplied to many foreign countries.

At the request of the Joint Chiefs of Staff, the Coast Guard provided officers and men to aid the government of South Korea in the creation of a Korean Coast Guard.

Last year officers of the Indonesian National Police were trained in the United States in search and rescue, port security and anti-smuggling measures. The next class at this candidate school will include three officers of the Indonesian National Police.

A Coast Guard detail served in Liberia to train native personnel in the operation of 40-foot patrol boats furnished to that country by the United States.

Assistance from this Service has gone to Portugal, Formosa, the Philippines, Thailand, Brazil, Argentina, Costa Rica, Sweden, Norway, Spain, Greece and many other countries. Inter-governmental cooperation of this type puts into active practice our President's desire to strengthen the friendly bonds between the peoples of all the world.

Not only do we of the Treasury take the utmost pride and satisfaction in the Coast Guard's contribution to this Nation both in time of peace and in days of conflict, but, in like fashion, the American people have a tremendous and deeply-felt affection and esteem for this sea-going Service. Yours is indeed a unique organization—a military organization fully functioning and in active status in peace as well as in war; a highly-specialized technically-trained Service which each day brings to the American people and to the visitors to this land the many essential services which you and you alone are trained to provide.

Now, comes this class to be graduated by the officer candidate school here at Yorktown—the first to have served here and to have benefited from this new installation put into service only a few months ago. You add your names to the roll of Coast Guard officers and will carry, for you, new responsibilities and, for us, an old tradition in the fields of service at peace and at war, at home and abroad, which I have so sketchily outlined.

We are proud of this class of officer candidates and you have every reason to share this pride.

Nearly a thousand young men asked for the privilege of membership in this small class which graduates today and presented themselves for examination. One in six was chosen. Your records of accomplishment demonstrate that those who selected this class ably performed their responsibilities. You have successfully completed a course of study and discipline which has tested and measured capacities and abilities which I am sure were not tested by the courses of study pursued in your undergraduate or service days. Your records, which have brought each of you through the vigorous competition of the last few weeks, justifies my personal confidence in the capabilities and the future achievements of those who constitute this class.

It is a rewarding privilege to have the opportunity to come for a time from civilian life to Government service. With the demands of our times, with the complexity of our present governmental institutions, the United States and its various political subdivisions will, I believe, be governed best if we can always provide a combination of dedicated, well-trained, and well-qualified career public servants, and those who for a few months or years step out of chosen fields of civilian service to make a contribution to their country through public service.

We need the strengths, the abilities, the accumulated knowledge and the continued dedication of those who in our Armed Forces and in our civil services make a career of Government service. We need, too, the new ideas, the challenge of new methods, the differing viewpoints and the enthusiasm to try the impossible brought to Government by those who for a limited period put aside civilian careers.

Those of you who are in the Reserve, by the very nature of things, cannot bring to the service some of the qualities and strengths a military service must have and which can only be provided by those officers who have decided on lifetime careers as Coast Guard regulars. You will be dependent on the knowledge, leadership and support of these men for many of the things which you may hope to accomplish. We could not operate the U.S. Coast Guard without the dedicated lifetime service of the Coast Guard regulars, several of whom are distinguished members of this class.

On the other hand, those of you who are members of the Reserve—many with an intention only to serve on active duty for a few months or a few years, through the very fact that the Coast Guard is not to be your life's work—can bring and will bring to this service a difference in perspective and a variety of experiences and points of view which will be your own unique contribution to the Coast Guard program. With a proper blending and correlation of the abilities brought to the service by both career and Reserve officers, we will have a stronger, a more vigorous, and a more responsible organization, better able to meet the challenges of the fast-moving, scientific age in which we exist.

Each year hundreds of Coast Guard officers, both Reserves and regulars, go from active duty to civilian life. They will bring to civilian life new skills and increased capacities developed in this service. They will bring to the daily interchange of civilian activities personal knowledge of the fine men and women who make the U.S. Coast Guard the equal in training, direction and service of any of the military services of this or any other nation. If they have done their tasks well and if the service has properly brought home its greatness to them, theirs will be

the privilege and opportunity to make certain that the people of the United States know and understand the significant daily contribution this service makes to the welfare of the American people.

Today, in this ceremony your country hands to you with pride the indicia of leadership each of you has earned. These visible signs of selection, however, only certify the qualities you individually brought here and which each of you must, with dedication, give to the tasks you now undertake.

We do expect far more from you than was demanded from many who served honorably in decades past. No longer is it sufficient to know and do well the daily tasks of your appointed rounds.

My generation has discovered the means whereby man can destroy himself and perhaps the very world on which we move and have our being. This Nation and other nations now hold the almost incomprehensible power developed by atomic and nuclear scientists. Like it or not, we leave this awesome heritage to you. It is for you, our leaders of tomorrow, to make certain that man's ability to live with man catches up with man's ability to destroy himself.

This calls for concern by all Americans—in service or out—with world events everywhere. We must now know and sympathetically understand not only the hopes, the urges and ambitions of our own people, but of the peoples of Asia, of Africa, yes, of the world. This is not a knowledge for someone else to acquire. This is not a problem for someone else to solve.

By your presence here you indicate some awareness of the responsibilities we face as we lead the free world. You have demonstrated a willingness to strengthen this Nation through personal service. This contribution by you, however, does not entitle you to turn away from the demands of the larger problem. It is your problem as well as my problem.

Force must be replaced as a means of settling international disputes. To meet this challenge we must be concerned with the stirrings of people who today seek for themselves the privileges they have now learned can be held and treasured by free men everywhere. We are indeed one world. We are called to the labors which this fact entails. Our people must fully realize the burdens this Nation—the leader of the free world—now carries as it strives to lead all people everywhere to the ultimate goal of lasting peace with freedom.

We can all wish this burden was not ours. Such wishing will solve no problems. It will ease no tensions. Every American shares the burden. He must be alert to developments everywhere in the world. He must, to the best of his individual abilities, do that which he can to solve the problems of this nuclear age.

It is because men of the sea have always known and understood the need to cooperate with other peoples and with other men of the sea coming from distant lands, and because in serving humanity your predecessors have not been concerned with race, creed or color but only with the needs of those in peril, that I have discussed with you this new and heavy burden which my generation is passing to you.

The problems are not easy. The solutions are not readily at hand. The way we must go is but dimly marked, but the job can and it will be done.

I voice here to you the hope which our great President so eloquently expressed in his second inaugural address. He then said:

"So we voice our hope and our belief that we can help to heal this divided world. Thus may the nations cease to live in trembling before the menace of force. Thus may the weight of fear and the weight of arms be taken from the burdened shoulders of mankind. This, nothing less, is the labor to which we are called and our strength dedicated."

Shortly, you will take the time-honored and traditional oath administered to commissioned officers of the proud Service in which you serve. You will then join the ranks of thousands of brother officers, past and present, who, coming from varied traditions with every possible background of education and experience, have stood with pride and pledged "both their lives, their fortunes and their sacred honor" to this Service and to our country.

In the months and years of your service in this vigorous, progressive, hard-hitting and closely integrated organization, we shall depend on your support and assistance in the common tasks which we shall undertake. I bring you the congratulations and best wishes of Secretary Anderson. Wherever you may serve, whatever duty you may undertake, you are officers of the U.S. Coast Guard and of the Treasury Department of the United States. May you always be worthy of the great tradition of this honored Service. Good luck and Godspeed.

Senator William Langer

SPEECH
OF
HON. QUENTIN BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 6, 1960

Mr. BURDICK. Mr. Speaker, the Nation lost a distinguished Senator and North Dakota a great champion on November 8, 1959. On that day, the State's senior Senator, WILLIAM LANGER, died in his sleep at his home in Washington at the age of 72, ending a 45-year political career.

WILLIAM LANGER, who was born on a farm near Casselton, N. Dak., on September 30, 1886, served as States attorney for Morton County between 1914 and 1916; as North Dakota attorney general between 1916 and 1920; and as Governor for two terms between 1932 and 1934 and 1936 and 1938. In 1940, he was elected to the U.S. Senate and for three terms thereafter.

In 1918, he married Miss Lydia Cady of New York, who stood by his side during his career. She died only 3 months before her husband.

WILLIAM LANGER'S name virtually became synonymous with that of the Nonpartisan League, the reform movement known as the political prairie fire. In 1916, he was the league's first successful candidate for North Dakota attorney general.

BILL LANGER, as he was affectionately known by his constituents, had a deep compassion for the underdog. Consistently, throughout his long political career, he carried the standard of the poor and the oppressed against the rich and powerful, without regard to the consequences.

The small farmer, the working man, the small businessman had no better friend.

With BILL LANGER in Washington, North Dakotans knew they had a friend at court, for he conscientiously considered the problems, no matter how trivial, of all his constituents—friends and foes.

For many, BILL LANGER'S humanitarianism is best remembered in the troubled 1930's, when as Governor, he took bold action to relieve the terrible burden that depression and drouth had brought to the people.

This vital, interesting personality will be sorely missed but dearly remembered by thousands of people.

People's Capitalism Taking Fire

EXTENSION OF REMARKS
OF
HON. ROBERT R. BARRY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 13, 1960

Mr. BARRY. Mr. Speaker, for those few who have any remaining doubts about the importance of continued worldwide public relations efforts by this Government, I invite your attention to the following speech given by Theodore S. Repplier, president of the Advertising Council and a member of President Eisenhower's Advisory Committee on the Moscow Exhibition who accompanied Vice President NIXON to the opening ceremonies. Mr. Repplier, a native of Yonkers, N.Y., spoke at the Fifth Annual Worldwide Information Service Seminar in New York City, held under the sponsorship of the Air Reserve on November 6, 1959:

ADDRESS BY THEODORE S. REPPLIER

Before focusing on the image of America, it might be useful to give a passing thought to this matter of images and their relationship to the object they are supposed to reflect.

Consider first, if you please, the common American barn owl. This bird is the accepted symbol of wisdom. He is the image of all that is wise. Every cub advertising copywriter who writes his first headline saying, "Be Wise," invariably wants to illustrate it with an owl, either in cap and gown or au naturel.

Now what is the fact about the owl? The fact is, according to ornithologists, that the owl is one of the dumbest birds who ever wore feathers. He is even stupider than the hen. Yet I will give you 20 to 1 that 50 years from now the owl will still be the symbol of wisdom.

The moral of this tale is, first, that an image is seldom a completely exact reflection of the original and may be as much as 180° wrong. And second, that an image, once well established, usually dies hard.

Take another example—the case of President Franklin D. Roosevelt. To one part of the citizenry, President Roosevelt was a saint; to another segment, he was the Old Nick himself. The same identical man, in the same relatively homogeneous country, but two utterly opposed images. Hence, when F. D. R. initiated the social security laws, to some Americans it was evidence of his humanitarianism; yet the same action, to other Americans, was an obvious manifestation of a crafty politican seeking votes.

So we have moral No. 2: actions tend to be interpreted to confirm existing prejudices. This tendency of fallible human beings is so strong that it is not at all strange that Mr. Khrushchev saw nothing in

the United States to alter by one whit his neat arrangement of Communist prejudices. Nor, for that matter, did I see anything in Soviet Russia this July that changed my own.

This makes the job of the propagandist or the information man seem pretty rough doesn't it? (Incidentally, when I use the word "propaganda," it is in its nonsinister and classical sense, meaning "to propagate" or "disseminate.")

If national images can be so wrong, and are so hard to change, and if actions so often only serve to strengthen existing prejudices, isn't information and propaganda a waste of time and money?

Yes, it certainly can be. I'm sure you will think of cases in your own experience when you yourself would say that an information campaign had been a flat failure. But contrariwise, if applied with intelligence, an information program can be a thrilling, magnificent success.

In fact, in my opinion, this is a time when anyone concerned with public information is a keyman, in a position of great leverage. For a potent idea, launched at the right time, can have an explosive force greater than a dozen H-bombs.

If you doubt it, consider that one-half the world has been set against the other half by an idea in a single book. I refer, of course, to "Das Kapital," by Karl Marx. No physical bombardment in history has ever brought about such a fantastic conquest of territory and people.

Let me now consolidate what I have said into a few ground rules for propagandists that we all know, but nonetheless occasionally forget.

(1) Don't direct your fire against the strongest entrenchments. Don't aim at those whose prejudices are deepest. If you are a Republican propagandist, for example, don't aim at the dyed-in-the-wool Democrats, or vice versa. You will have to keep at it "from hell to breakfast" to do much opinion-changing. It is like sending Christmas cards to Moslems, and may even be counterproductive.

It seems to me it makes good sense, in any public relations situation, to determine what group may be most easily won over and make a start there. You have seen this principle applied many times, and perhaps you have applied it yourselves, in encouraging GI's to care for Korean orphans, or in outfitting teams of German youngsters with sports equipment. Children seldom have the deep-rooted prejudices of their elders. Yet elders are reached by them.

(2) Never forget that actions have priority over words. This is hard for people who love words to remember, and I must constantly remind myself of its truth. Words are essential to interpret, to clarify, and to persuade, but the actions they relate to invariably speak louder.

For example, a poll among Turkish university students not long ago revealed bitter hostility to American troops quartered in their city. Yet another poll among the same university students showed the friendliest feelings toward America, the country. Why this apparent paradox?

Simply because, although the image of the land across the sea called America was a favorable one, this was in a different mental compartment from the students' feelings toward the cocky young men in khaki, who seemed to have a fortune to spend, who walked away with their girls, and who monopolized the best seats in local restaurants.

If you had the job of altering Turkish opinion in a case like this, would you start with actions or words? I think you would conclude that, if any lasting improvement in international relations was to be brought about, our GI's would have first to amend their manners. The words could follow.

Incidentally, such ambivalence toward America and Americans is not uncommon. It seems quite possible to approve of a country and dislike the people thereof simultaneously.

I recall seeing an article from Paris Match several years ago, which was widely quoted, entitled "Why Does Everyone Hate the Americans?" The article cited the usual faults attributed to us—boastfulness, immaturity, bad manners, and lack of culture, and said we were universally disliked. It got a chorus of amens from Match readers. Yet a poll conducted among Europeans at about the same time asked the question: "If you were not a citizen of your own country, what would be your next choice as your native country?" The United States came out, not at the bottom, but very close to the top.

A running poll has been conducted for several years in Europe by private researchers aimed at charting a curve of American popularity. People are asked a question which is purposely rather vague, along the lines of "Generally speaking, how would you rate the following countries—very good, good, fair, bad, very bad?" The favorable answers were given various positive ratings, and the unfavorable answers negative ratings. From these results it was possible to plot a popularity curve for America in each of the countries where the polling took place.

It is interesting to see from this curve that for the past several years American popularity has, with one brief exception, stayed well up on the positive part of the chart, while Soviet Russia's popularity in the same countries has consistently stayed down in the minus section. The one exception was at the time of the British-French invasion of Suez, when American popularity took a dive on both the British and French charts, but dipped clear down into the minus area only on the French chart. And in a month, both curves were safely back on the side of the angels. The British, by and large, like us better than do the French. But the French are the greatest individualists and nonorganization men ever created, and seldom like anything very much, including each other's political parties.

At this point, I think I should express the opinion that it is not critically important whether people overseas like us or not. It is, of course, pleasant to be liked, and psychiatrists tell us that this represents a strong emotional craving. But working over every quiver of public esteem abroad is, I think, a manifestation of our relative newness as a world leader, and is in many ways a symptom of our immaturity. This whole question of national likes and dislikes is wrapped in so many mantles of self-interest and local prejudices that it seems to me it is easy to attach too much importance to it.

What does count, however, is whether or not America is given respect. We can still be the leader of the free world team without the ardent liking of all our teammates, but we can never hold that post or wield any real authority if we are held in contempt. Fortunately, we are almost universally respected.

Now let us get on with taking a good close look at the American image as it appears overseas; and perhaps we should even emulate the Russians vis-a-vis the moon, and take a look at its backside.

What are the elements of which the American image overseas is composed? What are the factors which make us look the way we do to the Italians, the Iranians, the Indonesians and the Indians? In no two cases do we look the same; it is like a succession of distorting mirrors in an amusement park, where the original is reflected in varying degrees of grotesqueness and fantasy. What makes good, old, homely Uncle Sam appear such a caricature overseas?

Many, many things. The ingredients which shape a national image are so varied as almost to defy listing. But here, in my opinion, are some of them:

First, there is the factor of how our foreign policy of the moment goes with that of the subject country. Example: Our military aid to Pakistan pleases the Pakistanis but galls the Indians.

Second, the factor of how our policies conflict or harmonize with strong national emotions—such emotions as desperation at a vanishing empire, the fierce pride of a newly liberated people, the lust for an easier life and envy of the more fortunate, which is characteristic of the poorer countries.

Third, the effectiveness and volume of Communist propaganda, which constantly endeavors to attribute bad motives to every American action.

Fourth, the effectiveness and volume of our own American counterpropaganda—both official via the U.S. Information Agency and unofficial via Radio Free Europe and Radio Liberation.

And fifth, the cumulative effect of all of the private, strident voices of America.

All of these factors are vital, but for potency as an image maker, the last shall be first. Consider, for a moment, the impact of these private, unofficial voices of America.

First, there are the American tourists whose influence for good or ill is great. These are the only Americans many foreigners will ever see.

Second, there are the U.S. military and diplomatic personnel abroad, who, unlike the tourists, take up temporary residence in foreign nations.

Third, there are such American cultural exports—some fine, some shabby—as books, magazines, jazz music, comic books, and Coca-Cola.

Fourth, there is a day-by-day flood of American news, with the great wire services reporting and interpreting many facets of the U.S. life to the world. And since sin is news and virtue is not, our sins travel farther and faster than our virtues.

Fifth, there is the potent influence of the hundreds of American businesses who operate enterprises in every corner of the world.

And lastly, there are our American movies which daily girdle the globe and stamp an imprint on millions of minds which are not knowledgeable enough to distinguish between American fact and fiction, or between Hollywoodian fantasies and the realities of Main Street.

Scramble all of these complex and potent factors, toss in the heightened tensions of the dangerous times in which we live, and is it any wonder that the image of Uncle Sam seldom survives an ocean voyage without a sea change?

Much of the distortion of the American image we, as propagandists, can do absolutely nothing about. Nor would we want to do anything about it, since it is the nature of a democracy to speak with many voices. If it did not, it would not be a democracy for long. It is as impossible for Americans to have a party line as it is for cows to fly. This is a handicap we must accept, but it does make our propaganda job far more difficult than the Russians'. The Soviet presents one face to the world, and that face is artfully shaped and carefully made up. We present to the world a thousand faces and many of those faces—our race prejudices, our juvenile delinquency, our urban criminality, for instance—are seamed and ugly.

Anyone playing any part in information work overseas, military or civilian, must of necessity be a propagandist for America. There is no easy way that I know of to become a good one, short of the painful process of becoming really well informed about your own country.

To rebut the charges leveled against us, often Communist inspired, one must have

a knowledge of America's history, foreign policy, and our political and economic systems. This is hard work, but nothing less will give the propagandist the equipment he needs.

Yet I think it is possible to figure out the chief theme in the Communist symphony of propaganda and begin to checkmate it. It is a theme which recurs endlessly and which weaves in and out of the zigs and zags which occur after each turn of affairs for good or ill, be it Camp David or Quemoy and Matsu.

The chief Communist theme is a very simple one and is the essence of Marxism. It is that capitalism is dying and will be succeeded by communism. I should like to take the balance of my time to examine this claim, because it is the backbone of the Communist argument.

First, let us review quickly the major points in the doctrine of Karl Marx, much oversimplified.

Marx was influenced by the philosophy of Hegel (which, as he stood, he "stood on its head") and by the evolutionary theories of Charles Darwin. His teachings he regarded as the statement of scientific laws, and they are so solemnly accepted by all good Marxists.

Society, he said, is itself in a process of Darwinian evolution. Each form of society in the past, he claimed, contained two opposing forces, which he called the thesis and antithesis. These two warring forces eventually produced a synthesis, which constituted the next higher forms of human society.

Thus, he said, the early societies founded on slavery were succeeded by feudalism, and feudalism was in turn succeeded by capitalism.

Capitalism, the Marx-Engels doctrine pointed out, also contains two built-in opposing forces. These are what Marx calls the modes or means of production and the owners of production. These forces will produce a conflict which in turn results in increasing exploitation of the workers until they will finally rebel. At which point, capitalism will fall and be succeeded by communism, which in its initial stage is manifested as socialism.

Now offhand this sounds like abstract philosophy. But note one very important point, and one which I think is often overlooked. The Marxian doctrine is also moralistic. It predicts the triumph of the oppressed, the throwing off of shackles, and the victory of good over evil. Therein, in my opinion lies its enormous strength. Moralism makes for crusades and holy wars. This is why this improbable pseudoscience has the power to draw to it millions of devotees who embrace it with all the fervor of religious converts.

The Marxian case was made stronger by the fact that in Karl Marx' day and for 60 years thereafter, capitalism was indeed marked by social injustice. And American 19th century capitalism, as it developed, was no improvement. It, too, was marred by exploitation, sweatshops, child labor, and robber barons. No sensible person could deny its glaring faults.

But as the 1900's wore on there came the big change. Beginning with Teddy Roosevelt, reforms followed thick and fast. One of the most significant revolutions in history was triggered by Henry Ford, not so much because he pioneered mass production, but because he doubled wages and shortened work hours, and expounded a corporate philosophy which set a lasting pattern. The antitrust laws and the later reforms which grew out of the great recession continued the big change. What finally emerged was a form of capitalism so different from that of the Old World as to be virtually a new social invention.

Largely by happenstance, there has grown up in this continent a new kind of society which provides the ordinary man with more comforts, more freedom from want, and more opportunity to develop mentally, culturally, and spiritually than any other society in history.

And is it not irony that the country which is the most dedicated to the capitalistic system has produced the nearest thing to a classless society that the world has ever seen? No more complete contradiction of Marxism could possibly be imagined.

So in place of the bad capitalism indicted by Marx we have a complete new form of capitalism marked by social justice—truly the capitalism of the common man.

These are the facts. How should the propagandist present them?

Some people argue that the thing to do from a propaganda standpoint is to sweep the word "capitalism" under the rug. They point out, and rightly, that capitalism has acquired such a bad odor in many parts of the world that it should never be associated with the United States. In fact, many U.S. information people go to great lengths to avoid the use of the word entirely, and use such substitutes as "free enterprise" and "consumerism," which neither translate well into other languages or have any meaning at all outside the United States.

This line of thinking is, to me, astonishingly naive. Capitalism is the name of an economic system. We have this system, and there is no use pretending we do not. The world is engaged in an epic struggle between communism and capitalism, and it is childish to make believe that anything else is going on. The whole gigantic apparatus of Communist propaganda will never let the world forget it, no matter what our side might say or what semantics we use.

We will never get very far, in my opinion, until we meet this issue of communism versus capitalism head on; and—most important of all—until we stop allowing ourselves to be cast as the blackhearted villian in a morality play.

What is needed, I believe, is to make it crystal clear that a new kind of capitalism has been born in which the working man is king. Only in this way can we become the good guys instead of the bad guys.

The masses of the world, to use a Communist term, yearn for a system under which the masses will have a good life. To the extent that we can make it clear that they are more likely to find that good life under our system than under communism, we will win the idea war. To the extent to which we fail to make it clear, we will lose it.

It is essential that we use the word "capitalism." And it is essential that it be quickly apparent that it is good capitalism because it elevates the many. Semantics here are important, because the right words can save our side years of time, and we do not have years to waste.

This is why, a few years back, the Advertising Council suggested that one name for our unique economic system might be people's capitalism, thus reclaiming one of Abraham Lincoln's favorite words which the Communists have debauched. We chose this term deliberately over such alternatives as common man's capitalism and worker's capitalism because by so doing we turned one of the Communist's guns against them.

We held a round table discussion in cooperation with Yale University in which the matter was thoroughly discussed. It was pointed out in this discussion that under our system, the people themselves furnish the capital, not so much through the purchase of common stocks, as through supplying huge pools of capital via savings bonds, life insurance policies, building and loan associations, etc. And also that the people themselves are the beneficiaries of our economic growth because the benefits of this growth are widely shared.

When the term "people's capitalism" began to be widely used by Government officials and the U.S. Information Agency the whole Communist propaganda machine began to quake with alarm. No U.S. propaganda theme ever produced such a Soviet reaction. The Moscow radio and the radios of the satellite countries attacked the idea violently. The Soviet Foreign Minister said that people's capitalism was as impossible as "fried ice."

The Communists assigned their top economists to write articles in various Communist journals proving that American capitalism oppressed the workers and could not possibly benefit the mass of the people. The University of Moscow staged a learned symposium, in flattering imitation of our Yale Round Table, in which their professors rebutted the whole idea that capitalism could ever be anything but the few exploiting the many.

A whole procession of Russians was sent by the Russian Embassy in Washington to the headquarters of the U.S. Information Agency to get every scrap of dope on people's capitalism.

The Communist nervousness over this theme continues to the present day.

It is significant that when Khrushchev was in New York recently he said he could see no difference between people's capitalism and any other kind of capitalism. He could hardly say otherwise. For if Mr. K. admits that people's capitalism is an accurate description, he admits the fallacy of Marxism.

Already this idea—or at least some idea—has had such an effect that the Communists are new beginning to abandon some of their most cherished Marxian ideas. They are beginning to say that, anyway, socialism is less wasteful than our capitalism.

I hope I have made my point clear that what we have here is a morality problem. We cannot tolerate continuing to be pictured as the leaders of a system of oppression and economic slavery. We must show ourselves as we are—as the real champions of the common man, as the true revolutionaries, as the riders of the wave of the future, and as the dynamic leaders of the coming—not dying—society.

Despite our disturbing faults—from Little Rock to TV quiz shows—we have much to give the world. To the extent to which we as propagandists can make that clear we will be clarifying that distorted image of America.

The Late Will E. Neal

SPEECH

OF

HON. EDWIN B. DOOLEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 11, 1960

Mr. DOOLEY. Mr. Speaker, I express at this time my condolences to Mrs. Neal, the wife of our former colleague, Dr. Will E. Neal and to say that it was with sadness and regret that I read of his passing.

Quiet, meditative, gentle and compassionate, he typified that combination of human qualities so seldom found in one person, namely the characteristics of the statesman and the physician.

Keen of mind, sound of judgment, and rich in years, he served his constituency and his country with dedication and devotion.

I shall miss his friendly presence in the House and I shall think of him often for he was a fine gentleman who one long remembers.

Inaugural Address by the Honorable Richardson Dilworth, Mayor of Philadelphia

EXTENSION OF REMARKS
OF
HON. WILLIAM A. BARRETT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 13, 1960

Mr. BARRETT. Mr. Speaker, on January 4, 1960, in the Academy of Music, Philadelphia, Pa., I attended one of the most unique inauguration ceremonies ever held in the history of our city.

The inaugural program was flawlessly managed under the leadership of my colleague, the Honorable WILLIAM J. GREEN, Jr., who superbly carried out every minute detail to the satisfaction of the 5,000 invited guests; the president and members of the city council; the judges of the various courts; and the top officials of the city government.

Under leave to extend my remarks in the RECORD, I wish to include the inaugural address made by our wonderful mayor of Philadelphia, the Honorable Richardson Dilworth:

INAUGURAL ADDRESS

(By the Honorable Richardson Dilworth)

I would be less than human if I were not proud that the people of Philadelphia have approved our work in such unmistakable terms.

We had what the press calls an electoral triumph.

Triumphs originated, of course, with the Romans. They heaped honors on their leaders in civic holidays, but took pains to make sure that the honors were accompanied by significant reminders that fame is fleeting, power transitory, and pride and vainglory inevitable forerunners to a fall.

We still have pledges unredeemed, such as city-county consolidation. And, we can fail in our obligation to those who have trusted lose their willingness to fight for the ideals of arrogance, or of complacency.

Arrogance and complacency may take many forms.

It can be an assumption that an office, a title, or the trappings of success, have raised us above our fellow man.

It can be bureaucratic, a devotion to regulation for regulation's sake, a concern with procedures to the detriment of objectives, a belief that the self-declared expert always knows best.

It can be political, a belief that victory is a goal in itself, that a political party can be indefinitely successful, without reference to the public services it renders just because of victories given to it. We must never forget that free men and women will soon seek other leadership if those whom they elect lose their willingness to fight for the ideals they profess to cherish.

So I ask on this day, when so many of us are confirmed once more in our responsibilities, that we retain our sense of values; that we remember always that the authority vested in us is altogether by the consent of others; that we remember how and why we came to be what we are, as persons, as public servants, as active participants in the Democratic Party.

I am not so naive as to believe that the millennium is upon us, or that we are likely to become a community of saints.

But I do firmly believe that by the work we do for our city and for our processes of self-government, we can become better men and women.

Many thoughtful people are concerned these days, because they believe America is losing its sense of national purpose. They see a smoldering of the fires which brought us independence as a nation, which maintained our unity as a republic, which broke each new frontier to settle our continent.

They argue that we have lost our initiative; that we worship the god of things as they are; that we are becoming increasingly materialistic.

They compare us to the French monarchy of the early 19th century whose only advice to its people was: "Enrich yourselves."

If such a national mood exists, I believe it is a mood of the moment only. I believe it is a brief interlude that waits only for a new, vigorous, dedicated leadership which will demand sacrifice of us and greatness of action and purpose.

Here, in Philadelphia, I believe our people have a sense of purpose.

The people of this city recognized 8 years ago what many people throughout America are just now beginning to perceive. They understood that one of the greatest challenges to our democracy is the problem of the metropolitan city. The people of our city have given us a mandate to abandon the old ways; to be creative; and to work ceaselessly to solve and overcome our problems.

We know that our city's problems require something more than the standard political recipe of a little grease for the squeaking wheel, a little tinkering here, and a little fixing there.

We know that our problems are big; and that the solutions to them require big thinking, great energy, and bold action.

Our problems will merely multiply if we are satisfied with what at the moment seems to be the safe and popular way, or with what is second best.

We know that we must continue to advance, without letup, on every front in the whole range of our life here in Philadelphia.

Philadelphia was the admitted center of leadership of our Nation when it was young.

It is within our power to bring again to Philadelphia that mantle of leadership, and to demonstrate that the urban civilization upon which we have entered can bring forth the finest in our people and in our democracy.

We must believe that here we can shape the future, break new ground, and lead the way for all of urban America.

This tremendous challenge makes me most grateful for the opportunity to be the mayor of such a city as ours, in such a time as this.

The Late Honorable Richard M. Simpson

SPEECH
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. CURTIS of Missouri. Mr. Speaker, in the passing of Dick Simpson the House has lost an honest and hard-working Member and the country a statesman of vision and courage. The accomplishments of this man will not soon be forgotten nor will his leadership and the force of his personality be soon dispelled from those of us in this body who were privileged to work closely with him.

This man was well chosen to carry out his responsibility as a public servant. His recognized abilities and his strength of character elevated him to positions of leadership in his community and then in the House and the Republican Party. His loss will be felt in each of these circles within which he was looked to for guidance and inspiration.

I give my deepest sympathy to Mrs. Simpson and to the late Congressman's children. The sorrow they feel at the passing of this loved one is echoed by the entire Nation.

State of the Union

EXTENSION OF REMARKS
OF
HON. HAROLD C. OSTERTAG
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 13, 1960

Mr. OSTERTAG. Mr. Speaker, I was pleased by the President's recent state of the Union message; it was optimistic but realistic, hopeful but sound. He faced squarely the burning issues of defense, inflation, agriculture, civil rights, the emerging nations, and peace.

Many newspapers concurred in this evaluation and I would like to submit for my colleagues' attention an editorial published in the Buffalo (N.Y.) Evening News on January 8, 1960, entitled "State of the Union." The editorial follows:

STATE OF THE UNION

President Eisenhower's eighth annual state of the Union message to Congress Thursday was his next to last—and it had that "next to last" flavor all the way. It did not ask for much that was new or belabor Congress over quarrels of the past. It was the message of a President well aware that his time is running out. Yet it was not a valedictory, but a prevaledictory—an eloquent summons to Congress, to America, and to America's friends abroad to join him, in this year he has left, in getting on toward the common goal of world peace with justice.

It was an optimistic speech; indeed, how could it be otherwise? But it was not filled with pollyanna optimism. In the same breath he stated as a flat fact that "1960 promises to be the most prosperous year in our history," he noted that we continue to be afflicted by "nagging disorders"—in the realms of labor, agriculture, inflation, civil rights. And in very cautiously hailing recent "Soviet deportment" as suggesting a "somewhat less strained period" in the cold war, he warned again and again that Russia's more peaceful talk remains to be tested by actions.

The President was absolutely categorical, however, in warning the Russians—and assuring his legion of critics in Congress—that America's defensive strength is both enormous and wholly adequate to cope with any Soviet threat. His confidence on this must surely give pause to those who seek to make a major campaign issue of the claim that we are in danger of becoming a second-best power militarily.

For if the President—bearing the responsibility that he does, and knowing what he knows of the relative United States and Soviet military capabilities—had cause to share that fear, surely he would be asking this Congress for the wherewithal to breach the gap. That he does not do so is its own best

proof that he must be satisfied our defenses are in fact adequate; and if he is satisfied, which of his critics has better data to prove him wrong?

This year's state of the Union message, more than most, took selective aim at a variety of audiences, foreign as well as domestic, friend and foe, prosperous and hungry.

To Russia, it beamed both a warning and an invitation—to engage us in serious discussion on every subject leading to peace, but not to trifle with us, or to think we would relax our determination to defend ourselves and our friends against aggression, subversion, or false and phony propaganda.

To the underdeveloped Asian lands he has just visited, the President bore eloquent witness that he was deeply moved by their plight and by the free world's need to help them help themselves to a better life.

To our prosperous allies of Western Europe and Japan, the President hurled his strongest challenge yet—bidding them do with us, for the underdeveloped nations, what we, for so many years, did for them.

To Congress, his message was a plea—probably a futile one in a presidential election year—to waste no precious time in wrangling that can better be spent in intelligent co-operation to develop coherent policies for our national survival and progress.

Finally, to the American public, this was Ike's pledge to devote his full energies during the 12 months remaining in his term to the promotion of peace with justice abroad and progress with freedom at home. With the momentum he has achieved in recent months, this last one can be his most fruitful year in the White House.

Wheat Stabilization Plan

EXTENSION OF REMARKS
OF
HON. J. FLOYD BREEDING
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 13, 1960

Mr. BREEDING. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to call to the attention of this body a letter which I directed to the Secretary of Agriculture on January 5, 1960, calling for a wheat stabilization plan for agriculture. The letter is as follows:

LETTER TO THE SECRETARY OF AGRICULTURE

During the congressional recess, it was my privilege to talk with hundreds of wheat producers not only in Kansas, but in other great wheat-growing States.

I returned to Washington with one definite and strong impression: Wheat growers believe that something should be done to help correct the present wheat situation, and at least 75 percent of them believe this can best be accomplished by the passage of a wheat stabilization program.

Many taxpayers are very unhappy with the present wheat surplus, which is stored in warehouses at a great cost to them. They want Congress to act.

I am convinced that wheat farmers will overwhelming and enthusiastically support legislation to put into effect a wheat stabilization plan such as that developed by the National Association of Wheat Growers, and introduced in the Congress last year.

In all honesty, I must also report that my talks with hundreds of farmers failed to uncover any significant support for your plan to abolish the parity concept and base supports on the average price of the past 3 years, resulting in a price of about $1.30 a bushel for wheat.

But farmers will fight hard for a wheat stabilization program which provides: (1) Quotas and allotments based on a bushelage basis; (2) full parity supports for wheat going into domestic consumption; and (3) no supports at all for all other wheat.

This plan has several advantages. It affords the farmer an opportunity to receive true parity for that part of his crop sold on the domestic market, where he must pay full parity for everything he buys. It enables him to sell on the world market at world prices. It curtails surpluses and sizable storage costs to the Government. And it should return wheat production to the historic wheat-producing areas.

The purpose of this letter is to urge you to support a wheat stabilization program. Congress will pass such a plan easily with administration support. I am sure the threat of a veto would be sufficient to kill the legislation.

We need wheat legislation. It is evident Congress is not going to approve a bill such as you have recommended. And the administration has indicated time and time again it will not accept a program based on high fixed supports.

Therefore, it seems to me the wheat stabilization plan offers the basis for getting together on a workable program. The National Wheat Growers Association and State associations throughout the wheat area have endorsed such a plan. I believe the National Grange will gladly support the program, as well as the Farmers Union. Unfortunately, officials of the American Farm Bureau Federation continue to oppose the plan, despite its strong support among rank and file members.

If you would recommend legislation of this type, I believe it could be passed by Congress in short order and we would dispose of a troublesome and vexing problem in a manner that would be fair to the farmers and to the taxpayers.

But if you insist upon recommending once more your plan for lower prices without any hope of great production in the near future, I am sure the present stalemate will continue. No one can benefit from a continued stalemate.

I urge you to give this proposal serious consideration. It offers one way of achieving positive results.

Magazines Seek Slanted Pictures on Farm Life

EXTENSION OF REMARKS
OF
HON. MERWIN COAD
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. COAD. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I submit to my colleagues the following article which appeared in the Algona Upper Des Moines, one of the leading newspapers in my district. The article tells the story of a search for a stereotyped, legendary, nonexistent farmer and of the frustrated attempts of two national magazines, themselves heavily subsidized by the postal department, to perpetuate an unwarranted misconception of the excessively rich American farmer.

The article follows:

MAGAZINES SEEK SLANTED PICTURES ON FARM LIFE

While some county extension directors in Iowa have been contacted by Time and Life magazines for pictures showing how the farmer prospers from "government subsidy," no such contact was made here, Dean Barnes, Kossuth extension director, said Tuesday.

According to the Eagle Grove Eagle, such a contact was made with the Wright County extension office.

Time wanted a picture of a large pile of corn "going to waste" while the farmer lived on government subsidy.

The Eagle commented that "of course Time editors as well as midwest residents know that corn piled in the yard is not corn 'going to waste.' It is the corn being fed to livestock, and we have piles every year."

Life magazine, the Eagle said, had also contacted extension directors in that area asking for help in getting pictures of farmers who drive big cars, belong to country clubs, spend winters in Florida and California and piles of corn and cribs of corn that are "paid for by the government."

The Wright county extension director, the Eagle added, refused to give photographers help in lining up these slanted pictures.

Law Enforcement and TV Scandal—Address by Philip Cortney

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 13, 1960

Mr. PATMAN. Mr. Speaker, frequently we experience long overdue law enforcement. In some instances law enforcement comes only after there is some dramatic incident calling attention to the fact that law enforcement has been neglected. Our colleague, the gentleman from Arkansas [Mr. HARRIS], and the other members of the Subcommittee on Legislative Oversight, in exposing the TV scandals, have dramatically called our attention to neglect of the law and good morals in some quarters. As a result, we are now witnessing a substantial amount of activity to remedy a situation brought about by long neglect of the law and good morals.

Quite recently, President Eisenhower requested the Attorney General to inquire into the matters which gave rise to the TV scandals, and report on whether there were any laws violated and whether we should propose any new laws. As if by a New Year's resolution for 1960, the Attorney General caused to be released on New Year's Day a report replying to the President's inquiries. In doing so, the Attorney General stated that the laws as passed by the Congress are, on the whole, adequate, that these laws have been violated, and that the Federal regulatory commissions concerned with them—the one for communications and the one for trade—have, in fact, made no serious attempts to enforce the laws. For that candid, forthright report, the Attorney General should be congratulated.

In writing about this matter in the Washington Post on January 7, 1960, the widely and highly respected columnist, Mr. Walter Lippmann, under the title, "The Administration and TV," made reference to the report by the Attorney General, and in that connection stated:

While the Attorney General, perhaps rightly, did not deem it his business to say so, can it be denied that if the officials have failed to enforce the law, the remedy would be to appoint some new officials who will try to enforce the law?

Mr. Speaker, other prominent and highly respected persons agree with Mr. Lippmann and his expression of that thought. One such person is Mr. Philip Cortney, of New York, a prominent and succesful businessman. Mr. Cortney is president of Coty, Inc. Also, he was chairman of the U.S. Council of the International Chambers of Commerce at the time of his speech on this subject.

On November 6, 1959, Mr. Cortney addressed the Commonwealth Club of California at the Sheraton-Palace Hotel in San Francisco. The subject of his address was, "The TV Scandal and How To Defend Honesty and Morality."

Mr. Speaker, under leave to extend and revise my remarks, I include in the RECORD at this point Mr. Cortney's address on this subject:

THE TV SCANDAL AND HOW TO DEFEND HONESTY AND MORALITY

The TV scandal is a serious symptom of moral decay of our society. It may well be that we needed this shock to awaken again our sense of indignation. Indeed, too often in recent times is it given to us to notice the apathy and indifference of people toward evil, toward wrong-doing. When recently a strike broke out in New York against the hospitals, which means against sick and helpless people, I was convinced that the people of New York would be in the streets to protest against this insane and inhuman act. However, nothing of the sort happened. At times one has the impression that many people have become incapable of distinguishing between right and wrong. History proves beyond doubt that when a country loses its capacity for indignation against wrong-doing, and its enthusiasm for good actions, its decadence is certain even though it may be slow and not obvious to the majority of the people.

Greed for money is the general denominator of the recent scandal. Money paid by the public for merchandise, earned by some manufacturers through deceit and cheating of the public, a form of fraudulent advertising, has served to lure and corrupt children, adults, intellectuals, and even clergymen.

Recently I was one of the guests at a dinner organized by the Journal of Commerce in Washington in order to give a group of businessmen the opportunity to discuss with Khrushchev the issue of trade between Russia and our country. I was particularly struck by the repeated dangling before our eyes and ears by Khrushchev of the missed opportunities to make money in trading with Russia. Somebody must have convinced Khrushchev that the businessmen are so cupid, so greedy for money, so money-mad, that by appealing to this instinct he will obtain their cooperation to induce our Government to permit exports of capital goods and forget all about the cold war and the Russian menace. At one time, when Khrushchev remarked that Ford had made plenty of money in the 1920's in helping them to erect the Gorki factory, I could not resist telling him that what is good for Ford is not always good for the United States. By the way, his answer was but there are many Fords in the United States.

The TV quiz fraud was so gigantic that it served to direct our attention to many aspects of television, and to make clear that we are confronted with a TV problem.

While television is suposed to be free, it has become in fact the servant or rather the prostitute of merchandising, as Walter Lippmann wrote recently: "There has been a conspiracy to deceive the public in order to sell profitable advertising to the manufacturers." Mr. Jack Gould of the New York Times said: "The fraud could not have been carried out without the constant involvement of representatives of networks, advertising agencies and sponsors."

The only thing which seems to matter in the choice of the programs is the rating, by which is meant the number of viewers which can be made to look and listen to the advertising. The desperate fight for high ratings has lead the TV industry to devote 24 hours a week during the scarce prime evening hours of the networks to so-called adult westerns. The only noise in the house during those hours is steady gunfire, or a fist crashing against someone's jaw. In order to capture the largest mass-audience some producers, with the money made available by the manufacturers, have resorted to fraud as in the case of quiz shows.

The deplorable choice of programs to get the highest ratings for the advertisers tends to destroy the moral fibre of our homes and to demoralize them. The juvenile delinquency is only a consequence of the adult delinquency. The following short story epitomizes the influence of our present TV programs: A young girl was looking at TV when her mother came to tell her gently and with many precautions that her grandmother had died. At this sad news the child remarked, "Who killed her?"

In an article published by the magazine This Week in its issue of November 1, 1959, the parents of three children tell the interesting story of why and how they turned TV off for a year. There was not much conversation in the house, little or no reading or studying beyond the small amount of homework the children got. The only thing which interested the children was the screen, the so-called entertainment.

TV has not had much better results for most of the adults. Forgotten is the art of serious conversation, and very few have any time left for serious reading. Like the children, the adults have come to expect to be distracted or amused without end. In many homes looking at television has become, as a practical matter, compulsory. Under these circumstances have the adults any time left to think? I wonder.

Apparently the manufacturers who choose and sponsor programs, the networks and the producers have decided that in order to capture the largest mass-audiences they must cater to the low taste of the public, which according to them is the taste of the great masses.

Do not forget that the air is public property and that the networks get their licenses with the proviso that they will defend the public interest. This will be obtained if we take measures so that the public taste should not be subverted, and that the networks give the public not what is considered most popular, but the kind of programs which inspire the desire for a good life. Contrary to what many manufacturers, and in their wake the networks and producers have come to believe, there is civilized entertainment, good news reporting, educational shows of art and music, which even the great masses will come to love if their taste is not subverted.

Much of the evil of TV is defended on the assertion that it is what the people want. We doubt the people want to be played constantly for suckers or for immature children. TV enjoys valuable privileges in the use of public property and it has therefore the obligation to educate and elevate public tastes, rather than degrade them. And it can be done, contrary to what many skeptics and cynics have come to believe. Besides, it has become obvious that the general protection of the society requires some restraints on TV. Let us not forget that the freedom of the press is limited by laws against libel and obscenity.

Our Nation is confronted with one or more powerful, intelligent, and shrewd enemies. A competitive battle is going on every day for the minds, ideals and dedication of many uncommitted nations, in Africa, Asia, and even in South America. How are we going to play our international role, and win for the side of freedom the uncommitted nations without a regeneration of intellectual and moral leadership? In this battle between freedom and communism the role of education is paramount. Television and radio have become in the field of mass communication and education a force more powerful than any other single force in its influence on the thinking and tastes of the people. We dare not let TV continue to be used for shoddy entertainment, or worse yet for perpetrating fraud and deceit on the American people, instead of for education and civilized entertainment.

Crooked business practices are destroying the very foundations of business. Most shocking is the fradulent practices exposed on TV quiz programs. As the President of the United States said: "Fradulent quiz shows are a terrible thing to do to the American people." Mr. Roscoe Drummond of the New York Herald Tribune said, "The quiz shows were devised with the sole purpose of gaining access to your living r om by deception to make a sale." Some of the TV quiz shows were a fraud and a cheat to swindle the public and honest competitors. Such crooked strike at the heart and soul of the American free enterprise system. Indeed, these crooked practices kill sales. They may produce sales for awhile for those who benefit by these crooked practices. But these unfair practices destroy the confidence of the American people. The people can no longer believe what they hear and see. When that happens it is tough to make a sale. The callous disregard for elementary honesty toward the public casts doubt on the honesty and quality of the products. Unfortunately the dishonest business practices of some unscrupulous manufacturers hurt as well the decent, honest businessmen because of the loss of confidence of the public in the fundamental honesty and morality of business. Without honesty and morality, the very existence of the free enterprise system is put in jeopardy.

Who is responsible for this mess? The public has the right to know just how much was swindled and by whom. The dishonesty revealed by the rigged TV quiz shows will have a very damaging impact on the youth and children of our society unless those who committed the fraud and deceit get their deserved retribution. Otherwise they will come to believe that one can become rich by fraud and deceit. Immorality breeds immorality. Cynicism breeds cynicism.

We cannot live in an irresponsible society and be freemen. The first lesson which a free society must give to those who become adults is that they should have the moral courage to take the consequences for their actions.

Last April I addressed the 17th Congress of the International Chamber of Commerce of which I was president. I told the Congress that we cannot expect to remain freemen long if we are not ready to accept the consequences for our acts. Yet it is a fact that our free society behaves at times as if no one is responsible for manmade

situations which undermine basic freedoms.

In the present TV scandal those responsibilities are the manufacturers who sponsored the fraudulent programs, the producers of the shows, the networks, the advertising agencies, and the contestants. Of all the parties involved I consider the dishonest businessmen the most guilty ones. It is the manufacturer who is in the strongest possible position when deciding on the program to be chosen as a medium for his advertising. He can give or withhold. He can choose to have clean hands or dirty hands in selling his merchandise. The fixed TV quiz shows were made to happen for profits—undeserved profits that could not be made honestly. Those who profited must be made to answer to the American people for acts which our President describe as a terrible thing to do to the American people.

District Attorney Hogan put it well when he told the congressional subcommittee investigating the TV quiz shows, "It's hardly disputable that millions of viewers would feel shamefully cheated by a hoax which stole many hours of their time." District Attorney Hogan goes on to say that "the rigged TV quiz entertainment is morally, if not legally, larceny by false pretense and constitutes a fraud."

It is businessmen who made possible these fixed TV quiz shows by choosing these programs to sell their merchandise. They reaped profits from these fraudulent TV shows. It is time that they answered for their actions.

The TV scandal is a national scandal. Those who perpetrated it upon the American people must be exposed and punished, and we must do what we can to prevent anything like it from ever happening again.

Which of you here is not familiar with the zealousness of Government agencies—the FTC, the tax department?

The slightest, even imagined infringement, brings a round of investigations. But here we have an outright deception, deceit, and fraud staring everyone in the face, and yet the FTC and the FCC claim to be helpless, notwithstanding section 5A1 of the Federal Trade Commission Act which reads: "Unfair methods of competition in commerce, and unfair or deceptive acts or practices in commerce, are hereby declared unlawful." But if the judicial arm of our Government claims to be helpless, we can forget the moral law only at the risk of losing our freedom. A fraud is a fraud even though not punishable under the criminal law.

Ladies and gentlemen, let us not forget that business is central in our society. Precisely because business is central in our society the businessmen have a great role to play as active guardians of the free market economy which is being challenged today as never before. The businessmen assume, in the conduct of their own firms, great obligations and risk, but they are also the beneficiaries of the free enterprise system, at least moneywise, though their money benefits are too frequently assorted with heart troubles and ulcers. Money gives them power, which implies a great sense of responsibility, because money without morality and honesty can debauch. The businessmen should have the good sense and character to face their responsibilities toward society, otherwise it will disintegrate and free enterprise will perish.

Those manufacturers who sponsored TV quiz shows, and who contend that they were themselves victims of a fraud, can easily restore their prestige and prove their honesty. To this effect they should join the battle against immorality, and second, they should give to the hospitals and the Red Cross the illicit gains they have made by deceit of the public. This would be what our British cousins call "conscience money."

But to expose the wrongdoers is not enough. It is important to prevent a repetition of such immoral conditions. Here is my proposal to prevent such scandals in the future:

Businessmen who buy advertising in newspapers and magazines exercise no control over the editorial and entertainment sections of these media. Let us adopt this same practice for radio and television.

I propose that businessmen who utilize radio and television for their advertising adopt a hands-off entertainment code.

Let the businessmen be concerned only with honestly selling their wares. Let the networks and stations be fully responsible for the entertainment and editorial content. Businessmen who sell their products or services on radio and television must release all control, direct or indirect, on programs. When the stations and networks receive their licenses to broadcast, they are charged by the FCC to protect the public interest. They—the stations and networks—alone must therefore control program content and thereby assume full responsibility for protection of public interest.

It is a fact that TV advertising, which is very costly, has become a dangerous force for abnormal power and an instrument of monopoly. Therefore our Government must be extremely vigilant and make certain that this powerful force is not used abusively and particularly that it does not become an instrument for fraudulent gains in the hands of individuals without scruples and without conscience.

Censorship of programs is not the American way. However, if businessmen, advertising and TV executives do not clean their own house, the public will demand Government intervention.

Honest business cannot be legislated. In a responsible society, honest business is the responsibility of all businessmen.

We appeal to all business to adopt this hands off entertainment code. Adopt it in your various trade associations. It must be the concern of all chambers of commerce. And, finally, it must be the concern of every individual business organization—large and small—that makes use of radio or television.

We at Coty are placing a series of advertisements on this question which some of you may have seen in today's papers. These will appear in other cities. We will continue to fight immorality and corruption. We ask all who agree to join. The voice against fraud and for honesty cannot be too loud.

Thank you very much.

Crusade for Understanding

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 13, 1960

Mr. FASCELL. Mr. Speaker, the following editorial from the Miami Herald under date of January 6 very aptly outlines and discusses the renewed emphasis being placed upon the important relationship between the sentiments and ambitions of the people of the Latin American countries and our goals in foreign policy. The editorial reads:

CRUSADE FOR UNDERSTANDING

Happily, there is a sudden increase of interest in Latin American affairs among persons in high places.

President Eisenhower's long-discussed visit to South America now seems a certainty. Both Brazil and Argentina have announced officially they expect him next month. Uruguay and Chile anticipate being on his itinerary.

Adlai Stevenson, who may wind up as the Democratic presidential nominee, will pack his bags February 9 for a tour of 12 nations to the south.

Senator GEORGE A. SMATHERS, chairman of the Subcommittee on Latin American Trade, leaves next week for a journey to 11 countries.

All this indicates new awareness of the importance of Latin American friendship and trade for the United States. The three travelers, because of their official and party affiliations, are well able to further both.

It is the President, however, who can accomplish most.

His unprecedented trip will, of course, provide an opportunity for another display of the Eisenhower charm. The President has become one of the most potent and popular emissaries this country has ever sent abroad. Certainly he has been seen and heard by more persons, particularly as he made his historic pleas for peace during the recent tour of three continents.

Peace will not be primarily the goal of this mission to South America. It will be an occasion to renew ties of ancient friendship that may have become raveled by the pressure of events.

All four of the host countries were sparked to life by our own War of Independence and have constitutions based on our own. They are dedicated to democracy. But all are beset by the same ills which they are treating, with substantial U.S. aid, with varying degrees of success.

Argentina, Brazil, Chile, and Uruguay have meat and beans economies. They are trying desperately to industrialise to raise living standards and meet the needs of growing populations. All must battle incessantly against the prairie fires of inflation and unbalanced budgets.

Sometimes South Americans feel that we do not understand the significance and seriousness of that fight. Some believe we are more preoccupied with Europe and more ready to give military aid to governments than means of existence to people. The great value of Mr. Eisenhower's tour will be to demonstrate that we do care.

Indeed, we want to help. The President will be able to report that Congress is in the mood to step up economic aid in this area of the world.

It is true that relations had deteriorated—a situation revealed with shock during Vice President NIXON's visit in 1958. But there are signs of improvement.

Mr. Eisenhower's tour will contribute immensely to better feelings. From a journey such as this he should be able to turn to the fateful summit meeting next May with the assurance that there are no serious family misunderstandings in this part of the Americas.

Mr. Speaker, it is one of the most significant developments in this country's foreign relations that these fact-finding and good will tours are being scheduled at this time by the top-level representatives of this country's two political parties and two of the branches of our Government.

I share the hope of all the Members that out of these timely efforts will come an improved personal and economic relationship with these countries that will put teeth in the long-desired goal of hemispheric solidarity.

A Life Insurance Executive Underwrites World Peace Through World Law

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 12, 1960

Mr. PORTER. Mr. Speaker, during the recess of Congress I wrote to a number of leaders to find out their thinking on world law, specifically in connection with my House Concurrent Resolution 208. The other day I received a particularly fine letter from Mr. Henry E. Niles, president of the Baltimore Life Insurance Co. His letter is an excellent blend of reason and idealism, of practicality and dedication.

Mr. Niles has reproduced this letter and distributed it to a number of people. However, I believe it should be made available to all of my colleagues and therefore, under a previous consent, I am including it here:

DECEMBER 30, 1959.

HON. CHARLES O. PORTER,
House Office Building,
Washington, D.C.

MY DEAR MR. PORTER: This is in reply to your letter of October 1, 1959, in which you ask me to give you, by the end of this year, my views with respect to the questions of U.N. Charter Review and world law in general, and with respect to your resolution in particular. These are subjects in which I am most interested, and I am glad to comply with your request. I shall start by giving some of the background of my views. This is a personal rather than an official letter.

Man's new power over matter, his new knowledge and his new techniques have created an era of new fears and of new vision. The new fears include the fear of atomic attack, without warning, by weapons of vast destructive power launched across an ocean and exploding within a quarter of an hour or less over our cities and spreading terrific destruction. We react to these new fears as we did to our old fear of military aggression—by building weapons of defense, and also a sizable number of weapons of offense, which we intend only to use as a necessary part of our defense. But the other side builds the same kind of weapons and neither side trusts the other not to be the aggressor. The new fears lead to actions which tend to make more likely the things feared—which tend toward the destruction of modern civilization.

The new vision is based upon many of the same facts as the new fear, man's ability to split the atom and to release tremendous energy and power, to send words across the oceans in a fraction of a second; to send objects across them in a matter of minutes, to cross them himself in a few hours, to seriously plan space travel. Today man has the technical knowledge to eliminate poverty in all nations. And man is learning more about the spiritual values as the scientists make a belief in old fashioned materialism less and less tenable.

Persons such as yourself, a Congressman charged with determining our country's policy, have to face practical realities, have to consider the fears and the vision and human inertia and traditions. In the words of the National Planning Association's Special Project Committee on Security Through Arms Control (May 1958) "Sweeping or oversimplified solutions, not feasible in the context of international political realities, will not solve the problem, and it would be irresponsible to solicit the hopes and faith of men for measures which are beyond the capabilities of society. The problems of arms control and disarmament are complex, and their solutions require a recognition of the realities of armaments, military science, and international politics."

In common with many persons in the life-insurance business, I am concerned about the tendency toward inflation in this country. But worrying about inflation and not about the elimination of war and the building of a peace seems to me to be like trying to economize on the use of fuel on a boat caught in the Niagara Rapids and headed for the falls. Furthermore, I believe the most effective way to prevent inflation would be to create a situation in which military expenditures could safely be reduced or eliminated. I say "safely" although I realize that absolute safety is not attainable. But we are not getting security or safety through our present build up of weapons, and a new situation could have far less risks than the present "balance of terror."

The gradual development of world law seems like the constructive reaction of man to his current situation of new knowledge and techniques. I believe that the plan recommended by Grenville Clark and Louis B. Sohn in their book, World Peace Through World Law, is practicable. I believe that the United States should promptly decide that we would be willing to adhere to such a plan (with perhaps minor modifications), and that we should assume world leadership in getting other nations to agree to it. We should clearly state that we are willing at any time to give up our sovereign right to determine when and whether we will wage war on another country in exchange for an international system which we could reasonably trust to prevent any other country from choosing to make war upon us. This does not mean giving up our right to direct our internal affairs, except as to military activity. It means a chance to use all our economic power for human betterment in ways of our own choosing without directing any of it into weapons of destruction.

The necessity for the development of world law has been pointed out by many leading citizens including President Eisenhower; Vice President Nixon; Generals of the Army Omar Bradley and Douglas MacArthur; Senators Robert A. Taft, Hubert Humphrey, and many others; Secretary Dulles; Adlai Stevenson, and Paul Hoffman. These persons are close to the problem—as are you, Mr. Congressman—of what actions to take for the long-term good of our country and of the world. None of them seems to be satisfied with the idea that military might alone will give us a constructive solution. As Mr. Arthur Larson says in the material which you sent me: "In the past the greatest mistake we made in our struggle for peace is to go at the matter too negatively. We have concentrated on getting rid of war, getting rid of tensions, and getting rid of armaments. But you cannot just get rid of them and leave a vacuum. You will succeed in getting rid of them only to the extent that you put something else in their place. What is that something? In the human story, it has always been law."

Each individual and each business should do its part toward building a secure and peaceful world. The life insurance business has a particularly strong interest in and obligation toward world security for the following reasons: (1) Even a small war could affect our mortality experience from losses due to direct casualties (which are covered by practically all life insurance contracts now in force) and losses due to the effect of atomic fallout. (2) Huge military expenditures may lead to inflation which will decrease the value of dollars in which we pay our policyholders or their beneficiaries. Too much inflation would be ruinous to our business. (3) A war which involved action against this country would probably cause great losses in our investment portfolios.

Extension of world law against international violence and provision for the elimination of the armaments of individual nations seems to me to be a kind of solution which our industry should back, because: (1) World law is an intangible idea, but so is life insurance and the companies are used to selling intangibles. Here is one which is necessary in order to preserve life on this planet. (2) The life insurance companies are accustomed to planning a long time ahead and to making contracts which may run 50 years or more. (World law won't come next month, but progress can be made.) (3) The life insurance industry is one characterized by good management, by cooperation between competitors, by strong industry associations which know the power to get things done if the objectives are clearly set forth. (4) The industry has public confidence, and its endorsement of a long-range plan for peace and security should have much weight. (5) The industry could reach millions of persons with whom it has contacts through the mail and through the thousands of agents who call upon persons in all walks of life.

I believe that enforceable world law is a realistic goal at the present time. I do not expect us to reach the goal within a year or two. However, constructive steps taken toward the goal will immediately reduce tensions somewhat and make further steps possible. A very important step to be taken now seems to me to be revision of the U.N. Charter, so as to strengthen the United Nations and the World Court and to provide for the establishment of international police and eventual world disarmament. I do not think this is visionary in a bad sense. I think it is using our imaginations to overcome a present situation which is fearful.

With best wishes for your success in your efforts,

Sincerely yours,

HENRY E. NILES.

Commemoration of October 12 at Compostela

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 13, 1960

Mr. JACKSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

TEXT OF THE SPEECH DELIVERED ON OCTOBER 12, 1959, BY HIS EXCELLENCY DON FERNANDO MARIA CASTIELLA, SPANISH SECRETARY OF STATE, IN THE ROYAL CHAPEL, HOSTAL DE LOS REYES CATOLICOS, IN THE CITY OF SANTIAGO DE COMPOSTELA, ON HISPANITY DAY

MEANING OF COMPOSTELA

We are not here by chance. Our coming to Santiago de Compostela has a deep meaning, because this matchless city has much to tell us, Americans and Spaniards alike, on this day of Hispanity which we are fraternally celebrating today.

Santiago, the heart of Jacobean and boundless Galicia, is one of the great symbols of our Christian faith, of our European nature, and of our missionary and transcendent impetus. The road to Santiago, the road that used to be known as the French road, was the great European highway which kept us in spiritual touch with the continent to which we belong while we

fought against, and lived with, Islam. At the end of that highway, this most beautiful Compostelan stone shrine, due to its prodigious condensation of beliefs and culture, was and is the best justification of our American undertaking, the purest root of our historical, Christian, and European nature, the spot whence inherited faith started in order to cross the ocean and to become apostolically rekindled in a continent where the name and the image of St. James are continuously heard and seen, as if echoing the voices of the pilgrims that sounded here for centuries.

OUR EMIGRANT—A SPANISH AMERICAN

It is, however, the whole of Galicia which, looking seaward, is wholly inspired by the call of the ocean, by the things of the sea, and she is, therefore, irresistibly drawn to an American destiny. Galicia, who knows no limits to adventure, for whom the sea is a mere lane, looks toward America from here and has sailed for centuries, carrying her saint in her heart, bound for the beloved countries where Spaniards are sometimes endearingly called Galicians (gallegos).

The Second Congress of Spanish Emigration closes now. This should make us realize that the trend of communication between America and all the Spanish regions continues to flow, that the old impetus has not ceased and that the emigrant who goes to people of the plains or the hills or the cities of Latin America carries within him the essence of the Creole and later of the American. Because he himself, by the mere fact of going there has become somewhat American. Because this Spaniard of America or American from Spain is a pledge of our permanent brotherhood, we should all take care of him and help him.

CONSCIENCE OF UNITY IN NEW TIMES

The world is stretching its limits and releasing anew dormant stocks of energy. New countries appear, and those which are mature throw themselves into the conquest of new space, material or spiritual. New and serious problems become apparent. Placed, as we are, in this disquietening situation, we the Ibero-Americans must tackle these problems, as well as our own, with a realistic policy of mutual understanding and friendship, that policy of which an Argentine thinker said: "it becomes obligatory, under threat of death, to Spanish-American countries."

We Ibero-Americans form a community whose natural unity stems not only from a shared inheritance in one of the noblest spiritual patrimonies in the history of mankind, but also from the fact of our present collective interests. Either we save our common personality, or we shall flounder in more powerful and sonorously rushing currents of history.

Everybody who has thought passionately and with insight about the future of American nations, from the great Bolivar to Luis Alberto Herrera or José Vasconcelos—the two great American thinkers whose recent deaths fill us with sorrow—has perforce agreed with the Bolivar ideal of continental unionism.

That conscious unity, however, can only spring from what is Spanish. The Indian element may constitute in some American countries a reinforcing life stream, a motive for pride in ancient and splendid civilizations, a racial factor which through crossbreeding is giving to the whites new and human shades of remarkable personality. To adopt a purely indigenous outlook, however, can only result in a local and concrete nationalistic movement harmful to Hispanism, and Hispanism is the true common factor, the supreme link that joins together all the countries south of the Río Grande. South of Río Grande. We are apt to use this expression, thereby turning into a frontier a river that is such politically, but cannot be so spiritually or in our memories. How can we forget the projection of Hispanism northwards beyond the Río Grande, when even the U.S. Americans nobly refuse to do so? Beyond that river, from Los Angeles to San Agustín, the old "caminos reales" cross one another, and along those highways the people of the United States preserve as a valued inheritance the imprint of Fray Junípero Serra's Franciscan sandal or Coronado, De Soto and Ponce de Leon's heroic and martial steps.

TO UNDERSTAND THE CONQUEST AND INDEPENDENCE

It has been rightly said that spiritual community of the Hispanic nations would be realized when we Spaniards shared in the glory of America's emancipation and when, at the same time, Americans came to look upon the discovery, the conquest and the civilization of America by Spain as the only historical foundations of the independent nationalities.

Amongst us, as Guillermo Lohman has stated—and as I myself have reminded people at times—it was Menéndez Pelayo who showed the way towards the fruitful understanding by Spaniards of the great achievement of America's Independence. Miguel de Unamuno too, in his essay "Don Quixote and Bolívar", commended the poetry contained in the history of the emancipation of Spanish-America and wrote that "we should feel pride in the courage of those men who faced the troops sent by the incompetent peninsular governments and we should consider as our own racial glory the glories of American independences".

Víctor Andrés Belaunde—now chosen for the presidency of the highest world assembly, to the great satisfaction of all Ibero-Americans—goes even further when he writes in his oft reprinted study on Bolívar that "the old quarrel about the Spanish-American revolution is now settled to the honor of the mother country. Spain was a joint author of our revolution, because we inherited from Spain our 'Cabildos'—units of sovereignty—and because the revolution was the work of our national spirit, forged by Spanish culture, that gave us the best it had."

Yes, Bolívar and San Martín, the glorious Creoles, are ours, as Cortés and Pizarro belong to you. Tepoztlan and Cuzco are ours, as Salamanca and El Escorial are yours. And if the independence was, basically, the work of Spaniards from America, a family matter, the conquest was the work of your direct ancestors, of your Spanish forebears, who as soon as they landed on American shores, started to belong to them.

HISPANIC FRATERNITY AND ITS INSTITUTIONAL FORMS

Today we can say that the mutual and deep understanding between Americans and Spaniards is a reality and that the fundamental intellectual unity that binds us is expressed now through juridical means in concrete measures, such as the Double Nationality Agreement subscribed to by Chile, Peru and Paraguay, together with Spain, and that promising idea of the supercitizenship of Ibero-Americans that was defended by Jesus María Yepes, the illustrious Colombian internationalist a year ago, during the meeting of the Institutes of Hispanic Culture in Bogotá.

Spain interprets that fundamental unity as a fraternal link, without any privileges for the first born, without any subordinations. These ties that join us so equally, if they do not entitle us Spaniards to intervene in the private affairs of Spanish-American countries or in those of the Philippines, do entitle us to have, as brothers, a sincere, deep and constant interest in the destiny of a world that covers a whole continent and then leaps as far as the distant and beloved archipelago of Magellan, a Hispanic outpost where, between Corregidor and Cavite, the Spanish light is still burning.

THE PORTUGUESE-BRAZILIAN COMMUNITY—SPANISH GRATITUDE

It is to give full meaning to the great association of the peoples who share a common peninsular origin, that we have Portugal and Brazil among us today. The ocean-minded Portugal of the Descobertas, the American Portugal of Corte Real and Alves Cabral, the great Portugal of Camoens, who once summed up tenderly the oversea desires of a whole nation in a simple quatrain written in Spanish:

"I want to sail, mother,
In a galley
With my sailor boy
To become a girl sailor."

And next to Portugal, Brazil, young, strong and the hope of America; colossal and rich, not because of its vast territory and the wealth of its soil, but because of the impetus of its children and the vigor of its national spirit. Both countries are joined together by traditional links and by their present vigor that offers a splendid future to the Portuguese-Brazilian community. Their presence among us is proof of their belief in the parallel roads of the destiny of all Ibero-American countries and makes us feel sincerely and deeply grateful.

THE PRESENCE OF THE UNITED STATES

We also have among us the representative of the great North American Republic, whose customary participation in these celebrations has a meaning that cannot be unknown to anybody. It is personified by a great ambassador, who is particularly aware of all matters American and Spanish, as is to be expected from a man who bears a name belonging to a family illustrious in American history.

I should like to express my country's satisfaction regarding the recent efforts that have been made in favor of inter-American cooperation, and Spain's sympathy toward those efforts and, if possible and necessary, her willingness to cooperate with enthusiasm toward that end.

INTER-AMERICANISM AND THE HISPANIC IDEAL

Spain does not see the Inter-American movement as an instrument of competition against the common Hispano-American ideals. In the times in which we live—a good example is to be found in the Spanish stand, halfway between her fundamentally European nature and her American calling—relations between countries can take place on different levels, without paying homage to the incompatibilities and rigid exclusivisms of the past.

Summing up the words of Mario Amadeo, former Chancellor of the Argentine and at present his country's Ambassador to the United Nations, let us remember that it is necessary to improve upon the anachronistic ideas of those who, when confronted by the United States, either abdicate their personality or raise the standard of resistance.

Spain can only feel happy about the cooperation and understanding of all the countries in the double American continent, in such a measure as may be beneficial to the cause of peace and the welfare of nations.

"THE WEIGHT OF THE PURPLE"

That cooperation will be perfect when the United States decides to give constant, careful, and efficient attention to Ibero-America. Attention which has due respect for its spiritual being and for its actual personality, the conservation of wsich is vital to the destiny of those countries, and by remembering the fact—admitted during the Santiago de Chile Conference—that economic underdevelopment generates political instability in a large measure.

The Spaniards have heartfelt gratitude for the generosity of the United States, which has been amply proved in other continents. I loyally called upon that generosity two

years ago and on other occasions, saying that such generosity could find no better employment than to cooperate with decision and largesse to reinforce materially that important reserve of strength that Ibero-America means to the West, thus fulfilling once more the great historic mission that has fallen to the United States, that majestic and grave mission that carries with it, as Agustín de Foxá, whose death we mourn, defined with great intuition as "the weight of the purple."

REASONABLE CAUSES FOR UNEASINESS—THE COMMUNIST THREAT

It is impossible not to be aware that there are today in Ibero-America real causes for uneasiness. It is necessary to consider them, however, to determine in what measure they are born of troubles stimulated from abroad and in what proportion they are due to inner and absolutely justified desires.

There is no doubt that there are foreign elements decidedly plotting against peace and prosperity in the American countries, the rearguard forces of our free world. The Communist ferment, ably exploited by its proselytizing agents, poisons a not unimportant proportion of the political movements that frequently shake life in America. But it is also true that many times the restlessness is born out of unsatisfied demands for justice, for respect, for adequate representation in international affairs, and above all, for the means to participate in due measure in the material achievements of our present civilization.

The President of the Republic of Chile, Dr. Jorge Alessandri, has referred to this in his opening speech of the Vth Consultative Meeting of Foreign Ministers of the OAS, when he said, "we are living in times when the aspirations of the people to achieve an increased well-being grow much faster than the possibilities for the economic development of our countries". At that same time, during the Conference of Chancellors in Santiago de Chile, the Brazilian Foreign Minister, Dr. Horacio Lafer, stated that, "in order better to understand the seriousness of the problem (of economic underdevelopment) it is enough to consider that in 1980 Latin America will have a population of almost 320 million human beings who will demand a decent life, free from misery, sickness, and ignorance."

A POSSIBLE AND GENUINE PROOF OF EFFICIENT INTERNATIONAL SOLIDARITY: COLLECTIVE CONTROL OF RAW MATERIAL PRICES

In this kind of problem, Spain is observing with real attention and interest the path followed by the economy of the Ibero-American countries and particularly the price trends of those raw materials that constitute the basis of their economy.

Spain fervently wishes that, with the indispensable help of the great economic powers and by means of international agreements that may prove the existence of a real spirit of cooperation, stability of prices may be achieved as regards certain basic minerals and agricultural products which, if too low, would endanger the development of the weaker economies and disturb besides political and social life.

We hold this to be a reasonable aspiration within the state of economic cooperation the world has reached today. We personally have already set an example by subscribing to some international agreements aimed at achieving that end and are prepared to support any future plan of that kind.

ORTHODOX ECONOMICS

The Ibero-American countries should rely, as Spain is already doing with success, on healthy and orthodox economy and a true effort at cooperation between themselves, just as much, or more than on foreign aid—adapting the methods of cooperation tried in other latitudes to the realities of the New World.

And since the solution is always to be found in unity, a difficult goal but one that seems daily easier to attain, it is indispensable to stop all strife between the countries of Hispanic America and to avoid, with firmness of purpose, all conflicts between Sister countries.

MUTUAL RESPECT AND NONINTERVENTION

That is why, politically speaking, when disordinate nationalism and party feelings divide and weaken Ibero-America, we must proclaim, and adhere to it without exception, that great principle of the United Nations Charter: nonintervention in the internal affairs of other countries.

We hold this to be a basic tenet of the whole of Ibero-American international law, a tenet which now, more than ever, should be strictly respected in order to preserve peace in the Americas and their spiritual unity too. We should take notice with gladness of the repeated declarations that, consonant with this idea, were heard in the Conference of Chancellors in Santiago de Chile.

We should place on the same level the Estrada Doctrine, born in Mexico and always respected by Spain, the fruits of which doctrine have always proved to be highly beneficial for the coexistence of our countries and the practice of which, because it is inspired by true realism, offers the means for the coexistence of differing regimes and for mutual respect among all nations.

HISTORICAL MATURITY OF HISPANIC AMERICA

The countries of Hispanic America have already reached historically maturity, although we could say, following Zorrilla San Martin that:

"The Smile of God of which they were begotten
Still throbs there in waters and in forests."

Our America has attained its universal ripeness. It is no longer a "reflecting country" as Hegel would have it. It does not only mirror Europe, but is the authentic, fertile and personal continuation of Europe.

It is, therefore, necessary at this time that all the Ibero-American countries sacrifice what is accessory and circumstantial and which divides them for the sake of what is fundamental and permanent and joins them. Peaceful coexistence is the first step towards working together, and this working together is an indispensable condition towards attaining the progressive unity that shall make Ibero-America count decisively in the world, both today and tomorrow.

THE QUITO CONFERENCE AND THE FUTURE OF AMERICA

The 11th meeting of the Organization of American States will be held in Quito next year. Spain sends from here, in advance, her greetings, feeling optimistic and hopeful about that meeting. Nothing that is American can leave us indifferent and we ardently wish that that Conference may prove to be yet another step in the coordinated movement towards cooperation between the countries of that continent and particularly to attain the unity and prosperity of the Ibero-American countries, to which end, Spain, if at some future time she were invited to do so, would offer her unstinted and most cordial cooperation.

Let us pray for that. Let us do it here, in Galicia, that is not only the sweet region where the first poetical language of the Peninsula was born, but an open shore that looks towards every point of the compass, the Finis terrae of Europe, where Spain listened for many centuries to the Atlantic siren's songs until she decided, 467 years ago today, to change the Dark Sea into a western Mediterranean and the dreamed of shores beyond it into a splendid continent where today sister or friendly countries preserve the Spanish names, from the glaciers of Alaska to the cliffs of Tierra del Fuego.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

Retirement of Senator Green of Rhode Island

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, January 14, 1960

Mr. JOHNSON of Texas. Mr. President, this morning there was published in the New York Times a very excellent editorial in connection with the most unusual and distinguished career of the great senior Senator from Rhode Island [Mr. GREEN]. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the New York Times, Jan. 14, 1960]

SENATOR GREEN CALLS IT A DAY

In politics, distinction does not automatically come with age, as it seems to do in some other fields. And it has not come automatically to Senator THEODORE FRANCIS GREEN—it has been earned. Senator GREEN's announcement that he would not seek reelection draws to a close a tenure characterized by wisdom.

That Senator GREEN, at 92, has become the oldest Senator in our history is remarkable, but more remarkable still is the fact that his entire senatorial career, marked most outstandingly by his tour as chairman of the Senate Foreign Relations Committee, has been carved out after the age of 70. Senator GREEN was born in Providence in 1867. After his graduation from Brown University he taught Roman law there during the nineties. He assumed a number of diversified business interests in Rhode Island and began working in State politics in 1907.

The striking aspect of Senator GREEN's career is its continuity. He maintains old business associations. A graduate of and teacher at Brown, he is now connected as trustee. Born in Providence, he has a home there still. Obviously this is a man who sinks roots—and not to lie dormant but to grow. His decision to retire was made, he says, after considerable thought. It was a mental tussle, obviously, for a man who hates to cut ties. The Senate—and the country—will miss his services.

Richard Murray Simpson

EXTENSION OF REMARKS
OF
HON. CHARLES B. HOEVEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 13, 1960

Mr. HOEVEN. Mr. Speaker, under leave to extend my remarks, I include herewith the sermon delivered by Dr. W. Paul Ludwig, pastor of the Chevy Chase Presbyterian Church, Washington, D.C., on January 9, 1960, at the funeral service of our late colleague, Richard M. Simpson. Dr. Ludwig paid a most fitting tribute to a great American.

RICHARD MURRAY SIMPSON

When a tall and stately tree falls in the forest the thunder of the impact is heard for great distances. The imprint of its lofty greatness and power is imbedded in the earth. Men listen and are inspired by the echoes of its majestic strength. They look at the impression that is left and they lift up their hearts in praise and hope.

So is it with us today. A giant of the political and spiritual world has been removed from our midst, but the echoes of his strong and honest convictions reverberate throughout the world, and the indelible memory of his quiet goodness and sturdy Christian faith is molded into the everlasting consciousness of multitudes who loved and honored him.

This distinguished and saddened assembly today is a symbolical segment of an innumerable host whose lives have been blessed and whose hearts have been inspired by the unmistakable witness of his life.

It was a moving experience to read in the CONGRESSIONAL RECORD the gracious tributes of many of you who sat with him in the House Chamber or the committee room, and who felt the binding friendships which the pressures of shared responsibilities create.

Like the chorus of a mighty hymn of praise it was gratifying to hear the oft-repeated granite words of human character—conviction, loyalty, integrity, forthrightness, honesty, courage, devotion, sincerity, sympathy, humility, industry, warmth, and friendship.

These words came neither accidentally nor incidentally. They came because without them you could not have described that servant of the people whom we knew as Richard M. Simpson.

This alone is impressive, for there are few men who are so unanimously and genuinely revered. But this does not complete the story of the man; it does, in fact, barely outline its beginning.

For "a man's chief end," to quote the catechism, "is to glorify God." And this close union with his Creator is what made Richard Simpson the great man that he was. He could talk about God as naturally and familiarly as he talked about his friends. And he could talk to Him as easily.

Church worship to Mr. Simpson was not a form or fashion. It was an essential part of a way of life. He never mentioned it boastfully but I know he was proud to be a ruling elder of the Presbyterian Church. He was proud to be thus intimately entwined in its life, because to him the church was God's holy instrument upon earth to create that kind of God-centered human society wherein the ideals to which he had dedicated his life could flourish.

He had no hesitancy in talking about the relationship of religious faith and political integrity. His refusal to let expediency rule his conduct was rooted in a sense of religious values whose chief focus was at the Cross of Christ. Men have their earthly heroes who whom they love to quote and emulate. Mr. Simpson had his hero whose life is recorded in the Book of Books.

In faith as well as politics, he belonged to that stream that we speak of as traditional and conservative. Possessing a rare solidity of judgment he was not easily swept downstream by any sudden torrent of emotion or passion. His religion, therefore, had the purity of the deep-running river, unruffled by sudden winds of doctrine.

Out of his sturdy Calvinistic confidence in the sovereignty of God; the supremacy of Holy Scripture as revealing the word and will of God; the crucified and risen Lord who is Redeemer; the Holy Spirit who is Comforter, and the immortality of the soul—out of these he bequeaths to us the very elements by which we turn our mourning into victory.

This is the significance of our gathering together this afternoon. In the revised Directory for Worship of the United Prebyterian Church, our Christian concept of this experience which we are sharing today is described in these words: "Christians recognize with all men the inevitability of death, but, further, in the presence of death witness to their faith that God, in Jesus Christ, has conquered and raises His children from death to life eternal."

Thus you and I are called here "to bear witness to the greatness and goodness of God, and to the love He bears all men, a love which strengthens and supports even in the midst of grief. Ours is a witness to God's promises in Jesus Christ, as attested by His resurrection from the dead, and the sure and certain hope that He goes to prepare a place for His children."

Shortly before Mr. Simpson went into surgery we shared Holy Communion together at his request. There was no shadow of fear in those moving moments. He was reaffirming his trust in God—come what may—who through the sacrifice of His Son hath opened for us the blessed hope of everlasting life.

This is the trust that brought unusual quality to his devoted service to the Nation which he loved; that brought remarkable grace into his relationships with his colleagues of whatever political persuasion; that gave a Christian beauty to his homelife where those who loved him so deeply have caught the contagion of his spiritual strength; and that leaves now with all of us a banner to lift high and a sure road to follow.

In Support of the Administration's Farm Policy—Address by Don Paarlberg

EXTENSION OF REMARKS
OF
Hon. EVERETT McKINLEY DIRKSEN
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Monday, January 11, 1960

Mr. DIRKSEN. Mr. President, on December 29, 1959, the Honorable Don Paarlberg, special assistant to the President, and for many years Assistant Secretary of Agriculture, delivered an address at the winter program of the American Farm Economic Association, in Washington, D.C., in which he summarized agricultural policies and made a

case for the administration viewpoint in this controversial field.

Not only is it an excellent presentation, but it has been thoroughly documented, and should, therefore, be of high interest, not only to Members of the Senate, but to everyone who has an interest in the farm problem. I ask leave, therefore, to have it printed in the Appendix of the RECORD.

Mr. President, I have been advised by the Public Printer that the printing of the address in the CONGRESSIONAL RECORD will require approximately 3¼ pages, at a cost of $263.25. Notwithstanding that fact, I ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

IN SUPPORT OF THE ADMINISTRATION'S FARM POLICY

(Address by the Honorable Don Paarlberg, special assistant to the President on the occasion of the winter program of the American Farm Economic Association—Joint Social Science Association meetings, Sheraton-Park Hotel, Washington, D.C., Tuesday morning, December 29, 1959)

In this address I wish to make four points:

1. The farm price-support and production-control legislation now on the statute books does not represent the administration's farm policy.

2. The farm policies which this administration does support include many activities other than price support and production control.

3. On the controversial price-support and production-control issue, the needed modifications lie, as embodied in the administration's farm proposals, in the direction of greater opportunity for individual persons to exercise their judgment as to what should be produced and at what price it should be sold.

4. The alternatives to the administration's farm policy are generally lacking in promise.

I now shall take up these points individually.

I

First, let me trace the origin of the farm price-support and production-control legislation we now have, legislation which is generally considered to be unsatisfactory.

In making the flat statement that this legislation is considered unsatisfactory, I wish to acknowledge the good record of the Congress as regards price support and production policy for the majority of our farm products; that is, for commodities other than the so-called basic crops. I want to make clear my view that legislation providing for marketing agreements and orders has generally been helpful, as has legislation authorizing the purchase of surplus farm products and their diversion to the school lunch program and to needy persons. What I am speaking of as unsatisfactory is the mandatory system which requires price support for a few favored commodities at artifically high prices, and couples that support with a halfhearted and ineffective control effort. This is the system which has failed.

I have come to harbor misgivings both with respect to those economists who think they can analyze farm problems without reference to politics, and those politicians who think they can solve farm problems without reference to economics.

The basic legislation with respect to farm price supports and production control was enacted in 1933. This was done in an effort to meet the grave problems of a worldwide depression.

This legislation was clarified and modified in 1938. The major intent of the 1938 act was to give continuing status to the emergency legislation of 1933.

In 1941 and 1942 the Steagall amendment and other legislation were passed. Price supports were raised to a high level during the war emergency and their continuation was assured for 2 years after the war.

In 1948, Congress provided for an adjustment from the wartime level of price supports, but this law was not allowed to go into effect. The next Congress rewrote this law and delayed the date at which it was to become operative, thereby continuing the wartime price-support levels.

In 1952, Congress further extended the wartime level of price supports.

In 1954, Congress allowed the 1952 extension to expire, thereby permitting the functioning of legislation previously enacted.

For the 5 years since the congressional elections of 1954, the Congress has been controlled by one party and the executive branch by another. During this period some helpful modifications of the price-support and production-control legislation were enacted, but legislation for most of the so-called basic commodities remains generally similar to the pattern of earlier years.

During 22 of the 26 years encompassed by this legislative history, the Congress was controlled by the party now in the majority. The party now in the minority held congressional responsibility during 1947–48 and again during 1953–54. During the first of these two periods, farm legislation was enacted which a succeeding Congress kept from becoming effective; during the second period legislation was passed which allowed a law enacted by a previous Congress to become operative.

Thus practically all present farm legislation regarding price supports and production controls were written by the party now in the majority. Continued existence of this legislation is tolerated and condoned by the majority party, which has the power to change it.

It is sometimes said that the present Congress cannot enact farm legislation because of the threat of veto exercised by the executive branch. However, no truly remedial legislation has been vetoed, or is likely to be.

It is frequently said that farm policy has been bipartisan. But the effort to place responsibility upon this administration for the shortcomings of farm legislation is certainly a partisan effort, and an unwarranted one.

With respect to farm legislation, the executive branch has two responsibilities. One of these is to administer laws enacted by the Congress. This the present administration has done, faithfully. The other responsibility is to recommend legislative changes for the Congress to consider. This the present administration has also done. For 7 years now the administration has been invited by the Congress to make recommendations for improving our farm legislation, and has complied faithfully with these requests.

Some of the administration's recommendations have been heeded. Public Law 480, the basic authority for surplus disposal, was enacted much as recommended. The same is true of the rural development program.

Others of the administration's recommendations were accepted in part, though considerably modified. This was true of the soil bank, and the present corn program.

Most of the administration's recommendations have been resisted by the Congress, particularly those having to do with price support levels and production-control policies.

The administration cannot possibly be responsible for legislation which antedated its period of service and emanated from another party.

Existing difficulties with the farm program, and they are many, cannot possibly be the result of legislation which the administration has recommended if such legislation has not been enacted.

Congress cannot divest itself of legislative responsibility. Nor can the executive branch divest itself of its administrative responsibility. Surely the Congress will not accept responsibility for errors of the executive branch in administering our farm laws; nor can the Congress expect the executive branch to accept responsibility for legislative shortcomings.

Almost nobody defends the farm legislation now on the books. The pertinent point is that this legislation was put there by the Congress. If it is to be changed, it must be changed by the Congress.

Present farm legislation does not represent the policies of this administration, as I have endeavored to show. On the contrary, it must represent the farm policies of the majority party, since that party put it on the books and left it there despite having the power to change it.

There is a studied effort to create the illusion that the failure of agricultural adjustment policies is an administrative failure while in reality it is clearly a legislative failure.

If there is a failure to administer our farm laws as enacted by the Congress, this is a matter properly to be laid at the door of the administration, but I do not know of any serious charge of this kind. If there is a failure of the laws themselves, which is the fact, this is a responsibility of the Congress.

There exists a great confusion in the public mind as to the separate responsibilities of the executive and the legislative branches of Government. Some members of the Congress have heightened and exploited this confusion, rather than address themselves to their proper task, which is the writing of needed legislation.

Having attempted to make clear the fact that present legislation does not represent the administration's farm program, I shall now indicate what actually constitutes the administration's farm program. There is support for activities in eight different areas; there are recommended changes in one.

First, there are the historic services that concern the development of human resources, among them education, research, and the supplying of needed information.

Second, I name the rural development program, by means of which we endeavor to open wider the doors of opportunity for the million and a half rural families with very low incomes.

Third, I would name the development of natural resources and their intelligent use, including the conservation reserve, various land-use programs, the activities of the Forest Service and related matters.

Fourth, is market-building, which relates to consumer education at home, market development abroad, and research to discover new uses.

Fifth, I shall list surplus disposal, those activities which move into use, through special programs, our heavy Government stocks of farm products.

Sixth, are the credit programs, intended to meet a variety of needs, written for varying periods of time.

Seventh, there are regulatory activities to insure the wholesomeness of the food supply, the proper functioning of the commodity exchanges and similar activities.

Eighth, there are the marketing orders and agreements, the purchase and diversion of surplus products to the school lunch program, and the authority to support prices of the great majority of farm products at levels discretionary with the Secretary of Agriculture.

Ninth, for the problem crops, particularly wheat, legislative changes are proposed which move in the direction of greater freedom to plant and less interference with market forces.

Some of these activities were launched by this administration. Others originated earlier. All have administration support. It is clear that the administrations farm program is a broad one, encompassing many areas of service rather than one.

There is general agreement on the appropriateness of the first eight of the services I have listed. Despite occasional friction regarding one or another, they have been the cause of relatively little cleavage between the executive and the legislative branches, or between the two political parties.

Greatest interest has centered on the last of my listed categories, the one having to do with price-support programs for the so-called basic crops. The six crops designated by legislative fiat as basic bring in only about 20 percent of the farm income. But they account for 85 percent of the Federal inventory of price-supported commodities and for about 95 percent of the controversy. The remaining income, surplus stocks, and controversy are distributed among some 250 farm products which have not been designated as basic.

In its recommendations regarding price and production policies, the administration has not been doctrinaire, though it has often been charged with being so. Alternative recommendations have been made. The administration has indicated that it viewed with favor the relation of price-support levels to appropriate parity standards, if the Congress should so prefer. Or, if desired, supports could be linked to market prices of the immediate preceding years. Or, should the Congress wish, the Secretary of Agriculture has indicated that he would himself bear responsibility for establishing support levels in accordance with general criteria.

With respect to production controls, the administration has likewise avoided a doctrinaire position. A willingness has been expressed to support action by the Congress which would liberalize acreage allotments, eliminate them altogether, or to have the farmers choose between alternative programs. There has been an expressed willingness to administer a program of tightened allotments if the Congress should insist on keeping price supports at a high incentive level.

Throughout there has been this one important and consistent recommendation: that price-support objectives be reasonably related to production policy. If price supports for wheat are to be held at a high level, Secretary Benson said a year ago, then strict production controls must be imposed. If price incentives are reduced, then a less restrictive production policy can be followed. The administration indicated its clear favor for the liberal as compared with the restrictive route.

The one thing the administration has consistently resisted is high price supports coupled with flimsy production controls—running the vehicle with the throttle wide open and without brakes.

III

Much of the controversy regarding farm policy springs from failure to distinguish between equity and workability. Both of these are important. No farm policy can succeed unless it takes account of both.

Let me state some appropriate considerations of equity.

1. Farmers, who are exposed to unusual economic and natural hazards, are entitled to the help of government as a cushion against unfortunate events which they cannot well avert through individual or organized action.

2. The cause of equity is not served by programs which aggravate the disparity of income within agriculture while endeavoring to reduce the disparity of income as between farmers and other occupational groups.

3. A man's role as a citizen takes priority over his role as a member of an occupational group. It is not equitable to do violence to his rights as a citizen, or to the rights of other citizens, in an effort to improve the position of his group.

4. Equity does not lie in the equal treatment of unequals.

Within the stated conditions of equity, there are workable farm programs. There is a substantial area within which equity and workability overlap. The administration's farm policies are within this area.

Equity, like workability, is a necessary but not a sufficient criterion for success. Some programs are advocated as equitable, but are not workable and are of no service to agriculture. Other programs may appear to be workable in a harsh and callous sense, but do not meet the standards of equity which prevail in the mid-twentieth century; they will not be tolerated.

I wish to discuss the workability of farm programs, a matter which is the primary province of agricultural economists.

Here we run head-on into the fundamentals of demand, supply, and price. I shall state what seems to me to be the present state of professional knowledge on these points. If this seems elementary to you, I ask only that you note the grave difficulties that farm programs have come to be overlooking the fundamentals.

The law of demand is that, other things equal, an increase in price will result in a reduction in the quantity demanded; a decrease in price will result in an increase in the quantity demanded. I know of no exceptions to this law in the agricultural field.

Statistical evidence is very strong that for most farm products, in the short run, and with other things equal, a given increase in price is accompanied by less than a proportional reduction in the amount demanded. Thus, in the short run, a short supply will usually bring in a larger-than-average gross income.

The unchallenged statistical demonstration of this fact is the vision which has led to the production-control and price-support legislation now on the statute books.

But this vision, so clear in the short run, is proving in the long run to have been a mirage.

In the long run—and the longrun effect has been subjected to much less study—the relationship of price and quantity is far different from what it is in the short run. Over time and for many farm commodities, a given boost in price results in more than an equivalent reduction in the quantity demanded. Thus, in the long run and for many farm commodities, other things equal, a high price means a lower gross income to the seller.

The difference between the short-run and the long-run effect of a price increase is that over a period of time the buyer can find or develop substitute products or sources of supply. In the case of cotton, a price supported continuously and substantially above market levels has greatly stimulated the use of manmade fibers, and greatly stimulated the production of cotton abroad. During a quarter century of price support, the share of our farm income earned by cotton fell from 12 percent to 7 percent.

During the 5 years prior to the inauguration of price support and production control, the six basic crops brought in 21 percent of our farm income. After 25 years of controls and supports, after the expenditure of many billions of dollars and the utterance of many millions of contentious words, these same basic crops still brought in only 21 percent of farm income, and a goodly share of this 21 percent was from sales to the Government.

It might be argued that in a free country, if a group of people wish to sacrifice the future to the present, that should be their prerogative. But at least they should know the result of what they are doing. And economists, who by their professional competence have this knowledge, should tell them.

Confusion with respect to the law of demand has made grave trouble for farm programs. But confusion with respect to the law of supply has led us even more deeply into trouble.

The law of supply is that if price is increased, other things being equal, a greater quantity will be offered. And if price is reduced, other things being equal, a smaller quantity will be offered.

This law is challenged by many persons. The statement is made that if price is reduced, farmers will increase production in order to offset the decline in income.

There undoubtedly are some individual farmers, with very limited alternatives, who react to some extent in this manner. But this is not true of farmers as a group.

I have studied all the research on this subject which I have been able to find. This includes the work of Bean, Black, Kohls, Moore, Nerlove, Pearson, Pubols, Warren, Wells, and others. Thus far I have not been able to discover any competent piece of work which shows the perverse relationship so often alleged to exist.

Some Members of the Congress say that a price decline results in an increase in production. Yet when these gentlemen decided that fewer potatoes were needed, they properly allowed the price to decline. When they wanted an increase in production, as during the war, they properly raised prices. As recently as 1958 they extended the National Wool Act, the stated purpose of which is to stimulate production; the means by which this is to be accomplished is through offering increased prices. By their deeds Members of the Congress recognized the economic facts of life as related to the law of supply.

Recently there has been some loose economic thinking with respect to changes in corn acreage. The statement is made that price supports were dropped and farmers increased their acreage in order to maintain their incomes. The truth is that price supports were dropped for about 14 percent of the corn farmers, those few who had previously complied with their corn allotments. Supports were increased for the other 86 percent of the farmers. Farmers reacted in a perfectly normal and predictable manner. With price supports raised, with the corn acreage reserve program and corn acreage allotments abandoned, and with price supports for alternative feed grains reduced, a jump in corn acreage was practically certain. Farmers reacted in conformity with the law of supply.

Those who claim that farmers as a group increase production when price declines postulate a perverse and irrational situation. If farmers actually behave in this manner, crop acreage and livestock production are incapable of reaching or approaching equilibrium, and must, therefore, be subjected to strict Government control or catastrophe will occur. Those who deny the validity of the law of supply are left without any explanation for the generally rational behavior of farmers who produce the unregulated crops and livestock products. Nor do they

have an explanation for the generally rational behavior of farmers who produced wheat and corn and cotton during the centuries which preceded acreage control.

The fundamental laws of economics are these: Other things equal, as price rises, the quantity which will be produced increases and the quantity which will be purchased decreases. The Congress has not been able, in 25 years of effort, to set aside these laws.

I said these laws operate with "other things equal." But other things have not been equal. The special factor which has modified the operation of these laws has been the technological revolution in agriculture; this revolution has caused artificially supported prices to generate even greater surpluses than would otherwise have been the case.

The longrun consequences of artificially supported prices have set in. Supply has been increased, buyers have turned to alternative sources, markets have been lost, and farm incomes have been reduced.

If there is to be a better balance within agriculture, inducements for excess production must be diminished and pricing policy must allow farmers to regain markets.

Some people say that the solution lies in the direction of stiff controls. For 25 years the Nation has been building up a history of experience with controls. The evidence is that the Congress will not enact, the executive branch cannot enforce and the farmers will not accept the kind of production controls which would be necessary to balance production and consumption at the price objectives customarily cited by those who advocate the strict controls.

If, with supplies as heavy and costs as great as they have been in recent years, stiff production controls could not be enacted, how likely is it that tough controls will ever be invoked?

Until someone develops evidence of a substantial change from the pattern of the last quarter century in political behavior and in American mores, this history must stand as an insurmountable refutation to those who advocate stiff production controls as a way out.

As we said before, we are in the midst of a technological revolution in agriculture. The need is to reap for society whatever gains this revolution may bestow, and to cushion its impact when it deals harshly with individuals and groups. Farm legislation has concentrated more on the problems of this technological revolution than on its opportunities. As a nation we have been problem prone rather than opportunity oriented.

Our rapid scientific advance has lightened the toil, lifted the level of living, and broadened the horizon for our farm people, and holds hope for a hungry world. This is good, not bad. To extract the most good from this revolution, and to be in a position to ward off its sharpest blows, individual persons should themselves have a substantial role in price determination and in resource allocation. The rapid changes which are underway call for a greater adjustment capability than is possible under a parity formula or a historically based acreage allotment.

The heart of the administration's farm policy is faith that individual farmers, with appropriate services provided for them by private and public agencies, will be able to make wise allocation of their resources—decisions that are advantageous to them personally and are in the public interest.

A technological revolution calls for the use of all the intelligence that is available. In the practical experience of 4½ million farmers there is a great reservoir of intelligence and sound judgment. A major purpose of the administration's farm policy is to tap this reservoir.

The services I mentioned earlier are of great help in improving the caliber of individual decisions. Public programs can serve the national interest better by helping to improve the caliber of individual decisions than by substituting Government edicts for private judgment.

At the bottom of the income scale are a million and a half rural families who receive, from all sources, less than $1,000 a year. In terms of genuine need, this is the real problem. These people have been almost untouched by price-support and production-control programs. The technological revolution has largely passed them by. They do not contribute as much as they should or as much as they would like to the national production of goods and services. The administration's rural development program is addressed to this problem. It needs greater understanding, wider support, and more funds.

The administration's food for peace program is an effort to use our abundant capacity for food production in support of the foreign policy of the United States. This is done chiefly through Public Law 480, the chief legislative authority for surplus disposal. During this past fiscal year, well over a billion dollars worth of American farm products moved abroad under our special export programs. Some of these programs are new, unique, and unorthodox. They are not described in the standard texts on international trade. They have grown up out of necessity because our stocks were heavy and because dollars weren't available in the countries which needed our products. This program serves the needs of our friends abroad and relieves our heavy supply position. It is my feeling that Public Law 480, which has been considered by some as a province for idealists and temporizers, might better be considered as subject matter for hard-headed realists.

This then, restated in summary form, is the farm policy of this administration:

For the farmers who produce the bulk of our food and fiber, a liberal production policy coupled with modest price objectives.

For rural people in areas of low income, services which will open wider the doors of opportunity both within agriculture and for off-farm employment.

For all farm people, services to improve the caliber of individual decisions.

For this generation and the next, land-use programs intended for wiser use of our national resources.

In the broad public interest, wide dissemination of the fruits of the technological revolution, to our own citizens and in the service of American foreign policy.

IV

What are the alternatives to the adoption of some such policy as I have outlined?

Continuation of the present program? Clearly the public patience will not tolerate indefinitely the heavy cost and the growing stocks which result from the laws we now have.

Stand by and allow the present program to collapse of its own weight? This would be a sadistic remedy. If the present program should collapse, with the mountainous stock now on hand, prices of wheat and corn and cotton would be carried to disastrous levels. After having been insulated for 25 years from the rough-and-tumble of the market place, these crops can hardly quickly be tossed, unprotected, to the not-so-tender mercy of a completely competitive climate. We cannot regain overnight markets which we have been losing for a quarter of a century. Government has piled up the present stocks and is responsible for some of the present dislocations. Government cannot walk off and expect farm people to pick up the pieces.

Shall we apply marketing-orders or some similar technique to additional crops and livestock products? Programs which have worked tolerably well for speciality crops in concentrated areas of production, marketed through a limited number of well-defined channels, cannot easily be extended to crops grown generally in diversified areas, moving to market in many forms and through many agencies. The so-called self-help plans thus far offered involve substantial Government financing and responsibility. And it is not clear that Government, while retaining responsibility for the domestic and foreign consequences of these plans, can legitimately delegate price and production authority to commodity groups. Nor can commodity groups avert the laws of demand and of supply which have brought Government price-support and production-control programs to their present difficult state.

Should we enact two-price plans or domestic parity plans? If we do we institutionalize a wedge between the domestic and the foreign price, we set up Government machinery for the transfer of added special moneys from the eaters of food to the producers of food, and we set one faction of agriculture against another.

Shall we adopt production payments, or deficiency payments, or compensatory payments? Let us remember that the sole use to which this device has thus far been put has been the role of stimulating production, a consequence we do not want. Consider the likelihood that the Congress would dependably and consistently provide an annual appropriation running into many billions of dollars, to be paid directly and visibly to a vocational group which numbers only 10 percent of the voting population. And let us think of what might happen to the market price, and hence to public cost, if an unsupported market is asked to move not only the abundant production of our present farm plant but also the added amount induced by a Government payment.

There is, as I said earlier, a substantial area within which the separate disciplines of equity and workability overlap. Within this area the administration's farm policies will be found. These policies will not satisfy those with their own special definitions of equity, or those who ignore the practical problem of workability. Nor will they satisfy those who see an opportunity to make workable some program which violates individual rights.

Whether the administration's farm policies will satisfy a sufficient number of persons to permit corrective early legislation remains to be seen. Whatever time schedule the fates may hold, the day is gradually drawing nearer when farm legislation will be rewritten. It would be better to do this before the public patience is exhausted; it would be better to write new farm legislation in a climate of reason than with the attitude of resentment which further postponement would bring about.

Hon. M. J. "Bill" Laurie Receives the Eloy Alfaro Grand Cross and Diploma, and Is Appointed American Deputy Provost of the Eloy Alfaro International Foundation of the Republic of Panama, in Recognition of Humanitarian and Philanthropic Services to His Fellow Man

---

EXTENSION OF REMARKS

OF

HON. ROBERT R. BARRY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 13, 1960

Mr. BARRY. Mr. Speaker, under leave to extend my remarks, I insert the

highlights of the proceedings of the Eloy Alfaro International Foundation of the Republic of Panama, on the occasion of the reception, ceremony, and dinner of the New York League of Locality Mayors of the City of New York on February 15, 1959, at the Savoy Hilton Hotel, New York City, N.Y., at which the award was made to Mr. Laurie. This high honor was bestowed on him in the presence of a large number of locality mayors by Dr. Bayern in recognition of his outstanding efforts to serve mankind, and in carrying out the aims and objectives of this foundation. At this dinner Dr. Herman A. Bayern, appointed him American Deputy Provost.

Dr. Bayern's address follows:

Elroy Alfaro, soldier, patriot, statesman, and martyr, was a citizen not only of his native Ecuador, but of all the Americas. The personal integrity, the unwavering defense of the principles of truth, justice, and friendship among nations, the self-control and self-sacrifice that marked about one-quarter of a century of unflagging service to his fellow man, extended way beyond the confines of his own country, Ecuador. He was the leader of a generation fired with the hope and desire that responsible political action would enhance the prosperity of their country and the welfare of their people.

The Eloy Alfaro International Foundation was organized to perpetuate and further the political and moral values of the Americas by General Alfaro, for whom the organization was named, and, who at the turn of the century was president of Ecuador for two terms.

The philosophy of General Alfaro was based principally on service to his fellow human beings and to the cause of international world peace. The public and private activities of Mr. Laurie comes within the frame work of this kind of service to mankind. In recognition of this fact, the Board of Dignitaries of the Foundation granted Mr. Laurie its highest honor—The Eloy Alfaro Grand Cross and Diploma.

As you know, General Alfaro established many grammar schools, high schools, colleges and universities, as well as hospital and other welfare institutions. One of his major social contributions was to initiate measures for improving the status of Indians in his country, and the downtrodden, and freeing them from exploitation. On the political side, General Alfaro fought for liberty and American unity. He played a leading part in achieving the liberation of oppressed Latin-American nations, and furthering cooperation among the countries of the hemisphere. He welded the factions of the Cuban Freedom Party together in December, 1895, three years before the Spanish-American War, when he publicly petitioned the Queens of Spain, in a document, demanding Cuban Independence.

You know, my dear Mr. Laurie, that you now join a goodly company of fellow Americans, who have been similarly honored in the past. They include: President Dwight D. Eisenhower, Gov. Nelson A. Rockefeller, former President Harry S. Truman, Senator Lyndon Johnson, Congressman Joseph Martin, General Eugene McAuliffe, along with General Willis D. Crittenberger, U.S. Army (Ret.), who typify the caliber of men who hold this high honor, which I am now ready to bestow on my dear friend and colleague, Commissioner M. J. "Bill" Laurie. This is indeed a very pleasant duty imposed upon me by the Board of Dignitaries of this Foundation, and it gives me great personal pleasure to carry out this determination of the ruling body of this Foundation and confer this honor on Mr. Laurie.

I am particularly happy to make note of this occasion, since it gives me the opportunity of doing honor to a public-spirited person, because of his outstanding achievements and accomplishments, who was selected by my constituent, Dr. Herman A. Bayern, American Provost, to receive this very high honor of this famous foundation.

THE AWARD

Eloy Alfaro International Foundation—"Thus one goes to the stars"—recognizing the special value of the services rendered by the Honorable M. J. "Bill" Laurie, in support of the objectives of this institution, he has been awarded the Cross of the Eloy Alfaro International Foundation.

In witness whereof, this diploma, with the seal of the foundation, is presented in the city of Panama, Republic of Panama, on the 28th day of January 1959.

Mr. Laurie acknowledges receipt of the award:

Dr. Bayern, Judge Cox, distinguished guests, and fellow Americans, I am overwhelmed and deeply appreciative of receiving this great honor and being made American deputy provost, particularly in view of the fact that my good friend, Dr. Herman A. Bayern, American provost, conferred this high honor on me. I feel very happy that I now join such a distinguished company, including my good friend, Hon. Joseph A. Cox, surrogate of New York County, who has been similarly honored in the past.

To be the recipient is indeed a high honor, and I shall regard it as an inspiration to accelerate my efforts in carrying out the high ideals and principles of Gen. Eloy Alfaro, and the principles for which General Alfaro laid down his life. I shall be glad to continue my efforts to promote world peace through prayer to God.

I wish to again express my personal appreciation and gratitude for your kindness in conferring this Eloy Alfaro Grand Cross on me, and I hope and pray that we may have peace in our time.

Fourteenth National Conference on Citizenship Is Summarized

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, January 14, 1960

Mr. RANDOLPH. Mr. President, the 14th National Conference on Citizenship was held September 19, 1959, in Washington, D.C., following the adjournment of the first session of this Congress.

It was my privilege to have addressed the conference, the highlight of which was the summarization by Dr. Arthur P. Crabtree, head of civic education, Bureau of Adult Education, New York State Department of Health.

It was the fourth consecutive year Dr. Crabtree was selected to summarize, and he performed his mission most interestingly and with his usual efficiency and accuracy.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD of this date the text of Dr. Crabtree's conference summarization remarks.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

SUMMARIZATION SPEECH, 14TH NATIONAL CONFERENCE ON CITIZENSHIP, SHOREHAM HOTEL, WASHINGTON, D.C., SEPTEMBER 19, 1959, BY ARTHUR P. CRABTREE, HEAD OF CIVIC EDUCATION, BUREAU OF ADULT EDUCATION, NEW YORK STATE DEPARTMENT OF EDUCATION

Mr. Chairman, distinguished guests, ladies and gentlemen of the conference, this 14th National Conference on Citizenship marks the fourth consecutive year that I have been accorded the privilege of making this summarization speech. My fourth return to this platform reminds me a bit of the father-in-law who once said of his son-in-law that he dropped over one afternoon for a cup of coffee and stayed 7 years. Four years ago Judge Hyatt invited me to make this speech, and I accepted with a sense of humility and gratification. With each succeeding year, however, I have experienced an accumulating sense of concern that I may be becoming a trifle boring to you. For my part, however, I want you to know that I still regard it as a distinct pleasure. Each succeeding year brings to the conference new faces, new events, and new problems. This is the hallmark of our task: We who deal with the problems of citizenship in a dynamic world face a panorama of ceaseless change that is forever new.

To summarize effectively a conference like this one must become, in the slogan of a current popular cigarette, a "thinking man's filter." Your magnanimity during these next 20 minutes will determine how well I have succeeded.

EXCELLENT SETTING AND TIMING

Our conference this year has been staged in a new setting; the spacious environs of the Shoreham Hotel. Ours followed on the heels of a similar conference held by the Used Car Dealers of America. There may be something prophetic in this sequence of events. It well may be that the replacement of material values with the moral and spiritual considerations of good citizenship is the imperative transition which America must make in the years that lie ahead.

The timing of our conference this year was uniquely significant. It coincided with the coming of Mr. Nikita Khrushchev, the man in the gray flannel suit from the Moscow Chamber of Commerce. At this writing, Mr. Khrushchev holds the unique distinction of being the only man who has gotten more propaganda value from the moon than Rogers and Hammerstein. However, the recent Russian rocket to the moon lends credence to Eric Sevareid's prophecy of a few months ago that when we get there we will probably find a Hilton Hotel under Soviet management.

Our 14th conference opened this year with a dash of culture and beauty. On Wednesday evening we were delighted with a program of songs and dances of other lands, put on by students of the Americanization School here in Washington. It was a vivid reminder of the cultural contribution which people from all the world have made to our America.

Thursday morning the gavel of Judge Walter M. Bastian, conference president, officially opened the first general session of the conference. Once again the ever-colorful advancement of the various State and Territorial flags created a dramatic scene. The first session was climaxed by the introduction of the representatives of the Thirteen Original States which ratified the American Constitution.

Thursday afternoon, on the grounds of the Washington Monument we witnessed the first outdoor naturalization ceremony ever held in the Nation's Capital. With the Honorable Alexander Holtzoff, U.S. District Court Judge for the District of Columbia,

presiding, 34 representatives of 23 foreign countries were admitted to citizenship. This ceremony was the reenactment of a scene which has taken place in thousands of American courtrooms throughout our history—the great, fascinating process of blending from the freedom-loving peoples of all the earth the mosaic of this thing we call American democracy.

DR. FLEMMING WAS KEYNOTER

In our second general session on Thursday evening we listened to the keynoter of the conference, the Honorable Arthur S. Flemming, Secretary of the Department of Health, Education, and Welfare. His subject was the theme of the conference: "U.S. Citizenship—Know It—Cherish It—Live It." Secretary Flemming chose to assume that we who constituted his audience proved, by our presence here, that we both know and cherish citizenship. Hence, he elected to dwell at length on the third phase of the topic, the living of American citizenship. It was a hard-hitting forceful speech and carried a message that well served as a springboard for the discussion groups of the conference. Secretary Flemming plead for the creation of a richer brand of spiritual leadership among us all and again and again posed the pivotal question of his address: "Are we willing to live our U.S. citizenship in such measure that our actions express our thankfulness for it?"

Yesterday was primarily dedicated to the work of our discussion groups. These discussion groups, in my opinion, constitute the fountainhead of this conference. It is here that all of us have a chance to talk. We can agree or disagree—as long as we remain agreeable. Here is democracy in action.

Let me, then, attempt to capsule your thoughts and recommendations as they came to me from the reporters of these discussion groups.

PRINCIPLES WERE EXPRESSED

In terms of principles you expressed yourselves as follows:

1. The home, the school and the church are the fundamental settings for learning the demands of sacrifice necessary for a deeper relationship to the Nation and its ideals.

2. Mature adults should help younger people define their responsibilities for citizenship and find opportunities for them to face together the problems in government and civic affairs.

3. We should teach people in all walks of life the dignity of the individual.

4. Society must continue to find new approaches leading to the involvement of people in matters of citizenship.

5. Education and good citizenship go hand in hand and adult education programs must be provided that will give continuing citizenship education.

6. We must try to make politics respectable by electing respectable people to office.

7. Apprentice training opportunities in citizenship affairs should be provided for our youth.

8. One of the duties of citizenship is the participation in politics at every level of government.

9. All voluntary agencies in the community should be encouraged to participate in citizenship activities.

10. The awareness of citizenship responsibility must be constantly emphasized through a process of continuous education.

11. We must resolve to subordinate private, material concerns for the preservation of our rights and privileges.

12. Only personal involvement, dedication, and commitment to good citizenship practices, produce devotion to the country's ideals.

In terms of action you made these specific suggestions:

1. Send out a questionnaire to all delegates to this conference at midyear asking how they have implemented the findings of this conference.

2. Broaden the base of representation to this conference by inviting other youth organizations.

3. Urge mayors and other heads of local subdivisions of government to create committees related to citizenship programs.

4. Make more use of our schools as laboratories of good citizenship.

5. Encourage the proper authorities to establish a National Citizenship Week.

6. Work for the voting franchise for the people of the District of Columbia.

7. Hold ceremonies for all people who are voting for the first time.

8. Encourage the creation of more State citizenship conferences.

9. Authorize the preparation of a manual on training for citizenship, to be sold through the Government Printing Office.

10. Set up orientation programs in good citizenship for young adults and teenagers.

HARVEST OF BON MOTS REWARDING

Then each year, as you know, I ask the group reporters to record any particular bon mots or striking statements that appeal to them. This year I thought the harvest was unusually rewarding. Here are some of the better ones:

1. Being an American is a continuously unfinished experiment.

2. Our rights do not include the right to refrain from citizenship responsibility.

3. To be a good citizen does not require sacrifice, but the image and implementation of a dream.

4. Understanding plus action equals citizenship.

5. Citizenship is a diamond of many facets.

6. Citizenship is more than painting one's house every spring—more than merely being a charming social animal.

7. Citizenship is a virtue that prompts us to do without witnesses what we would do before all the world.

8. A recent statement by Chief Justice Earl Warren was quoted by two groups in these words, "Every generation, to keep its freedom, must earn it through understanding of the past, vigilance in the present and determination for the future."

Last evening we staged a doubleheader. Under the artful leadership of Dr. Richard Kennan we heard the voice of youth in the conference. A panel of young adults addressed themselves to the topic, "How To Prepare Youth for Effective Citizenship." Judging from what we heard, these bright young minds have a better idea of what they need to prepare themselves for meaningful citizenship than some of us oldsters.

Later in the evening we thrilled to a program of music provided by the U.S. Army Band and Chorus. All in all, it was a delightful evening.

This morning at the closing session, we have been challenged by Senator JENNINGS RANDOLPH, of West Virginia, to go forth and demonstrate good citizenship in action.

Here, then, is the capsuled version of your conference program. And, more importantly, perhaps, a synthesis of your thoughts and reflections in the discussion groups.

These latter represent your contributions to the conference. Now, before the final curtain falls, I should like to air a few thoughts of my own. This opportunity to offer free advice is a tempting thing, and I would be less than human were I to resist it completely.

The overwhelming fact of this conference, it seems to me, is the insignificance of what happens here. The final appraisal of our conference will be written in the record of what happens when we return to our home communities. In my work, I attend several conferences during the year, all of them related, in some degree, to the upgrading of American citizenship. In all of them I hear fervid commitments to the cause of better citizenship. But from all too many of them I see little or nothing result after the white heat of conference enthusiasm has grown cold. For this reason I was delighted to hear Mr. Havens at yesterday's luncheon pose the $64 question: What is the one important project which, if carried through in your community during the coming year, would activate good citizenship? And, I might add, I was delighted with the answers he received. In fact, I thought this was one of the most fruitful sessions of the conference.

LIVING ASPECT OF GOOD CITIZENSHIP

For the same reason, I was gratified to hear Secretary Flemming stress the living aspect of good citizenship. This is what counts in the long perspective. I, along with you, applauded vigorously on Thursday evening when Congressman BENTLEY stated, with admirable fervor, that if any way of life is "buried," as Khrushchev threatened, it would not be ours. But it was not our applause at that moment that will make it so. Moments like that are perfect seedbeds for fervid affirmations of faith. History will determine the fact or falsity of Mr. Khrushchev's boast by the degree of dedication which you and I, and the millions of other Americans, ascribe to citizenship responsibility in the daily business of living.

The age in which we live is no time for the sunshine patriot, no time for Fourth of July oratory, no time for the "half believer in a casual creed." Rather, in the words of Tom Paine, we are witnessing a return of the times that "try men's souls." What we need today, perhaps more than anything else, is an honest appraisal of ourselves. Let's make such an appraisal for a brief minute or two, using the theme of our conference as our tool of measurement.

What about the first prong of our conference theme? Do we know what we should about good citizenship? Well, maybe we who are here do, but let's don't push the assumption too far. Let me give you a couple of disturbing facts. Not long ago the National Opinion Institute found that 10 percent of the adults they interviewed could not identify the Bill of Rights, the first 10 amendments to the Constitution we commemorate this week and which house the most precious civil rights that were ever written into any form of government. A survey conducted by the New York Times this past summer revealed that 39 percent of the people questioned did not know that Berlin is surrounded by Communist East Germany. No, the facts are that the American adult's awareness of the factual aspect of citizenship problems is not too encouraging. Far too many of them are not quite sure whether the Monroe Doctrine originated with James or Marilyn.

What about the second facet of our theme? Do we cherish American citizenship as we should? Perhaps, but I sometimes wonder. I have spent many years of my life in the education of the foreign-born for citizenship and I have witnessed many naturalization ceremonies similar to the one we saw on Thursday. And I have never come away from one of these courtroom scenes without silently wishing to myself that I could find reflected in the faces of our native-born citizens the same appreciation for American citizenship that I always see in the eager eyes of these people from other lands, people who know what it means to be deprived of the rights and privileges granted by the American Constitution. We speak so frequently of the Americanization of the foreign born. I sometimes think we need a refresher course for all of us in citizenship appreciation. Perhaps the Americanization

of the native born is infinitely more important in these anxious times.

The third concept of our conference theme involves the living of good citizenship. How do we measure up? One criterion of our daily behavior as citizens is our voting record. Ours is the poorest of all the free nations of the world. During the last 30 years an average of approximately 60 percent of our eligible electorate have participated in general elections. In 1948 we came dangerously close to electing a President of these United States with only a minority of the eligible voters in the Nation participating. This does not become the deportment of a nation which carries the leadership of the free world on its shoulders.

These are disturbing facts. To contemplate them brings the logical question: How do we get this way?

EDUCATOR LOOKS AT HIS PROFESSION

I am a professional educator. In my opinion much of the blame lies with my own profession. Somewhere along the way American education lost sight of its original purpose. In the minds of statesmen like Washington and Jefferson and educators like Horace Mann and Henry Bernard, education was conceived as the indispensable ally of democracy. Its purpose was the education of the people in order that they might be better equipped to solve the problems of a democratic society. It was essentially dedicated to the creation of informed and participating citizens. But somebody lost the compass. Our great material resources eventually obscured our vision. Devotion to the American dollar replaced devotion to American democracy. This trend was reflected in our public education and the educative process came to be regarded as a gift to the individual that would equip him to earn a better living than his neighbor. Education for citizenship became secondary. We became absorbed in goods at the expense of goals. We developed the blithe assumption that good citizenship would somehow take care of itself as a sort of fallout from our mushrooming material prosperity. Today we are reaping the harvest of that misguided philosophy.

Speaking not long ago Adlai Stevenson made this statement: "For hundreds of years we have preached the Christian promise of brotherhood but, today, when vanishing space and scientific revolution have turned our planet into a neighborhood, the ideal means little in terms of concern or conviction, in terms of policy or action." In a recent article in the Atlantic Monthly Jim Farley authored this statement, "Our American conveniences and unearned rewards are so much a part of our daily lives that while I concur in our national motto, 'In God We Trust,' it seems to me that each individual citizen's prayer should be, 'Forgive me, O Lord, for taking so much for granted.' Secretary Flemming quoted our Ambassador to the U.N. as saying that "the free world is not sufficiently dynamic."

These facts and these opinions of men like Stevenson, Farley, and Lodge reflect the situation in which we find ourselves today. These gentlemen are not fearmongers. They are men with the courage to take an honest look at the state of our Nation. And their findings serve to set the dimensions of our assignment in the immediate future.

It is my deep-seated conviction that the greatest single citizenship task we face today is that of impressing the American people with the gripping realization that we are engaged in a cold war with a powerful nation, a nation that represents the antithesis of all we stand for. And what is a cold war? It is a war that is fought with ideas, not guns. Its most lethal weapon is a better idea. Its battlefield is the mind of man. Its foot soldiers are men and women who are willing to live, not die, for the survival of a particular way of life. A citizen who believes in the rightness of American democracy is as vital to the preservation of this Nation today as was any soldier in the ranks at Valley Forge, Gettysburg, or Iwo Jima. This is the nature of the war we are fighting and its very nature represents the disadvantage under which we labor. We have no experience of this kind of warfare. But we must learn—and learn swiftly—the ground rules of the new game we are playing. Somehow, and in some way, we must convice the American citizen that the business of making democracy work to the limits of its vast potential is the most important task he faces in today's world. And the responsibility of carrying that conviction back to the people of our communities as we leave this conference is, perhaps, the most important assignment that faces you and me. In some way that is not now clear to me we must manage to rekindle in the hearts and minds of the American people a renewal of fighting faith in the dream that guided and inspired the men who dared to launch this Nation 172 years ago.

But enough to the sober and the serious. Let us close in a lighter vein. In a few minutes this 14th National Conference on Citizenship will disappear behind the portals of time. But, as usual, a host of pleasant memories will linger long after "the tumult and the shouting dies," long after the "captains and the kings depart."

AND THEN—FOND REMEMBRANCES

Like the blind men and their impressions of the elephant, however, each of us will carry away from here his own personalized treasure chest of warm remembrances. At the risk of boring you, I should like to suggest what some of mine will be.

I shall remember the exhilarating atmosphere of a gathering of 600 people who are dedicated to the proposition that this Nation can be made a better nation and this world a better world.

I shall remember the image of two dedicated and indefatigable people who have given their fullest measure of devotion to this conference: Judge and Mrs. Carl Hyatt.

I shall remember the fresh and eager faces of the young people of the conference, with their hunger for knowledge and their impatience with the conservatism of the old ways.

I shall remember a conversation the other night with Mr. Mack Lupton, the ex-mayor of New Bern, N.C., as he related to me how he went about the job of getting the attendance of 60 young people and of the gracious ladies from Tryon Palace whose 18th century costumes added so much to the color of the conference.

I shall remember the faces of the veteran members of the conference that I look forward to seeing each year and this year, as always, I shall add some more.

I shall remember the gracious courtesy and cooperation of all those who work at the registration desk.

I shall remember the beauty of our Capital City in September.

I shall remember the rollicking humor of Julius Meitzer, and many others like him, who seldom gain the spotlight of the glittering podium but whose devotion to the cause of better citizenship guarantees the success of this conference year after year.

And, finally, I shall remember the little old lady who told me yesterday she was staying over to hear this summary and I shall hope that I haven't disappointed her too much.

But amid my memories this year I shall take home with me one regret—the regret that Mr. Khrushchev couldn't have spent some time with us. I'm afraid he is looking in the wrong places to find the real America. He will not find it in our skyscrapers, our supermarkets nor our pigs and cattle. If he wanted to see a profile of the real America he would have found it here. He would have seen it in the faces of 600 people who believe that liberty and freedom are more than words and who are willing to dedicate their vision and courage to the end that these priceless guarantees of individual rights may be forever retained within the context of the American dream.

This was your conference as I saw it and heard it. If I have recaptured for you some of its spirit and substance, some of its lights and shadows, some of its melody and its overtones, then my efforts have been richly rewarded. And this will be my most cherished memory of all.

War on Hunger

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Monday, January 11, 1960

Mr. WOLF. Mr. Speaker, in the Middle West, the acknowledged expert and leader in the field of an enlightened foreign policy is the Des Moines Register. This newspaper has done a great deal to change the attitude of the Middle West in the area of foreign policy and foreign aid. More than ever before, and to a great extent, thanks to the Des Moines Register, we in the Middle West have a growing awareness that the hunger of an Indian infant and the squalor of a Pakistani village is something which involves the workers, businessmen, and farmers in Iowa.

As part of its explanation to the public on the problems of foreign policy, this newspaper has shown how the Nation's basic asset, its food and fiber supply, can be used for the purpose of economic development in newly developing nations. This newspaper has consistently pointed out that in a world half starving, our agricultural abundance is not a burden but an asset. In my recent trip to India and Pakistan, Premier Nehru made this same point to me. Nehru said that India's needs are agricultural for in the development of their agricultural base and in the use of our food and fiber resources, their nation will be free to continue on the road to economic development.

Under leave to revise and extend my remarks I wish to insert into the body of the RECORD this statement and the appended editorial which points the way so well for both Congress and the American people in the area of economic development through use of agricultural abundance.

[From the Des Moines Sunday Register, Dec. 20, 1959]

WAR ON HUNGER

At the opening of the New Delhi, India, World Agricultural Fair the other day, President Eisenhower called upon all nations to join in a genuinely noble war against hunger, as a step toward enduring peace.

"Men right now possess knowledge and resources," he said, "for a successful world-

wide war against hunger—the sort of war that dignifies and exalts human beings."

That is true.

And the United States has by far the greatest capacity of any country for munitions in this kind of war. U.S. weapons for a war on hunger are not merely the vast quantities of grain which can be supplied to other countries needing food. They are, more importantly, the capacity to teach others how to produce more food.

Even if the United States produced to the utmost and could make effective use of all its surplus food to aid other countries, that would not be enough to provide good diets for the world's hungry. Large as America's surplus is, it would vanish in India alone as population rises, without lifting the standard of diets appreciably. American food can help meet emergency situations for a long time ahead, but the ultimate answer is higher productivity in India and countries like India.

America has an overhead production-improvement organization, through the Department of Agriculture and the State agricultural colleges, which is unmatched. It has made American agriculture the most productive in the world. This has been a big public investment over the last 75 years. And the public has reaped large returns—in the form of absolute security against food shortage, the highest quality diet in the world and cheap food prices.

This research and educational system has been so effective, in fact, that it has overdone the job. The problem right now is that farm production keeps racing ahead faster than demand for food.

Thus the United States has great surplus capacity in its agricultural industry—including its overhead research and educational arm. It could well convert a portion of this overhead organization for research and educational efforts on food production in India, Tunisia, Peru, and similar countries.

Basic scientific research would go right on, of course. But instead of applying this new knowledge for new technology on American farms, some experiment stations would do so for farms in Asia, Africa, and South America. (Private research by farm machinery, feed, seed, chemical, and other firms would fill some of the gap in development of new technology for U.S. farms.)

At the beginning of World War II, the United States set out to produce 100,000 warplanes a year to defeat the Germans and the Japanese. To do this, automobile production had to be stoped. Gas and tire rationing had to be enforced to cut automobile travel.

But America could deliver the equivalent of 100,000 warplanes in the form of food and agricultural knowledge for a war against hunger with very little, if any, sacrifice. Such a program, continued over a decade or more, might slow down America's rapid advance in food production to be sure. But would that be bad? Food prices would rise and farmers would be better off. The Nation is trying to accomplish this anyway, by other methods, to correct the disparity in farm income.

Why not do it by shifting a part of the agricultural industry to wage a world war against hunger?

This is fine in theory but difficult in practice. The United States for several years has been providing technical help for agriculture in other lands. From the economic viewpoint, this Nation could easily double or triple its effort without real cost. From the political viewpoint, it's hard to marshal the people and the institutions (which depend for support on State legislatures largely) to fight hunger abroad.

But we believe Americans would respond, out of their humanitarian convictions, to imaginative leadership on this—even if it meant some real sacrifices. They would find a way to make U.S. agricultural resources more freely available to the poor countries through the United Nations or other cooperative programs.

This is one field, incidentally, where the Soviet Union cannot equal America for a long time to come. In fact, the Russians need assistance on improving agriculture themselves.

Program To Preserve and Perpetuate the Trumpeter Swan

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Thursday, January 14, 1960

Mr. NEUBERGER. Mr. President, protecting the heritage of the next generation is one of the essential duties of this generation. Previous generations did not always fulfill the obligation, as witness the obliteration or virtual destruction of such species as the passenger pigeon, the American bison, and other wildlife.

In American Forests magazine for December of 1959, Mr. William B. Morse, of Portland, Oreg., who is Pacific Northwest field representative of the Wildlife Management Institute, has written a moving and informative article about the efforts underway to preserve the stately trumpeter swan at such places as the Malheur National Wildlife Refuge in Oregon and the Red Rock Lakes area in Montana. The trumpeter is one of our most magnificent birds.

The title of Mr. Morse's splendid article is " Trumpets in the West." I believe it should be read by Members of the Senate and the House, because we soon will be voting upon appropriations to protect the trumpeter swan and other threatened species of bird and animal life. Therefore, Mr. President, I ask unanimous consent that the article from American Forests magazine for December by William B. Morse, whom I am proud to claim as a constituent and a personal friend, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the American Forests, December 1959]

TRUMPETS IN THE WEST

(By William B. Morse)

One of the most difficult problems in wildlife management is to protect and save a vanishing bird species. Many conservationists and agencies are participating in heroic efforts to safeguard the whooping crane, and that issue is still in doubt. There is another bird, once almost as near extinction, that has been saved, increased, and spread in the last 23 years by the use of routine but concentrated wildlife management techniques. This is the trumpeter swan, largest and most magnificent of the wildfowl in the West.

Saving the trumpeter swan took no magic, only hard work, money, luck, and the cooperation of the trumpeter himself. The techniques used were those applied routinely to many other birds. If a species monument exists to game management, it could be appropriately symbolized by the trumpeter swan.

The year 1958 marked the first successful reproduction of transplanted trumpeters on two areas far from their existing population center. Four cygnets were hatched and reared on the Malheur National Wildlife Refuge in southeastern Oregon. Six cygnets were reared at Ruby Lake National Refuge in east-central Nevada. This was a special birthday present for the Malheur Refuge. The 50th anniversary of the founding of the refuge by President Theodore Roosevelt was celebrated by a dedication ceremony on October 25, 1958. The ceremony was held adjacent to Sod House Spring, and eight trumpeters attended, with ringside seats on the spring pond. Their talk was music to the ears of Dr. Ira N. Gabrielson and other distinguished conservationists who participated in the brief ceremonies.

If all goes well, the trumpeters should increase and spread. It is not likely that they will ever again become abundant, but all nature lovers will be able to hear what is to me the most beautiful sound in nature—the deep, clarion, French-horn tones of the mighty trumpeter of the West. Why has the trumpeter survived where other remnant species often dwindle to extinction? If we examine the history of the trumpeter, perhaps we may find some answers.

The trumpeter originally ranged throughout a vast area of western North America, breeding from Alaska, northern Mackenzie and James Bay, south to British Columbia, Montana, Wyoming, Nebraska, and northern Missouri. It wintered in open water areas south to California and the Gulf of Mexico. At the present time there is a small population of about 200 birds in Alaska, and several hundred in western British Columbia and Alberta. The 700 trumpeters in the States of Idaho, Montana, and Wyoming complete the population. They live within a triangle less than 100 miles on each side.

That is trumpeter country, U.S.A. It is within the historic breeding and wintering range of the species. The small size of the occupied habitat makes it very important to increase the breeding range to other areas. Some catastrophe could conceivably wipe out the greater portion of our remaining birds. Who knows what combination of severe winter, disease, drought, or even fallout from a badly aimed ICBM could do to put the United States out of the business of raising trumpeter swans.

Statements of former abundance of trumpeter swans vary, and are further complicated by the difficuty of distinguishing whistling swans from the larger trumpeters in the field. Trumpeters were supposed to be abundant throughout their breeding range. We now know, however, that each breeding pair requires a large territory, large enough to cause doubt of some old-time estimates of tremendous trumpeter populations. Swans were used for food, shot for the market, and thousands were killed for the breast skins alone. Between 1853 and 1877, the Hudson's Bay Co. marketed 17,671 swanskins. How many of these were trumpeters is not known; in fact, it was not until 1831 that the species of whistling and trumpeter swans were differentiated. While swan breast skins were a quality item, they were also used in a later age for such prosaic items as cowboys' coats and, according to a user, tanned as tough as sheepskin.

Except to the expert, the trumpeter and whistling swans appear identical in the field. Both are large white birds and look about the same on the water and in flight. The major difference is size—any specimen over 55 inches long, weighing over 20 pounds, is probably a trumpeter. There are additional identification aids. Most whistlers have a yellow spot in front of the eye, trumpeters vary in possession of a narrow salmon-red

streak or grinning patch on the edge of the mandibles. In 1956, banding operations at Red Rock Lakes, Mont., revealed that this grinning streak was prominent in 98 of the 102 birds examined, and 50 to 95 percent obscured in the remaining 4.

The surest field characteristic is, of course, the voice of the trumpeter. It can never be mistaken for anything else. A peculiar extra convolution of the windpipe within the trumpeter's breastbone is the final and positive identification. This convolution is also responsible for the trumpeter's clarion voice. Like all swans, the male is called a "cob," the female a "pen," and the young are "cygnets."

We know from records that the trumpeter was widely distributed, but few reports of large numbers of birds have been made by qualified ornithologists, so a reasonable doubt exists that they were ever as numerous as some believe. Records are authentic for distribution, and while trumpeters may not have numbered in the millions, they were found throughout the West. Whether there were many or very many, we know that the trumpeter was intensely persecuted from the time white men entered the country. Trumpeters fly low, near the borders of lakes and marshes, exactly where hunting is easiest. They often wintered on the only open water in cold areas, a habit which tended to concentrate hunting on the species more than on the whistler.

As prairie land was taken up, nesting marshes and potholes were drained. By 1912, E. H. Forbush stated, "The trumpeter has succumbed to incessant persecution in all parts of its range, and its total extinction is now only a matter of years." This seemed true, and by the 1920's the bird had almost vanished. By 1935, there were 73 swans in the United States by actual count, the bulk of these on Red Rock Lakes, Mont., and in Yellowstone Park. If any year was ever critical to a bird, 1935, was the year for the trumpeter. That was the golden year of national wildlife refuge expansion. Large Federal emergency fund appropriations provided money for acquisition and enlargement of many refuges on a scale never since equaled. Red Rock Lakes was one of these. Federal lands were withdrawn for wildlife purposes, private ranches purchased, and the remnants of the trumpeters at last had a home of their own, dedicated solely to their welfare. Forty thousand acres it was, swan breeding and wintering country since the end of the last Ice Age.

Swans had always nested here. Cowboys of the eighties roped and butchered cygnets to vary a diet of beef and beans. Market hunters and commercial duck clubs had operated. One commercial enterprise near the turn of the century, strangely enough, may have been responsible for perpetuating the trumpeter. The Wetmore family, oldtime ranchers at Red Rock, started catching trumpeter cygnets for sale to zoos and gardens throughout the country. It was a lucrative business for those times, for prices varied from $50 to $75 a pair. Cygnets must have parents, so the hunters, both market and sport, were requested not to shoot adult swans, and, strangely, they complied. This may have been the help needed to preserve the species.

Since establishment of Red Rock Lakes Refuge in 1935, the trumpeter has had the benefits of all applicable wildlife management techniques. Three of the oldest techniques have had a major part in increasing and spreading the birds over a much larger range. These are provision of breeding and feeding areas, protection, and trapping and transplanting. In the course of these activities, the trumpeter became a much-studied bird, and a great deal has been learned about him. Much more remains to be learned, some of it by scientific studies and some in th manner of the old-fashioned naturalist, by just observing.

The best way to discuss some of these findings, as well as the story of the trumpeter and his habitat and management, is to follow through an annual cycle.

Swan country is high; the home triangle is 5,000 and more feet above sea level. Red Rock Lakes Refuge lies in the eastern end of Centennial Valley, Mont., just west of Yellowstone Park. Here the birds have large marshes for breeding and spring-fed lakes with year-round open water for wintering. Conditions are somewhat different in Idaho's Island Park country and in Yellowstone National Park, where swans are also found. Here they nest in small mountain lakes scattered throughout the rolling timbered country; the shallow lakes are good for both swan and moose. Trumpeters winter primarily on the open waters of Henrys Fork of the Snake River, and its larger spring-fed tributaries. A few birds have been successfully transplanted to the National Elk Refuge near Jackson Hole, Wyo. Their habits here are much the same, breeding on marshy lakes and wintering on the open water of the main stem of the Snake River.

Trumpeters start pairing off in February, and late in the month they spend most of their time on snow-covered meadows. Trumpeting increases as the weather becomes warmer, and by mid-March courtship reaches a peak. Shortly after the ice goes out, usually in mid-May, the swans prepare to nest.

Trumpeters are monogamous and probably mate for life, pairing off when 3 years old and breeding at 5 or more. Alvin Misseldine, formerly the Idaho State Conservation Officer at Island Park, says he could almost always tell when a trumpeter had been killed. The surviving mate flew up and down the river for days calling constantly, and would sometimes sit down in a field and starve to death.

Nests are huge structures constructed of cattails or other marsh vegetation, often 4 to 5 feet across. Muskrat houses frequently serve as a base for the nest. Lacking these, a beaver lodge or any other elevation in the marsh will do. Trumpeters are not particular whether the muskrat houses are active or vacant; both are used. Relatively large nesting territories are needed. In recent years, a staple number of breeding pairs have used Red Rock Lakes. Exactly 44 nests were located in 3 successive years. In Island Park, a pair of trumpeters utilizes an entire lake of 2 to 10 acres in size. One requirement is paramount, that of solitude. Tolerance is very low to human interference; if solitude does not exist, trumpeters will not breed in that place.

Swan eggs are large, and dull white in color. A wide range in egg numbers has been recorded—the usual range given is from 2 to 12. On 2 separate years, nesting studies at Red Rock collected data showing slightly over five eggs per nest (50 nests) 1 year, and just under 5 per nest (32 nests) the other year. The eggs were about 110 millimeters long and 73 millimeters wide. Incubation starts after the last egg is laid and takes about 35 days.

The pair stays together during incubation, although it is believed that the pen does all the incubating. The nest is lined with down, and eggs are covered with down when the pen leaves for her twice-a-day feeding excursions. The cob remains near the nest at all times and warns of any danger. There is usually some protection for the nest; swans prefer a nesting site separated from open water by a strip of bulrush or sedge.

As soon as their down is dry, the cygnets leave the nest and, in a family group, start feeding and exercising near the nest. Distances traveled gradually increase as the young get older. In September, flight lessons start, taught and supervised by the parents. Cygnets are usually flying by early October. Family units normally stay together until March of the following year, when the breeding cycle starts anew.

During this nesting and rearing season, all the birds go through a moult. This flightless time at Red Rock Lakes Refuge is the period for capturing the nonbreeders of all ages for transplanting, banding, and scientific studies. Trumpeters are relatively easy to capture at this time. The method developed at Red Rock Refuge is to chase and catch the swimming swan with an airthrust boat. One man drives the boat, another leans over the side and picks the swan from the water by grasping its neck.

Trumpeters, unlike many species of waterfowl, will not fight when captured, but seem to go into a state of semishock. As many as eight swans can be placed on the floorboards of the boat, resting on their backs. They will remain immobile for extended periods, requiring only an occasional touch on the neck to restrain them. When banded, they are returned to the water and have been observed to lie motionless on their backs for several seconds before righting themselves and swimming away. Capture in this easy fashion does not hurt the birds in any way.

All possible nonbreeding swan are captured and banded at Red Rock Lakes. In 1956, a total of 103 birds were captured and 66 were taken in 1957. The larger number in 1956 represented 65 percent of the nonbreeding birds in the refuge. Thirty percent of the 66 captured in 1957 were repeats of birds banded in previous years. Normal aluminum bands used on other waterfowl have not been successful with swans. Trumpeters wear out bands faster than smaller waterfowl. As a result, stainless steel locking bands are now in use. Birds in Canada are also extensively banded, and a very few Canadian swan have been recovered in the tri-State triangle.

There are two trumpeter census counts each year. One is in August on the breeding areas, and the other in January on the wintering areas. The winter census is part of the nationwide annual waterfowl inventory. Like all wildlife census figures, the census results are not a complete count, but do represent the trend of bird numbers over a period of years; they are essential in evaluating population increase or decrease. The counts have gradually climbed from 73 in 1935 to 735 in 1958, with a general leveling off since 1951. Fluctuations are apparent even in this level plateau of swan numbers, but since the birds have such definite territorial requirements, it is most likely that they are due to flaws in the counting method, rather than changes in bird numbers. This does not imply that the census of trumpeter swans is haphazard or that the methods used are not good. On the contrary, swan counts are checked repeatedly. The enumeration of any wild creature has inherent inaccuracies simply because the count is made of wild creatures free to hide, move, or appear as they choose. Such counts are among the most valuable wildlife management tools used to indicate the relative changes in wildlife numbers. The results of such a census must be considered as an index number, not as the exact population of the species counted.

Over a long period, it became evident that the refuge was producing about all the trumpeters that would live there, although some spread continues through Island Park as more vacant breeding areas are taken up. It was decided in 1938 to undertake the transplanting program that culminated last year in cygnet rearing in Oregon and Nevada. Over 200 birds have been transplanted, but last year was the first successful breeding.

The way has been pointed, and several other areas are being considered as new homes for trumpeters. Transplanted swans are no longer pinioned, but the primary feathers are clipped on one wing to hold them flightless at their new home for a year. After that they are free to move. Low water at Malheur refuge in Oregon has caused trumpeters to seek new habitat in the vicinity.

When the lakes freeze in the fall, trumpeters move to their ice-free winter areas. Some of these are on the refuge and some on the Snake River. A number of swans leave the refuge to winter on the Snake. Food presents a problem and, as the winter progresses, some artificial feeding of grain is done on Red Rock refuge. Measurements made show that 188 wintering swans consume 23 bushels of grain a day. Birds wintering on the Snake River must forage for themselves on river and meadow vegetation. Here they meet a new danger, hunters.

Hunting kill along the Snake River is the only measurable loss of trumpeters. It is a good goose hunting area, and suitable areas are heavily shot over, especially late in the fall. Fog banks hang over the river much of the time and any large bird seen through the fog is usually fired upon. Trumpeters as well as geese fly up and down the river, and so some swans are killed every fall. This kill varies from 10 to 25 a year. Others are killed and never found. Hunters have no excuse; the snow goose season has been closed for many years in all the counties where trumpeters are found, so no possible reason exists for shooting a white bird. Idaho wardens devote a great deal of their time to swan protection in the area. The Fish and Wildlife Service recently assigned a game management agent to law enforcement in the area during the hunting season. His primary responsibility is to prevent shooting of trumpeter swans. Nesting studies show that less than 16 percent of potential trumpeter cygnets are alive at 10 weeks, and only 10 percent of the potential survive to flight age. Every effort must be made to eliminate hunter kill, for each bird killed is potentially a transplanter and is vitally needed for that purpose.

Mr. Frank Belrose fluoroscoped 103 trumpeters on Red Rock Refuge in 1956. These comprised 65 percent of the refuge nonbreeding flock. Although most were young birds, 15 already carried shotgun pellets in their bodies. Man is still the trumpeter's worst enemy, as well as his best friend. Incidentally, weights on these younger birds average 20.98 pounds for males and 17.86 pounds for females.

As trumpeters are transplanted to other areas, the danger of hunter kills will increase. Snow geese are abundant elsewhere, and a closed season on white birds is not practical. Many whistling swans are shot by ignorant hunters each year, and a trumpeter straying from a Federal refuge will be at least as vulnerable as a whistler. Education and good enforcement can reduce but never eliminate the hunting toll on trumpeters. There is some movement of trumpeters from British Columbia to Red Rock. Two trumpeters, wearing bands from British Columbia, were wounded by hunters in Nebraska last year. Some, at least, still migrate, and as trumpeter populations increase, more can be expected to adopt the old specie habits. This will increase the hunter toll. It is one facet of trumpeter management that we must expect and plan for.

The American people have every right to be proud of the restoration job they are doing on the trumpeter. Purchase and development of Red Rock Lakes National Wildlife Refuge, transplanting operations, and enforcement of protective laws have increased trumpeter numbers almost tenfold in 25 years. These are simple techniques, but the swans have responded, mainly because of their limited annual range.

The future of the trumpeter is as secure as any small population can be. Much has been done in the past, and as management and factfinding continues, swans will slowly increase and spread. The sound of a trumpeter's voice can carry 2 miles. It is a sound that could have vanished from our country. For the trumpeter it is still a swan song, not the legendary death song, but the bold trumpet of a species that will be with us into the foreseeable future, the magnificent trumpets in the West.

I Speak for Democracy

EXTENSION OF REMARKS
OF
HON. J. ARTHUR YOUNGER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 14, 1960

Mr. YOUNGER. Mr. Speaker, Laurence A. Denny, Jr., was the California winner in the 1959–60 broadcast script-writing contest sponsored by the National Association of Broadcasters for students in the 10th through 12th grades in all 50 States and the District of Columbia. Laurence lives in the Ninth California District at Redwood City.

Under leave to extend my remarks in the RECORD, I include his winning script:

I SPEAK FOR DEMOCRACY

I speak for democracy as an American and a student and citizen at that time in life when my heritage becomes something real, a living reality that is woven into every movement and expression of my daily life. At first, my understanding of democracy is slow and confused. But with the dawning of reason, I realize the position of democracy in my life, and this truth is mine to hold and love. Breathless and fresh as the dawning sun, this truth captures my understanding and it then becomes a part of every fiber of my being.

You may ask, What is this mysterious force which seizes the mind and soul of Americans? It is those principles of freedom, of speech, of religion, of personal expression and fulfillment which so many men have died for—men not only from America, but from all over the world. I experience the very same freedoms as a matter of course in my everyday life. I, even as a student, have the right to stand up and express myself; and, believe me, I have, as many students, had the chance and did speak up. I know that we have freedom of the press and the many other freedoms you undoubtedly hear about. These are the goals which all human hearts and minds strive for, and gladly die for, so great are these among men and before God.

This inheritance of mine is not merely an abstract something contained in nicely worded sentences, but it is as real and part of life as the school which I freely attend to learn and to grow in knowledge of this world of ours; as real as the faith, the religion, which is mine and which is incorporated into my everyday life as an expression of love and adoration to God; as real as the government officials who are freely voted into office; as real as my own vision into the future as to what I shall freely choose to be and there set all my energies before God and men. Truly the nobleness of the human soul can only come in a society such as I am so thankful to God to be a part, a free society.

For truly each man is a part, as I, of this country of ours. Each man, as an individual, has the right to stand up and speak; each man is a voter, freely choosing who will run his Government and how it will be run. And yet we, because of our common ideals, are as one in our communities and our families, working and thinking toward a common goal of peace, prosperity, and happiness everywhere in this world.

The Growth of Arizona

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Thursday, January 14, 1960

Mr. GOLDWATER. Mr. President, Newsweek magazine in its issue of January 4, 1960, contains an article entitled, "Phoenix Rises and Soars: 'Miracle' in Arizona." I desire to call this article to the attention of the Senate, and also to supply a few interesting statistics about my State.

Arizona leads the Nation in the rate of employment growth. It has grown 81.2 percent in this category in the past 10 years.

We rank first in the growth of manufacturing employment, showing an increase in that category of 154.5 percent in the past 10 years.

Arizona has produced 36.5 percent of the nonferrous mineral production in the United States.

We have, however, dropped to second place in the rate of growth of agricultural income, increasing by only 90.2 percent in the past 10 years.

We also dropped to second place in the rate of income growth, bowing to Florida, whose rate of increase was 173 percent, while Arizona's percentage of gain was 157 percent in the past 10 years.

Arizona ranked second in bank deposit growth, showing an increase of 148 percent in the past 10 years.

At the same time we have been enjoying these ranks at the top, we have slipped to third place in population growth. Arizona grew only 65.2 percent in that same period. But I remind Senators that in 1950 Arizona had a population of 749,000, where it expects, in the 1960 census, to show a population of 1,300,000. That is a growth, by the way, from only 200,000 in 1910.

Mr. President, so that more people may have the opportunity to read the very interesting and informative article published in Newsweek magazine of January 6, 1960, I ask unanimous consent that the article be printed in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PHOENIX RISES AND SOARS: MIRACLE IN ARIZONA

(Four hundred and twenty years ago, Francisco Vásquez de Coronado and his armored conquistadors clanked all over the spectacular scenery of Arizona seeking the mythical, gold-paved Seven Cities of Cibola. The Spaniards never found treasure, but latter-day prospectors did. The new gold seekers, using computers and checkbooks instead of picks, are making strikes more fabulous than Coronado's pipedreams. Associate Editor John A. Conway and John P. Nugent of Newsweek's Los Angeles bureau focus the spotlight on business on ever-growing Arizona and its fabulous pace-setting capital city, Phoenix.)

North of Flagstaff this week, workmen were back at work on the $421 million Glen Canyon Dam, which eventually will add 900,000 kilowatts of new electricity to the State's power grid. To the south, New York real estate man William Zeckendorf (whose grandfather was an Arizona trader) had bought the abandoned copper-mining town of Clarkdale and was talking of putting up a $15 million mill to recover iron and other metals from a 30-million-ton slag pile. Below Tucson, Bing Crosby and a well-heeled group of Hollywood celebrities were staking out miles of silk-stocking ranches. Navajos in the State's northeast corner were getting rich on the Four Corners oil strikes. The quest for more oil and gas had brought in companies like Shell and Humble—along with Zsa Zsa Gabor who leased 30,000 acres in Mojave County for exploration. Around Fort Huachuca, southeast of Tucson, where horse soldiers once rode out after Geronimo, the Pentagon has set up an electronics proving ground and four companies are bidding furiously for contracts that may eventually run to $150 million.

It is all part of a miracle in the desert which has made electronics plants next-door neighbors to starkly beautiful mesas. In the past 10 years, Arizona's income has zoomed from $889 million to $2.2 billion—a 146 percent growth versus 83 percent for the United States as a whole. Agriculture, mining, and tourism helped spark the boom, but the State is proudest of its industrial growth. Arizona turned out about $500 million worth of manufactured goods in 1959 versus only $86 million in 1946.

Heart and hub of the activity is Phoenix, the sprawling city which is the capital of Arizona's business as well as its politics. Right now, Conrad Hilton has scouts looking for a spot in Phoenix to plant a new 100-room hotel. On Central Avenue, the capital's main street, a $50 million uptown center is changing the skyline with a 20-story, $6 million office building that will be the tallest between Los Angeles and Dallas. General Electric's new Phoenix plant has just made the company's largest shipment of computers—$4 million worth—to California, something that must have given the west coast electronic giants a point to ponder.

POPULATION BURST

The postwar migration that has pushed Arizona's population from 714,000 in 1949 to 1.3 million has centered on Phoenix and the mountain-rimmed Salt River Valley around the city. During the same years, Arizona's capital has bulged from 108,000 to 357,000, with another 70,000 in Greater Phoenix, 200,000 more in surrounding Maricopa County.

Until World War II, for instance, Scottsdale, 11 miles from downtown Phoenix, consisted of a gas station, a Chinese grocery store, and a pool hall. Today, it is Arizona's fifth largest city (population: an estimated 15,000) and the center of a rich colony where the bars are semiauthentic Old West and the drinks are martinis, extra dry. With the surging demand for factory and homesites, farmers are getting $20,000 an acre for land that once went for $20, and pastel-painted ranch houses are crowding out the alfalfa and the lettuce.

COOL WATER

Paradoxically, the population boom has helped solve the State's water problem. An acre of homes uses only one-third of the water that an acre of irrigated farmland needs, and during the past 6 years, Arizona's total watered land has shrunk from 1.3 million acres to an even 1 million acres. Farmers, who sell their cultivated land to builders, however, often use their fattened bank accounts to start new deep-well irrigation in places like the Harquahala Valley, west of Phoenix. That helped raise crop income (to $271 million a year today versus $265 million 3 years ago), with cotton still king at $145 million. (Copper mining is still important, but its value declined from $485 million in 1956 to $315 million last year.)

War and the strategic dispersal of industry helped bring business into the desert. "The detonator of growth for Arizona" says Senator BARRY GOLDWATER, scion of a Phoenix department-store family, "was World War II." But the thing that brought the valley explosive peacetime growth for Phoenix—and all Arizona—is a simple priceless asset: fabulous weather. During the past 30 years, for instance, the city airport has been closed in by bad weather for only 4½ hours. Year round, the humidity stays in the blissful thirties, and in answer to the blistering desert summers, the Phoenicians have air-conditioned everything but the streets. (At most, only 20 homes in the city are without it.)

A PLACE TO VISIT

The weather, of course, is made to order for tourists. This year, 3.5 million visitors will pass through Arizona, leave behind $275 million. Some will rough it in tents around the fantastically colored gorges of Grand Canyon, but 2 million will come to Phoenix's valley to pay anywhere from $8 for a motel bed to $65 for a night at the Camelback Inn.

To house the tourist influx, the Salt River Valley, which already boasts half the State's 100,000 hotel, motel, and dude-ranch rooms, is building still more accommodations. At Apache Junction, 30 miles from Phoenix and hard by the Superstition Mountains, ground was broken last week for a $2 million hotel, complete with landing strip.

Every State has its tourists, of course, but Arizona enjoys a plethora of a special kind—the upper-bracket businessmen. They've helped transform Arizona from a cow-copper-and-cotton economy. "The millionaires liked it and went native," explains Herbert A. Leggett, vice president of Phoenix's Valley National Bank, whose 60 branches blanket the State. Philip K. Wrigley, for instance, vacations in an enormous hilltop hacienda in Phoenix—and next door is the Arizona Biltmore Hotel, which he also owns. George Borg, of Borg-Warner, checked into Phoenix's Jokake Inn for 4 days in 1944 and stayed 4 months. He never bought the research plant he came for, but ended up building the Casa Blanca resort.

A PLACE TO STAY

The millionaires brought more than resorts. Motorola, for instance, moved into Phoenix because its late chairman, Paul Galvin, liked the place. Today, the Chicago-based company's three plants in the Phoenix-Scottsdale area employ 3,000 with a total payroll of $18 million a year.

Although Arizona's climate attracts 5,000 new residents each month, they wouldn't stay long without jobs. But the jobs are there, 2,000 new ones a month. Phoenix, for instance, has added 270 new industries in the past 10 years, 50 in the last 12 months.

Once they arrive, the newcomers burgeon like the crops they displace. AiResearch had 170 workers in its 70,000-square-foot Phoenix aircraft component plant in 1950; now it has 650,000 square feet of plant and a payroll of 3,700, biggest in the city. GE picked Phoenix for a computer plant after checking more than 180 cities (because "it was the best possible location in the U.S.," says Chairman Ralph Cordiner), and it was ready to tear down a wall for expansion by the time the new factory opened last February.

COWBOYS AND DOCTORS OF PHILOSOPHY

Phoenix prides itself on catches like GE, Reynolds Metals, Kaiser, and Sperry Rand, but other cities have been beating the bushes, too. In Tucson, where more than one resident dismisses Phoenix as a "cowtown that thinks it's a city," Howard Hughes' missile plant is the biggest employer in the State (5,000 workers). And with the 10,000-student University of Arizona to exploit, Tucson has made a strong bid for more electronics plants. (Its current roster includes Westinghouse Air Brake's Melpar, Inc., Collins Radio, Babb Co., and RCA.) A year ago, Tucson set up a research foundation (backed by $100,000 in contributions) and serenaded 12,000 electronics firms with come-hither letters. The lures seem to be working. Half of RCA's 90 Tucson employees are taking courses at the university, says Manager Allen M. Creighton. (Phoenix is fighting back. Its Arizona State University, once a normal school, will soon award doctors of philosophy in engineering.)

While Tucson hopes to share in the high-salaried harvest in electronics, it also makes no bones about its abundance of cheap labor. It is beating the drums for more clothing firms to join the 14 already there making everything from sun togs for the station-wagon set to sacks for squaws. "We have 10,000 workers right now available for jobs," says Mayor Don Hummel. Other cities will gladly welcome industries even with scenic flaws. Flagstaff, surrounded by stands of ponderosa pine, dreams of paper plants. And last week, Southwest Forest Industries, which already has a lumber mill in Flagstaff, announced plans for a $40 million papermill in Snowflake, 140 miles away near the Mesa Redondo.

To man all this, Arizonians keep on hoping the tenderfeet will keep flocking in to stock what Gov. Paul Fannin calls his State's advantageous labor pool. One of the advantages appears to be the scarcity of unions—Arizona also has a so-called right-to-work law—and the current crop of newcomers should do little to change things. Half the new citizens are professionals and skilled workers, who don't take to unions as readily as others.[1] "The cards aren't all stacked on labor's side here," says Phoenix's Mayor Jack Williams. But, he adds, "we hope that management doesn't ride a good horse to death."

Whether they carry union cards or not, the newcomers will continue to jam into Arizona. Valley National Bank Vice President Leggett figures that 10 million cars pass through the State every year (and along Phoenix's Central Avenue, which averages 32,000 cars a day, the gag runs that "all 10 million meet here"). Many of them will park in the State for good. The State, in fact, is a land of strangers. Governor Fannin

---

[1] The State, of course, does have its labor troubles. The rambunctious Mine, Mill, and Smelters Union, for instance, keeps the copper mines in continuous uproar. Kennecott called back its workers last week, but other mines, at Bisbee and Ajo still were strike-bound.

himself is Kentucky born. Leggett was a New York stock broker.

BARRY GOLDWATER sums up the booster spirit of Phoenix and all Arizona. "Before I die," the Senator says, "Phoenix will be one of the five or six biggest cities in the United States. There is no stopping this state."

Farm Problems and Farm Organizations

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. WOLF. Mr. Speaker, under leave to revise and extend my remarks I wish to insert in the Appendix of the RECORD a letter written by George Landsgaard which appeared in the Des Moines Register.

This letter points out something that is known among farmers, but is not generally known in the city areas. The Farm Bureau does not represent all of farm opinion. Furthermore, its views, on most questions, are very similar to those of the National Association of Manufacturers, a group hardly known for its public interest attitude or its interest in the economic security of the average worker or the small farmer.

To the EDITOR:

The depression of the 1930's was felt in almost every home in the Nation. In the cities, factories were closed and breadlines were formed; in the country, farmers everywhere lost their farms and homes. Production was high and farmers tried to raise more trying to keep their farms. Supply and demand was in force. Early in the 1930's farm programs were put in force and surpluses soon disappeared and farm prices were boosted. Agriculture was in fair condition for many years.

Several years ago when Secretary of Agriculture Benson took office he asked for a new farm program. It seems the high command of the Farm Bureau Federation also approved of this program and began working for it in Congress with a powerful lobby.

The program seemed to be mostly to lower support prices. The surplus was not big at that time. With some strengthening of that program agriculture could have been in good condition today. Acreage compliance was good and kept surpluses down and there was freedom to produce.

AN INCREASE IN SURPLUSES

As the support prices became lower and lower, acreage compliance decreased less and less every year and surpluses increased. Farmers were forced to increase yield and acreage to make up for the low prices. Surpluses grew to the highest in history.

It seems that the main points of the Farm Bureau Benson program were adopted with disastrous results.

For years the program was given a terrific propaganda campaign and was labeled as the only sound program with freedom to produce. There always was freedom to produce, and no one has proposed a program that wasn't. Then why this propaganda?

MANY FARMERS LOSING HOMES

The Farm Bureau has been saying that the smaller or family sized farm must go, and it seems they are doing a good job of it, because all over the country can be seen farm homesteads which were once a credit to the country and built-up towns and cities now are abandoned and left to decay and rot.

Average farmers everywhere are in desperate condition. Many are losing their homes and farms, and in some areas, less productive, are leaving the farm in large numbers because of mismanagement in agriculture. This is a most inhuman thing to do and seems almost impossible to be in a highly civilized Christian country. This is a sinful act and is in itself a crime. It seems some are ruling with an iron hand and getting by with it.

STUMBLING BLOCKS FOR CONGRESS

Congress knows it is its duty to see to it that agriculture functions properly and has been willing to see to it that it does, but it seems that the Farm Bureau and the Secretary of Agriculture have come up with stumbling blocks. Congress has been confused and divided. If Congress had been permitted to act without interference, agriculture would have been in good condition today.

Congress and farmers were willing to make cheaper food available to lower income families and pensioners through the food-stamp plan. Heaven knows this would have been the human thing to do—share our surplus—but this was opposed.

The Farm Bureau and the Secretary of Agriculture pretend to be friends of agriculture, but it would seem they are not, as they are backed by selfish interests and would rule with ruthless hands. They have proved by their deeds they are not for the farmer and can never be relied on.

GEORGE E. LANDSGAARD.

ST. OLAF, IOWA.

George Catlett Marshall

EXTENSION OF REMARKS
OF
HON. A. WILLIS ROBERTSON
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Thursday, January 14, 1960

Mr. ROBERTSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a beautiful and touching tribute to an adopted son of Virginia, a man I was privileged to know and admire for many years, the late Gen. George Catlett Marshall, by my good friend, Hon. Wilbur C. Hall, before the Leesburg Rotary Club, Leesburg, Va., on the evening of December 10, 1959. Wilbur C. Hall is an outstanding lawyer practicing in the courts of northern Virginia, who had a distinguished record of service in the General Assembly of Virginia.

There being no objection, the tribute was ordered to be printed in the RECORD, as follows:

GEORGE CATLETT MARSHALL: A TRIBUTE

A Prince once said of a warrior dead,
"Taller he seems in death."
—Ancient folk song.

Virginia autumns have a special magic and beauty. Once-green leaves turn garish gold and vermillion. Only the stubborn evergreens hold their green against the sea-blue sky. The earth sags with color and goodness.

Overhead the south-bound birds screech, and in the woods water gurgles as it leaps over a limestone ledge. Still, autumn has a sad note. Summer is over, and winter is not far off. Soon the trees of Leesburg will be "bare ruined choirs, where late the sweet birds sang."

This fall brought with it a special note of sadness. As our October leaves fell, a great American warrior, the master of Dodona Manor, fell too. George Catlett Marshall is our "warrior dead," and as in the ancient song, "Taller he seems in death."

What can I say to you tonight that has not already been said about George Catlett Marshall? On only a few occasions in recent years have so many great men and nations paid such high tribute to one man. The grief and sense of loss felt in our own little town made itself felt in Washington, London, Paris, Tokyo, Hong Kong—yes, even in Moscow. Heads of state vied with each other to strike the deepest note of appreciation. That tough, tart soldier, Field Marshal Montgomery, said: "He was the one man, more than anybody else, who organized the manpower of the United States for war." In France, De Gaulle called him, "a brilliant soldier, known to the four corners of the earth." Our own President Eisenhower, whose fame was so dependent on General Marshall's trust in him said:

"For his unswerving devotion to the safeguarding of the security and freedom of our Nation, for his wise counsel and action and driving determination in times of grave danger, we are lastingly in his debt."

Former President Truman's comment was shorter but no less memorable:

As a military man he was the best since the days of Robert E. Lee.

Because nothing I can say tonight could match either in eloquence or importance such tributes as these, I shall content myself merely with sketching the main outlines and achievements of that life, as one might try to do if he had to boil all of it down to a few pages in a history book. I do so without making any claims to skill as a professional historian, and with the full knowledge that even what the best historians say today will be revised in the light of time. And I do so because I have found in my reading and inquiring a few facts and stories about General Marshall's life which might illuminate his character for you, as they did for me.

On a much earlier fall day—in September 1897, to be precise—the president of the Percy Mining Co. in Fayette County, Pa., wrote a short note to Gen. Scott Shipp, the superintendent of the Virginia Military Institutes in Lexington, Va. It began:

"I send you my youngest, and last. He is bright, full of life, and I believe will get along very well."

The name of this youngest and last son was George Catlett Marshall. His father was right. He would get along very well, indeed.

The 17-year-old lad who went South to Lexington for his education was full of life, and, like all boys, sometimes full of mischief. Once, when his family was entertaining out-of-town guests, he was sent out of the house so that peace and quiet could prevail. Soon after he was out, however, young George became interested in a swarm of bees. Before long, due to boyish provocation, the bees in turn became interested in him. Across the street and back into the house ran the future general, in full retreat. A sudden flank movement fooled the closest bee. But the insect continued its course until it found a suitable target for stinging—who turned out to be the guest of honor.

That he excelled in the drill and discipline of V.M.I. is confirmed by noting that he was selected first corporal, first sergeant, and first captain during his years there. He was not, however, among the most brilliant students. In fact, his early grades were often low. But

they improved steadily during his cadet years, and he finished in the upper half of the class of 1901.

Of course, there is not time to examine his subsequent military career in detail. From 1901 to 1917 he advanced from a newly commissioned lieutenant to a 37 year old lieutenant colonel in the 1st Division. While he was still a lieutenant, General Franklin Bell called him "the greatest military genius in America since Stonewall Jackson." World War I gave ample demonstration that General Bell has spoken shrewdly; World War II proved that he had spoken better than he could have known.

One trait which George Marshall exhibited from the first was a remarkable memory. While serving in the Philippines (1913–15) he amazed his fellow officers by dictating a plan of operation for a maneuver without referring to notes. Years later when a man wrote Marshall and said, "I was with a signal battalion and I came once to see you with another officer in August or September, 1918". Marshall replied: "You came with Major so and so. It was while I was writing on the plans for the St. Mihiel operation, on August 17, 1918."

Some idea of how well Colonel Marshall performed in World War I can be had by pondering General Pershing's contention that Marshall was "the finest officer produced by the conflict."

Serving as chief of operations at 1st Army, and GHQ, Colonel Marshall prepared and supervised plans to bring 220,000 French and Italian troops out of the Meuse-Argonne line and to move up, in 2 weeks, 600,000 Americans with all equipment and supplies. Said the London Post: "It was a fine piece of staff work and no staff could have done it better."

The postwar years saw Colonel Marshall touring European troop areas as General Pershing's aide, and visiting with his chief many parts of the United States. Between 1927 and 1938 he was stationed at various American bases, and had a 3-year tour in China. In 1938, as ominous war clouds gathered over the world, he was called to Washington as head of the War Department's war plans division.

After that, the finger of history pointed to Gen. George Marshall, and he stepped forward to act out his memorable role. In April 1939, President Roosevelt promoted him over the heads of 34 seniors, and on September 1, 1939—the very day Hitler invaded Poland and made World War II inevitable—Marshall became Chief of Staff.

Now his story merges with that magnificent effort to arm, train, and advance which makes the 1940's one of the pivotal decades in history, and World War II one of the tremendous conflicts of all times. No one within range of my voice is ignorant of that titanic strugle: and of the fact that George Catlett Marshall was one of the key figures in it. In 1939, when he took over, our army numbered 200,000. When Hitler surrendered, we had 8,300,000 men under arms—more than 4 million serving overseas. It was General Marshall who planned and coordinated this enormous effort, and made that army of armies possible.

But like George Washington (whom he inevitably reminds us of), George Marshall was first not only in war, but in peace. If he destroyed nazism as a soldier, he rebuilt democracy as a statesman. It was as Secretary of State (from 1947 to 1949) that George Marshall came to symbolize our new leadership in world politics.

When the old soldier turned to his new office, at 67, the picture was hardly brighter than it had been when he became Chief of Staff the day the war opened in 1939. Free Europe was in the grip of a dreadful winter; both her physical and her moral strength were sapped. Thriving on human misery, communism was bursting the bounds of the Iron Curtain, spilling over into Greece, Italy, Germany, and France. From his firsthand knowledge of the situation, gained from a March trip to a Moscow conference, Secretary Marshall knew that drastic steps were necessary. In June 1947, he delivered a speech at Harvard University which was one of the high points of our time. He announced the Marshall plan to the world.

"Our policy is not directed against any country or doctrine," he said, "but against hunger, poverty, desperation, and chaos. We of the United States are deeply conscious of our responsibilities toward the world." Four years later, $22.5 billion had been distributed among 23 nations. The free world was back on its feet.

"The really important thing that Marshall did," Lord Attlee has said, "and the Marshall plan was only part of it, was to play an integral part in the process by which after the war the Americans were prevented from reverting to the isolationist attitude of mind which even the great Wilson could not sever in 1919." "Without this aid," Churchill has added, "Europe might well have foundered into ruin and misery in which the seeds of communism would have grown at a deadly pace."

George Marshall reached his 70th year as the century reached the halfway mark. Surely now he could enjoy some of the peace and quiet which he deserved as much as any man alive. But no. Shortly after war broke out in Korea, President Truman turned to the one man whom he thought could shoulder fully the responsibilities of the new post of Secretary of Defense—George Marshall. Reluctantly he accepted, and in 1950 and 1951 gave new courage and direction to our military program and defensive efforts. If the free world were pleased, it was certainly not surprised when Marshall was awarded the Nobel Prize for Peace in 1953.

So far I have touched on a few outstanding aspects of a life devoted to doing much for others; but before I conclude, I want to mention something very fine, and important, that was done for George Marshall in the last years of his life. I refer to the Marshall Research Foundation, a nonprofit foundation established to collect and preserve the papers and documented record of the career of the soldier-statesman.

Chartered in 1953, the foundation plans to construct a library and museum to house General Marshall's mementoes of a half century of service to the Nation. The State of Virginia has dedicated the land for this project, which will be located on the campus of General Marshall's alma mater, V.M.I.

In 1955 President Eisenhower announced that arrangements had been made by the Department of State, the Defense Department, and the national archives to cooperate fully with the whole program. In 1956, Mr. John D. Rockefeller, Jr., presented the Foundation with $150,000 "to be used exclusively in making a permanent record of General Marshall's papers, which the general has agreed to turn over the Foundation for that purpose, and in the compilation, writing, and publishing of a history of the general's life." Already an able staff is at work on the project, under the direction of Dr. Forrest C. Pogue. Thus the relationship between two of the Old Dominion's most delightful towns, Leesburg and Lexington, is strengthened and enriched.

The master of Dodona Manor has not been many months in his grave in Arlington Cemetery, but already his stature and reputation have begun to grow. "Taller he seems in death." And how right that he should be buried at Arlington, once the home of the Lee family. It was that noblest flower of Virginia aristocracy, Robert E. Lee, who once said that duty was the noblest word in the English language. What career in our generation demonstrates this so clearly as that of our late neighbor, George Marshall, who now rests in the quiet lawn of Arlington?

Who knows when his feeling of greatest satisfaction might have come? When, as a young officer, he helped bring order out of the chaos of trench warfare in World War I? When, as assistant commandant of Ft. Benning (from 1927 to 1932) he helped shape a new doctrine of the infantry, and train such officers as Joe Stilwell, Omar Bradley, and Courtney Hodges? When as a marked man he took over an angry but pathetically trained democracy in 1939, and started to build our greatest Army? Or was it on V–E Day, when that Army could survey the Europe it had liberated?

We do not know. General Marshall chose not to write his memoirs. When offered large sums to do so, he invariably replied that he was admitted to the councils of the President, Prime Minister, and military staffs as a confidential conferee, not as a reporter for the Saturday Evening Post.

Whatever his thoughts, his doubts, and his triumphs, he already belongs to history. Subsequent investigation will change minor details of his story, but his high position is secure. Of all the men who have vouched for this, none has done so more eloquently than Secretary of War Stimson. Here are his words, spoken on the very V–E Day we have just alluded to.

I shall use them as my final words, for I know of no better ones with which to leave you tonight:

"I want to acknowledge my great personal debt to you, General Marshall, in common with the whole country. No one who is thinking of himself can rise to true heights. You have never thought of yourself. Seldom can a man put aside such a thing as being the commanding general of the greatest Army in our history. The decision was made by you for purely unselfish reasons. But you have made your position as Chief of Staff a greater one. I have never seen a task of such magnitude performed by man.

"I have seen a great many soldiers in my lifetime and you, sir, are the finest soldier I have ever known."

Ninety-third Birthday of Dr. Francis E. Townsend

EXTENSION OF REMARKS
OF
HON. CHARLES S. GUBSER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 14, 1960

Mr. GUBSER. Mr. Speaker, this month marks the 93d anniversary of the birth Dr. Francis E. Townsend, famed as the founder and president of the organization which bears his name. It has been my privilege to have known the doctor for most of the years since the early 1930's, when he launched his movement to bring security and decency to the retired and disabled citizens of our country. In fact, the headquarters of the Townsend organization is located a few short blocks from the Chamber in which we sit today.

Dr. Townsend, I believe, merits far more recognition than has been accorded him. He was, in truth, the vital force which persuaded the Congress to enact a social security program in the first place. Through the years, when

amendments have been under consideration, the doctor has appeared on Capitol Hill to urge the adoption of changes which would bring social security closer to his ideal, and to help direct the social security program into even more liberal channels.

The results of his efforts have been substantial. Today we near his goal of universal coverage. We are liberalizing in the direction of benefits made available at age 60. We realize now that disability benefits should be provided at the time the disability occurs, and not at an arbitrary age. And I believe, too, that we are inexorably moving toward his principle that retirement benefits should be geared to actual living costs, thus providing insurance in the finest meaning of the word "insurance."

And so I salute Dr. Townsend on this, the occasion of his 93d birthday. Here is a fortunate man indeed—one who has been given the years necessary to see his dream on the very verge of fulfillment.

Disclaimer Affidavit

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Thursday, January 14, 1960

Mr. WILLIAMS of New Jersey. Mr. President, much debate was devoted last year to the question of the loyalty oath required under the terms of the National Defense Education Act. One of the clearest and most concise analyses of the case against the disclaimer affidavit I have seen was written by Robert F. Goheen, president of Princeton University.

Mr. President, I ask unanimous consent that this fine statement be printed in full in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

DEFENSE EDUCATION ACT OF 1958

Princeton University strongly approves the general intent of the National Defense Education Act of 1958. We have, however, marked objections to two aspects of the act as it stands. These we stated more than 11 months ago when we decided not to apply for fellowship or loans funds under the act in its present form.

One objection is to the degree of Government interference in details of institutional administration latent or explicit in various parts of the act. The other is to the disclaimer affidavit required by the law of all student applicants for loans or fellowships.

A college or university, whether supported by public or private funds, must cling tenaciously to the proposition that its trustees, officers, and faculty are responsible people capable of executing the authority historically entrusted to them. The imposition of arbitrary straitjackets in the use of donations or grants is not acceptable. There are many cases on record in which institutions of higher education have refused to accept gifts whose terms violated established principles of institutional integrity. The unwillingness of a number of colleges and universities to cede to the Federal Government their administrative discretion and responsibility is but one act in a long line of actions which have preserved the freedom and the consequent distinction of American colleges and universities.

There are two oaths required by the act, and it is important to keep them distinct. One is an oath of allegiance to the Constitution of the United States. While we feel that such an oath is downgraded when attached to minor financial transactions, we have no other objections to it.

The other oath required is an affidavit disclaiming association with subversive movements, which, be it noted, are very loosely defined. Because it singles out students as suspect beyond other beneficiaries of Federal support—e.g., steamship and airline employees, farmers, and veterans—we find this provision discriminatory and unfair. Furthermore the implication that young men and women seeking education have, in particular, tendencies toward disloyalty seems to us unwarranted.

It was reassuring, therefore, to have President Eisenhower state on December 2, 1959, in answer to a reporter's question about possible changes in this act, "But for my part, I should think that the loyalty oath, the basic citizenship oath, is sufficient." In this opinion we wholly concur.

Stated categorically, Princeton's objections to the disclaimer affidavit may be summarized as follows:

1. The affidavit is discriminatory. The imposition of the disclaimer clause strongly infers, first, that American college students as a group are particularly suspect of disloyalty as opposed to the general citizenry and, second, that American institutions of higher learning have not fulfilled their responsibility by selecting and supporting students of loyalty and integrity.

In inferring that selected young persons upon whom our Nation depends for its future leadership are peculiarly liable to be disloyal to their country, it singles out students as suspect above all other beneficiaries of Federal aid who are not also employees of the Government.

2. It involves undue Government interference in an area of administration properly belonging to free institutions: At a time when increased Federal concern in and support for higher education seems inevitable, it is doubly important to avoid undue Federal control of education and to protect in every way possible the historic self-determining role of American institutions of higher education.

The disclaimer, repeated each time a fellowship or loan in any amount is awarded to an individual, is imposed as a compulsory procedure upon institutions which have long sustained positions of trust and responsibility in the selection of students for scholarships. Under the terms of the act, it must be exacted by the institution, and in the loan program it covers the administration of funds supplied by the institution itself because they become intermingled with funds provided by the Government.

3. It is unfair, and contrary to our national heritage: The imposition of the disclaimer affidavit, which offers no clear and definite criteria for determining subversion and which is similar to the affidavit of nonbelief removed by Congress from the Taft-Hartley Act last summer, suggests the right of government to investigate individuals for their beliefs and not on the basis of overt actions. As such, in the judgment of many persons experienced in law, the constitutionality of the disclaimer is extremely dubious. It is essentially, as has been emphasized by the American Council on Education, an affront to individual freedom of belief and conscience, the safeguarding of which has been one of the great accomplishments of our Nation.

4. It is negative and self-defeating: The inclusion of the disclaimer affidavit in this legislation carries the unfortunate implication that the whole process of free inquiry in this country needs to be curbed. It is in this respect disturbingly shortsighted. There is no safety for a free people in apprehension and timorousness, especially in a time when the extension of educational opportunity, intellectual boldness, and the quest for new knowledge are essential weapons in our contest with the Soviet Union and with international communism.

The loyalty of free men rests on intelligence and is self-won; it cannot be coerced or compelled. Its surest guarantee in our society is freedom to pursue the truth, along with freedom of religion, freedom of the press, freedom of assembly. These all require having confidence in freedom and in the institutions of freedom.

5. It is ineffective and unnecessary: The affidavit offers only illusory protection against those who would abuse our heritage of law and freedom, for they would not hesitate to sign. It is a most uncertain instrument and is reminiscent of the long and distressing history of political and religious test oaths—tragic symbols of nagging and harmful distrust of individuals and institutions.

Sufficient to the purpose sought in the act's positive requirement of the traditional citizenship oath, or affirmation, which states: "I do solemnly swear (or affirm) that I will bear true faith and allegiance to the United States of America and will support and defend the Constitution of the United States against all enemies, foreign and domestic."

ROBERT F. GOHEEN.

Holiday Greetings of the American Legion

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 14, 1960

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the body of the RECORD, I include this very fine holiday greeting letter from the national commander of the American Legion, Martin B. McKneally. I am sure he sent this letter to all Members of Congress, but I think it is nice for the readers of the CONGRESSIONAL RECORD all over our country to see the fine patriotic spirit shown in these holiday greetings of the American Legion. I believe the Congress will wish to join with me in sending the Legion every possible holiday wish for the coming year.

The letter follows:

THE AMERICAN LEGION,
December 23, 1959.

HON. EDITH NOURSE ROGERS,
House Office Building,
Washington, D.C.

DEAR CONGRESSWOMAN ROGERS: In the mood of the holiday season may I express to you the best wishes of all our members. Now, as at all other times of the year, we are thankful for the manner in which the Congress has viewed the programs submitted in the name of the war veteran and his dependents.

During the coming months we shall hope that we may be given the wisdom to match

the tasks assigned to us as we present to you those programs in the field of veterans' affairs which seek to correct existing law in the light of changed conditions.

Our interests in the field of veterans' affairs go hand in hand with the desire to do all that may be proper in making Americanism a living expression of the thoughts of our Founding Fathers; to assure a peace with security so that our Nation, under God, may continue to symbolize the world's hope for freedom.

For the present, let me associate myself with those in the American Legion who have been aware of, and have expressed confidence in, the will of the Congress to maintain and perfect those laws governing the field of veterans' affairs.

Sincerely yours,

MARTIN B. MCKNEALLY.

Special Senate Showing of "On the Beach"

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Thursday, January 14, 1960

Mr. KEATING. Mr. President, it was my pleasure on Monday to sponsor a special Capitol Hill showing of the film "On the Beach." I want to thank all my colleagues and the many other Hill people who were in attendance. The response to my invitation was so overwhelming that two showings were required to accommodate all those who wanted to see this film. I hope that this did not inconvenience anyone.

I recognize that this film is somewhat controversial, and I therefore appreciate the statement which the Senator from Utah [Mr. BENNETT] made on the Senate floor at about the time the first showing of the film started. I have written a letter to the Senator from Utah expressing my sentiments on the subject, and since this letter may be of interest to other Members of the Senate, I ask unanimous consent that a copy of it be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

U.S. SENATE,
COMMITTEE ON THE JUDICIARY,
January 12, 1960.

Hon. WALLACE F. BENNETT,
Senate Office Building,
Washington, D.C.

DEAR WALLACE: I have read your letter and statement on the Senate floor with regard to "On the Beach" with great interest and agree with many of your comments.

Of course, any work of art is subject to varying interpretation, and this film is no exception. To me, it conveys a simple message—the importance of avoiding nuclear war and mistakes in the handling of nuclear weapons. I do not regard it as a plea for peace at any price. I do not regard it as a scientific demonstration of the effects of fallout. Art forms frequently have to be overdrawn in order to create the desired impression, and some dramatic license certainly must be allowed those responsible for this film. But I believe it was important for someone like yourself to call attention to its limitations.

I am glad that you agree that the film was worthy of presentation in the Senate Auditorium, and I appreciate the sincerity of your comments.

With kind personal regards,

Very sincerely yours,

KENNETH B. KEATING.

Dedication of the Pfc. Melvin L. Brown, U.S. Army Reserve Center, Clearfield, Pa., November 1, 1959

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 14, 1960

Mr. VAN ZANDT. Mr. Speaker, it was my privilege to participate in the dedication of the U.S. Army Reserve Center, Clearfield, Pa., November 1, 1959, at which time I delivered the dedication address.

The new U.S. Army Reserve Training Center has been named after Pfc. Melvin L. Brown of Mahaffey, Pa., who was awarded the Medal of Honor posthumously in 1951 for his heroism while serving with Company D, 8th Engineer Combat Battalion in Korea.

The 20-year-old soldier, the first Pennsylvanian to receive the Medal of Honor, was the son of the late Mr. and Mrs. Edward D. Brown, Mahaffey, Pa. He was first listed as missing in action and later as killed in action. He is buried in the Mahaffey cemetery.

Participants in the interesting program included county, and borough officials while the Clearfield Area Senior High School Band under the direction of Mr. Harold E. Kuhns rendered musical selections.

The dedication address follows:

ADDRESS GIVEN BY JAMES E. VAN ZANDT, MEMBER OF CONGRESS, 20TH CONGRESSIONAL DISTRICT OF PENNSYLVANIA, AT THE DEDICATION OF THE NEW U.S. ARMY RESERVE TRAINING CENTER AT CLEARFIELD, PA., NOVEMBER 1, 1959

As a veteran of both World Wars, as a member of the Naval Reserve, and as a Member of Congress who has always supported a strong Defense Establishment, I am especially grateful to be able to return again to Clearfield to participate in the dedication of this training center for those patriotic Americans in our Army Reserve.

It is a particular significance that this new U.S. Army Reserve Center is named in memory of the late Pfc. Melvin L. Brown of Mahaffey, Pa., one of Clearfield County's Medal of Honor winners.

He was killed in action September 5, 1950, while serving with Company D, 8th Engineer Combat Battalion.

Private Brown's outstanding war record is well known.

His valor was recognized by various decorations and awards in addition to the Medal of Honor which was awarded posthumously in 1951 for heroism beyond the call of duty.

This U.S. Army Reserve Center is a dignified memorial serving both a practical and a patriotic purpose—a purpose suited to the character and career of Pvt. Melvin L. Brown.

As a memorial it should prove gratifying to all who knew and loved him—and most of all to his living relatives.

It is regretted that Private Brown's mother died 2 years ago and his father in July 1958.

It is good to think that the surviving loved ones of Private Brown, who made the supreme sacrifice in defense of his country, will have ever before their eyes this substantial evidence of the honor in which his name is held by his grateful country.

On this occasion I should like to salute the officers and enlisted men of the Army Reserve units which will use the new center, namely:

1. Headquarters and Headquarters Battery, 4th Howitzer Battalion, 92d Artillery Regiment.
2. Company D, 336th Military Police Battalion.
3. 353d Ordnance Company (ammunition).

In this time of continuing crisis, the vital importance of this Reserve training center here at Clearfield—and of others like it throughout the land—is clearly apparent.

The United States is confronted by a diabolical enemy who is relentlessly seeking to destroy our way of life.

This enemy is armed with weapons of a destructive power hitherto unknown to mankind, including long-range ballistic missiles which can deliver hydrogen warheads.

With these weapons, the enemy can strike in a matter of hours or even minutes.

Soviet missiles can now be shot at the major centers of population and industry of our West European allies.

Many of the most vital military bases and installations of the free world are within the range of Communist missiles, including some of our overseas airbases, which are an important part of our deterrent force and retaliatory power.

The time is soon coming—indeed, it may have already arrived—when Soviet missiles can be aimed at targets here in the United States.

Never in our history has it been as important for the United States to have powerful and vigilant Armed Forces at its command.

A strong program of national preparedness offers the best chance for deterring an all-out nuclear war.

Strength is the only language which the Communists will listen to with respect.

Only through strength can the free world convince the Communist dictators that aggression will not pay.

To deter war, and to win a war if we should be forced to fight, the United States must have a strong retaliatory force of strategic bombers and ballistic missiles that will strike fear in the hearts of those tyrants who would plot aggression against the free world.

Not only must the striking power of this retaliatory bomber and missile force be very formidable, it must also be made as invulnerable to enemy attack as possible.

At the same time, the United States must strive to develop a more effective defense against attack from Soviet bombers and missiles.

If the United States is capable of deflecting a significant portion of the attacking forces, the enemy will be less likely to launch all-out aggression against the free world.

The security and survival of the United States will be placed in grave jeopardy if we fall behind in the race for military supremacy.

If the Soviet Union should succeed in its attempt to gain a decisive military advantage, the United States is likely to be con-

fronted with the disastrous choice between appeasement or all-out war on terms favorable to the Communist bloc.

The recent achievements of the Soviet Union in missile development—especially during the past 2 years—has increased the urgent necessity for strengthening our ability to deter and, if need be, to win a general nuclear war.

However, the military threat from international communism is by no means confined to long-range missiles and hydrogen bombs.

The ground forces in the Communist bloc outnumber those in the free world by about 2 million men.

The Soviet Army, alone, is over 2½ million strong, whereas there are less than 900,000 in our Army.

The Red Army is the only major ground force in the world today that has a completely new postwar arsenal of weapons.

It is capable of fighting either a big war or a small war, with nuclear or conventional weapons, in any kind of climate or terrain.

At present, strong Communist forces are deployed adjacent to the Middle East, Western Europe, North Korea, Southeast Asia, and Formosa.

The threat of these Communist forces represents piecemeal aggression and is part of a plan to conquer the free world in installments, thus posing an even greater danger than all-out war.

As you well know, during the cold war there have been many diplomatic crises which have been provoked by the blackmailing tactics of international communism.

The dispute over the West's rights in Berlin is a current example.

There have also been several limited-war situations in which maximum firepower was not employed.

The engagements of armed forces in Korea, Indochina, the Formosa Straits, and elsewhere illustrate the dangers of limited war which challenge the free world.

The United States and its allies must have the armed forces which can deter and cope with the threats of limited aggression.

Otherwise, small conflicts may spread into global wars fought with weapons of mutual destruction or the free world may be gradually nibbled to death.

The power needed to deter and repel limited aggression and subversion against the free world is vastly different from hydrogen bombs and long-range missiles.

The forces required for dealing effectively with this kind of situation must be mobile, flexible, and discriminating.

It must be able to engage the enemy without destroying major centers of population and without arousing the moral antagonism of world opinion against the mass slaughter of nuclear warfare.

It should fit the punishment to the crime.

It must be adaptable to a variety of geographic and military situations.

It must not cause the conflict to spread into all-out war.

A strong reserve and national guard is important to our national defense posture.

In past wars—most recently in Korea—the Reserves have been a vital component of our military strength.

In case of either all-out or limited war, the Reserves can put added steel into our Armed Forces.

Our reservists have written a glorious account of themselves on the pages of our Nation's history.

Our first reservists were the colonial militiamen who organized to protect their farms and families against hostile Indians.

The United States has always depended heavily on its reserves of citizen soldiers.

Like the patriotic men who will train at this center, they were peace-loving men who preferred work at their civilian jobs and enjoyed life with their families and friends, free from the disruptions and separations of active military duty.

But in the face of danger to their country these men, with courage and patriotism, always rallied to defend the American way of life.

The progress which our Reserves and National Guard have made during recent years is very commendable.

Our Reserve units have made marked improvements in their organization, training, and general readiness.

They are now more positively oriented toward their primary mission of supporting the active forces.

Better training and recruitment programs have been inaugurated and are now underway.

A larger percentage of Reserve personnel is now participating in the training program.

Better equipment is now being made available.

And maintenance and operations activities have been improved.

In addition, the Reserves and National Guard are now carrying out certain essential air defense functions which were previously performed by the regular services.

In recent years, the reorganization of the U.S. Army has been an almost continuous process.

But the greatest change in the past 25 years has been the conversion to "pentomic" organization.

The "pentomic" organization is now considered the best form of Army structure for adapting nuclear weapons to the battlefield and for deterring and fighting effectively in both limited and all-out wars.

It has now been put into operation in all active Army divisions and nondivisional support units.

If Army Reserve units are to replace, reinforce, or relieve active Army units in wartime, the organization of the Active and Reserve Army must be identical.

The Army Reserves must be capable of performing according to the most up-to-date principles of strategic and tactical mobility.

The organization, training, and deployment of our Reserve combat and support units must conform to the requirements of modern warfare.

As missions, weapons, and tactics change, the members of the Army Reserve must be prepared to assume new assignments and to become proficient in new military occupational specialties.

As a result of new developments, three important changes in our Army Reserve Forces are now occurring.

First, our Army Reserve units are being reorganized into a "pentomic" structure, so that in case of mobilization they can be more quickly integrated into the Regular Army Forces.

Second, the mission of the Army Reserve is more oriented in the direction of rounding out and balancing an Active Army that in peacetime is unbalanced because of limited manpower and financial resources.

Third, the principle has been accepted that the Army Reserves must be prepared to respond on very short notice in event of a national emergency.

Due to the potential enemy's capability of launching an attack with little or no warning time, the Reserves must be prepared to reinforce quickly our Active contingents, both at home and overseas.

The new Reserve policy is to give priority to the men and material which are most essential in aiding our Active Forces to carry out the objectives of our war plans.

For this reason, the Army Reserve must be organized, trained, and equipped to perform its assigned mission of rounding out and balancing the forces of the Active Army almost immediately after an order for mobilization.

However, our war plans do not require that all Reserve units be immediately mobilized in case of emergency.

Those Reserve units which can be organized and trained after the outbreak of hostilities in accordance with our war plans will receive secondary priority in the allocation of manpower, training, and equipment.

Top priority will go to those Reserve contingents that are assigned the mission of immediately reinforcing our Active Forces at the beginning of mobilization.

Men, equipment, and money are limited.

If these resources are spread too thin, the overall effectiveness of our Reserve Forces will be weakened.

Defense plans have been changed in order to meet the threat of the Communist bloc's increasingly strong capabilities in new weapons and techniques of warfare.

The Reserves must be modified to conform to these plans.

Few will dispute the necessity of this requirement.

An important Reserve policy is the assignment of Army and Air Force National Guard units to Continental Air Defense.

This is a form of combat which properly trained and equipped Reserve units should be able to perform effectively.

Continental Air Defense calls for a number of fixed installations which must be manned at all times and prepared for instantaneous action.

The sites of these installations are very often in or near communities which have National Guard or Reserve units.

By assuming these air defense functions, reservists and National Guards men free active servicemen for other combat duties.

Because of the increasing complexity of modern weapons, training is very important to our Reserve program.

The modern reservist is no longer like the self-sufficient frontiersman who at a moment's notice could simply lay down his plow, pick up his rifle, and march off to war.

The modern reservist must be a specialist and a technician.

He must be skilled in the operation and maintenance of complicated weapons and other elaborate pieces of military equipment.

As new weapons and equipment are introduced, he must adapt his skills to the operation of the most up-to-date tools of defense.

Because the Reserves have an important role to play in our national defense, this country has an obligation to treat the members of the Reserves fair and square.

Reservists serve at considerable sacrifice.

They must not be allowed to become the victims of neglect and discrimination.

Their rights and benefits must be protected.

Reservists have spent considerable time and energy developing assets which strengthen our national security.

These assets to our country's defense should not be wasted.

The best training programs and facilities must be provided to see that they are not wasted.

At present, there are about 1 million members in all of our Reserve and National Guard units.

This is an increase of about 50,000 over 1958.

The support of the Army Reserves and the Reserve Officers Training Corps requires only 2 percent of the Army budget and only 1 percent of the total Department of Defense budget.

In view of the relatively small size of our Active Army compared to that of our potential enemies, the role of the U.S. Army Reserve assumes increased importance.

Since the end of the Korean war, the United States has reduced the strength of its Active Forces.

But there is a limit to how few men we can have under arms or available for rapid mobilization.

If we don't have these men in our Active Forces, then we must have them in our Reserves.

A strong and well-trained Reserve organization is essential to our defense posture.

The Reserves are an effective and economical alternative to the maintenance of a larger standing Army.

America cannot afford to relax its vigilance when confronted by the menace of aggressive dictatorship.

The relentless and unscrupulous forces of international communism are watching intently and waiting hopefully for the free world to drop its guard.

Therefore, a strong program of national preparedness offers the best hope of preventing war.

In this time of continuing world crisis, strength is indispensable to the preservation of liberty, justice, and the American way of life.

Ladies and gentlemen, this U.S. Army Reserve training center which we are dedicating here today in the memory of Private Melvin L. Brown is a symbol of America's strength and determination to defend its freedom.

Anti-Semitism Outbreaks

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Thursday, January 14, 1960

Mr. BRIDGES. Mr. President, in recent years, America has made great strides toward eliminating ignorant prejudices and bigotry among the peoples of various religious beliefs. I submit that there now exists the healthiest climate for religious understanding in the history of this Nation.

At such a time, it is particularly appalling to read of outbreaks of antisemitism in Europe and in some sections of this country. These anti-Jewish demonstrations are the subject of a hard-hitting editorial entitled "Disgraceful Tactics" which appeared in the January 5 edition of the Manchester (N.H.) Union Leader.

The editorial, written by Publisher William Loeb, places the blame for these outbreaks at the doorstep of the International Communist conspiracy. I ask unanimous consent that this editorial be printed in the Appendix of the RECORD, and I commend it to the attention of my colleagues.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Manchester (N.H.) Union, Jan. 5, 1960]

DISGRACEFUL TACTICS

Decent people everywhere are profoundly shocked at the sudden desecration of Jewish synagogues and the painting of anti-Jewish signs on buildings in West Germany, England, New York City, and in other parts of the world.

This newspaper joins all decent people everywhere in condemning these outrageous actions.

We further urge that the culprit be immediately brought to justice. The culprit, in our estimation, is the Communist-International operating from Moscow.

No coordinated outbreak of anti-Semitism in so many different parts of the world could possibly occur unless it were in response to orders from some central headquarters. There is, unfortunately, no organization in the world that can produce such spontaneous reaction in various parts of the world except the Communist-International. The Communists appear to be responsible for these anti-Jewish symbols appearing in various parts of the world, and especially in Western Germany.

And why do we believe the Reds responsible for these outrages? Because elsewhere—in this country and in other lands—never in the memory of this writer has there been more good will toward different religions, including the Jewish religion. Religious prejudice is at an alltime low in the United States, and that is so elsewhere, from what we have been able to observe.

There is no reason for this outbreak. It had to be planned by someone who had something to gain from it.

The nation to gain most by these outrages is Communist Russia.

The Communists are attempting first to seize Berlin and then to take over all of Germany and then to turn its immense technology to the benefit of the Communist world conquest.

In order to seize Berlin and West Germany they must discredit Adenauer and the German people. What better way to do it than to tell the whole world, "Well, those Germans are still nothing but a bunch of Nazi anti-Semites." Men and women of good will all over the country must remember one thing and never forget it—the Communists conquer more by psychological warfare, and more by dividing peoples, than they do by military arms.

The police in every nation where the fake anti-Semitic outrages have occurred should apprehend the perpetrators of the deeds and carefully and rapidly check back their Communist connections. When the data is assembled, then the heads of the Government of the United States, Germany, England, and the rest of the world should send a note to Khrushchev, telling him that there will be no summit meeting or any other negotiations until this latest Communist skulduggery ceases. But, to our Jewish friends we say—do not be alarmed, do not be upset—these are not genuine outbreaks of anti-Semitism. These are deliberate attempts to disturb you and to arouse suspicions of brother against brother.

There has never been a better era of good feeling between Christians and Jews than the present and it will continue as it is and will grow better as the years go by.

WILLIAM LOEB, *Publisher.*

All Over in 60 Days

EXTENSION OF REMARKS
OF
HON. JOHN S. MONAGAN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 14, 1960

Mr. MONAGAN. Mr. Speaker, in connection with my recent suggestion for shorter presidential campaigns, I append herewith an editorial from the New York Daily News of January 8, 1960. This is typical of the approval with which this proposal has been meeting in many widely separated parts of the country.

The editorial follows:

ALL OVER IN 60 DAYS

Let us, says Representative JOHN S. MONAGAN, Democrat, of Connecticut, have a law limiting presidential campaigns to 60 days, beginning this year. That would cut them to about half their present length.

The proposal sounds good to us, if for no other reason than that television makes it possible for candidates to show themselves faster to more people than they ever could by train, or even by plane. How about some serious discussion of MONAGAN's idea?

Freedom of Information

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Thursday, January 14, 1960

Mr. WILLIAMS of New Jersey. Mr. President, free people must know all possible about the working of their government. This self-evident fact is seldom disputed, and yet we read frequently of controversy about the right to know.

An editorial in the New Brunswick (N.J.) Sunday Home News of January 10 gives a clear and vigorous support for a "Freedom of Information" bill introduced by the Senator from Missouri [Mr. HENNINGS]. I ask unanimous consent to have the editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FOR FREEDOM OF INFORMATION

Senator THOMAS C. HENNINGS, JR., Missouri Democrat and one of the stanchest defenders of the people's right to know, has announced that he is preparing to introduce a freedom of information bill which has been approved by a majority of the members of the Constitutional Rights Subcommittee of which he is chairman.

The bill is a revision of a bill introduced by HENNINGS a year ago. The revision has been made to incorporate in the bill strengthening and clarifying amendments found desirable in studies and hearings conducted by the subcommittee last year.

The Hennings bill rewrites the public information section of the Administrative Procedure Act of 1946. It looks toward more general dissemination of information the public has a right to have, and eliminates restrictive provisions and interpretations of the 1946 act.

HENNINGS says of his bill that it gives agency officials a precise standard for determining what must be made public and what may be kept confidential. Present vague language is eliminated and generalized phrases are clarified.

This is of course what has been needed all along. It is an inherent tendency of many public officials to keep from the public whatever information may seem to be in a clouded area, whatever information may possibly be withheld successfully. Where

the statute is not clear, officials tend to veer to the side of secrecy, on the theory, perhaps, that so far as they are concerned no news is good news.

The existing statute has a variety of provisions giving aid and comfort to the official who, through general timidity or a fear of disclosing errors of his own, wants to withhold information. It has phrases like "any matter relating to the internal management of an agency," and "any function * * * requiring secrecy in the public interest," and "required for good cause to be held confidential." Provisions like this leave so broad a field of interpretation that an official has wide latitude in keeping facts under cover.

HENNINGS points out that under these provisions some officials have taken advantage of the ambiguous language and misused it to conceal, rather than divulge, information which the public has every right to know.

The prospects for the Hennings bill this session seem better than ever before and we trust that he will receive support from his New Jersey colleagues in the Senate. Certainly in these troublous times, there is more than ever a critical need for the people to be as fully informed as possible on what is going on within their Government.

Hon. Thomas Jenkins

SPEECH
OF
HON. JOHN E. HENDERSON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. HENDERSON. Mr. Speaker, in these first days of the new session, we have been shocked at the news of the death of former Congressman THOMAS JENKINS who from 1924 until 1959 represented Ohio's 10th District here with great distinction.

TOM JENKINS became a legend in his own lifetime. The people of his district admired, respected, and loved this man who served them with courage, devotion, and imagination through a tumultuous and crisis-ridden three and one-half decades in his Nation's history. Their feelings were fully shared by all of us who had the honor to serve with him here.

The problems and issues of importance in TOM JENKINS' district are the same in many respects as those which interest the people of the neighboring seven counties of Ohio's 15th Congressional District, which I have the honor to represent. When I came to Congress 5 years ago, this interest in common problems served to bring us together immediately. TOM's helpful advice drawn from his rich experience in public service, and his friendship were of lasting value to me.

I wish to pay tribute to this dedicated statesman who gave so much to the people of his district and to the Nation. To Mrs. Jenkins and his fine family I want to join with my colleagues here in offering my sympathy in the profound loss they have suffered.

Divided Europe

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Thursday, January 14, 1960

Mr. JAVITS. Mr. President, the vital interests of the United States are concerned in the economic discussions now in progress in Paris where Under Secretary Douglas Dillon has been ably representing our country. A searching commentary on the significance of these deliberations, within the framework of the mounting difficulties between the Common Market nations and the Outer Seven, was made in the New York Herald Tribune of January 14, 1960, by Walter Lippmann. America's role as a "candid friend," whose primary concern should be the unity of Europe, the unity of the two Germanys, and the Atlantic community, is the focal point for the analysis. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DIVIDED EUROPE
(By Walter Lippmann)

Mr. Dillon, the Under Secretary of State, is in Paris for a meeting which is concerned with a subject that has not yet interested Americans very much. It is, however, one that interests Europeans passionately. This is the division of almost all of Western Europe into two large trading groups, which are known as the Inner Six and the Outer Seven.

The Inner Six call themselves a "community," which is in itself significant. They have organized a common market within a customs union and they are in the process of developing other common financial and administrative institutions. The Outer Seven call themselves by the looser name of an "association." They are pledged to grant free trade to each other. But as regards the rest of the world they have no common tariff.

The Inner Six consists of France, West Germany, Italy, and the three Low Countries. The Outer Seven consist of the United Kingdom, the three Scandinavian countries, Switzerland, Austria and Portugal. There are five other non-Communist nations which do not belong to either group. They are Iceland, Ireland, Spain, Greece, and Turkey. And, of course, Canada and the United States, though they belong to NATO, do not belong to either of the European trading groups.

Each of the two groups will have preferential tariff discrimination in favor of its own members and against not only the other groups, but against all the outsiders. At present and for the foreseeable future the tariff around the Inner Six will be considerably higher than the average of the tariffs of the Outer Seven.

All these discriminations and differences will create much discord within the Atlantic community. But they are undoubtedly negotiable, especially as the real interest of West Germany, which is to have lower tariffs, is likely in the end to prevail over the protectionism of the French manufacturers. In a negotiation to deal with the lowering of European tariff the United States has powerful cards in its hand, and can surely take care of its own interests.

Our most important interest in the whole subject is not economic. It is political. It has to do with the peace, order and unity of Europe. It is in this context that we should discuss and form American policy toward the rivalry of the two European blocs. I must hasten to say that it is not clear to me now what our policy should eventually be. But it is clear already that the real problem is not one to be dealt with by tariff experts alone but rather by those concerned with political planning and strategy at the highest level.

The Inner Six, with their common market and their growing agreement to harmonize their internal affairs, must be regarded as the nucleus of a new European power. It is correct to say, I believe, that the conception of the European community was born at the end of the war out of the dramatic lessons taught by the war. One lesson was that the Franco-German feud, which had produced 3 wars in 70 years, was suicidal and that it must be ended. The other lesson was that the greatness of Europe in the world could never be restored by the European nations separately, and that if they were to count among the great powers of the earth, they would have to unite.

With these purposes our government has always been in sympathy, and we have not let the probable inconveniences of a customs union deflect our support. That has been, no doubt, the right policy. But it is not a sufficient policy, and the time is at hand when a greater sophistication and less naivete are needed.

In their push toward a greater European unity, toward some kind of confederation, the planners and strategists of the Inner Six have relied upon the energy of vested interests in the larger market to overcome local and national obstructions. They have been eminently successful. But the methods they are using to integrate the Inner Six are making it more difficult to bring a greater unity into Europe as a whole. This is the point which calls for sophisticated examination in Washington.

The integration of the Inner Six—essentially of France and West Germany—has called into being the loose defensive association of the Outer Seven. This division of Europe is not, however, incurable and ominous, once France can be persuaded to permit the Common Market to adopt a low tariff policy.

But for the longer run there is something more serious in the way the Inner Six are developing their community. As they intensify the integration of West Germany with France, they make it increasingly difficult to reunify Germany. The East German economy cannot be integrated with the West German except very slowly and very gradually. That is why there is no enthusiasm for reunification, far from it, in the inner circles of the Common Market community.

Moreover, the increasing political integration of the Inner Six makes it increasingly difficult to envisage the entry of the East European nations into an all-European trading community. The integration of the Inner Six, which is too strong medicine for Sweden, Switzerland, and Austria, would surely be much too strong for let us say Poland or even Yugoslavia.

The community of the Inner Six is a good thing. But it has grown to a point where what it needs in the Government at Washington is not so much a sentimental uncle as a candid friend. This candid friend would be concerned not only with the discrimination of the customs union but also with

the larger problems of unity—of the unity of the two Germanys, of the unity of the Atlantic community, and of the unity of all of Europe.

The Inaugural Oath

EXTENSION OF REMARKS
OF
HON. WINT SMITH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 14, 1960

Mr. SMITH of Kansas. Mr. Speaker, among the great men actively participating in the Christian Amendment Movement is Dr. R. J. G. McKnight, D.D., Ph. D.

Dr. McKnight, whose record is listed in "Who's Who in America," has made a special study of the Christian philosophy of civil government and is a scholar of the first rank in this field.

I commend to my colleagues' attention a radio message delivered by Dr. McKnight some time ago, entitled "The Inaugural Oath." This was one of a series of 13 radio programs sponsored by the Christian Amendment Movement.

The message follows:

It was pointed out in the first of these discussions that America is moving toward a definite realization that there is need for divine guidance in her national life and in her participation in world affairs.

In taking the oath prescribed in the Constitution, the President added these words: "So help me God." He uttered these four words solemnly, as a prayer from his heart. It was manifest to all that he recognized that without God's help his best efforts to lead the Nation would fall short.

It seemed that the words of the 127th Psalm, verse 1, were running through his mind: "Except the Lord build the house, they labor in vain that build it; except the Lord keep the city, the watchman waketh but in vain."

In the Bibical text this 127th Psalm is ascribed to Solomon.

King Solomon at the beginning of his regin prayed above all for wisdom, and God gave him "wisdom and understanding exceeding much"—and "Solomon's wisdom excelled the wisdom of all the children of the east country and all the wisdom of Egypt" (I Kings 4).

Solomon asked God for wisdom and guidance, and God gave him wisdom "exceeding much"—so that his reign was peaceful and prosperous beyond any period in Israel's history.

"So help me God." The President added these words because he realized that "except the Lord build the house, they labor in vain that build it."

Let us look for a moment at the oath prescribed in the Constitution. It reads: "I do solemnly swear (or affirm) that I will faithfully execute the office of President of the United States, and will, to the best of my ability, preserve, protect and defend the Constitution of the United States." Period.

The words, "So help me God," are not there. The word "God" is not in our Constitution. There is not a suggestion in the oath of any appeal to God to judge the person who does not perform the duties listed in the oath he takes.

What is an oath? An oath is a declaration before God, Who searcheth the heart, that what the one who takes the oath says is true, as God is true, and that calls upon the Judge of all the earth to hold him responsible for all that he has promised to perform.

"An oath without an appeal to God is a violation of the historical practice, both English and Colonial."

More important than that: it is a violation of the specific divine command expressed in Deuteronomy (10:20): "Thou shalt fear the Lord thy God, and serve Him, and shall swear by His name."

There are those who contend that by the use of the word "solemnly" (in "I do solemnly swear") there is an implicit recognition of God.

Not so.

In legal terminology (and the Constitution is a legal document) the word means only "made in form, ceremonious, conforming with all legal requirements. The formality necessary to render valid a thing done" (see Webster's New International Dictionary).

An atheist could consistently take the oath as it stands in the Constitution. This may shock the average American, but it is true.

If the word "solemnly" in the constitutional oath is taken as indicating that the one who takes the oath takes it with an appeal to God to witness his action and to judge him for his performance or nonperformance of his vows—then the oath takes on a religious aspect. It becomes, for him, a confession that God exists and that God will judge. But it cannot mean that, if the Constitution is to be consistent with itself. And for this reason, the Constitution in the closing lines of article VI stipulates: "But no religious test shall ever be required as a qualification to any office or public trust under the United States."

If the words, "I do solemnly swear," in the oath of the Constitution, are to be considered as having even an implied recognition of God—then they are in direct contradiction to the prohibition enunciated in article VI which says: "But no religious test shall ever be required as a qualification to any office or public trust under the United States."

There are those who argue that the framers of article VI did not mean to say "no religious test." What they meant, they say, was "no sectarian test." They meant that no one was to be denied office on the ground that he was a Presbyterian or a Methodist or a Baptist or a Lutheran.

How do they know that the framers of the Constitution meant to say "sectarian" when they said "religious"?

The framers were intelligent men—they understood the meaning of words.

They knew the meaning of the word "religious" and they knew the meaning of the word "sectarian." They knew that these words were not synonymous. They chose the word "religious" and they wrote it down in the Constitution and it stands there today.

They also knew the expression, "I do solemnly swear," was in the oath. It had been there from the beginning. They did not regard the form of the oath as a religious test.

The paragraph containing the "no religious test" clause was written as an amendment to article VI—and was much debated.

The very words used by the Chief Justice in administering the oath raise some very interesting questions:

1. Why did the Chief Justice add to the oath as prescribed in the Constitution the words—"So help you God"?

2. Had the Chief Justice the right or authority to add these words or any other words to the oath prescribed in the Constitution?

3. If Mr. Eisenhower had been an atheist (which, thank God, he is not), could he not have challenged the Chief Justice on the ground that the words, "so help you God," implied a belief in the existence of God—a belief which no atheist can have.

4. Would not his challenge be sustained by the Constitution itself—article VI which stipulates that "no religious test shall ever be required as a qualification to any office or public trust under the United States"?

5. Does the Constitution of the United States, as it now stands, give any regard to the law of God for nations and their rulers?

6. Does our Constitution, in its qualification for officials harmonize with the divine prescription (II Samuel 23:3)—"He that ruleth over men must be just, ruling in the fear of the Lord"?

The Constitution provides generous protection for the rights of men. We call these the "Bill of Rights."

Has the Sovereign God, Who created nations, no rights?

Think it over, Christian citizens.

Major Baseball Leagues Threaten Minor League Cities With Raids and TV Stations

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, January 14, 1960

Mr. NEUBERGER. Mr. President, I ask unanimous consent to include in the Appendix of the CONGRESSIONAL RECORD a column from the Washington Post and Times Herald sports section of January 13 by Shirley Povich.

I am moved to make this request because Mr. Povich has emphasized so accurately the unscrupulous raids upon minor baseball leagues by the two existing major leagues. Mr. Povich has seen through the hypocrisy of Commissioner Ford Frick, who now pretends to be concerned over the fate of minor leagues. Mr. Povich has written:

In the rape of the minor leagues, the majors got there first. The greedy radio and television programing by Mr. Frick's leagues into minor league territory, without regard for the welfare of the minors, left the Continental with little to destroy.

I believe this material should appear in the CONGRESSIONAL RECORD because no community symbolizes more convincingly the words written by Mr. Povich, than does my own native city of Portland, Oreg. Portland is an outstanding citadel of baseball interest. But raids by the major leagues and the broadcasting into minor-league territory of major-league radio and television programs, all have contributed to diminishing and reducing the possibility of the Portland Baseball Club surviving and really prospering.

Mr. President, I ask unanimous consent that the article by Shirley Povich be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post and Times Herald, Jan. 13, 1960]

MAJOR BASEBALL LEAGUES THREATEN MINOR LEAGUE CITIES

(By Shirley Povich)

I

The plight of the little fellows has evoked the tender concern this week of those two distinguished bleeding hearts, Redskins Owner George Marshall and Baseball Commissioner Ford Frick. They want nothing evil to happen to, respectively, college football in Texas and minor league baseball.

Marshall is reacting violently to the proposal to put a pro football franchise in Texas because he says the pros would obliterate the college game in that section and such fine institutions as Texas, Texas Christian University, Southern Methodist and Rice would suffer. Somebody has to protect them, so Mr. Marshall says he will vote against expansion of the National Football League.

This adds up to a bit of a switch by Marshall who, in the past, has looked far down his nose at the caliber of the college game and has lambasted the colleges' split-T formation as lazy man's football. However, it seems now to Marshall to be worth preserving. Besides, he doesn't want any more partners in the lushly profitable National Football League.

Mr. Frick, who takes care to say nothing bad about the newly formed Continental Baseball League that wants to go major, what with Congress looking over his shoulder, says, however, he is disturbed. "We can't stand by and see the minor leagues raped," he said, inferring evil intent by the new league.

II

The fear as Mr. Frick expressed it is that the Continental will go wading into minor league territory for new franchises without giving adequate compensation to leagues that might be wrecked by the invasion. This is a responsibility vested in him as commissioner, and he must carry out his duty to make certain the minors are not hurt, and are at least indemnified.

Now this is all wonderful, this concern of the established major leagues for the suffering minors, and it is also new. There used to be less regard for the minors. In the rape of the minor leagues, the majors got there first. The greedy radio and television programing by Mr. Frick's leagues into minor league territory, without regard for the welfare of the minors, left the Continental with little to destroy.

There used to be more than 50 minor leagues. Less than a third of that number has survived the scorched-franchise policy of the majors' radio and telecasts. To the daily telecasts into minor league territory, the majors added the networks' "Game of the Day," and later, the "Game of the Week," until minor league baseball was starved out in dozens of cities and towns.

Ostensibly, Commissioner Frick fell into loving embrace with the new Continental League when he said the majors would welcome it, and he even went further, pinning a "can't miss" label on the new league. The Continental people wish they could be as certain as Frick, what with the conditions he has spelled out for them.

Before the Continental is accepted as a third major league, Frick stipulated, it must not only meet payments for territorial rights but must set up a players' pension fund, comparable to the two existing major leagues. The $50,000 earnest money each club put up for a franchise in the Continental is a trifling sum compared to what it will cost to meet Frick's conditions.

The better guess is that the Continental can miss, and badly, as a third major league, and that National and American League club owners actually are not much alarmed by the prospect they will have company as a big league. Even if Branch Rickey, the astute president of the Continental, gets his franchise holders over the indemnity and pension fund hurdles, there is still much work to do.

III

It will be years before the networks and the big sponsors cut the Continental into the radio-television loot because they will prefer the established shows of the two traditional leagues with their readymade box office stars. The Continental also will be expected to meet big league player payrolls without the comparable revenue of the two existing majors.

The test will be whether the eager new club owners in the Continental will be willing to lose money for a period of years. The majors aren't about to give away any box office attractions and the Continental's player-development program will take many years.

Calling a league a major league doesn't quite make it so. When Buffalo is playing Houston, it will require some imagination by the fans in either city to regard it as bona-fied major league ball. There will be too many leftover connotations of their minor league history, especially when they never see Mickey Mantle or Yogi Berra or Early Wynn or Ted Williams or any of the other established big leaguers. The Continental, if it gets off the ground, could nose dive, too.

Speech by Hon. Vance Brand, Managing Director of the Development Loan Fund

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 7, 1960

Mr. MULTER. Mr. Speaker, I am pleased to commend to the attention of our colleagues the text of a speech delivered by Vance Brand, Managing Director of the Development Loan Fund, at the Far East-America Council in New York City on October 6, 1959.

The following text was released by the Department of State on October 5, 1959:

SPEECH BY MR. VANCE BRAND, MANAGING DIRECTOR OF THE DEVELOPMENT LOAN FUND, AT THE FAR EAST-AMERICA COUNCIL, WALDORF-ASTORIA HOTEL, NEW YORK, N.Y., TUESDAY, OCTOBER 6, 1959

Of the 5 weeks elapsed since I was sworn in as Managing Director of the Development Loan Fund, I have spent almost 2 in the Near East. You will understand, therefore, that I am not yet in a position to describe steps taken and actions accomplished. However, long before I was sworn in I had begun thinking about the DLF and the challenge that it presents. Tonight I am going to tell you some of the ideas that are in my mind, some of the directions in which I shall be aiming, as I set about taking advantage of the opportunity which has been given me.

First, let us size up the agency. The Development Loan Fund is about 2 years old. So far, Congress has appropriated for it a total of $1,400 million in capital funds, of which about $835 million had been committed before I took office. This money is to be used in loans for specific undertakings, public and private, which upon thorough investigation are found to be economically and technically sound and which will contribute to the economic growth and development of free underdeveloped nations. The major outstanding characteristic that distinguishes the Development Loan Fund from other financing agencies is that it can accept repayment in currencies other than those lent. The DLF, by statute, does not make loans which other free world financial institutions are prepared to consider, including private capital, Eximbank, and the IBRD. There are other stipulations and limitations on the agency, but I do not mean to go into descriptive details in my talk tonight.

The Development Loan Fund was established as part of the U.S. policy of assisting free friendly nations and is an important arm of the country's foreign policy. This is manifested by the fact that the Under Secretary of State, Mr. Douglas Dillon, is ex officio the Chairman of its Board of Directors. The other Directors are the Chairman of the Board of Directors of the Export-Import Bank, Mr. Samuel C. Waugh; the U.S. Executive Director on the International Bank for Reconstruction and Development, Mr. T. Graydon Upton; the Director of the International Cooperation Administration, Mr. James W. Riddleberger, and myself.

Next, I shall endeavor to size up the Development Loan Fund's field of operations:

I think of the free world as being divided into three areas. There are the developed countries where private enterprise is already active, and there is no place for an agency like the Development Loan Fund.

Then there is the other extreme. Certain countries in Asia, Africa, and even Latin America are still so undeveloped that free enterprise and mobilized industry find only a limited field in which to work and grow. Here the Development Loan Fund's program should first exert itself. It can help finance the provision of basic facilities, like highways, harbors, waterways, communications, and power systems, which are necessary for the continuous growth of private enterprise. Certainly the technical know-how of American industry should be brought to bear in establishing these facilities, but, at present, it will undoubtedly be used mainly on an employed or consultant basis. The basic development activities generally are nonprofit activities and hence do not provide a proper field for the exercise of the creative vitality of American enterprise. But I am satisfied that a way can and must be found for American industry to take added interest and more responsibility in the other important development processes in those underdeveloped countries—of course, always in cooperation with their people.

This leaves most of the free world's area, the bulk of its population, and a large part of its natural resources in a third intermediate category made up of ambitiously developing but still incompletely developed countries. Here there is still need for basic facilities, and the Development Loan Fund can properly help to provide them. At the same time, these countries are already reaching the stage where American free enterprise is exercising its creative role in cooperation with people of the countries concerned. The problem here, as I see it, is to make sure that the efforts of the Development Loan Fund and other public agencies do not in any way preempt or interfere with, but on the other hand consciously and energetically assist and promote, the activities of private industry and enterprise, American and other.

With such considerations as a background, I ask myself: How can I guide the Development Loan Fund's efforts so as best to carry out its assigned economic-development tasks within its proper field of action?

Let me begin answering that question by saying something that may strike you as rather trite. A man cannot help bringing

into any task his own background and experience, and my background happens to be that of a small-town banker, lawyer, and businessman. Urbana, Ohio, was once an agricultural economy with good banking facilities sufficient for the community without any need to go to Cincinnati or New York for money. I think you know what happened, because it's happened to thousands of similar towns all over the United States. Industries were established and built up. Over the agricultural economy was superimposed a thriving industrial economy. The local banks were no longer able to meet the needs of the community, and people and industries began to borrow funds outside.

I saw all this happen and helped it happen. I went to Cincinnati and New York with these people and helped set up joint accounts with the larger city banks. And I know from my own knowledge that the business relationships thus established did more to draw Cincinnati, New York, and Urbana together, and make them parts of a strong, well-knit economic system, than all the studies on rural-urban sociology ever published.

During my service with the Export-Import Bank I saw one new underdeveloped country after another becoming more active and capable. I saw new industries established and commercial activity broaden. And I came to realize more and more that those countries were going through essentially the same experience that my own community had gone through. In the one case as in the other, it is largely through business relationships that the newly developing areas are being bound together with the more industrialized areas in a strong well-knit free world community. Flourishing business ties constitute a people-to-people kind of relationship that may be more effective in the long run than any other kind.

So first and foremost I want the Development Loan Fund to be an effective instrument for helping create and cement closer business ties between the United States and the underdeveloped or developing countries in which it operates. In other words, I want the considerable powers and resources of the Development Loan Fund to be used to the utmost to help bring the vitality, intelligence, and experience of American private enterprise into those countries to participate in their own development efforts and those of other nations. This is the best way I know of to stimulate economic growth and development.

When I say American private enterprise, I mean every one of the three words. American enterprise, simply because the record proves as a fact that American industry has unexcelled resourcefulness, initiative and creativity. Its qualities have been forged by a century and a half of experience in developing our own large and varied continent, and its record in developmental activities is unmatched. Private enterprise, because I believe the peculiar problems of economic development require the talents of men who have proven themselves as producers and enterprisers.

The Development Loan Fund is not interested in promoting statism, primarily because we believe that statism is a blind alley for any developing nation that aims at sound progress. And enterprise—that word is perhaps the key to the whole concept, because without the spirit of drive and initiative which it implies, development simply cannot take place. Economic growth is as vital a process as bodily growth. It cannot be accomplished with a mechanically conceived set of plans mechanically carried out.

So when you put all three words together—American private enterprise—you have what to my mind is unquestionably the most powerful and effective force, although not the only one, that can be applied to any problem or task of economic development. My desire to have the Development Loan Fund work as closely as possible with this force is not due to any narrow or chauvinistic or doctrinaire reasons. DLF's job is to stimulate economic development; I want it to do its job; I want it to use the best means available in doing so; and American private enterprise is the best means—that is all there is to it.

Now, the profit motive is the driving power of American private enterprise. One of the first things I looked at in my new job is the fact that I do not have to make a profit because I am heading a government agency. Lacking the inspiration of the profit motive, and the guidance and discipline of profit considerations, it is all too easy to make decisions that otherwise might not be made—decisions that in economic affairs at least may lead into blind alleys because they are outside the stream of economic life.

It is true that the Development Loan Fund is a nonprofit agency, but it is also true that its purpose is to stimulate economic development, and I am skeptical of any kind of economic development in the business and industrial sector that does not have the profit motive at its heart and center. In fact, I believe that without profits there will be no effective development. As Dr. Milton Eisenhower said last winter: "Private capital cannot be driven. It must be attracted." So one of the main objectives of the Development Loan Fund, insofar as I am concerned, will be to make sure that each loan opens the legitimate possibility of a reasonable profit for somebody, either directly or indirectly.

Another consideration I am bearing in mind is the fact that the dollar position of the leading friendly developed countries has changed very much for the better during the past decade. Our free world allies are now able to take a much bigger part in the worldwide economic development effort. It is as much to their interest to do so as it is to ours. I see no need for assuming that the United States must always pay most of the cost of international undertakings. The Development Loan Fund is not supposed to make loans for any projects for which financing is available on reasonable terms from any other source. I would like very much to see some of the other industrialized nations become alternative sources of financing to an increasing extent.

The International Development Association, now in process of formation by the World Bank countries, will bring additional funds into the development field, but will not eliminate the need for bilateral assistance by all industrialized nations. I cannot help entertaining the hope that in addition to supporting such institutions, as we do, the other industrialized nations will also expand their own development financing efforts, as we have.

Meanwhile, I would like to see the Development Loan Fund stick very closely to its own particular job, which is to work in the areas where the Export-Import Bank, the International Bank for Reconstruction and Development, and other sources do not reach. The essence of cooperation is to know where one agency's task leaves off and the other's begins. I earnestly believe the Development Loan Fund must become established in the minds of everyone not as a supplementary adjunct to the Export-Import Bank or the World Bank or the ICA, but rather as a unique agency entitled to the solid consideration and backing of American enterprise on its own merits.

I look forward to seeing the Development Loan Fund work hand in hand with representatives of American industry in exploring investment opportunities in the underdeveloped and developing parts of the world. I would like to see a group formed to represent American enterprise—not another advisory committee, but an effective working group, which would cooperate with the Development Loan Fund and the Government, but would form its own programs and goals and be responsible for its own actions. Its members would be willing to send their engineers and their other bright people into the world to see what they can do toward establishing free-enterprise activities in partnership with the nationals of other countries.

I would want the Development Loan Fund to be in a position to back up such an effort by American business with all its powers and resources—to be a cooperative and reliable partner which, when the risks appear substantial, would stand ready to help industry shoulder the financing burden. I believe that with backing of the kind the DLF conceivably might provide, American industry, with all its energy and vitality, might make quick progress in solving the problems which impede the growth of many ambitious new nations.

I know from my experience in the Export-Import Bank that one of the main problems confronting American enterprise in such nations is the need for Government backing and sharing the unusual risks in coping with situations that are beyond the scope of any private firm. On the other hand, when proper governmental support is available, I have seen American firms go into countries like Argentina and work wonders.

There is no doubt that manifold economic opportunities exist in the areas we are talking about, and that these opportunities can be exploited once we find means of getting around difficulties that are basically irrelevant to the economics of the situation—problems that arise mainly from the fact that the world is divided into separate nations, and hence can be dealt with only by national and international bodies.

One such problem concerns the method of repaying development loans. In both the underdeveloped and developing areas there are countries which cannot digest any further dollar-repayable financing. Such countries for the time being need financial assistance in forms adapted to their current position. Such assistance may take the form of local-currency repayment, on fairly long terms, or repayment partly in one currency and partly in another. The point is that repayment problems may have only a very indirect connection with the soundness of a given project from the engineering and economic standpoints.

For example, a plant to manufacture soda ash and related chemicals is being established in Korea. All of the products to be made are needed in Korea and at present are being imported. All of the raw materials except salt are available in the immediate vicinity of the plant, and salt is available elsewhere in Korea. The management of the firm is experienced, and an American firm of engineering consultants has approved the plant plans and confirmed the existence of a market for its output. Labor and technical supervision are no problem. The plant would save more than $2 million a year—ultimately perhaps more than $4 million—in foreign exchange in a country whose foreign-exchange deficits are now largely met by grants from the United States. In spite of all this, the investment climate in Korea is such that neither private sources nor such public sources of credit as the Export-Import Bank, the IBRD, or the International Finance Corporation are interested. The Development Loan Fund has approved a loan of $5,600,000 to help this plant get started, and we regard it as a sound project in spite of the fact that the loan necessarily has to be repaid in local currency.

As I say, this loan is an example of those that have already been made. It illustrates the kind of backing that the Development Loan Fund can provide in support of private enterprise in the face of problems that no private institution can solve by itself. I would like to see such backing placed behind an organized effort by American business in a cooperative drive to open the opportunities of developing regions.

With a mobilized body of American business and industrial talent probing into the underdeveloped and developing countries to search out the many ways in which free enterprise—both American and local—can be established and put to work; with the Development Loan Fund and other financial agencies ready to back up the sound projects that emerge, each in its own appropriate way; with increased effort by other industrialized countries; and with the incalculable power and drive of American free enterprise available to help those countries exploit every opportunity that is opened, the problem of developing the world's economic frontiers into strong, contributing parts of a worldwide free-enterprise community can be cut down to manageable proportions.

At any rate, the Development Loan Fund and American industry are going to cooperate as one team in using U.S. business talent, engineers, economists, brains, and tools for extending the creative ferment of the American industrial revolution into the areas where it is needed. That is the resolution I have formed as I take over new duties, and time will prove to you that I have not formed it in vain.

Not long ago Mr. Douglas Dillon, the Under Secretary of State, who is also the Chairman of the Board of Directors of the Development Loan Fund, said:

"An increased flow of U.S. private investment into underdeveloped countries, accompanied by the ingenuity and dynamism that has always characterized U.S. private enterprise, could mean an injection of vitality into the underdeveloped countries that would set off an unparalleled process of economic growth."

That is and will remain our guiding thought in the Development Loan Fund.

Questionnaire Submitted by Senator Milton R. Young to People of North Dakota

EXTENSION OF REMARKS
OF
HON. MILTON R. YOUNG
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Thursday, January 14, 1960

Mr. YOUNG of North Dakota. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a questionnaire I am sending out to approximately 27,000 North Dakota people.

There being no objection, the questionnaire was ordered to be printed in the RECORD, as follows:

This questionnaire is being mailed to approximately 27,000 North Dakota people. Included in the list are all North Dakota newspapers, Republican and Democratic, precinct committeemen, 1,000 public officials, every 10th name in the Grand Forks city telephone directory, and many thousands of others representing all occupations.

1. Do you think that foreign aid should be: Abolished? ——. Continued with present amount of funds? ——. Continued with greatly decreased funds? ——.

2. Do you favor legislation to provide Federal aid to education? Yes, ——; No, ——; no opinion, ——.

3. If you plan to vote Republican this year, which of the following would be your choice for President? NIXON, ——; Rockefeller, ——.

4. If you plan to vote Democratic, which of the following would be your choice for President? Humphrey? ——; Kennedy; Stevenson ——, Symington ——.

5. If the following were nominated for President, which one in each group would be your choice? (All candidates listed alphabetically.) Humphrey ——; Nixon, ——. Kennedy, ——; Nixon, ——. Nixon, ——; Stevenson, ——. Rockefeller, ——; Stevenson, ——.

6. Many proposals have been advanced to solve the farm problem. Your views concerning some of the more prominently mentioned programs, as stated in this questionnaire, will be very helpful to me. Space does not permit a more detailed explanation of each program. Would you approve or disapprove the following?

(a) Abolish all price support programs and controls? Yes, ——; no, ——; no opinion, ——.

(b) Provide high price supports and marketing quotas for every commodity a farmer produces, with stiff penalties for violation of marketing quotas? Under this proposal price supports would be based on direct production payments for each commodity. Approve, ——; disapprove, ——; no opinion, ——.

(c) Abolish present mandatory 75 percent of parity price supports for wheat and dairy commodities; elimination of the 15-acre provision; elimination of acreage allotments and marketing quotas; price supports for wheat based on the support level for corn (which is primarily based on a 3-year market price average) with adjustments for differences in quality, etc.? According to testimony of proponents, this would result in price supports of approximately $1.10 to $1.20 a bushel. Approve, ——; disapprove, ——; no opinion, ——.

(d) Provide price supports for wheat at 100 percent of parity (presently $2.36 a bushel) for that portion of the farmers' production which is consumed within the United States. (This would be about half of his production.) For the other half, the producer would receive the market price or whatever minimum price support the Congress might provide. Proponents claim that under this program acreage allotments or quotas soon could be eliminated. Approve, ——; disapprove, ——; no opinion, ——.

7. If it would appear impossible for Congress to agree on any new farm legislation, would you approve modifying the present program to make it more workable until a new one could be enacted? This would envision some further cut in production, reducing the present 15-acre exemption to 12 acres or less, and stiffer penalties for violation of quotas. Approve, ——; disapprove, ——; no opinion, ——.

8. Do you approve of the soil bank program? Yes, ——; no, ——; no opinion, ——.

Name ——————; Occupation ——————

Address ——————

Because of the personal nature of some of the questions, you may prefer not to sign your name. Your vote will be tabulated whether you sign it or not. Results will be mailed to you when completed.

Please return to: Senator MILTON R. YOUNG, 3121 Senate Office Building, Washington, D.C.

A Pioneer in Interracial Relations

EXTENSION OF REMARKS
OF
HON. JEFFERY COHELAN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 13, 1960

Mr. COHELAN. Mr. Speaker, as the 2d session of the 86th Congress approaches the all-important matter of civil rights legislation, it is fitting that we pay tribute to the memory of a pioneer in the field of interracial relations, Dr. George Edmund Haynes. Dr. Haynes was a native of Pine Bluff, Ark., whose career as a social worker, sociologist, lecturer, teacher, and organizer in the field of Negro-white relations won him the highest respect of all Americans.

Under permission to extend my remarks, I submit the following article from the New York Times of January 10 which, on the occasion of Dr. Haynes' death last Friday at the age of 79, reviews his lifetime of dedication. It is my hope that Race Relations Sunday, the second Sunday in February, will have a new emphasis throughout the Nation because of the passing of its founder:

GEORGE E. HAYNES, SOCIOLOGIST, DIES—PIONEER IN GROUPS PROMOTING INTERRACIAL RELATIONS—HEADED URBAN LEAGUE

Dr. George Edmund Haynes, a pioneer in numerous national organizations formed to raise the status of Negroes and to improve interracial relations, died Friday night in Kings County Hospital, Brooklyn, after a short illness. He was 79 years old.

As sociologist, lecturer, teacher, and organizer in the field of Negro-white relations, Dr. Haynes achieved many firsts for men of his race. For 25 years, until his retirement in 1947, he was the first executive secretary of the department of race relations of the former Federal Council of the Churches of Christ.

During and after World War II, Dr. Haynes developed a program of interracial clinics as a method of dealing with racial tensions in more than 30 American cities.

He was cofounder in 1910 and first executive director of the National Urban League, an organization concerned with the problems of Negroes who had migrated from the South.

In 1912 Dr. Haynes became the first Negro to receive a doctor of philosophy degree from Columbia University. He was a charter member of the National Association for the Advancement of Colored People.

Born in Pine Bluff, Ark., Dr. Haynes spent much of his life in New York. He graduated from Fisk University, Nashville, Tenn., and received a master of arts degree from Yale University. Then he became the first Negro graduate of the New York School of Philanthropy (now the New York School of Social Work).

WIDE RANGE OF PROBLEMS

His arguments for better conditions for Negroes were characterized by dignified, scholarly language. They covered the whole range of Negro problems including discrimination in employment, housing, and schooling.

During World War II, in a letter to a New York newspaper, he wrote:

"How can we enlist these black and brown men to fight and work for the Four Freedoms, one of which is freedom from want, and then

deny them jobs to keep themselves and their families from want?"

Dr. Haynes often emphasized that the world was predominantly colored and that Americans could be digging a pit into which their democracy might fall if they persisted in prejudice against Negroes.

Higher education should also be available for the manual worker who has interest in the fields of liberal knowledge and culture, he said. While a member of the board of trustees of the State University of New York, from 1948 through 1953, he wrote in a letter to the New York Times:

"We should face the fact that making a life is even more important than making a living. Our present social order is suffering because we have a great army of people in industry, agriculture, commerce, and government who are making good incomes for living, but their education has not given them the training and the inspiration of liberal learning which would enrich their lives."

TAUGHT AT CITY COLLEGE

For the last 9 years, until he became ill in November, Dr. Haynes taught at City College. His subjects included Negroes in American History and Culture; Africa in World Affairs, and Principles and Methods of Interracial Adjustment.

A half century ago Dr. Haynes was making studies on Negro migration from the South. His doctoral thesis, "The Negro at Work in New York City," was published by Columbia University Press in 1912.

In 1918 he was named Director of Negro Economics for the U.S. Government, serving as special assistant to the Secretary of Labor. He remained with the department for 3 years, on leave from his teaching duties at Fisk University. He completed a book, "The Trend of the Races," in 1922.

While heading the race relations department for the Council of Churches, Dr. Haynes promoted the idea of Race Relations Sunday, the second Sunday of each February. He prodded churches to end segregation practices.

In 1910 Dr. Haynes married Elizabeth Ross of Montgomery, Ala. She died in 1953.

Surviving are his widow, the former Olye L. Jeter, of Newport, R.I., whom he married in 1955; a son, George Edmund Haynes, Jr., and two grandsons. Dr. Haynes resided at 303 Tecumseh Avenue, Mount Vernon, N.Y.

Tribute to Steven Carter

SPEECH
OF
HON. JOHN KYL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 6, 1960

Mr. KYL. Mr. Speaker, in the congressional campaign of 1958 I was a political opponent of the late STEVEN CARTER. He was my Congressman the year he served in the House.

In the years I have known STEVEN CARTER he was a Christian gentleman and a man of courage. He was a good father, and his love of young people took his efforts beyond his family to activities with the Boy Scouts and other youth groups. He was a good neighbor, and the support his home people gave him at the political polls is proof of the high regard in which he was held by those who know him best.

For his fine family there should be solace in the fact that his life was dedicated to that which is right, and that he will remain an inspiration for many who had the benefit of his guidance.

The Impact of Imported Cars on the American Economy

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. MULTER. Mr. Speaker, I am pleased to commend to the attention of our colleagues the text of a speech delivered by our former colleague, the Honorable Franklin D. Roosevelt, Jr., at a luncheon meeting of the Advertising Club of Washington, D.C., on October 6, 1959, as follows:

THE IMPACT OF IMPORTED CARS ON THE AMERICAN ECONOMY

(Speech delivered by Franklin D. Roosevelt, Jr., at luncheon meeting of Advertising Club of Washington, D.C., October 6, 1959)

Mr. Chairman, ladies and gentlemen, members and guests of the Advertising Club of Washington, D.C., first, may I express my sincere appreciation for the award you have presented me today. I would like to say that this award properly belongs to the hundreds of thousands of Americans who have, in the last few years, bought economical and quality transportation in the form of imported cars and in doing so have had a considerable impact on international trade and the sound development of the economies of western Europe and the United States.

You have asked me to talk for a few minutes this afternoon about the impact of the imported cars on the American economy. First, let us take a quick look at just what this impact has been. What are we talking about? In 1955, 58,000 imports were sold in the United States. In 1956, 98,000 imported cars were sold. In 1957, this figure had doubled to 206,000. In 1958, 377,000 imported cars were sold, and it is estimated that in 1959 at least 600,000 of these imported cars will be sold in America.

This represents approximately 10 percent of all the new cars that will be sold this year and about 70 percent of these cars fall into what we call the economy car class. That is to say that they sell to the customer from $1,100 up to $2,000 with all accessories, except radios and automatic transmissions. This group of economy cars seat between four and five adults comfortably and get from 30 to 60 miles per gallon of gas and have maximum speeds that vary from about 50 miles an hour to 90 or 95 miles an hour, certainly speeds that are comparable to the maximum speed limits on American highways.

The growth of this relatively new segment of the American automobile business has been phenomenal, but it is also having remarkable effects on related industries. For example, one in which all of you are particularly interested, the advertising business, has seen one of the independent importers place advertising contracts in 1959 in amounts reported to be in the neighborhood of several million dollars. Local dealers carrying imported cars are placing additional advertising to make their communities aware of the qualities of their new imported products. The parts and service business, necessary to keep these cars rolling satisfactorily, has taken on a rapid expanion. The American tire companies are racing to bring out new sizes to fit the imports.

The demand for economy cars is not limited to the U.S. market. It has experienced an increasing demand all over the world. For example, during this last year, Volkswagen of Germany, is selling in a new market: the Sheikdom of Kuwait, at the rate of about 60 cars a month. Fiat of Italy, with which I am connected, will sell approximately 85,000 cars in Germany in 1959. Renault of France has made a license agreement with Alfa-Romeo in Italy, who is making the Renault for sale in Italy. The Fiat Co., of Turin, Italy, sells automobiles in a hundred and eleven different countries of the world and the other European factories sell on a comparable international scale. In this connection, it is interesting to note that the worldwide demand for Fiat cars is approximately 2,200 units a day, whereas their production is at present at the rate of 1,600 units a day. This shortage of supply versus demand is true also of several other European manufacturers. In fact, the total imported car sales in 1959 in the United States might have been considerably higher if Fiat and Volkswagon had been able to allocate to the American market all the cars that could have been sold by their respective organizations in this country. However, I am glad to report that both Fiat and Volkswagen are expanding their production in 1960.

Of course, many people ask why this sudden new demand for the economy car. This is a rather complicated question and there have been many surveys taken among buyers of imported cars to determine the answer. But I would say that, generally speaking, there has been a constant rise in the standard of living in the United States, as well as a continually expanding population. This increase in the standard of living has witnessed the constant growth of suburbia. When a family moves from the city to the suburbs, it often becomes a two and sometimes three car family. The head of the family has to drive a considerable distance to work and statistics show that almost 50 percent of imported economy cars are used by the head of the family to drive back and forth to work. The ease of parking and the ease of handling in traffic has been an important reason why many others have bought the economy car. The cost of operating and maintaining an automobile is constantly rising and many people have bought the economy car in order to cut down on these costs and there is no question that the imported car has provided an economical status symbol for many buyers.

This, in short, is the story of how the imported economy car has arrived in the United States automobile market. In my judgment, it is firmly established and is here to stay. Great emphasis is being placed by imported car distributors and dealers on proper parts and service in order to keep satisfied and happy customers. Basically, the product is a good one and the cost of maintenance, as I have said, is remarkably low in comparison to the bigger Detroit products. The customer in turn is getting a new satisfaction and enjoyment out of just plain driving a car and last, but not least, the American public has always been willing and often quite anxious to buy the right product at the right price. As long as European manufacturers continue to give a quality product to supply the basic needs of transportation and they do this at the right price, Americans will continue to buy imported economy cars.

This new and growing imported car business has had a significant effect upon the automobile business in America itself. The Big Three in Detroit this year, as everybody knows, are introducing their new com-

pact cars. In fact, last week General Motors introduced the new Corvair. This week Ford unveils its new Falcon and late this month, Chrysler will bring out its new Valiant. These new compact cars are not so small, being only about 2 feet shorter than their bigger Ford, Chevrolet, and Plymouth brothers. Nor are they quite so cheap. It is estimated that with comparable accessories they will sell at $2,350 and over.

Of course, everybody is asking how the compact cars will affect the imported-car business. I think the answer is not too hard to find because the American public has had the opportunity to buy two American compact cars for some time. The Lark has been on sale for about 18 months and the Rambler has been available for 5 years. Both of these cars have sold well and have developed a large and satisfied group of customers, but, at the same time, the economy imported cars have been almost doubling their market each year.

Therefore, I believe that the new big three compacts will not put us out of business. They, obviously, will affect the market for the higher priced imported cars and during the next few years we may see several of these withdraw from the American market, but I think their major sales will be to new customers and to former owners of Chevrolets, Fords, and Plymouths. Furthermore, I believe that the compact cars will find a ready market abroad, and in so doing, will restore America's position in the international field. In recent years our export of automobiles has fallen off considerably, perhaps for some of the same reasons as has our domestic market, but the compact car should find ready acceptance abroad.

The new compact cars have, without question, created a great and new interest in automobiles generally. Everybody has been waiting to see them, to drive them, and many to pay for them. This renewed interest in automobiles could easily result in 1960 being one of the great years in the history of the American automobile business. It is quite possible that, in 1960, almost 7 million cars will be sold in the United States which would make it the biggest year, except for 1955, in the history of the industry.

Therefore, it can be said that the imported cars caused a revolution in Detroit. Their success has forced the Big Three to reverse their trend of bigger and bigger cars with more and more horse power and ever flashier chrome. Detroit this year, with the introduction of their compact cars—like Jack and Jill have rolled down the hill. They are starting once again to produce transportation instead of what they mistakenly thought was the symbol of status. But a word of warning. Now that Detroit has rolled down the hill, if history repeats itself, they will once again march up the hill and a few years from now the compact cars will once more be the useless giants which, again, will be rejected by the American buying public. It is my guess that the imported cars will never sell more than 13 or 14 percent of the American market but so long as they continue to supply economical quality transportation they will continue to render a service to the American automobile industry and they will continue to provide what a small, but important segment of the buying public, will continue to demand.

There are those who are talking darkly of increasing the tariff on imported cars. To me, this would be an incredibly short sighted and stupid move. Since 1948 when the Marshall plan was commenced, the American people have spent billions of dollars to put Western Europe on its economic feet and in so doing to eliminate the threat of internal communism. We have succeeded and today Western Europe is prosperous. It is marching steadily toward the Common Market, the elimination of tariffs between European countries. Western Europe is today our strongest ally in our quest for a free and peaceful world. In its simplest terms, we must decide whether we favor a policy of trade or of aid. If we do not buy from Western Europe, we will have to subsidize Western Europe or face once again the prospect that because of its poverty it will turn to communism.

And in our own interest, it is important to continue to buy from Western Europe because the dollars that they get from selling automobiles in the United States, they spend here for many of our other products, such as: heavy machinery, machine tools, electronics equipment, refrigerators, radios, television sets, ad infinitum. I happen to know the figures of one company better than those of the others and, therefore, I can tell you that the Fiat Motor Co., in Turin, Italy spends all of the dollars that it makes from selling automobiles in the United States on buying from American manufacturers the very tools with which those automobiles are made, for paying the royalties on license agreements that it has with several American manufacturers, on buying many other items and raw materials that it requires to continue to be one of the greatest industrial operations in Western Europe. If Fiat cannot sell here, it cannot buy here. If Western Europe cannot sell here, it cannot buy here. If Fiat does not continue to employ 80,000 people in its many factories, those people may well turn, as they almost did after World War II, to another system of economic and social life, namely, communism.

One other factor. In the last 4 years the number of Americans employed in manufacturing American goods for export have almost doubled. Therefore, we should look at the impact of foreign imported goods upon the total economy and not upon one segment of the economy. We now pay 8½ percent of the value of every imported car to Uncle Sam. If we were to increase this tariff, the effect would be to virtually exclude the imported economy car from the American market. I can assure you that trade is much cheaper than aid when it comes to the pocketbook of the American taxpayer.

In closing, let me say that the American economy and its capitalist system is based on the theory of competition—competition between ourselves and competition with our friends abroad. I believe that the imported cars have had a good effect upon the automobile industry from the point of view of the consumer in the last few years. I believe that they are here to stay and will continue to have a good and sound effect upon one of America's greatest industries. I also believe that they can continue to have a good effect which will help to raise the standards of living, not only for our people here in America, but of our friends abroad and as we raise the standards of living in the free countries of the world so will we make our way of life more attractive, not only to those so-called neutrals, who now wonder which way to go, but those behind the Iron Curtain who Mr. Khrushchev is so anxious to expose to the competition of coexistence.

Thank you very much for letting me be with you today and thank you again for the award which you were so gracious in giving me.

Hon. Richard M. Simpson

SPEECH
OF
HON. JOHN E. HENDERSON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. HENDERSON. Mr. Speaker, in the tragic death of RICHARD SIMPSON the Congress has lost one of its great leaders and the Nation is made poorer by his passing. He was a man of stature in the rich tradition of Americans who have dedicated their lives to the service of their country. The principles for which he fought so eloquently sprang from a deep conviction that representative government must be both responsive and responsible. He clearly understood this delicate balance in his untiring efforts for all the people of his country.

DICK SIMPSON was my friend whom I admired for his courage, the clarity of his convictions, and his sincere and unswerving loyalty to principle. Perhaps even more I admired qualities of kindliness and humanity which he possessed in such abundance.

I join with my colleagues here in mourning his loss and I wish to extend to his family my most profound sympathy in this time of sorrow.

Paul O. Peters

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 13, 1960

Mr. BOW. Mr. Speaker, a beloved figure is absent from Capitol Hill as we begin this session of Congress, and there are many of us who miss him deeply.

Paul O. Peters passed away, quietly, at his home in Arlington on December 30 and now is resting in Arlington National Cemetery.

For the past 10 years he has edited a daily news bulletin to which may of us subscribed. His skillful analysis of government budgets and agency programs have often appeared in the pages of the RECORD. We will miss his daily calls and the service he rendered.

Paul Peters will be missed also in the great American conservation movement, of which he was a leader for many years. He was known throughout the Nation for his speeches and writings on conservation subjects. He served for many years as a national director of the Izaak Walton League and was instrumental in the establishment of the excellent Izaak Walton League facilities in nearby northern Virginia.

He will be missed by many who knew him only as "Porcupine, Jr.," the nom de plume he used in witty political columns that appeared in a number of journals.

His was a long and remarkable career. I have known few men who had as vast and varied a fund of knowledge or used their knowledge as wisely.

Mr. Peters' memory will be especially cherished in my home area by reason of his great generosity to the College of Wooster at Wooster, Ohio. Late last spring he announced his decision to give his library of some 90,000 volumes and various historical and art objects to the library of that college. He traveled to Wooster to announce that decision, and

on his return expressed to many of us his great satisfaction with the institution.

Earlier he had been fearful that his collection, one of the most complete in existence on governmental and political subjects, would be dispersed at his death. It gave him great pleasure and satisfaction to know that it would be held together and made available for students of government and politics not only of the College of Wooster but many others who may be expected to visit Wooster to refer to the collection.

A new library is under construction at the college and special provision is being made for the Paul O. Peters Room which will house his collection. At the time of his death he was looking forward to consultations with the architect on the design of that room. He had already arranged the shipment of a part of the library.

One could recite many highlights of a long and useful life. Mr. Peters' investigations of political corruption in St. Louis won his newspaper a Pulitzer prize. His service as an investigator for the Small Business Committee of the House, under the chairmanship of Hon. Walter C. Ploeser, and later for the General Accounting Office, saved Americans many millions of tax dollars.

I like to recall an investigative trip he made to Alaska shortly after World War II. Though he was gone several weeks, his expense voucher asked for only $18. He did not believe in wasting tax dollars and he wasted none himself. He had made the trip hitchhiking on military aircraft, bunking in military barracks, and spending only a few dollars for film and cab fare.

He was one of the founders of the Outdoor Writers Association about 20 years ago and regularly attended its meetings.

Though his many friends miss him acutely, we take satisfaction in knowing that his many contributions in the various fields that interested him have built a memorial that will never fade.

Congress Eyes Spending Spree

EXTENSION OF REMARKS
OF
HON. CHARLES E. CHAMBERLAIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 13, 1960

Mr. CHAMBERLAIN. Mr. Speaker, that $4.2 billion budget surplus which President Eisenhower sprung on an unsuspecting Congress and American people in his state of the Union message seems to have stirred up somewhat the same reaction as dad getting a Christmas bonus or winning the Irish sweepstakes.

Every Member of Congress and every columnist and every economist and every taxpayer has been calculating ever since as to how to get rid of it fast.

The taxpayers want it for a tax cut, and the Members of this body have just about as many proposals as there are Members.

It seems to be only the President who can see a sounder fiscal policy for the country and for our descendants in suggesting that it be applied to reduce the national debt.

Today I read an editorial in the Flint Journal of Sunday, January 10, 1960, which I believe deserves the attention of the Members of the Congress; and, pursuant to unanimous consent, I herewith include it in the Appendix of the RECORD:

CONGRESS EYES SPENDING SPREE

Reaction in Congress to President Eisenhower's surprising estimate of a $4.2 billion budget surplus in the next fiscal year was about what should have been expected. But it still was none the less frightening.

With a $290 billion deficit staring them in the face, most of the lawmakers clicked their heels in glee and plunged headlong in one of two directions. Either they came up with proposals as to how to spend the money or they climbed onto their political soapboxes to advocate tax reductions.

It is just such a philosophy "if we're going to get a buck, let's hurry and spend it" that has helped to lead us to the point where $1 of every $10 we pay in taxes goes to pay the interest on past expenditures. Based on today's national debt, taxpayers over the next decade will pay $80 billion, or about the equivalent of the entire 1960 budget, just for interest charges.

There are those, of course, who argue that Mr. Eisenhower is overoptimistic in his estimate. He admittedly is anticipating a cut in Government spending and a great influx of revenue from a booming economy. Many things could alter the situation between now and July 1961, when the fiscal year will close, so the contention has been made that Mr. Eisenhower's forecast is not realistic.

For the moment, we won't attempt to defend or question the soundness of such a long-range prediction. Our concern here is the lack of concern on the part of the Congressmen as to how they spend the taxpayers' money.

The President had in mind something far removed from a new spending splurge when he indulged in his budgetary optimism. In the same message to Congress, he proposed that any such surplus be used to reduce the amount of our national debt.

"Personally, I do not feel that any amount can be properly called a surplus as long as the Nation is in debt," he stated.

"I prefer to think of such an item as a reduction of our children's inherited mortgage."

No such concern for the taxpayers' staggering burden was shared by the majority of Congressmen, who took the President's remarks as an invitation to make some points with special-interest groups. They immediately began sounding off on this country's many needs.

There is no denying that worthwhile programs being pushed by various pressure groups would benefit many people. But, at the same time, there comes a point in budgeting money, whether at a family or national level, beyond which further expenditures can only lead to financial disaster. Our national progress and fiscal integrity are interdependent and inseparable. You can't expect to enjoy the former without insisting on the latter.

It stands to reason that there is a limit to the things that can be bought by borrowing against anticipated revenue. The programs on which Congressmen would spend surplus funds—schools, roads, public works, health, missiles, and so forth—undoubtedly can be defended. But it never seems to occur to those who are so free with our tax dollars to look for possible economy cuts in other expenditures to provide the needed money. They might step on someone's toes and risk political disfavor. It's easier to increase the tax load by adding to our debt. Taxpayers aren't organized as well as the many powerful spending blocs. They confine their efforts to infrequent pained outcries.

The advocates of tax reduction are showing no more wisdom than the heavy spenders. They, too, seem all too willing to turn their backs on our national debt. Tax revision may be advisable, but certainly this is no time to indiscriminately slash taxes because of the possibility of our first budget surplus since 1957.

We believe the President is looking at this country's financial situation much more realistically in holding out the prospect of tax reductions in the future.

The long-talked-about balanced budget is not an impossibility. Neither is tax reduction. But realization of them depends upon acceptance of certain budget limits and a realistic approach to reducing our national debt.

It probably is too much to expect, especially in an election year, but if Congress would substitute reasonableness for selfishness and put the interest of the American taxpayer ahead of political gain, definite progress toward the fiscal stability Mr. Eisenhower seeks could be made over the next fiscal year.

The Consumer Interest in the Continuation of Federal Grading of Lamb

EXTENSION OF REMARKS
OF
HON. LEONOR K. SULLIVAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 14, 1960

Mrs. SULLIVAN. Mr. Speaker, the House Committee on Agriculture has been conducting hearings this week on the proposal of the Department of Agriculture to suspend for a period of 1 year the voluntary program in effect for Federal grading for quality of lamb and mutton. Because of the widespread interest in this matter, particularly among the Nation's housewives, I include under unanimous consent the statement which I prepared for the committee's hearings giving the reasons why I think the lamb grading program should be continued. In the last session, on several occasions, I placed in the CONGRESSIONAL RECORD a number of statements, letters and comments on this matter and there has been such broad response throughout the country to that material that I am sure the statement I have prepared on the current status of the issue will be similarly of interest to many people.

The testimony referred to is as follows:

THE CONSUMER INTEREST IN THE CONTINUATION OF FEDERAL GRADING OF LAMB AND MUTTON CARCASSES

(Testimony by Congresswoman LEONOR K. SULLIVAN, of Missouri, before the House Committee on Agriculture, January 13, 1960)

Chairman COOLEY and members of the Committee on Agriculture, I congratulate the chairman for his prompt action last

month in interceding with the Department of Agriculture to continue the lamb grading program of the Federal Government at least until this committee of the Congress can examine the Department's reasons for wanting to suspend the program. If Chairman COOLEY had not acted when he did, lamb grading would have ended on January 4 without Congress having had the opportunity to look into the issues until after the death sentence had already been executed. Now, with this short reprieve—the second in a period of less than a year—I am hopeful the program can be rescued from the death sentence Mr. Benson has imposed.

In the period since the lamb grading program came under attack last summer until now, I have written or wired the Department on a number of occasions urging consideration for the consumer's stake in this important governmental program. Usually, a month or so later, I receive a polite reply telling me what has been decided in the interim, and I therefore cannot help but have the feeling that expressions from individual Members of Congress carry very little weight in the office of the Secretary of Agriculture. For that reason, I feel that it is most important that this committee, after hearing all of the facts in the controversy, follow up on its hearings by reporting out a resolution calling for the continuation of lamb grading. Otherwise, I am afraid the hearings will have been futile, and the Department under present leadership will continue to pay no attention to any views expressed here except those it may happen to agree with at the moment. This, unfortunately, has been the history of the Department's attitudes under the present Secretary.

CONSUMERS WANT GRADING CONTINUED

Since first intervening in this matter last summer, Mr. Chairman, I have heard from many consumers—not only from St. Louis but from widely separated parts of the Nation—supporting my view that he Federal meat grading program—including lamb grading—should be maintained and its integrity defended. Consumers first learned through the wartime price control programs to look for Federal grades in buying meat, and they still find the grades essential in obtaining fair value for their meat dollar. I will grant that tastes in meat are changing over the years and that many housewives no longer prefer to buy and pay for the high-fat-content prime grades of beef and lamb, but at least they want to have a basis for knowing and measuring the quality of the cuts they do select so that they are certain they are paying only for the quality of cut they are receiving.

The recent revelations of cheating in so many areas of our economy and society—mass, organized cheating often engaged in by respected, if not wholly respectable, business firms, and even by some industries on a broad basis—have emphasized to consumers the absolute necessity for keeping whatever reliable quality guides are available to them. Meat grading is a reliable guide of quality to the consumer. Consumers do not want to see it abandoned.

SMALL PACKERS NEED GRADING TO SURVIVE

And neither do the small packing firms which depend upon Federal grading as their means to compete with the big packers. You are all familiar with the way almost any product can be glamorized by packaging and advertising magic—and that is all right—but Federal grading of meat is the only sure guide the consumer can use to be sure of quality among a host of competing brand names and unbranded cuts. Having graded cuts is therefore the only way the small packer can market his meat in competition with the giants in the industry. This committee has gone to bat too often for the small packer and the small businessman to want to step aside now and allow the small packer to be denied the most important selling tool he has in order to compete with the big packers. As you know, grading does not cost the Federal Government or the Federal taxpayer a cent—it is paid for by the packer who chooses to utilize this service. And I think you have had testimony showing that on lamb, for instance, the prices to the consumer of comparable graded and ungraded cuts in the stores are often, if not usually, identical, indicating that the customer is not paying extra for this helpful service.

Certainly somebody is paying for it, and that somebody is the small packer, out of his profits. But at least he has profits—he is able to compete—because of the existence of this program. One might wonder why the big packers which are not using grading do not reflect the saving in their prices. But that is another story—another issue. Obviously, if grading were eliminated, the packers which do not at present use the service are not going to charge any less for their meat; on the contrary, if they can force out the small packers as competitors, you can be sure the price of lamb will go up.

MANY GROUPS HAVE PROTESTED DEPARTMENT ACTION

Last July, when the Department originally proposed abandoning the lamb grading program, about 1,000 firms, organizations and individuals wrote to the Department of Agriculture on this matter, and apparently the overwhelming majority supported the idea of continuing the program. At least, the Department so indicated in a press release at that time—reassuring those of us interested in the issue that the battle for the continuation of lamb grading had been won. The outpouring of consumer protests and of protests from small business firms directly involved in this matter was the more remarkable in that, up to then, practically nothing had appeared in the newspapers or on television about the Department's intention to end lamb grading. The newspapers in St. Louis had carried information on this, but very few others did.

Since then, the newspapers have become much more interested in this matter, so that today the consumer is alerted to the issue now facing this Committee. I can assure you therefore that if you take action to insist on a continuation of lamb grading it will be broadly supported in the country.

POST-DISPATCH EDITORIAL

Let me list a few of the comments I have received or seen on this:

The St. Louis Post-Dispatch commented editorially that—

"Chairman COOLEY of the House Agriculture Committee deserves the gratitude of consumers for intervening in the suspension of lamb and mutton grading."

Then, after giving the background of the issue, and citing Secretary Benson's decision to suspend grading because representatives of the various segments of the industry could not agree on changes proposed by the Department in the grading regulations, the Post-Dispatch editorial added:

"We imagine Representative COOLEY will want to know, as many consumers certainly do, why the Secretary did not perform the obvious administrative functions of enforcing a decision of his own until the industry could agree on a better. Such a course might still provide a healthy incentive to agreement."

ST. LOUIS CONSUMER FEDERATION PROTESTS

Consumer groups throughout the country have urged continuation of lamb grading. The St. Louis Consumer Federation, which is one of the outstanding organizations of its kind in the country—an alert and well-informed group of outstanding St. Louis residents—advised the Secretary of Agriculture as follows last month, in a letter from Mrs. J. M. Klamon, president:

"Our organization has learned that an order has been issued by your Department suspending lamb and mutton grading service for one year, effective January 4, 1960. The reason given in the press for this suspension is that the industry could not agree on standards. Industry interests, apparently, were the only ones considered; no mention is made of consumer interests.

"Our organization has fought for years to have grades placed on meats and other foods so consumers can buy intelligently. As you know, Federal standards for poultry were made effective only a few years ago.

"For the benefit of the consumers we urge that you reconsider the suspension of lamb and mutton grading. We find ourselves in agreement with those consumers who have already stated that they fear the suspension of lamb and mutton grading is only the first step toward removal of grading from beef.

"We feel that the solution of the problems now present in connection with lamb and mutton standards can be found while the grading program is in effect, and strongly protest the removal of grading from these products.

"We sincerely trust you will reconsider this entire matter for the protection of the consumer.

"Sincerely,

"MRS. J. M. KLAMON,
"President, St. Louis Consumer Federation."

MEAT DEALERS SUPPORT GRADING

Mr. Chairman, I received an equally emphatic letter on this same subject from the president of the Metropolitan St. Louis Meat Dealers' Association, Mr. Morrison McFarland, who points out the difficulty which would confront the small meat dealer if he personally had to grade and evaluate every piece of meat he buys—if he did not have reliable Federal grades to guide him—particularly on top quality meats destined for the hotel, restaurant, and institutional trade.

Even if each meat dealer had the time or the experienced personnel to grade in his own establishment each piece of meat he sold, so as to reassure the customer on quality, please keep in mind the fact that meat merchandising today is done largely through prepackaged meats put out for display in a refrigerated case. As Dorothy Diamond, the columnist on the woman's viewpoint for the magazine Printer's Ink put it in her column directed at people in the advertising and communications fields, "Now that the old-fashioned butcher who used to advise the housewife has become almost as elusive as the maid-of-all-work, and now that meat is sold increasingly in antiseptic prepackaged form, we housewives need and deserve all the help that we have been accustomed to getting from the Government." She makes a good point.

PROTEST TO SECRETARY BENSON

In conclusion, Mr. Chairman, I want to include in the record of your hearing the admittedly angry telegram I sent to Secretary Benson on this matter on December 9, immediately after hearing in a most roundabout fashion of the decision to suspend lamb grading. If you will recall, I had been very much interested in this matter when it first came to a head last July and had writen to him then and had placed a lot of material in the CONGRESSIONAL RECORD on this issue and so, in the normal course of things, I would expect to be notified when a decision of last July is suddenly changed in December. But I received no notification of the

change in plans and when I did hear about it—in a roundabout manner—I reacted quite angrily, and sent the wire which I shall attach at the end of my statement. The wire was sent December 9. I received a polite answer to it from an Assistant Secretary on January 8. I shall not include the reply because I am sure you have received the identical information from the Department in these hearings.

But I would like my wire to be included, as follows:

DECEMBER 9, 1959.

Hon. EZRA TAFT BENSON,
Secretary of Agriculture,
Washington, D.C.

I have just learned in a fantastically roundabout manner that you have ordered suspension for 1 year, effective January 4, of U.S. Department of Agriculture lamb grading program which provides quality guidance to consumers. I bitterly protest not only the sudden about-face in the Department's position on this controversial matter but the quiet, unobtrusive, almost surreptitious manner in which the order has been promulgated within the Department without alerting consumers or even notifying those of us in Congress interested in this issue. In contrast, your decision last July 23 to continue the lamb grading program despite wishes of some industry groups was announced with great fanfare via a press conference and widespread news coverage. Consumers believed then the battle was won; apparently all they won was a short reprieve if your latest order stands.

As one who believes sincerely in the important role of meat grading by USDA in protecting consumers on the quality of the meat they buy, I protest what is obviously a surrender by your Department to a few powerful special interest groups which prefer to see the consumer flounder amid conflicting quality claims on meat rather than have clearly marked, federally certified grade standards which the consumer can follow in selecting meat purchases. Suspension of lamb grading appears to be the first step toward eliminating beef and other meat grading programs—programs which are completely self-supporting and operated at no cost to the taxpayer.

May I urge, in view of the long consideration given this matter prior to your decision of last July to continue lamb grading, that the suspension order for January 4 be rescinded. If lamb growers and some big packers believe changes should be made in grading criteria, let them come forward with intelligent, constructive suggestions, rather than be permitted to kill the program by their failure or refusal to agree on proposed changes. In giving in to their demands, I am sorry to say you have sold out the consumer completely.

Your action on this matter convinces me that programs established by Congress primarily to protect consumers rather than merely to aid sellers should be placed within departments which have at least a semblance of interest in the consumer's welfare. This action on lamb grading, coming on top of your ridicule of danger of using a prohibited, cancer-inducing weedkiller on cranberries, indicates the Department of Agriculture under present leadership is concerned only with the tinkling of the cash register on food sales with little or no interest in the quality, purity or value of the food the consumer buys. Is there any way I can state more strongly my dismay over the lamb-grading action, or my conviction that many consumer-important functions of the Department of Agriculture should be transferred to other agencies of Government?

LEONOR K. (Mrs. JOHN B.) SULLIVAN,
Member of Congress, Third District, Missouri.

Mr. Speaker, that concludes the statement given to the committee. To complete the background, I now include as part of my remarks in the CONGRESSIONAL RECORD on this matter the reply I received from the Department of Agriculture to the above wire, as follows:

DEPARTMENT OF AGRICULTURE,
Washington, D.C., January 8, 1960.

Hon. LEONOR K. SULLIVAN,
House of Representatives.

DEAR CONGRESSWOMAN SULLIVAN: This is in reply to your telegram dated December 9, 1959, to Secretary Benson, protesting the suspension of Federal grading of lamb and mutton for 1 year effective January 4, 1960, as announced by the Department in a press release December 2, 1959.

In evaluating the decision to suspend Federal lamb grading for 1 year, it is necessary to consider the history and sequence of events that prompted this action. The proposal was brought to the Department's attention by the National Wool Growers Association which adopted a resolution on January 29, 1959, stating the Federal grading was detrimental to the efficient merchandising of lamb and urging that the Department suspend Federal lamb grading immediately. The National Lamb Feeders Association had adopted a similar resolution on January 10, 1959.

In view of the widespread interest in this subject, the Department called a meeting on April 17, 1959, of individuals representing various organizations, from producers to retailers, who were directly concerned with the merchandising of lamb. Based upon the statements presented at that meeting, it appeared that the entire industry should have an opportunity to comment on this situation prior to the Department taking any action to discontinue lamb grading. Consequently, notice was published in the Federal Register on May 28, 1959, announcing that the Department of Agriculture was considering the suspension of lamb grading on August 1, 1959, and inviting all interested parties to submit comments by June 22, 1959. At the request of certain segments of the industry, the time for submitting comments was extended until July 6, 1959, and was again extended until July 20, 1959, as requested by Hon. JAMES ROOSEVELT, chairman, Subcommittee No. 5, Select Committee on Small Business, House of Representatives.

During this period for filing comments there was ample opportunity for the entire industry to express its views on this subject. After considering comments of more than 1,000 organizations and individuals, and weighing the matter carefully, the Department issued a press release on July 23, 1959, announcing that Federal lamb grading would be continued and stating that the Department would proceed promptly to consider revised grade standards for lamb and mutton to eliminate any deficiencies in the present standards. At that time it was stated that "If improved grade standards for lamb and mutton are not developed to meet more adequately the needs of the industry the Department will give further consideration to suspension of Federal grading of lamb and mutton carcasses." Following that announcement, Department officials met with an industry group at Kansas City on August 26, 1959. Representatives from all segments of the industry from producers to consumers attended this meeting and advised the Department concerning the objectives to be accomplished in revising the standards. General agreement was reached on the principle of the revision which was to lower the requirements for the two highest grades, Prime and Choice, with the objective of sufficient volume within each of these grades for effective merchandising.

Following the meeting of the general group, the Department met with a technical committee of eight members selected to advise on the techniques of effectuating the changes which were to be proposed. This group met again on September 16 to review the tentative proposals which the Department had developed. At this meeting the technical committee indicated its general agreement with the objectives of the grade standards and final grades placed on demonstration lambs in accordance with the new standards. However, six of the eight members of the committee strongly objected to the use of interior carcass indications of quality in determining grade. The Department maintained the position that the standards should contain all indicators of quality necessary to accomplish a precise evaluation of grade. It was pointed out that without the consideration of internal indications of quality in determining gradelines the Department graders would not be able to maintain a satisfactory degree of uniformity in grading. In view of this, the Department proposed these standards on October 21, 1959. Comments concerning these proposals were received through November 21, 1959, and clearly indicated a substantial lack of agreement within the lamb industry. Consequently, on December 2, 1959, it was announced that Federal lamb grading would be suspended for 1 year and hope was expressed that representative groups in the industry would make every effort to resolve their differences in order to propose a generally acceptable plan for the Department's consideration.

Since issuing this statement, the Department has received numerous comments and we have met with a large number of representatives of producers, consumers, and industry interested in this subject to hear their position regarding this action. In addition, the chairman of the House Agriculture Committee, Hon. HAROLD D. COOLEY, requested that the suspension of Federal grading of lamb and mutton be delayed so as to permit his committee an opportunity to become more fully acquainted with the problem. In respecting his request, the Department announced on December 30, 1959, that the decision on this matter is being withheld for a period up to 1 month (not later than February 8, 1960). A copy of the press release explaining this action is enclosed.

Thank you for forwarding comments for consideration. Your views and suggestions are always welcome and your interest in the Federal meat grading program is appreciated.

Sincerely yours,

CLARENCE L. MILLER,
Assistant Secretary.

Why Coddle Commies?

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 13, 1960

Mr. BOW. Mr. Speaker, under leave to extend my remarks, I include an excellent editorial from the North Canton (Ohio) Sun:

WHY CODDLE COMMIES?

It is just too bad about these American colleges and universities (12 of them at this writing, and including Harvard and Yale) that have pulled away from Uncle Sam's new

student loan program. It seems they are outraged over the requirement that a student borrowing Uncle Sam's money must declare that he is not a Communist.

We might object to the loan program on the ground that this is none of Uncle's proper business and that in the land of the free and the home of the brave a young fellow, or girl, either, ought to have enough getup and gumption to achieve an education without Government aid. But so long as we have it, the least we can do is to make sure this assistance goes to loyal young Americans and not to traitors.

Didn't these college people ever salute the flag when they went to school? "I pledge allegiance to my flag and to the Republic for which it stands * * *." Are those strange and fearsome words? Or do they think they are too corny for intellectuals? Or do they think the U.N. flag is prettier?

Certainly, if we were one of those well-heeled philanthropists (and there are lots of them) who go around endowing this and that at our institutions of higher learning, we would at least know a dozen of them to keep away from.

Cleveland's Gifted Pupil Classes Reap Dividends

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 7, 1960

Mrs. BOLTON. Mr. Speaker, in this Nation's quest for leadership and scholarship in all fields, Cleveland is doing its share in developing human resources. At the urging of the women's city club and one of its outstanding leaders, the late Mrs. Benjamin P. Bole, in 1922 the Cleveland Board of Education instituted major work classes for the gifted child. There are now 1,500 of these pupils in the classes from first grade through the sixth. All these children have an intelligence quotient above 125, and each must be directed with specialized care and motivation into achievement that squares with his or her ability.

The Cleveland News in a recent editorial applauded the admirable goals of these classes, and the vision of their founders. Under leave to extend my remarks, I include the editorial herewith:

GIFTED PUPIL CLASSES REAP DIVIDENDS

With painstaking care and inspiring results, Cleveland's major work classes for the gifted child are "mining intellectual gold" from this city's youngsters.

These classes, instituted by the board of education in 1922 at the urging of the women's city club and one of its outstanding leaders, the late Mrs. Benjamin P. Bole, are presently helping to refine the potential of 1,500 of these pupils from first grade through the sixth.

All these children are normal except that their intelligence quotient is measured above 125, and each must be directed with specialized care and motivation into achievement that squares with his or her ability.

Described in a series by Mrs. Lucie Hildreth, just concluded in the News, this program is a graphic demonstration of the concern for, and attention given the unusually talented child in Cleveland's educational planning. A follow-up on the futures of these pupils after graduation discloses that they have gone on to dramatic accomplishments in business, science, music, medicine and the arts. And all credit the major work classes for honing their scholarship, social adjustments, and leadership.

In this Nation's quest for leadership and scholarship in all fields, Cleveland is doing its share in developing human resources. This city should applaud the admirable goals of these classes, and the vision of their founders.

Government Lamb Grading

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 13, 1960

Mr. WOLF. Mr. Speaker, this week there have been committee hearings on the question of Government lamb grading. I would like to place in the RECORD at this point a letter which I wrote to the chairman of the House Agriculture Committee, the Honorable HAROLD D. COOLEY, and two letters which came to me from the State of Iowa, pointing out the necessity for continued Government grading of lamb.

The letters follow:

JANUARY 14, 1960.

Hon. HAROLD D. COOLEY,
Chairman, Committee on Agriculture, House of Representatives, Washington, D.C.

DEAR MR. CHAIRMAN: I had planned to submit a statement on my views concerning the need for Government lamb grading to be included in the hearings on this subject.

This morning, however, I received in the mail two letters which so eloquently state the case for the small packing plant, that I decided instead to submit these letters for inclusion in the printed hearings. I endorse wholeheartedly the position taken in the two letters which follow.

Sincerely yours,

LEONARD G. WOLF,
Representative in Congress.

SOMEWHERE IN IOWA,
January 12, 1960.

Congressman LEONARD WOLF,
U.S. House of Representatives,
Washington, D.C.

DEAR MR. WOLF: One reason why there is so much controversy over lamb grading, and this I have seen, is when Swift & Co. (or any of the other large companies) kills a large bunch of lambs, their grader, not the Government grader, goes through the lambs first and puts "Swift's Premium" on all the best ones; then they want the Government grader to grade the second best "choice" and naturally the choice ones have already been picked out and branded with "Swift's Premium." Then they accuse the grader of not giving them the choice grade and then tell the producer that the Government grader is too tough. When the choice or prime have been picked out, there is nothing left for the grader to work on except the inferior ones. This I have seen, but I could lose my job over this letter, so please don't use it publicly unless I have protection on it.

Sincerely,

SOMEWHERE IN IOWA,
January 12, 1960.

Congressman LEONARD WOLF,
U.S. House of Representatives,
Washington, D.C.

DEAR MR. WOLF: I am writing to you relative to Mr. Benson's order to suspend grading of lambs as of February 6. I thought you would be interested in knowing that if this happens hundreds of small packers will go out of business. This I know for certain as it happened to us when we lost Government grading in our packinghouse. From 1945 until about 1954, we had Government grading. In 1954 or thereabouts new laws were put into effect making it mandatory that we spend at least $50,000 remodeling and enlarging our killing floor so that we could qualify for grading.

Since we did not have the necessary money we were unable to remodel and, consequently, lost our grading. Thereafter we were unable to sell our product at competitive prices as the butchers told us that they could not pay us as much for ungraded meat as they would for graded or highly advertised brands, as their customers wouldn't pay as much for an unknown quality. They further stated that they would just as soon buy our meat if it were graded as they would meat of a highly advertised brand, as people knew they were getting the same quality if it were Government graded. We felt that this law was caused to be put into effect by the big packers to eliminate competition. In our case it worked, as we had to get out of the packing business.

Now the big packers are trying to get the grading taken off lambs so they can in the same way eliminate competition. It seems to me if they do not want grading they should not object to others having it as it is strictly their own choice and the small packer pays for the service if he wants it and can discontinue it at any time. As you already know the grading service is entirely self-supporting and does not cost the taxpayer one cent.

Sincerely yours,

P.S.—Since World War II there has been lots of small packers that have started up because they have had a product equivalent to the large packer, mainly because they have had the U.S. standards to help them sell their products. In other words, they have had "U.S. Choice or U.S. Good."

Now if a large chainstore buyer had to buy a carload of lamb or beef and he called the packinghouse, whose name was, say, Jones, and said "What have you to offer?" the packer, if he has U.S. Choice or U.S. Good, can state that he has the certain grade at a certain price. But if he has no U.S. graded meat, he would have to say, "We have a load of Jones' Choice." Now, which do you think the big buyer would buy?—Jones' Choice, or Swift's Premium, or Armour's Star, or Wilson's Certified, or Morrel's Pride? These big packers are all nationally advertised and naturally the buyer would buy the nationally advertised brand. But when the small packer has Government grading, he has the same quality to sell as the others have because everyone knows the U.S. grades are the same in every packinghouse.

If the large packer doesn't want Government grading he can tell the Government he no longer wants it, as the grading doesn't cost him anything if he doesn't use it. But why take it away from hundreds of small packers, as the packer pays for the service if he wants it and it doesn't cost the taxpayer anything. There is just one answer. As long as the small packer has Government grading he is a threat to their business, and they are trying to eliminate him.

As I have stated before, we had to give up our business because we lost our U.S. grading, and we know this is happening to other small packers. Also, on the other side of the picture, when we had the packinghouse we killed a few mutton and lambs. A few market operators used to buy old mutton and advertise it in the paper as weekend specials, at cutrate prices, as genuine lamb. Most housewives do not know a lamb from a mutton unless it is so graded and marked.

The Farmer's Revolution

EXTENSION OF REMARKS
OF
HON. WALTER NORBLAD
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks I include herewith a very interesting editorial by Mr. Robert Ingalls in the Corvallis (Oreg.) Gazette-Times on the farm problem:

THE FARMER'S REVOLUTION

After a quarter of a century of Federal control of practically every move the farmer makes, from the number of acres he may plant to the price he may get for his yield, the largest farm organization in the Nation has intensified its policy of getting the Government out of agriculture to the point where it may become a veritable revolution.

Looking realistically at the conditions that have given the farmer an increasingly smaller share of the consumer's food dollar, while the householder has been paying more and more for his food basket, the American Farm Bureau Federation put its finger on the sore spot. It found that it is not Government that is to blame for the farmer's plight—a conclusion that any taxpayer burdened with the payment of billions for surplus commodities knows—but food processors, packers, buyers, and others who handle and sell farm commodities.

The Farm Bureau decided that the time has come, not only to get the Government out of agriculture but to let the farmer, not the middleman, control farming. The medium for taking over this control will be a new national marketing association, owned by the Farm Bureau and its State affiliates and empowered to help organize State and regional bargaining groups of producers. In effect, it would create a selling power strong enough to face and contend with the huge buying and processing powers that have grown in the food industry.

The new marketing association would have authority to negotiate contract terms, quality control, and related matters. It is the farmers' answer to the vertical integration and other devices by which food processing groups control commodities from the farm to the retail outlets. The Farm Bureau would reverse this, and let the farmer exercise primary control over his produce.

This revolution may be likened to the formation of organized labor. Farmers are in much the same position as were workers, before unions took over negotiations of wages and working conditions. Except for scattered cooperatives, the farmer has been at the mercy of the big buying combines. Now he means to call the tune himself. It will take time to set up the new marketing association, but the farmer is at last on his way to getting his share of American prosperity by his own initiative, not through the uncertainties of politics.

Farm Survey, Monroe County, Iowa

EXTENSION OF REMARKS
OF
HON. JOHN KYL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 14, 1960

Mr. KYL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following survey reported in the Monroe County News of Albia, Iowa. The results of this survey present in graphic form a story which is of significance to all Americans.

[From the Monroe County News, Albia, Iowa, Jan. 11, 1960]

ONLY HALF OF FARM FAMILIES SUPPORTED BY THEIR FARMS

(This is the second in a series of articles appearing in the Monroe County News and Albia Union-Republican based on results of a study completed recently by the Monroe County Extension Service.)

Only half of the farm families in Monroe County in 1959 farmed without spending some of their time at other occupations.

This information is contained in the report of the Monroe County survey conducted in 1959 by the county extension service. The survey also showed members of farm families are employed off their farms in eight different counties, with several working as far away as Des Moines.

The smaller the farm, the more likely a farmer will have another job, the survey showed. More than half the operators of farms smaller than 40 acres have other jobs.

The survey of the county's 1,163 farm families showed the following numbers and percentages of families in different occupational categories:

Full-time farm families—565 families, 50 percent.

Only head of household works away—254 families, 21.8 percent.

Only wife works away—57 families, 5 percent.

Head of household and wife both work away—52 families, 4.5 percent.

Other adults or combinations work away—54 families, 4.5 percent.

Retired families—150 families, 14.2 percent.

Forty-five farm women work in Albia. Three more work in Lovilia and one in Melrose.

Other cities where farm women are employed and the numbers employed are: Oskaloosa, 6; Des Moines, 4; Ottumwa, 3; Moravia and Eddyville, 2 each; and Newton, Blakesburg, Centerville, Russell, and Chariton, 1 each.

Nine women are employed as nurses; 52 are teachers. Forty-five of the teachers work in Monroe County.

One hundred and fifty-one of the farm men work in Albia. Eight work in Lovilia and one in Melrose.

Seventy-one work in Ottumwa, 16 in Newton, and 12 in Knoxville.

Other towns where they are employed are: Des Moines, 7; Eddyville, 6; Oskaloosa, 5; Moravia, 8; Russell, 2; and Chariton and Centerville, 1 each; 11 of the farm men work in mining; 28 are self-employed.

Substantial numbers of farmers from farms smaller than 80 acres have other jobs. Smaller numbers from farms of 80 acres or larger have other work. Only 3 farmers from the 82 largest farms are part-time farmers.

Numbers of full-time and part-time farmers from farms of different sizes are:

Acres	Full time	Part time
Up to 19	5	17
20 to 39	27	34
40 to 59	59	38
60 to 79	63	41
80 to 99	57	14
100 to 119	73	13
120 to 139	31	4
140 to 159	30	3
160 to 179	16	5
180 to 199	9	1
200 to 219	32	0
220 to 239	5	0
240 to 259	10	1
260 to 279	4	0
280 to 299	5	1
300 and up	14	0

Firm Step Against Nazism on All Fronts in United States and Abroad

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 13, 1960

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I am inserting in the Appendix of the CONGRESSIONAL RECORD an editorial appearing in the Detroit (Mich.) Jewish News of January 8, 1960, by its distinguished editor and publisher, Mr. Philip Slomovitz.

The editorial sets forth very well the real root of the rash of outrages against Jewish temples, homes, and businesses. The painting of swastikas may look like a childish prank or the act of an immature mind to a casual observer, but in fact it is a manifestation of a dangerous sickness which we have witnessed abroad in the world more than once before. Like all other forms of racial and religious intolerance, if left alone long enough it can grow to a situation of immense danger to all.

As is so rightly pointed out, this is nothing but plain anti-Semitism which can and may well soon take the form of other forms of antireligious and anti-minority expression to the detriment of society. It can and must be stamped out ruthlessly.

The editorial follows:

FIRM STEPS AGAINST NAZISM ON ALL FRONTS IN UNITED STATES AND ABROAD

Callousness, indifference, complacency, and policies of appeasement are responsible for the reemergence of nazism in Germany, and the attendant spread of anti-Semitism elsewhere.

It is sheer nonsense to try to pin responsibility for the Nazi acts in European countries on a Communist plot. The new campaign against Jewry is sheer anti-Semitism. It has been encouraged by many weaknesses—by the too-ready acceptance of the view that the young Germans have not been indoctrinated by nazism, by the speed with which the world has forgotten the murder of millions of people by the Nazis, and by the failure of the kinsmen of the martyrs, including the Jews, to continue the fight against nazism in spite of the indifferences toward reemerging bigotries that is evident in the ranks of the statesmen who control the fate of the world.

A swastika painted on a synagogue in Cologne encourages similar acts in London

and New York and Melbourne and Vienna. By striking at the root of the problem in Germany we would be demolishing anti-Semitism. Failure to effectively repudiate neonazism in Bonn may result in renewed anti-Semitic arrogance in Washington.

The lesson is a costly one. Once again we are in the limelight. Now there is need for action. The repudiation of all evidences of anti-Semitism must be firm and uncompromising. proof should be provided quickly that a conscience-stricken world—a victor not so long ago over nazism but now its victim—will declare itself against the new outbursts of bigotry; and that Jewish leadership will face the issues realistically, firmly, and by united action.

Speech Delivered by the Most Reverend Francis J. Green, Auxiliary Bishop of Tucson, Ariz., to St. Thomas More Society on October 29, 1959

EXTENSION OF REMARKS
OF

HON. JOHN J. RHODES

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 7, 1960

Mr. RHODES of Arizona. Mr. Speaker, under leave previously granted, I wish to include in the RECORD a speech by the Most Reverend Francis J. Green, auxiliary bishop of Tucson, Ariz., to St. Thomas Moore Society on October 29, 1959, as follows:

It is a great pleasure for me to greet you, the members of the St. Thomas More Society and other distinguished members of the bar and bench who have come here today for this annual celebration of the Red Mass. The origin of this custom goes back through the centuries to the Courts of the Sacred Roman Rota. It existed in France in the 13th century, in England in the 14th.

In former times the designation "Red" had more significance than it has today, for not only was the priest who celebrated the Mass clad in the red vestments demanded by the Mass in honor of the Holy Spirit of God, but the assembled judges and members of the legal profession were clad in their crimson robes of office. But through the years, the purpose of the Mass has remained the same.

To ask God to recognize our obligations, and for the grace to fulfill them. God grant that we may receive these graces; God grant that we may co-operate with them.

There are those who think that this supplication for divine aid has no place in our American way of life; who may cry out that this is a relic of the past long since dead and that it should be buried in oblivion; that, God bless us, it violates the principle of separation of Church and State. But they are wrong.

There is no doubt that our Founding Fathers in devising our American form of government were most determined that it would be for all its citizens a haven of peace and justice, and that men of all religious faiths and convictions would be legally free to worship God in these lands according to the dictates of their conscience. To this end they wisely ordained that there would be in America no established church, no official religion. This they wrote into the very charter of our political existence and provided that not even future generations would be able to change it without destroying the very nature of our American way of life. Through the years of our national history we have been faithful to this principle. Certainly no one in his right mind would attempt to change it, or even desire to do so.

But this does not mean that our Founding Fathers were opposed or indifferent to religion, or that they wished in any way to minimize or disparage it in the lives of the citizens. Historically we are a religious people, whose institutions presuppose a supreme being. Our jurisprudence is deeply rooted in our Judaeo-Christian civilization. The American Declaration of Independence was an appeal to the law of nature, and to nature's God, and to the rights which the Creator had endowed all men.

Do you recall the Farewell Address of George Washington as he left office? Among many fine things, of importance to the people of his day as well as to us, he said: "Of all the dispositions and habits which lead to political prosperity, religion, and morality are indispensable supports. In vain would man claim the tribute of patriotism who should labor to subvert these great pillars of human happiness, these finest props of the duties of men and citizens. The mere politician, equally with the pious man, ought to respect and cherish them. A volume could not trace all their connections with private and public felicity.

"Let it simply be asked where is the security for property, for reputation, for life, if the sense of religious obligation deserts the oaths which are the instruments of investigation in the courts of justice?

"And let us with caution indulge the supposition that morality can be maintained without religion. Whatever may be conceded to the influence of refined education on minds of peculiar structure—reason and experience both forbid us to expect that national morality can prevail in exclusion of religious principles."

This conviction of the Father of our Country that without a moral conscience laws cannot be enforced, was echoed by all the Founding Fathers. Alexander Hamilton stated: "Civil liberty is only natural liberty, modified and secured by the sanctions of civil society." Thomas Jefferson asked: "Can the liberties of the Nation be thought secure, when we have removed their only firm basis, a conviction in the minds of the people that these liberties are the gift of God?"

James Wilson, who signed both the Declaration of Independence and the Constitution wrote: "To direct the more important parts of our conduct, the bountiful Governor of the universe has been graciously pleased to provide us with a law, and to direct the less important parts of it, he has made us capable of providing a law for ourselves."

The American way of life is founded on religious belief. The whole course of its history contains numerous other examples. Perhaps none more beautiful and noble than the document which Abraham Lincoln wrote on August 22, 1861, in answer to a request from both houses of Congress that a day of prayer, humiliation, and fasting be established to speed the restoration of peace between the North and the South.

"It is," writes Lincoln, "fit and becoming to all people, at all times, to acknowledge and revere the supreme government of God; to bow in humble submission to His chastisements, to confess and deplore their sins and transgressions, in the full conviction that the fear of the Lord is the beginning of wisdom: and to pray with all fervency and contrition for the pardon of their past offenses; and for a blessing upon their present and prospective action. * * *

"It is peculiarly fit for us to recognize the hand of God in this terrible visitation, and in sorrowful remembrance of our own faults and crimes as a Nation and as individuals, to humble ourselves before Him and to pray His mercy * * * that the inestimable boon of civil and religious liberty earned under His guidance and blessings, by the labors and sufferings of our fathers may be restored in all its original excellence."

Similar sentiments have been echoed and reechoed by Presidents, Congressmen, and judges down through the years; they have been heard not only in the halls of our national assemblies, but in those of State, city, and hamlet. Consider if you will the great seal of the State of Arizona, and the motto that it bears "Ditat Deus." It is God who enriches. What more striking profession of faith in God's sovereignty could a great people make, than to have every important document of government bear this graphic admission of our dependence on God? With these words there is given us a constant reminder that all our greatness, all that we have, be it food, shelter, or wealth comes to us from God, as well as the blessing of possessing these in ordered civic life in peace and tranquillity and justice.

And to bring the record up to date, may I call your attention to the beautiful proclamation of His Excellency the Governor who in recent days has officially designated the month of November as a month of public acknowledgment of God, and of a rededication on our part to His love and service.

And so you see, my friends, there is ample justification for your presence here this afternoon. Let no one dare say that prayers for divine guidance is foreign to the American way of life. Let no one harbor the thought that America can continue on in its glorious traditions without them.

And this brings me to the particular application of what I have said to you men of the bench and the bar. I submit that not only is the recognition of God and our dependence upon Him permitted to us Americans, but it is even demanded, if we are to keep inviolate the concepts of civil liberty and justice.

The memory of the recent visit of Premier Khrushchev is still fresh in our minds. Avowedly he came to America to see at first hand this great country of ours, and to compare it with the powerful Soviet Union. No matter what our opinion may be of the propriety of his visit, I am sure that he came and left without ever seeing the real America. Oh it's true that he saw our great cities, our factories, and our farms. He certainly saw on every side manifestations of the great wealth and prosperity of our people. What his real feelings and judgments were as he ended his visit we shall perhaps never know. But if one may judge from his remarks, it would appear that he was not overly impressed. It's quite possible that he really believed the statement he made that in a very short time Russia would be able to equal or even outdistance us in material productivity and prosperity.

It is unfortunate that material prosperity and mechanical or scientific progress should have been the basis of comparison. These are not, and have never been, the real basis of America's greatness. Actually great as has been our advancements along these lines, it has come as the fruit of something more basic—the recognition of the worth of the individual citizen as a creature of God, endowed with rights for the protection of which stands the very concept of American Government.

Prosperity and material supremacy are as much a goal for nations as they are for men. And nations are subject to the same temptations as men in their desire to acquire them. You know of the pressures that beset men in the business world, and of the ever-pressing temptation to lower one's standard of ethics and justice to meet the unfair practices of one's competitors. The same pressures and temptations are being felt by us as a

nation. The tremendous strides that Russia has made in the fields of industry and science and politics, presents a strong temptation to us to abandon our principles and standards and to compete with her on her own level.

We even hear men advocating a monolithic structure for our economy and politics, as the only efficient way of meeting the competition. Like all technical words this one has a certain fascination and appeal, especially when it is adduced as a more efficient way of getting things done. But it is a concept that is as discordant with our American way of life as are those of monarchy and tyranny. Monolithic basically means one stone. It is a term that we apply to concrete construction. Simply it means that we put into the hopper the component parts of sand, water, and cement, mix them well, and pour the aggregate out into a mold to set. There is no doubt that in the building trades there is a useful place for monolithic construction, but I doubt if very many Americans would like to change to a monolithic form of government, in which our schools, social agencies, political parties, courts of law, and all the other aspects of national life would be poured into the aggregate and molded into a rigid and inflexible monster of controlled living.

We might grant that it would be a more efficient way for the prosecution of any given idea or policy. There would be no time lost in debate, because there would be no real opposition. One would not have to concern himself with individual personalities, for they would be all suppressed in the mass. It is not necessary to imagine what such a monolithic structure of government would be like. We have had the example of Nazi Germany, and at present that of the Soviet Union.

Our house is of different construction. We have used stone and mortar and steel, allowing each to keep its own peculiar characteristics and individuality; but blending them all harmoniously together according to a definite overall plan. The plan which we have followed is that which was devised by the Founding Fathers and written into the Constitution. The steel in our edifice is found in the skeletal structure of the three departments of Government, executive, legislative, and judicial. The stone with which we have builded are the individual citizens, large and small, which have been chiseled and polished each to its own beauty and capabilities in the free associations of freemen. The mortar which binds all together in a unified and beautiful whole is the religious faith and convictions of our people.

Occasionally a stone here and there will lose its color and mar the beauty of the building; or one disintegrate and crumble, and will have to be replaced with one more worthy and durable. But no matter what assaults are made upon it, we need have no fear that the building will collapse so long as the mortar holds firm.

There is another point that we must keep in mind. In making concrete for a monolithic building, one must be careful of what he puts into the mixture. There are certain materials which simply will not make good concrete, for they never lose their individuality, and so weaken the mixture that in a very short time the building made of it crumbles and falls. Of such a kind of material would be our American people.

There is no need of panic in America. We have builded well through the years; and our national edifice, while it shows the scars of time, is still sturdy and strong. But it needs the constant attention of the caretaker; to keep a vigilant eye on the structural steel of the threefold division of government, to replace the ugly and the disintegrating stones with others that will add beauty and strength and, above all, to see that the mortar of religious life and conviction remains intact and binds us solidly together—one to the other.

This watchfulness is, of course, the duty of every American citizen; but in a special way it is yours, men of the legal profession. By your training by your very vocation you are dedicated to the defense of the Constitution and to the promotion of the laws of the land which bring the riches of the Constitution into the lives of the people. The task is not an easy one. It is fraught with many and difficult problems, but they are not insoluble.

One of the problems that we must solve is this: how shall religious groups be permitted to continue their great role as the leaven of society, unhindered by Federal or State Government, yet within the framework of the Constitution. This I submit is basic, for as our country was conceived and brought forth in an atmosphere of religious faith, as the Constitution was devised for a people of deep religious convictions, conscious of their dignity and freedom as children of God, so it follows for America to keep its character and continue on in the tradition of its history, the same religious environment must surround it at all times, and its citizens must ever portray the religious convictions of those men of the past who have mapped its course.

We cannot fail; we dare not fail. For if we fail, we shall have lost all we hold dear, all for which our fathers and our forefathers fought and died. There may continue to be a people and a government in the area now occupied by the United States of America, its name and its flag may be identical with those of our beloved country, but it will not be the land which Lincoln loved. For if we fail, this Nation under God shall have perished from the earth.

Funeral Meditation, Richard Murray Simpson, January 11, 1960

EXTENSION OF REMARKS

OF

HON. IVOR D. FENTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 14, 1960

Mr. FENTON. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to include the funeral meditation of our beloved colleague, Richard Murray Simpson, which was conducted by the Reverend J. Raymond Powell, pastor of the First Presbyterian Church of Huntingdon, Pa., on January 11, 1960:

FUNERAL MEDITATION, RICHARD MURRAY SIMPSON, JANUARY 11, 1960

We are now faced with the fact that his life of usefulness on this earth has come to an end. Who will take up where he has left off?

In the Old Testament we are told that Elisha saw Elijah translated. That "he took up the mantle of Elijah that fell from him and went back and stood by the bank of the Jordan."

Elijah was gone, but Elisha took up his mantle.

Richard M. Simpson is gone. Would that some young man would take up his mantle.

It is a good mantle. There is nothing shoddy about it. It is not made of cheap material. It is woven through many years of patient living. It is a mantle that will never wear out. Goodness never becomes threadbare. It doesn't wear for a day, a week, a month; it wears forever and ever. It can be passed from one to another.

There was a certain loveliness about this mantle which belonged to Dick.

It was not made of flashy colors which fades with use. It was of solid colors which stands the weather. Nothing in the long run is so winsome and attractive as goodness. Dick wore his goodness very naturally and simply.

What an ideal to make our own. To accept the mantle, then stand by the River Jordan. To take one's stand by the river of God. To take one's stand by the Church of the Lord Jesus Christ. To take one's stand in the Nation. Clothed in goodness. Standing to pray, to worship, to serve.

We are reminded that someday we too must lay down our mantle. Charles R. Salit in "Man in Search of Immortality" reminds us: "Man accepts a paradox that offers him life and rejects a logic whose conclusion is death. When a person dies, his friends, his relatives, as a rule, will offer all sorts of excuses. No matter how old or how sick the deceased might have been, his death could have been prevented. He ate the wrong kind of food; he exercised too much or too little; he did not follow advice or he had the wrong doctor. He should have had a specialist. * * * Had he only listened to these things he would be alive today. No high-pressure salesman as yet has sold us the slogan that man was born only to die."

Death is a natural thing, when we think of it in our saner moments we shall realize it is a beautiful thing.

It is God's way of insuring progress in this world and the next.

Physical death makes room for a new life in this earth.

Physical death is also God's way for bringing a new life into Heaven.

We can say that the purpose of Jesus' earthly ministry was to get us to realize this fact.

Jesus knew that the only way Heaven was peopled was by physical death on earth.

Physical death is not the terrible thing that most of us think.

Jesus came to make us realize that there is such a place as Heaven.

It is God's dwelling place. Who should be afraid of dwelling with God? Particularly since he has prepared for it.

Heaven is the eternal abode of God's people.

Jesus said, "I go to prepare a place for you; if I go and prepare a place for you I will come again and receive you unto myself; that where I am, there ye may be also."

At physical death He receives us, why should we fear going with Him?

Jesus came to make us realize that God loves us.

"God so loved the world that He gave His only begotten son, that whosoever believeth in Him should not perish but have everlasting life."

The Apostle Paul in the wonderful words of that eighth chapter of Romans assures us there is nothing, nothing in the whole of creation that can separate us from the love of God through Christ Jesus our Lord.

Is the physical death of one of God's children a terrible thing? No. It is really beautiful.

It is according to God's master plan.

And God's plans are good.

IN MEMORY OF HON. RICHARD M. SIMPSON

Resolved, That our church has sustained a heavy loss in the passing of Elder Richard M. Simpson, who was called to his heavenly home on the seventh day of January 1960.

Richard Murray Simpson was born August 30, 1900, of ancestry distinguished for fidelity

to high ideals alike in their public and in their religious life. He was baptized April 8, 1901, and received into church membership on January 21, 1912. Regular attendance at all services and active participation in all activities of the church was a cardinal principle of his life so that, following in the footsteps of his grandfather, J. Randolph Simpson, and his father, Warren B. Simpson, he was ordained as an elder February 12, 1939, at which time he was serving as superintendent of the church school.

Fifty-five years, 27 years and 20 years respectively, more than 100 years of the lives of these three men, grandfather, father, and son, were devoted to the office of eldership in our church, which is ample testimony to the importance they placed in religious character and faith in Almighty God.

Richard Simpson, in addition to being a prominent son of our church, was also a distinguished citizen of Huntingdon, an honorable member of the legislature of our Commonwealth and occupied a high place in the councils of the Government of these United States, having served continuously for almost 20 years as a Member of Congress.

It is not given to many to accomplish so much in both church and civic life and to be able to leave the memory of such a complete and successful life: Therefore, be it

Resolved, That, while we in sorrow bow to the will of God, we will continue to cherish the memory of the Christian character we have known in him and pray that we may follow his loyalty to his church, his community and his America; be it further

Resolved, That we extend to the members of his family our deepest sympathy and direct that these resolutions be inscribed in the minutes of the session and a copy sent to the Presbytery of Huntingdon.

J. RAYMOND POWELL,
Moderator.

G. J. HALL,
Clerk of Session.

(Prepared by Roberts D. Royer, January 9, 1960.)

Karl Meyer on Latin America

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 14, 1960

Mr. PORTER. Mr. Speaker, Karl E. Meyer is an editorial writer for the Washington Post. His recent series on Latin America grew out of his tour of Latin America. Mr. Meyer is a keen and objective observer whose opinions deserve careful consideration by everyone concerned with our relationships with Latin America. Under a previous consent, I am including the articles as follows:

[From the Washington (D.C.) Post, Dec. 27, 1959]

THE TROUBLED AIR IN LATIN AMERICA

(By Karl E. Meyer)

(First of a series)

"Trouble, trouble and more trouble." So prophesied one Latin American concerning the area's future relations with the United States. Another, a journalist, added: "I wouldn't want to be your Secretary of State. In Latin America, his job will soon be impossible."

These are among the more cheerful forecasts that a visitor who spends 6 weeks traveling through 11 Latin American countries is likely to hear. No doubt there is an element of hyperbole; in some cases, the dire predictions are self-serving arguments for increased U.S. aid. But there is a hard kernel of truth in the assertion that the United States is in difficulty in its own front yard.

A swift and wide-ranging journey through a highly diverse area has its limitations, but some symptoms speak for themselves; the tone of concern and defensiveness among U.S. officials, and the mood of outspoken criticism among Latin American leaders—even in countries where the surface is deceptively calm.

The clearest warning is evident in Cuba, the first stop on this writer's tour. There, pent-up resentments—some irrational, some well founded—have burst into a devastating political storm, a storm which has made Fidel Castro the best-known Latin American, and the hero of all who feel that Washington does Satan's work.

Venezuela, by contrast, is notably more stable, and there are justifiable hopes that President Betancourt's regime can implant democratic ways in a country blessed with oil but blighted by a tradition of tyranny. Many fear, however, a bloody civil war if restive generals become impatient with democracy and again extinguish free government in Caracas.

In Brazil, the largest and most populous Latin American country, a rash of nationalism is causing serious concern, a nationalism inflamed by economic distress, for which the scapegoat, more often than not, turns out to be the United States.

Uruguay, stable and altogether democratic, is an island of serenity compared to its next-door neighbor, Argentina, where the hemisphere's most embattled President is given a 50–50 chance of serving out his term. The virus of Peronism continues to sap Argentina's strength.

Across the Andes in Chile, a right-of-center President is enjoying some success in invigorating his country's economy. But realists remind visitors that President Alessandri won election last year only because a cranky minority candidate drew away a decisive handful of votes from the candidate backed by the extreme left.

Peru, land of majestic ruins and appalling poverty, faces the prospect of a revolution within a decade unless the Government finds ways of improving living standards. Observers express doubts that the improvement will come soon enough. Next-door Bolivia, which unfortunately this writer was unable to visit, is reportedly in an even more troubled state.

In Colombia, after a decade of fratricide, a brave attempt is being made to make democracy work. But outside the cities, banditry and violence continue. In October, 230 persons were killed; the average now is 8 deaths a day, a creditable improvement over the average of 25 a day a year and a half ago.

Panama was beset by two riots in November directed against this country's stewardship of the Canal Zone; residents of the Isthmus recall Suez and fear that the troubles have just begun. In Guatemala, once a major trouble spot, a lovely country seems to be enjoying a moment of calm. How long it will continue no one dares predict.

The last stop was Mexico, a country which in many ways stands out as a beacon of hope in an uncertain sea. Not even Soviet First Deputy Prime Minister Mikoyan could, during his visit, weaken the feeling of friendship for the United States. Mexico's Government is stable, its way of life free, and its youthful president about to become a major figure in hemisphere politics. Most significant, President Lopez Mateos represents a country with a revolutionary tradition—and revolution, as the next article will suggest, is a word to conjure with in Latin America.

[From the Washington (D.C.) Post, Dec. 28, 1959]

HARD SELL HELPS STIR A REVOLUTION

(By Karl E. Meyer)

(Second of a series)

Latin America is afire with unrest, but it would be a gross error to assume that the demand for change stems from Moscow. Quite the contrary; it seemed to this visitor that the major source of discontent originates in the United States.

Of all the merchants of dissatisfaction, few have greater impact than North America's mass media. A brigade of bolsheviks could scarcely rouse more ferment in hard-pressed Latin American countries than a copy of Life, filled with alluring and glossy advertisements.

The marks of Yankee enterprise are evident in Latin America as in few other regions of the world. From Rio to Lima, from Bogota to Santiago, the traveler is struck by the saturating force of the "American presence" which finds its expression on the newsstands, movie marquees, supermarkets, gas pumps, neon signs, and in the glittering window displays of Sears, Roebuck, South America (the Chicago firm now has 55 stores in 9 Latin American countries).

North American standards have become a yardstick not only for our neighbors but for visiting Russians. As one Mexican official pointed out, Mr. Mikoyan himself paid indirect tribute to North American affluence. Repeatedly during his Mexican visit, the Soviet First Deputy Prime Minister reiterated that Russia would "catch up to" or "surpass" the production records of the otherwise degenerate neighbor to the North.

The "consumer revolution," as one writer terms it, has wholesome effects in serving as a catalyst of change. A visitor from the United States can scarcely find anything seditious in the demand for a better way of life. The problem, rather, is whether this demand does not also encourage an unreal expectation of what the near future will bring.

As in other underdeveloped areas, the typical economy of Latin America is geared to the sale of a single major commodity. The results of this dependence can be catastrophic. A drop in world coffee prices can be a severe setback to Brazil and Colombia, a slackening demand for wool can cripple Uruguay, and a weakening in the copper market has immediate impact on Chile.

The goal of most Latin-American countries, therefore, is an economic diversification which can liberate the region from the single-commodity pattern. This requires planning, heavy investment, long-term credits and the education of a skilled labor force.

But it also requires a postponement of immediate consumer gains, a transitional period of relative austerity until capital is acquired to furnish the industrial base. Thus, at the very moment when mass media is stimulating appetites, a meager menu is likely to be served.

Compounding the problem is the remarkable fertility in Latin America. Recent United Nations estimates place the population growth rate in Latin America at 2.4 percent annually (and up to 3 percent in some Central American countries). This compares with a growth rate of 2 percent in the Middle East, 1.7 percent in Africa, and 1.4 percent in the Far East.

Latin America is thus the world's fastest growing region. In 1900, the population for the area was 63 million; current projections place the total by the year 2000 at nearly 600 million—an increase of 10 times. In the same period, it is expected that North American population will rise from 81 million to 312 million.

Add to these statistics the fact that food production is lagging behind population

growth in key Latin American countries, and that thousands of young male workers are entering a job market with little hope of employment, and you have the ingredients of a potential disaster. The specter ahead takes visible form in Caracas, where more than 300,000 persons live in makeshift shacks on the hills surrounding Venezuela's capital—and this in a country which, on paper, has the highest per capita income in Latin America.

President Lopez Mateos of Mexico has told associates he expects that the remaining 5 years of his term will be the hardest, in great part because his country's population boom will cause graver economic problems. His dilemma is typical of many Latin American democrats; at a time when masses of men demand a better life, increased impoverishment may result. It is against this background that the Castro phenomenon is so significant.

[From the Washington (D.C.) Post, Dec. 29, 1959]

THE LONG SHADOW CAST BY A CUBAN

(By Karl E. Meyer)

(Third in a series)

Enough, surely, has been said about the migraine headaches which Fidel Castro is causing in the State Department. Something also needs to be said about the major problems that Cuba's fiery Prime Minister is causing for Democrats elsewhere in the hemisphere.

A visitor who travels through Latin America is struck by the interest in Cuba, an interest that at times seems to border on obsession. A mention of Havanna, and other conversation stops.

"Have you been in Cuba? What happened to Camilo Cienfuegos? Did you talk with Castro? Will the United States intervene? And on it goes.

In responding the visitor soon finds that the interest focuses not only on Castro as a person, but also on Castro as a phenomenon. Cuba is a small island, and in many respects its traditions are unique. But as a political stylist, Castro is using techniques which moderate Latin Americans fear could be generally copied. Where there is one Castro today, there could well be a half dozen tomorrow.

In a technical sense, Castro is a dictator, but he is wholly unlike the typical caudillos who have time and again risen to power in Latin America. Of them all, Castro most resembles Argentina's Juan Peron.

Like Peron, Castro has a mass following among the impoverished and ill-used people in his land. Like Peron, Castro delights in huge demonstrations and seems to equate the voice of the people with a roar of the mob. His regime, like Peron's has an ambitious social program.

Castro's fervid nationalism and his impassioned attacks on the U.S. Government recall Peron's anti-Yankee crusades. The Cuban regime, like Peron's is based on a loose alliance of army, labor, and have-not farmers. Castro, again like Peron, is willing to work with Communists to further his cause.

But there is a major difference. Castro may be a zealot, but it would be difficult to demonstrate that he is dishonest, cynical and corrupt—adjectives easily applied to the Argentine dictator. Further, Castro came to power as a hero who felled a tyrant, while Peron emerged from the army hierarchy.

In terms of Castro's appeal to other Latin Americans, these differences are fundamental. Misguided, demagogic, and erratic though Castro may be, he has an undeniable appeal to Latin Americans impatient for change, resentful of the Yankee giant, and weary of political systems that are outwardly democratic but in reality dominated by a small and myopic oligarchy.

"Fidel Castro," summed up one of the region's leading democrats, "is the perfect expression of Latin America's sense of disorientation in the modern world."

The opinion concerning Castro varies from country to country, and, more markedly, from class to class. In countries like Argentina and Uruguay, proud of their European traditions, the well-informed shrug off Castro with a patronizing smile. "After all," said one Argentine resident, "Cuba is a Caribbean country and we are not."

In other countries, there is less smiling. Castro has made decided inroads among rank-and-file members of moderately leftist parties like democratic action in Venezuela and the Apristas in Peru. Even though the mass executions cost Castro sympathy in other Latin American countries, his name has become a symbol and his ideas gospel among many of the less sophisticated and less well off.

The Castro phenomenon is perhaps the most significant portent in the hemisphere today. North Americans may deplore the Cuban's flamboyant tactics and his 5-hour monologs streaked with unreason. But masses of people living in squalor, in the shadow of the U.S. supermarket, may be in no mood to listen to a rational discourse on the need for patience.

In the view of many observers, if Latin America fails to resolve its pressing economic and social problems, Fidel Castro may find apt pupils in a region yearning for change. This is why the hemisphere's democratic leaders are so anxiously watching the course of events in Washington as well as in Cuba.

[From the Washington (D.C.) Post, Dec. 30, 1959]

RESTIVE NEIGHBORS LOOK FOR A LEADER

(By Karl E. Meyer)

(Last in a Series)

Washington's interest in Latin America moves by spasms, its policies tend to trail rather than guide events, and too many officials misunderstand the temperaments of a different civilization. This is the bill of complaints a visitor hears again and again during a tour of Latin America.

A Peruvian known as an old friend of the United States phrased it this way: "What can you do to shake up those people in Washington? Lord knows, we've tried. They spend millions all over the world while things get worse all the time right next door. What will the State Department do when the Communists actually take over a Latin country—send the marines?"

An influential Brazilian was even blunter: "Since 1952, relations between your country and mine have been set back an entire generation. There is a chasm growing between us."

To a visitor familiar with various U.S. aid programs, assertions like these often seem overdrawn and unfair. Loans, grants, technical assistance missions, a new Inter-American Development Bank, surplus food programs—all testify to an increased concern with Latin American demands. Yet in many countries, the tide of discontent continues to swell. It is worth asking why.

One explanation, it seems to this writer, is that most U.S. aid programs originate on a scatter-shot, ad hoc basis, unrelated to any overall plan. The State Department has made clear its preference for bilateral agreements and has shied away from the regional approach urged by Brazil as part of that country's Operation Pan America.

The State Department position may make economic sense, but it has serious psychological drawbacks. Few appeals are more insistent in Latin America than the plea for something dramatic, for something similar in spirit to the Marshall plan as proof that the United States is not indifferent.

The drift of events ultimately may lead to such a program for the hemisphere, a program integrating long-term credits, technical assistance and multilateral price stabilization agreements for basic commodities—the three types of aid that Latin Americans consider essential to a modest leap forward.

But the fear is that it will take an earthquake to budge Washington, and because of that the United States will lose the credit it deserves. Why can't the United States anticipate the thrust of events? The question crops up everywhere; a current case cited by critics is Panama, where some adjustment in the canal's status seems inevitable. To pessimists, it seems just as inevitable that the change will be forced on the slow-footed strategists on the Potomac.

A common complaint is that U.S. officials are insensitive to the nuances of Latin American civilization. For example, a perennial source of irritation is the tendency to lump together all 20 Latin republics in an indiscriminate heap. Brazilians contend that their vast country is sometimes treated as if it were a tiny Caribbean republic; an Argentine editor observed that too many North Americans see his country through "tropical eyeglasses."

It is this apparent clumsiness and lack of psychological insight that accounts, perhaps, for the most serious charge leveled against U.S. diplomacy: the charge of favoritism to dictators. In the eyes of many Latin Americans, the State Department has been morally compromised by ambassadors who favored tyrants with medals and fawning words of praise.

To a visitor who encounters some of the political appointees in Latin American embassies, it seems a half-truth to blame past errors on a preference for dictatorship. Rather, the blunders appeared to arise from an eagerness to please whoever was in power—dictator or democrat—on the asumption that the status quo would last forever.

No miscalculation could have been greater. Latin America today is in the midst of a tumult of change, moving generally in a democratic and left-of-center direction. The task ahead for the United States assuredly is to learn to flow with the tide while there is still time to influence its direction.

Fact, Fiction, and Cancer—The Journal of the American Medical Association Is Wrong Again

---

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 13, 1960

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD two articles, the first appearing in the Journal of the American Medical Association on January 2, 1960, the other appearing a few days later in the Washington (D.C.) Post and Times Herald on January 7, 1960.

While many have given up any hope of ever seeing the Journal of the American Medical Association maintain any degree of objectivity on liberal and social

issues we still hope that it will maintain factual correctness on other issues.

The first article in the Journal of the AMA takes the Food and Drug Administration to task for its recent order outlawing transportation in interstate commerce of cranberries treated with aminotriazole under the provisions of the Delaney amendment. Under the law aminotriazole is a carcinogen or a cancer producer and cannot be used as a food additive.

The burden of the article is that aminotriazole occurs naturally in many foods.

The subsequent article in the Washington Post and Times Herald is a complete refutation of the first including complete destruction of the statement that aminotriazole occurs naturally and the so-called well-documented evidence of the Journal of the American Medical Association. Happily, the author of the article in the Journal has had reason to recognize the error of his ways, in at least a small way. It is to be hoped that in the future he will be more careful with the truth, particularly where the danger of cancer to the American public is so great.

The articles follow:

[From the Journal of the American Medical Association, Jan. 2, 1960]

CRANBERRIES, CHARCOAL, AND CHICKENS

The holiday season has been associated with cranberries (Vaccinium macrocarpon) and fowl since the first Thanksgiving offered by the Pilgrims in December 1621 in appreciation of the bountiful harvest. It is reasonable to presume that wild cranberries were served at this first Thanksgiving since it was held near the town of Plymouth in the domain that was to become the Massachusetts Bay colony, not far from the entrance to Cape Cod, the land of cranberry bogs today. It is more than likely that the taste of wild turkey was enhanced by the addition to the menu of the fruit of this shrub. If turnips and cabbage were included among the vegetables served or mustard was used as a condiment, minute quantities of aminotriazole might have been ingested by the Pilgrims more than 300 years ago.

A threat to the inclusion of cranberries in our Thanksgiving dinner just past received wide publicity early in November when evidence was revealed purporting to show that the use of a herbicide, 3 amnio-1,2,4-triazole, resulted in traces of this artificial contaminant in some batches of cranberries in commerce. Historically, the herbicide has been studied experimentally since 1954. Beginning in the fall of 1956 the probing studies had progressed sufficiently that analyses of cranberries harvested from test crops were carried out systematically to determine whether any residue of aminotriazole remained on the berries. The cranberry laboratory of the Univesity of Massachusetts, an institution of higher learning under a charter from the Commonwealth of Massachusetts, participated in these analytic studies together with laboratories in other States, including those in Wisconsin, the second center for cranberry bogs in America. New Jersey, Washington, and Oregon also produce cranberries that enter into interstate sales.

The analyses begun in 1956 were sufficiently satisfactory in detecting residues of aminotriazole that the U.S. Department of Agriculture reported this compound suitable for use on cranberries. Eighteen months later, early in November of last year, the implication of this compound as a carcinogen prompted withdrawal of all batched cranberries and cranberry products from the open market. This proved to be sad news for the many Americans who love their tart holiday berries. The alleged carcinogenic activity was based on the antithyroid effect, demonstrated in rats but not in other mammals, that followed the ingestion of relatively huge quantities of the compound for relatively long periods of time. Little stress was placed on the well-documented evidence that aminotriazole occurs naturally in vegetables, notably cabbage, turnips, and broccoli, as well as in mustard, or that the antithyroid action is described in current textbooks of therapy.

According to the New York Times, a reputable newspaper in my experience, there were only 3 batches of cranberries under suspicion out of 202 batches examined initially. The number of batches examined was increased several fold in the next fortnight. Before preparing an editorial on this subject that might have been printed in the issue distributed a few days before Thanksgiving and thus available for physicians who read these editorial pages, it seemed best for me to seek consultation. One consultant was my former technical sergeant of Army days, Chester E. Cross, whose knowledge of cranberries extends over several decades and whose judgment as an agricultural scientist ranks high. Currently he is a professor at the University of Massachusetts and in charge of the cranberry station. If you have never mushed through a cranberry bog on the cape early in September just before the harvest with Professor Cross, you have missed a real experience in sensing dedication to this low-growing shrub that has caused so much consternation. Until further evidence was forthcoming, it seemed prudent to withhold judgment and to delay the preparation of my impressions of the newsworthy affair. A long wait was not necessary. The Federal Register of November 28, 1959, outlined the requirements for specific labeling of cranberries and cranberry products from the 1958 and 1959 crops. If this stipulation was a little late for last Thanksgiving, it was reassuring for those who looked forward to the inclusion of cranberries in the holiday dinners of Christmas and New Year's.

Charcoal, carbon black, came under scrutiny on November 20, 1959. Since few persons are addicted to the eating of licorice or black jelly beans, there was considerably less space devoted in the newspapers to the suspicion cast on carbon black than had been afforded cranberries. Chronologically, it was recorded in the Federal Register of December 9, 1958, that carbon black was a permissible food adulterant. The omission of this substance from the Register 1 year later brought apprehension to the makers of licorice candy and black jellybeans since each item relies on licorice for flavor but charcoal for the characteristic color. A fort-night after this action a supplementary document by the Food and Drug Administration permitted the processors and the users of charcoal in food and candies a 3-month period of grace to produce evidence that burned toast is harmless.

Chickens (iatrogenic capons) were under suspicion for only a few days last month. However, neither poultry producers, manufacturing chemists, nor the chickens themselves had violated any Federal regulation. Approximately 1 percent of the chickens eaten in the United States have been given stilbestrol as a fattening hormone. The implantation of pellets of this hormone under the skin at the base of the skull has been an authorized practice for more than a decade. This produces a desired commercial effect, especially attractive to the consumers in New York City and Los Angeles where the caponettes are sold as a premium item. Recent improved tests revealed that residues of the drug remained in the skin, liver, and kidneys. After this disclosure immediate steps were taken to withdraw the caponettes from commerce and to suspend the sale of stilbestrol to the chicken growers.

When next fall rolls around, we hope that cranberries will be permitted for the festive dinners, that licorice and jellybeans will be for sale at the candy counter, and that southern fried chicken will be a permissible menu item.—J. H. T.

U.S. OFFICIAL CHALLENGES DOCTOR'S CANCER CLAIM

(By Nate Haseltine)

A Food and Drug Administration official here yesterday challenged the editor of the Journal of the American Medical Association to put up or shut up.

Specifically, Deputy Administrator John L. Harvey questioned the existence of well-documented evidence that the cancer-causing compound aminotriazole occurs naturally in vegetables, notably cabbage, turnips, and broccoli, as well as in mustard, as Editor John H. Talbott, M.D., had averred.

Traced to its source, the editor's evidence turned out to be a "newspaper misquotation" of November, when tainted cranberries and the weedkiller aminotriazole were much in the news.

The Chicago physician-editor set FDA researchers busy checking the scientific literature since his FDA-twitting editorial appeared in the January 2 issue of the Journal, official weekly publication of the AMA.

Yesterday, Harvey said the search for the editor's well-documented evidence had proved futile.

"We," he said, "have been unable to find this documentation in any scientific or technical literature. As far as we know, aminotriazole is a completely manmade chemical, with nothing to indicate that it occurs naturally."

Confronted with Harvey's statement, Dr. Talbott treaded deep water for awhile, and then credited Prof. Chester E. Cross, cranberry expert, of the University of Massachusetts, as his souce for the statement.

"Dr. Talbott has done me a disservice," Professor Cross replied, "I know of no scientific evidence that aminotriazole occurs in any vegetable."

Cross referred the question to Dr. Edwin D. Astwood of Tufts Medical School and the Boston Dispensary, who knew the background.

"I was interviewed by the press just before I talked with Secretary Flemming (Arthur S. Flemming, Secretary of Health, Education, and Welfare) in November," Dr. Astwood explained. "I told the reporters that the named vegetables contained an antithyroid compound that acts like aminotriazole, but doesn't cause cancer. The newspapers misquoted me, and said the vegetables contain aminotriazole."

Dr. Astwood also said he knew of no scientific evidence that the weedkiller occurs naturally anywhere in nature.

(The cranberry producers association, at the time, issued a direct quotation attributed to Dr. Astwood, saying that the weedkiller compound occurs naturally in vegetables, and named them as mustard, cabbage, turnips, and broccoli).

FDA Deputy Administrator Harvey also took exception to Editor Talbott's statement that aminotriazole had to be eaten "in relatively huge quantities * * * for relatively long periods of time" to cause thyroid tumors in test rats.

Harvey said the cancers occurred in 2 years of feeding the test animals a diet containing the chemical in a proportion of 10 parts

per million. When the ratio was stepped up to 100 parts per million, he said, the tumors showed up in 68 weeks.

Dr. Talbott said that since his name was signed to the AMA editorial he felt he was free to exercise an editor's prerogative, which he defined as an individual's interpretations in controversial matters.

"We don't question his right to disagree with us," Harvey said. "We can only hope our usual good liaison with them (the AMA) will prevent him from getting his facts mixed up again."

Speaking on the AMA editorial, generally, Secretary Flemming said:

"I cannot agree with those who endeavor to deal with this matter in a light vein. It is a serious problem. It is serious because if a substance induces cancer when included in the diet of test animals no one knows how much or how little of that substance will induce cancer if included in the human diet.

"An issue of this kind does not lend itself to light treatment."

Statement of the Honorable H. Alexander Smith at the 11th Meeting of the Consultative Committee for Economic Development in South and Southeast Asia on Thursday, November 12, 1959, at Djakarta, Indonesia

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 14, 1960

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of the Honorable H. Alexander Smith, leader of the delegation of the United States at the 11th meeting of the Consultative Committee for Economic Development in South and Southeast Asia on Thursday, November 12, 1959, at Djakarta:

Mr. Chairman and fellow delegates, may I say at the outset of my remarks that from a personal standpoint I am delighted to be here in Djakarta representing the United States at this 11th session of the Colombo Plan Consultative Committee. Secretary of State Herter requested that I express his deep regret at not being able to attend this important meeting. Since it was impossible for him to be here at this time he asked me to represent our Government because of my experience for 14 years as a Member of the U.S. Senate and particularly as a member of the Far Eastern Subcommittee of the Senate Committee on Foreign Relations of which I was a member for 12 years. It has been my happy privilege to have visited the Far East including practically all the countries in the Colombo plan and to have met personally the executive and legislative leaders in those countries. I had the privilege of visiting these areas in 1953 and I have just paid a similar visit between January and May of this year.

Because of my membership on the Foreign Relations Committee I have had intimate contact with the development and carrying out of the foreign aid and mutual security programs with which the United States has been concerned since the adoption of the original Marshall plan in 1948. Our efforts included outright grants which in the early stages of our operations contributed a large part of U.S. aid; loans which with the Development Loan Fund as the newest instrument have now become a major element in our assistance programs; sale of agricultural surpluses under our Public Law 480 for local currency much of which is used to further economic development. And of very major importance we have participated in the development and carrying out of technical assistance programs in many countries.

Of particular personal interest to me are the programs for the exchange of persons such as the Fulbright exchange program (the international educational exchange program) with which you are all familiar and which has highlighted the importance of the exchange of people from our different countries so that we may all understand each other better. I had the honor to be one of the sponsors of the so-called Smith-Mundt legislation which like the Fulbright program established the exchange of persons and especially leaders and students. Each year since the Fulbright and Smith-Mundt programs were set up we have brought hundreds of leaders and students from other countries including your countries to the United States and each year we have sent leaders and students to many countries of the world and especially to the southeast Asian countries. In addition to these programs over 2,000 persons were brought to the United States from the Colombo plan area last year under the program of our International Cooperation Administration for training in specialized fields. Of the 47,000 students in the United States on private and governmental grants during the 1958–59 academic year, one-third come from the Far East. Here again it has been possible to meet on a friendly basis and exchange ideas.

Having had an intimate part in the creation of these varied operations in the Colombo plan area, I have watched with deep interest their evolution and the constant efforts of my Government to seek improvements in the whole program. I share fully the conclusions of the special congressional committees that have been working in these fields that successfully meeting the economic problems in the areas is a basic and essential element in maintaining the freedom and independence of the countries in the area. Freedom and independence, if they are to be sustained, must have a solid economic foundation. If we want, as we do, a world environment of freedom, and neighbors north, south, east, and west who share our basic belief in the dignity and integrity of the individual, then we have a responsibility to ourselves to help to strengthen the economic basis for such a world society. We know that economic growth is not in itself a sufficient condition for freedom; it is, however, a necessary condition.

We are fully convinced that our objective should be to help countries to help themselves. While we have physical resources and experience, both of which we can make available in this cooperative effort, we would not have them used in any paternalistic sense nor in any attempt to reshape countries in our own image. While recognizing that change is implicit in growth and development, aid can be most effective when it helps countries to develop in accordance with their own cultures, objectives, and philosophies.

It is because of the evolution of what we have been trying to do, both within international organizations and through our cooperative efforts in individual countries, that we welcomed the initiation of the Colombo plan in 1950 and its subsequent development. Again we compliment warmly the members of the Commonwealth who were the inspiration of the Colombo plan. Aimed to stimulate economic development of the less developed countries in the area through cooperative efforts, it soon developed into a program for full and free consultation between the member countries and a stimulus to their individual efforts and programs. While not dealing with regional programs as such, it has encouraged and widened the scope for cooperation among nations. The exchange of ideas and experience under the auspices of the Colombo plan, the review of progress to date and of problems ahead are immensely valuable to all of us. It is a time of stocktaking for the year ahead; and it is good for ministers to pause awhile to take stock. The special peril to which ministers (and I should add Senators as well) are subject is that we are caught up in the press of daily problems and cannot easily step back awhile to gain perspective. Here, at the Colombo plan, we have the opportunity to see matters in perspective. The officials have prepared a draft report for us that tells us how far we have gone, and how much there is yet to be done. And, because there is so much that is yet to be done, we are all resolved to continue the Colombo plan for the period ahead.

What are the problems ahead of us and what is to be done? Seen from the vantage point of the United States—that is to say, seen from the point of view of countries outside the region that desire to be helpful, within their means, in the development of the countries in the region—the economic effort ahead is threefold: (1) to improve the quality and increase the volume of technical assistance; (2) to encourage an expanded flow of investment capital, and (3) to search for practical solutions to provide growing and relatively stable markets for the exports of the less developed countries.

We are trying to do our full part in each of these fields.

TECHNICAL ASSISTANCE

So far as technical assistance is concerned, we shall give the fullest support to the programs of the United Nations; we have become active participants in the Colombo Plan Council for Technical Cooperation; and as President Eisenhower said in his address at the Seattle meeting last year, we shall press our bilateral programs, through our International Cooperative Administration, even more vigorously than in the past.

The U.S. Congress has this year appropriated $150 million for our national technical cooperation activities and further sums for the atoms-for-peace program and the important work of malaria eradication. As a result, we would hope to be able to strengthen our wide-ranging technical assistance activities in the Colombo plan area. At the recent pledging conference in New York in support of the U.N. special fund and expanded program for technical assistance, we pledged $40 million on a matching basis. While the total contributions to these U.N. technical assistance programs are unlikely this year to reach the annual target of $100 million, it is gratifying that many participants substantially increased their pledges over the sum made available last year, and we can hope that by next autumn we will indeed meet our target.

INVESTMENT CAPITAL—PUBLIC

So far as the flow of capital is concerned, the Development Loan Fund will continue to be our most important national instrument for providing development capital on flexible repayment terms. Last year, the Development Loan Fund substantially increased its commitments in the Colombo plan region. As the U.S. chapter indicates, more than half of the total fund committed by the Development Loan Fund in the brief 2 years since it began active operation has been committed in the Colombo plan area, a total of $421 million to eight Colombo

plan countries. The U.S. Congress has appropriated a further $550 million for Development Loan Fund operations in the fiscal year ending 1960. It has authorized $1,100 million for the succeeding year although it is, of course, not known at this time how much of this will be appropriated. The Development Loan Fund is young as institutions go, but it is gathering strong support from the American people for its important work; it should play an increasingly significant role in the years ahead.

As you may recall, when President Eisenhower spoke to us last year, delineating the measures which the United States was taking or prepared to take, he referred to the possibility of creating an International Development Association. This would be an affiliate of the International Bank to mobilize financial resources from the free world as a whole in order to meet more of the vital needs for development financing in the less developed areas in a way which will not bear heavily on their external payments. The response has indeed been encouraging. At the annual meeting of the Governors of the International Bank last September, they unanimously adopted the U.S. resolution asking the Executive Directors of the Bank to draft the articles of agreement of such an association for submission to member governments. While there are points of difference that have yet to be ironed out on the precise structure and operations of an International Development Association, there is, I believe, virtual unanimity on the need for such an association to finance on favorable repayment terms sound development projects that cannot be adequately aided through existing institutions. We look upon the International Development Association as an instrument to increase the total flow of development capital to the less developed areas and not as a substitute for existing lending activities carried on by the industrial countries.

It is our hope that when the executive directors have completed their task, the parliaments and people of all member countries of the Bank, including the countries of the Colombo plan, will respond affirmatively and establish the IDA as an important supplement to existing national, and international, lending institutions.

INVESTMENT CAPITAL—PRIVATE

In the field of private investment, we are continuing to explore ways of increasing the outflow of the U.S. private capital and of strengthening private investment in the less developed countries. We are supporting legislation in our Congress to provide new tax incentives for U.S. private investment in the less developed areas of the free world. The principal feature of the proposed legislation would be full deferral of U.S. taxes on profits from such investment which are reinvested abroad. Also in the field of taxation, good progress is being made toward the conclusion of income tax conventions between the United States and countries of the Colombo plan region. Such conventions, including provisions under which the United States would allow its companies tax credit for certain taxes waived or "sparred" by the other country as an incentive to development investment, are well advanced with India and Ceylon. Preliminary discussions have been held with some of the other countries of the Colombo plan.

We are considering other measures. As the President stated in his state of the Union message, "Private enterprise continues to make major contributions to economic development in all parts of the world. But we have not yet marshalled the full potential of American business for this task, particularly in countries which have recently achieved their independence." In an effort to use more effectively the talents and resources of American business, we have in the past month sent a private investment team to Thailand in response to a request from the Government of Thailand. The group will assist the Thai Government in developing programs to encourage local private investment, to attract foreign investment, and to foster increased association between Thai and foreign investors. It will also try to identify areas of investment possibilities for follow-up measures, including detailed exploration. If the work of this investment team proves fruitful and the establishment of similar teams should commend itself to other countries in the region, we would hope to expand programs of this kind upon request. I hardly need add that the competition for private investment capital is intense and global in extent and much of it goes into already highly developed countries. Accordingly, those countries which need it most are perhaps the ones which must make the greatest effort to stimulate its inflow.

INTERNATIONAL MARKETS

So far as international trade is concerned, we are supporting a many-pronged effort to explore the possibilities of dealing in practical ways with the essentially short-term problem of fluctuations in commodity trade and the longer term problem of expanding the exports of the less developed countries. We are taking an active part in the three intersessional committees on expansion of international trade set up by the GATT at its general session in the fall of 1958. The first of these committees is concerned with preparations for a further general round of tariff negotiations to reduce tariff barriers to trade. The second committee is now studying the effects of agricultural protectionism on international trade, with a view to making appropriate recommendations for dealing with this problem. The third committee is investigating measures for maintaining and expanding the exports of less developed countries in view of the importance of export earnings to the development and diversification of their economies. The work of these committees is addressed essentially to the longer term problems of international trade.

We are also taking an active part in the work of other international bodies concerned with problems relating to trade in primary commodities which are of particular significance to the economic welfare of less developed countries. The United States is a member of all the commodity study groups that have now been organized, and is also a member of the Sugar and Wheat Councils which administer these agreements. Last year the United States became a member of the United Nations Commission on International Commodity Trade. The Commission will examine several aspects of the short-term problem of market instability; it will study the way in which business cycles affect world commodty markets; it will study the potentialities of various national and international techniques for dealing with fluctuations in commodity markets, such as national buffer stocks, commodity study groups, and commodity agreements; and it will study prospective supply and demand for particular primary products. It is our belief that orderly study of this kind is an important and necessary step toward determining how best to try to deal with these problems in the future.

I should like to turn now to the excellent draft annual report before us.

To me this report provides further demonstration of a basic aspect in economic development, namely that progress in the many fields of economic activity is achieved mainly by the efforts of the less developed countries themselves. We all recognize, I believe, that while foreign capital and technical assistance can help, the major part of the resources and skills are those of the developing countries. The credit for the forward movement that is manifest in the pages of the draft before us belongs to the peoples of south and southeast Asia and their leaders.

Mr. Chairman, I congratulate all who had a part in this carefully drawn document.

GENERAL CONCLUSIONS

In conclusion, let me state again my appreciation of the opportunity to be here personally representing the United States and to present to you all the warm greetings of my Government and of the American people. We rejoice with you in what we believe are the splendid accomplishments which have evolved through the efforts you have stimulated from year to year, and especially the creation of an atmosphere of mutual trust and friendship which these conferences have developed.

The big subject on all our minds and hearts is world peace. World peace, as we see it, depends on mutual helpfulness between all countries. The Colombo plan is predicated on this precept as are our assistance activities and our vast programs for the exchange of leaders and students. Throughout its history, my country has been dedicated to the protection of the sacredness of individual human beings and their right to freedom. This is the very heart of all our several religions. And, furthermore, we have felt the call to assist others, where they desire it, to a fuller achievement of what might be called the religion of freedom and human brotherhood in the largest sense.

Our ancestors in the United States, who came to the New World to find individual human liberty have built for us an experience and a great abiding hope that the whole world may become free through mutual understanding. This is the great cause for which the friend of all of us, the Honorable John Foster Dulles, gave his dedicated life. It is the cause to which Secretary Herter is equally dedicated.

One year ago President Eisenhower addressed this Conference in Seattle. One year ago Secretary Dulles was the Chairman of this Conference.

Today I am happy to be with you as a special Ambassador from my country to congratulate you sincerely on the effectiveness of your consultations and on the human understanding that you are perpetuating by carrying on and extending this great Colombo plan vision and inspiration.

We in America rejoice in taking these steps with you toward freedom and lasting world peace.

Veterans Day Program, Altoona, Pa., November 11, 1959

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 14, 1960

Mr. VAN ZANDT. Mr. Speaker, veterans' organizations in Altoona, Pa., under General Chairman Lt. Col. Harold J. Pegg, joined in the annual Veterans Day observance held November 11, 1959.

A parade through the business district preceded the memorial service to all veterans. The program was held in front of the Altoona City Hall, at which time

I had the privilege of delivering the following address:

ADDRESS BY REPRESENTATIVE JAMES E. VAN ZANDT, MEMBER OF CONGRESS, 20TH DISTRICT OF PENNSYLVANIA, AT THE VETERANS DAY PROGRAM, ALTOONA, PA., NOVEMBER 11, 1959

Once again it is my privilege to join with my fellow veterans and the citizens of my hometown in observing Veterans Day, a day of tribute to those who have served in the Armed Forces of the United States.

In preparing my remarks for this occasion, I could not help but recall the great contribution made by thousands of men and women from this area who have worn the uniform of their country in all of America's wars, from the Revolutionary War to the end of the Korean conflict.

It is not difficult to understand the deep love of country that has been characteristic of the manhood and womanhood of this area, because its history reveals that early settlers were deeply religious, with the result that love of God and country were their outstanding characteristics.

Today the many beautiful churches in our midst are eloquent testimonials of the faith and devotion of God-fearing and liberty-loving Americans that inhabit this area.

The sponsors of this Veterans Day program are the veterans organizations of Altoona, all of which serve a common purpose, namely, to promote love of God and country and to provide a means for war veterans to foster and preserve the ideals for which they served in the Nation's wars.

As we observe Veterans Day this year we are reminded that 41 years have passed since this Nation paused at 11 o'clock on the morning of November 11, 1918.

This hour and date marked the end of World War I and for years was observed as Armistice Day.

November 11 has been designated by Congress in recent years as Veterans Day.

Today we commemorate the services of those from this area who fought in all the wars in which our country has been engaged.

Our few minutes today are dedicated to this noble purpose—the commemoration of the patriotic service of all veterans.

The presence of our respected veterans on this occasion, and the entire purpose of this part of the program makes it very necessary that we seriously consider how the average citizen can assist in our efforts to keep the cold war from turning into a conflict which would destroy the very foundations of our civilization.

Missiles and nuclear bombs are in themselves no menace to mankind, nor are the "conventional" weapons which can inflict widespread destruction.

The menace is the man who, in disregard of the wishes of his people, can order the trigger pulled.

The one big danger in the world, therefore, as David Lawrence recently stated, is one-man rule—autocratic government.

Our opponents are strong—this we must admit.

To avoid facing such a fact is nothing less than cowardly.

The square mile area of the Soviet Union is greater than that of the United States by over 5 million square miles.

The population of the Soviet Union exceeds that of the United States by 33 million persons.

The military manpower picture of the Soviet Union is greater than ours by over 1 million men.

It is significant that between 1954 and 1955 trade between the Communist countries and the rest of the world rose from $3.6 billion to $4.46 billion—an increase of 24 percent.

Afghanistan, Egypt, Finland, Hong Kong, Iceland, Iran, Turkey, and Yugoslavia all increased their trade with the Communist world by 10 percent or more.

It is recalled that in 1956 the Communist bloc extended $600 million in credits to Yugoslavia, Egypt, Afghanistan, and India.

In addition, Russian trade with Communist China increased $200 million between 1954 and 1955.

Then too, Russia is building a million-ton steel mill in central India on "generous credit and repayment terms."

We used to think that the economy of a slave state could never be as productive as a free one.

We must now revise this belief.

Within a recent 12-month period, the leaders of the Kremlin made trade agreements with 11 countries.

During that same period the United States did not sign a single agreement.

Mr. Khrushchev has been—for some months now—calling for the end of the cold war.

This is no recent request.

In February of this year he boasted that "economic competition was now enough to win the world to communism."

During his recent visit to the United States, he repeated his views on the Russian economy in no uncertain terms.

We have been warned from several sources that we must choose now between teamwork and dictation or the freedom of choice may be taken away from us.

Leaders in Government, in business, in labor, must stop fighting small battles among themselves and present a united front—a truly United States of America against our known adversary—world communism.

The director of our Central Intelligence Agency in Washington, D.C., Allen W. Dulles, tells us that in addition to its worldwide penetration through Communist Party organizations, the Communists in Moscow and Peiping have set up a whole series of front organizations to penetrate all segments of life in the free countries of the world.

Mr. Dulles says these include the world federation of trade unions, which claim some 90 million members throughout the world.

International organizations of youth and students stage great festivals at frequent intervals.

Last summer they met in Vienna, and it was the first time they dared to meet outside of the Iron Curtain.

They have the Women's International Democratic Federation, the World Federation of Teachers Unions, the International Association of Democratic Lawyers; Communist journalists and medical organizations.

Then cutting across professional and social lines, the Communists have created the world peace council which is designed to appeal to intellectuals and which maintains so-called peace committees in 47 countries, gaining adherents by trading on the magic world of peace.

Mr. Dulles gives us additional pertinent facts, which I quote as follows:

"To back up this massive apparatus, the Soviet has the largest number of trained agents for espionage and secret political action that any country has ever assembled.

"In Moscow, Prague, and Peiping and other Communist centers, they are training agents recruited from scores of other countries to go out as missionaries of communism into the troubled areas of the world."

Continuing, CIA Director Dulles said:

"Much of the Middle East and southeast Asia, and particularly black Africa, are high on their target list.

"They do not neglect this hemisphere as recent disclosures of Communist plotting in Mexico show us."

Concluding, he said, "Their basic purpose is to destroy all existing systems of free and democratic government and disrupt the economic and political organizations on which these are based.

"Behind their Iron Curtain they ruthlessly suppress all attempts to achieve more freedom—witness Hungary and now Tibet."

Ladies and gentlemen, under the heading of subversion we must not overlook the fact that the Communist leaders have sought to advance their cause through local wars by proxy.

In this connection, Korea, Vietnam, Malaya are typical examples.

One of the important aspects of the cold war is the way in which it shortens the time one can take to learn about the world into which we are moving.

Throughout the history of our country—and until the past 25 years—it was possible to allow time for the development of understanding of the inherent process of our society.

Now no such allowance of time can be made because of the hot war threat which would bring death itself.

In simple language—the business at hand is survival itself—there is no time to find out the why and wherefore.

Perhaps the answer to our vexing problem is a more positive stand on the issues—or delving even deeper, perhaps we need a firm reappraisal of the issues themselves.

Dean C. Ken Weidner of the American University of Beirut has pointed out that many thoughtful Europeans feel that in the United States we still do not understand that the Russians have devised a new kind of war.

He points out that instead of seeking out the enemy's forces and destroying them, the Russian approach is to maneuver and encourage the enemy to destroy himself by exhausting his natural resources and dissipating his wealth and power in countering widely scattered military threats.

Meanwhile, he says all the time the Russian ideology is being sold to the people of the United States from within our own borders.

Eminent philosophers and statesmen of our Nation have in the past warned that our kind of system cannot be destroyed from without, but can be destroyed from within our own Nation.

Mark you, there is no prescription for a quick and easy peace.

We must expect periods during which world tensions will flare up, quiet down, and then break out again.

Therefore, we must strive constantly to narrow the gap between the differences in our world.

We must earnestly seek an answer to the questions: What can I do to help solve the issues?

What can I do to help the problems from becoming worse and worse?

It was in this spirit of earnestly seeking peace that Premier Khrushchev was invited to visit the United States.

On this Veterans Day as we attempt to briefly evaluate the cold-war picture, we may safely conclude that much of our defense lies in understanding and firmness, in a strong and ready deterrent military power, in the marshaling of our economic assets with those of other free countries.

This was the picture we sought to convey to Premier Khrushchev in the hope he would not continue to underestimate our desire or our ability to continue to strive for a just and lasting peace.

As liberty-loving Americans, if we are to fulfill our obligations to the veterans of past wars—if we are to keep that faith we talk about on every Veterans Day—we must

widen the streams of freedom that flow through our world.

"Life, liberty, and the pursuit of happiness," that is the way one great American historic document spelled out the needs of the time.

Self-government and respect for the rights of man are ideals deeply cherished by the peoples of America since their earliest days.

Drawing upon their common belief in the dignity of man—based on their Christian heritage—our Founding Fathers were inspired to lay the foundations of a new nation.

Although from time to time the achievement of our goals has encountered obstacles and setbacks, we have never wavered in our determination to press forward.

We have maintained our political system which is designed to uphold American principles and to guarantee human dignity.

Ladies and gentlemen, we should not lose sight of our purpose in opening our doors to the leaders of the Soviet Union, any more than we should lose sight of the purpose of our Founding Fathers when they drafted the Declaration of Independence and the Bill of Rights.

It is important in our personal and national conduct during the cold war that we not become so embroiled in the conflicting ideologies of the present, that we forget to draw upon the past for our inspiration.

We must not forget to remind ourselves our purpose in upholding the dignity of the individual.

It is not a fly-by-night ideal—but one basic to a continuation of free society.

If we wish to maintain faith in ourselves and in the values our free society embodies, we must understand what this faith is and how it came to earlier generations.

Every civilization is cradled in some religion.

The culture of China is unthinkable without the philosophy of Confucius.

Indian society is the expression of Hinduism.

Islam is composed of followers of Mohammed.

In like fashion, our western culture stems from the Judeo-Christian tradition.

We are a branch of christendom.

Our Declaration of Independence sets forth the conviction that political liberty is part of the covenant between a man and his Maker.

The American dream was built upon a religious foundation.

If liberty and freedom are our commitments, then we have no choice except to stand for those principles.

We cannot sacrifice those principles and expect to lessen the gap that is caused by the cold war.

Only when peoples are able, in free elections, to choose their leaders and to remove them at will can there be an assurance of peace in the world.

People do not make wars—but dictators do.

November 11, 1918, was a day of rejoicing in the United States.

The meaning of that day seemed so simple.

Right had triumphed; aggression had been put down; men could and would again live together in peace.

Armies could be disbanded; ships converted to the uses of peaceful commerce.

Indeed, there were not enough swords to make all the needed plowshares.

In 1918 there was little boastful triumph in our mood.

It was not the celebration of a military victory—it was a spontaneous hymn of joy to the fortunes of peace.

Today it is not the victory of that war that we remember.

Because since the first Armistice Day we have learned that there can be no enduring victory.

Meanwhile, we ask ourselves, "what of those who have sacrificed their all."

"What of those we especially honor on this Veterans Day program."

Perhaps those of us who wore the uniform of our country and breathed the essence of comradeship-in-arms as we saw the naked spirit face the peril of wars can give the words for the tribute we are groping for today.

It is said that men who live for freedom will die for freedom.

We are told to contemplate such sacrifice in true perspective.

And we are told that it is better to have even a brief vision of the stars from the vantage point of free men than to have a spirit dulled by the futile routine of communistic oppression until the eyes can no longer be lifted upward.

May God grant that the memory of those brave men and women whose patriotic service has enshrined them in the hearts of all Americans—and whom we honor here today—will serve as an inspiraton to us in the great task before us of preserving our priceless heritage of liberty and freedom.

The Future of Title I

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 7, 1960

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by Stephen G. Thompson as it appeared in the Architectural Forum, September 1959 issue:

THE FUTURE OF TITLE I—THE MESS IN NEW YORK DOES NOT GO MUCH BEYOND THE CITY AND ITS LOCAL ADMINISTRATION—A SURVEY OF BALTIMORE AND 14 OTHER CITIES FINDS THE URBAN RENEWAL PROGRAM WORKING WELL

(By Stephen G. Thompson)

When New York City's title I slum clearance and redevelopment "scandals" were splattered all over the newspapers for weeks this summer, the immediate questions were: How far does this thing go into the fabric of the Federal supported urban redevelopment program, and does it weaken or jeopardize that national program?

Forum has completed a survey of 16 cities (see box, page 108) and canvassed leading authorities in the urban renewal field. It finds that the answer to the first question is that the situation does not go much beyond the borders of New York City; and to the second, that no real black eye has been hung on the program as a whole. Outside of New York, Forum found only three or four isolated instances of abuses, such as the fining and jailing of a redevelopment director in Jersey City for concealed conflict-of-interests. This is no more than political realists would expect in any large public works or public land disposal program. The significant fact, pointed out as amazing by former Federal Housing and Home Finance Agency Administrator Albert M. Cole (1953–1959), is that the urban-renewal program, despite its broad scope and 10-year duration, has been marred by no widespread major scandal.

As for the effects of the New York "scandals" on other cities, the consensus is expressed by Philadelphia Redevelopment Authority Director William L. Rafsky, who believes that, as of now, the national program will not be seriously affected, beyond a generally tighter supervision everywhere and a possibly sharper scrutiny by Congress—which may well be to the good. The steam behind a full-dress congressional investigation, demanded at the height of the New York revelations, has been steadily losing force. Democrats have no relish to probe Democratic New York City before the national election next year, and liberal Republicans are not likely to press for anything that would tag them as anti-renewal or reflect on the administration's handling. Urban renewal, therefore, is likely to escape major injury from this source.

For the country at large, however, much remains to be learned from the New York fiasco, not the least of it by New York itself. What sets the New York situation apart is not so much the basketful of smelly situations uncovered, as a pattern of operations that almost constitutes a handbook on how not to get urban redevelopment done. Actually, for several years the Federal Housing and Urban Renewal administrations have been quietly riding herd on the New York program raising objections to or rejecting outright many highhanded attempts to circumvent or disregard Federal regulations. The nub of the matter is that, scorning Federal and local practices that have been tried and proved elsewhere, the New York program is unique—and a mess.

THE NEW YORK MESS

New York's uniqueness is embodied almost solely in the redoubtable, storm-centered Robert Moses, who, in addition to holding many other public work jobs in which he has earned just fame, is chairman of the city's slum clearance committee, a part-time ad hoc body that directs the city's redevelopment program. A prickly but effective political scientist, shrewd and suave, Moses had come to rule what amounts to a private empire of public works in and around New York because he knew what he wanted and how to get it—either through channels, through loopholes, by audacious administrative dexterity, or, if otherwise unobtainable, by fait accompli. It is not that Moses acts against the law, but simply above it. Where his capacity for getting things done did not win high praise, it evoked only the criticism that it was too bad he had to be arbitrary or capricious, and perhaps next time he would observe the rules, but his achievements and integrity could not be overlooked.

When, however, Moses' high individualistic talents were turned in part to slum clearance and redevelopment, an enterprise involving the whole fabric of the community, it led to trouble, and one of the longest, most violent storms of a stormy career. The major revelations of the last few months were that much of New York's $1 billion slum clearance and redevelopment program was being held closely by a group of cronies with whom Moses was used to getting things done, that project sponsors were chosen by a peculiar preselection system, that some projects were for years "milked" of slum rentals by these sponsors without clearing the slums, and that in one instance a twice-approved sponsor, Louis Pokrass, was a known business associate of known racketeers. Though none of these things so far has been deemed actionable, and Moses' personal honesty remains unimpugned, their odor is high enough, particularly in the last case, to cause newspapers and civic organizations, led by the Citizens Union, to call for Moses' removal. So far Moses has refused to explain these cases beyond a perfunctory denial of fact or failure to answer a long list of questions from the press.

The situation was summed up more than 2 years ago in a provoked blast from HHFA Administrator Cole, ordinarily a temperate, equitable man: "This month is the 10th anniversary of HHFA. During most of this

time the agency has had more trouble with Mr. Moses than with any other single individual in all the cities of the United States."

The main sources of trouble were individual and procedural. The busy Mr. Moses holds no less than six major jobs, including commissioner of parks, city construction coordinator, city planning commission member, Triborough Bridge and Tunnel Authority chairman, and New York State Power Authority chairman, developing the U.S. side of the St. Lawrence Seaway's hydroelectric power. He could spend no more than a modicum of time on the slum clearance committee, which itself had no regular staff for project planning, development, or supervision, such as every other large city in the program has. This led to many inefficiencies and much waste, increased by Moses' personal and stubborn way of doing business. When, to save face in the present situation, New York's Mayor Robert Wagner instituted some reforms in the slum clearance committee ordering its chairman to remove the veil of secrecy from committee meetings and to appoint a full-time director, Moses' first action at a closed meeting was to reappoint the same part-time staff directors as before from among his old standbys on another of his agencies. "He must have misunderstood me," said Bob Wagner.

A STRING OF INCIDENTS

The list of dubious incidents and possible scandals in New York title I operations—some of which were brought to Forum's attention over the years—goes well beyond those so far aired.

On two occasions, reputable, nationally known builders and redevelopers were dangled along with some promises of participating in the program, only to find eventually that the prize went to a small, obscure outfit or carried impossible terms. In the first instance, the losing builder was privately approached by the winner to become an associate, who would do most of the work on the project while the sponsor would take a profit for holding the franchise. In the second, a developer found that a promised contract for taking over a sour project from a defaulting sponsor was repeatedly delayed while a fixed-sum settlement to be paid to the original stockholders was successively upped, $100,000 at a time. The developer bowed out.

In the early stages of the Lincoln Square project, Moses and the SCC made an extraordinarily involved arrangement to sell a basic three-block site to the Performing Arts Center in two parts: the main portion for about $7 per square foot; a small subplot occupied by the 13-story Kennedy Building for a flat $1.5 million, or about $63 per square foot. Arts center officials later found out that this subplot could be obtained as an integral part of the title I site and protested to the SCC, arguing that they should be allowed to buy it for the same price as the rest. This led to an involved tug of war with Moses, who held out for the original arrangement. Eventually, the HHFA refused to approve the two-part sale and the arts center paid a composite price—averaging $10.60 per square foot—saving Federal Government about $700,000 in subsidy.

A curious subsidy-credit situation, typical of the city's tangled web of public works, is posed in the Bronx's storm-tossed Soundview title I redevelopment, from which Federal funds already have been withheld on suspicion of speculation. Part of this project is the improvement and extension of a city waterfront park, the cost of which may be counted as a project expense by the city and credited as part of its write-down contribution. The park extension already is underway, according to Moses, with the placing of an unspecified amount of "fill" obtained from a Bronx public-housing site. The poser: since the Federal Government already is bearing the full cost of disposing of this excavated material through its underwriting of all capital costs on the housing project, can the city also receive credit to itself for the "value" of this same material when used as fill on its title I park project?

A HANDBOOK OF DUBIOUS POLICIES

Federal officials last month alerted all concerned parties to be wary of the situation.

Most of these incidents and many more dubious policies flow from Moses' insistance on his own system of slum clearance and redevelopment.

Unlike most cities, New York's SCC "tentatively" approves a project sponsor before calling for public bids, though theoretically any builder is free to bid for a New York title I site at formal auction. In 14 official auctions held so far, however, there has never been a bid from anyone except the predesignated sponsor. This practice is now likely to be reformed—though no one can be sure in the SCC's closed-door operations—for Federal officials are insisting that the city introduce genuine open competition into sponsor selection. This is delicate ground because competitive bids, once obtained, must still be judged—and negotiated—largely on intangibles. Federal officials also intend to insist quite properly on wide advertising well in advance for proposals, and on assurances being given that no builder will be harassed or penalized even if he outbids an officially favored sponsor at an open auction.

Unlike other cities, New York effects simultaneous acquisition and resale of an entire project tract to the designated sponsor on a single day, then putting the full task of site management, tenant relocation, and slum clearance on the redeveloper. Moses always has insisted on this unique procedure, arguing that it requires too much city investment and is too risky for the city to clear sites without assurances of immediate sales, pointing to sale troubles encountered in St. Louis, Detroit, and Philadelphia. But these cities have worked out of their difficulties, and none has had a string of sour projects such as has piled up in New York, where, as a consequence of policy, some so-called redevelopers have been allowed to take large sums out of properties slated for redevelopment without ever clearing them.

Unlike other cities, notable Washington, New Haven, Pittsburgh, and Sacramento, New York has never negotiated the lease, instead of sale, of Title I tracts to developers. In one famous New Haven lease deal, taking annual rent as 6 percent of land value, the price obtained rose from an upset figure of $700,000 to $1,150,000, with corresponding reduction in both city and Federal subsidies. In another deal involving negotiated resale of a 16,000-square-foot plot to a bank, New Haven secured $550,000 or $35 per square foot, believed to be the highest resale price for Title I land in the country.

Lacking a full-time staff organization, as in other cities, New York's SCC has made a complicated arrangement of hiring outside consultants. For 9 years, coordinating architects to the SCC have been Skidmore, Owings & Merrill, who receive two consultant contracts on each project, one covering planning, the other covering the execution stage. Any housing in the project requires another consultant contract with a housing architect, and most of this work has gone to S. J. Kessler & Sons. To date, no one has been able to find out either from the consultants or from Moses exactly how much this has cost the taxpayer, but it leads to waste.

New York's coordinating architectural consultants to the SCC prepare an official brochure on each project detailing redevelopment plans, and in the case of housing, a separate section is supplied by the housing consultant showing site planning, preliminary architectural sketches, and proposed rental schedules. Not a single New York title I project has been erected according to these original brochure plans, hence most of this work for which housing architect-consultants are paid has little value except as publicity for the SCC. Only recently, however, have many outside redevelopers learned that none of these schematic plans or even the proposed rental schedules are binding on the redeveloper—a discovery rudely made when some scheduled middle-income housing turned up at luxury rentals when completed, the most notorious example being Washington Square Village.

The major trouble with SCC policies is that, lacking a planning staff, nowhere in them is there any coordinated plan for New York urban redevelopment on a consistent pattern. Many projects seem to be tailored mainly to serve or assist special purposes of the moment, institutions, or favored sponsor organizations, with only enough slum clearance to assure Federal assistance. There is no slum clearance and redevelopment on a priority-of-need basis, but only a pragmatist's contempt for all planning and planners, even good ones.

PROGRESS ELSEWHERE

In contrast to New York, eight cities were nominated by Forum correspondents for outstanding records of title I progress with a minimum of political favoritism, shenanigans, or scandals: Baltimore, Chicago, Cleveland, Little Rock, New Haven, Philadelphia, Pittsburgh, and Sacramento.

Baltimore may be taken as a good example, for it was the first city to get a title I project into execution, the first to have new title I housing occupied, and the second city (after Philadelphia) to have an entire project completed, in June 1957, and receive the entire Federal assistance grant. Baltimore has two projects completed, four in execution, and four in planning. As of March 31 it had drawn $6 million, or 23 percent of its $26 million in Federal grant allocations. At the same date, New York had drawn $39.6 million of its $156 million of grant allocation, which was 25 percent.

Baltimore has had its difficulties—but never a hint of scandal. And it disposes of land by competitive bidding, by negotiated sales, and by leases. Its biggest headache was its Broadway project, where an old Negro slum was cleared and scheduled for redevelopment with housing mainly for whites. For several years after demolition, the Broadway area still stood empty and useless. Builders could not obtain adequate financing for new housing in the area, mainly because of adjacent blight, and the result was the type of situation that Moses has feared in New York. By the end of last year, however, the city had completed arrangements for redeveloping the entire project area under revised plans that included expanded facilities for neighboring Johns Hopkins Hospital, a Hopkins-Sheraton Inn (motel), three churches, a school, and a medical office building. The project was officially completed in June.

In Baltimore's Mount Royal Plaza project, 2 large State office buildings have been erected, the Baltimore Life Insurance Co. has bought a 5½-acre plot for a new home office building, and at least 11 builders have indicated they will submit proposals for its high-rise apartment sites.

Baltimore has made its greatest strides in urban renewal in the past 2 years, following creation of a unified Baltimore Urban Renewal and Housing Agency, which merged the city's public housing, redevelopment, urban renewal, and conservation programs into one coordinated operation. This new agency also was instructed to establish a program to interest and enlist private capital in nonsubsidized redevelopment work. Its outstanding achievement in this field is the projected $127 million Charles Center redevelopment.

Also of major importance has been the work of the Greater Baltimore Committee, composed of some of the city's outstanding bankers, merchants, civic and business leaders. This citizens group has worked in the closest liaison with BURHA and the city's planning commission to help expedite the Charles Center redevelopment and other city projects. New York, by contrast, is conspicuous for its lack of any broadly representative citizen advisory group that has any official or even quasi-official status as an adjunct of its redevelopments agency.

THE LESSONS FROM IT ALL

For New York and other cities, notably Boston, that are poorly organized for urban redevelopment, there are several lessons to be learned:

Top-level coordination of a city's various redevelopment and public works programs is absolutely essential. New York might well borrow a leaf from Baltimore in this respect. Experts have suggested that New York and other cities might create some form of "housing policy board" composed of the heads of redevelopment, public housing, and planning agencies, plus the mayor or one of his deputies. Such a board might establish coordinated city "policy" for certain volumes, types, and general locations of public housing, urban redevelopment, and other public-assisted housing each year.

Enthusiatic citizen group participation and approval is needed in formulating housing and redevelopment policy.

Redevelopment agency activities must be conducted in a "goldfish bowl," a phrase that turned up repeatedly in reports from other cities. Discussing New York's troubles last month, HHF Administrator Norman Mason disclosed that both he and Urban Renewal Commissioner David M. Walker think it would be helpful to have a clause in the housing law requiring full disclosure of prospective sponsors and all other details about redevelopment projects. Moses' aides have lobbied against legislation for this purpose.

Redevelopers need to be assured that there is free and open competition for redevelopment property, even though its final disposal may be worked out on a negotiated-price basis in lieu of a formal auction or bid-opening process.

Large redevelopment projects should be divided into smaller units for resale (a recommendation by many experienced builders, which has been ignored in New York).

If some of these lessons are learned, the washing of New York's dirty linen in public will have served a wide and useful purpose. For the Nation's slum-clearance and urban-redevelopment program is sound, and all the pressures of society, economic growth, and population indicate that the Nation should get on with it.

THE STATE OF TITLE I IN OTHER CITIES

A sampling of 14 cities—other than New York and Baltimore, covered in detail in this article—reveals that none is suffering from New York City's problems, though various local programs range from excellent to poor.

Boston: Except for its chairman—Joseph W. Lund, nationally known real estate man—city's redevelopment authority is generally rated "a political dumping ground." Projects for sake of projects, rather than slum clearance, seems to be objective. One West End project, surveyed by outside experts, is shown to be substantial low-rent area, not slum, from which 2,800 households are being ousted. Status: poor.

Chicago: Spirited bidding for land, which city clears, parcel by parcel, as fast as old buildings are vacated and families moved by city's own relocation staff. Redevelopment agency's "goldfish bowl" policy includes joint meetings about twice a month at which heads of conservation board, building department, and planning commission confer with mayor on renewal plans and progress. Status: excellent.

Cincinnati: Vociferous minority of almost evenly divided city council is alert to shenanigans by any majority. Redevelopment, conducted "in a goldfish bowl," enthusiastically supported by city's two newspapers. Projects conform to city's master plan; no effort to locate them to serve special interests or organizations. Status: good.

Cleveland: Through nonprofit Cleveland Foundation, top industrialists have subscribed $2 million to revolving fund to assure success of urban renewal. Loans are made to approved redevelopers needing extra financing, and strategic properties are bought while still inexpensive if city agencies cannot act fast enough. Foundation serves as city's redevelopment watchdog. Status: excellent.

Jersey City: Has distinction of having only criminal case in whole program. In 1954, executive director of redevelopment agency was fined $5,000 and jailed for 2 years for concealing interest in architectural firm doing business with agency. Charges of poor management and politics rife. Status: poor.

Little Rock: City sells individual building lots for single-family houses to both individual families and speculative homebuilders. Some commercial parcels sold in open negotiation; program conducted without scandal or outspoken criticism. Status: excellent.

New Haven: Exceptionally effective citizen participation and approval of program through 500-member citizens action commission appointed by mayor. Outstanding land disposal record (see article). Status: excellent.

Philadelphia: Open and vigorous competition for most sites. Originally some sales by negotiation, more recently by sealed bids. Close adherence to city's master plan. Some redevelopers admit friendships with powerful political figures but no hint that political influence or connection has ever affected awards. Status: excellent.

Pittsburgh: Extensive private, nonsubsidized redevelopment. The city's title I program, now getting into stride, receives same wholehearted support of city's powerful business community. Status: excellent.

Providence: Completed second title I project in July. Program scandal free, very efficient, but misses some of city's worst slums. Some initial projects seem to have been calculated to gain such municipal improvements as schools and playgrounds as well as to redevelop substandard areas. Status: good.

Sacramento: Redevelopment agency strong and independent; it rejected bid of one big redeveloper to buy entire 15-block project, instead offered commercial, hotel, and housing sections separately to get best specialists in each field. Despite heavy political pressure, it also turned down local housing investors for more experienced eastern redeveloper. Sharp-eyed Sacramento Bee watches over program. Status: excellent.

St. Paul: Delays due to political jockeying and conflicts between redevelopment agency and commissioners. Says one former agency official: "In general it was possible to run your program—if you went along with the commissioners' deals on personnel and contracts." One suit against commissioners charging favoritism in selling a site went to State supreme court; was dismissed. Status: poor.

San Francisco: Slow-moving program due to restrictions hedging land acquisition; first resale of land is not scheduled until next spring at earliest. In January, city's chief administrative officer resigned under cloudy circumstances, in no way involving local redevelopment agency. (He was investor in and director of corporation which purchased properties slated for redevelopment, then offered them to agency at premiums as high as 140 percent.) Incident has tightened scrutiny of program. Status: poor.

Washington: Large and complex program benefits from good newspaper coverage and support, including some criticism. Formula for upward revision of land prices worked out after local builders complained that proposed negotiated price with Webb & Knapp was too low. One proposed but inactive project criticized for being tailored to provide special benefits to local university. Status: good.

Fidel Castro: America's Achilles Heel

EXTENSION OF REMARKS

OF

HON. H. ALLEN SMITH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 14, 1960

Mr. SMITH of California. Mr. Speaker, not since the days of Teddy Roosevelt's Rough Riders has Cuba been more on the minds of Americans. With the suddenness of a black thunderhead rolling up in the summer sky, a young revolutionary, Fidel Castro, swept to power last January in this lovely Caribbean island. Since then, like a tempestuous volcano, Castro has been strewing revolutionary lava far and wide. Most alarmingly, some of his deeds and words sound suspiciously like the tactics of communism. More and more, as Americans learn about the Cuban revolution, they are shocked by the increasing Communist infiltration and, in some areas, Communist guidance. These facts must give America great care lest Cuba become a Soviet stronghold on our very doorstep.

To most Americans, Fidel Castro must appear as a fascinating character. Young, gay and handsome, his bearded face brings memories of a young Daniel Boone. An intelligent, jolly fellow, he always seems ready for a good time. Perhaps most appealing, he gives the impression of an allegiance to an ideal—the 26th of July Movement, the name of his revolutionary party. Always we admire a man supposedly dedicated to an ideal—especially a man who has the vigor, enthusiasm and determination to carry forward its principles. Admittedly, Fidel Castro possesses leadership qualities which have made him a towering figure in his homeland.

The question before America today is simply this: Which way does Fidel Castro tower? Does he lean toward democratic ideals—the ideals which gave his country freedom, the ideals which brought Americans as liberators to his shores in 1898, the ideals which made America and Cuba friendly neighbors? Or does he lean toward totalitarian precepts—the precepts which destroy liberty and justice and would make his country a captive of international communism? That is America's chief interest in Castro.

We are all familiar with the background of Fidel Castro—how, as a young student, he led a revolt on July 26, 1953, against the Batista government, how he was arrested, sent to prison, later released. That was just the beginning for

this young man. He went to Mexico, organized a band of revolutionaries and vowed to overthrow the Havana government. The very term "26th of July Movement" comes from the historic date in 1953 when Castro made his fateful attack against Moncada Barracks in Santiago.

Then one December day in 1956, Castro with only some 80 men actually invaded Cuba. This act in itself shows the daring fearlessness of this man—who with a mere handful of followers would attempt a military invasion of a sovereign American republic. Castro's expedition met with resistance at the shore and only some dozen members, including Castro, escaped inland. The stage was now set for one of the most ingenious, swift, and amazingly successful coups in the whole history of the Western Hemisphere. In just a few months these dozen men, through terror, cajolery, and blind devotion to a revolutionary program, mushroomed into a tremendous military force. From a shadowy silhouette figure hurriedly slithering ashore from a small boat to a grand Cuban conquistador cheered by thousands as he parades down the streets of Cuba's capital city—that was the transformation of Fidel Castro in roughly 2 years.

There is a lesson here to be learned. Castro's success shows the tremendous power which can be generated by a fanatic minority determined to overthrow a legitimate government. Lenin and his henchmen did the same in 1917. A mere handful of Bolsheviks, trained in deceit and revolutionary techniques, overthrew the mighty, centuries-old governmental structure of the czar. They then went on—after brutally murdering the czar and his family—to erect a revolutionary Communist government. The world is still reaping the bitter fruits of that fateful event.

To the victor belong the spoils—such has been the motto of dictators for countless centuries. Castro heaped upon himself the honors and rewards which came from victory. He promised reforms. He promised new laws. He promised to do away with injustices. Many Americans were highly sympathetic as it must be admitted there was much room for improvement in Cuba.

But when victory is achieved by a revolutionary minority through military means, there inevitably come the abuses of power. We remember the infamous treason trials, held in a virtual circus atmosphere. Human beings were sent to death—almost like cattle in a slaughterhouse. The name "La Cabana"—the hated fortress where prisoners were jailed—leaped into the headlines. Many hundreds fled Cuba as political exiles. These are the familiar trappings of the dictator state: "treason" trials, prisons, political exiles.

Yet, there was much good will still left for Fidel Castro. Last April, as you will remember, he toured the United States. Virtually everywhere he was received with enthusiasm. He spoke before many audiences of political leaders, newspapermen, civic officials, students. He told what he was trying to do in Cuba. He tried to explain away the excesses of the revolution. He denied his movement was Communist. "We have said very clearly we are not Communists, very clearly." He espoused friendship for our country. He said he was bringing a new life to millions of his fellow countrymen.

Now, some 9 months later, the time has come to take a serious inventory of Fidel Castro. I know some people are downright weary trying to figure out just what is occurring in this historic isle—where Christopher Columbus traveled on his first expedition to America. One day Castro resigns as Prime Minister—then upon the appeal of the people, returns. Invasions of Cuba occur while Cuba invades the Dominican Republic. The President of the state resigns under fire and another is appointed—both mere puppets of Castro. Special tricks are used to lure airplanes to the island—there to be captured. A high-ranking Cuban official, Maj. Pedro Luis Lanz, chief of the air force, suddenly disappears—is denounced by Castro—and then testifies before an American congressional committee. These 9 months have been marked by a kaleidoscope array of confusing incidents, bewildering to anybody who does not take the time to study the pattern of developments in this country.

And what we see is not encouraging. Castro's Cuba, from all indications, is rapidly falling under Communist influence. Whether Fidel Castro himself is a Communist is not known. Major Lanz was asked during his appearance before the Senate Internal Security Subcommittee as to who was the "strongest Communist in the Castro government." He replied, "I think it is Fidel himself. I am completely sure he is a Communist."

Major Lanz added, "While fighting in the hills we talked about bringing democracy back to Cuba, about free election, about the constitution. What have we got now? He has let the Communists have control, and few Cubans are Communists."

Evidence continues to mount of Communist infiltration and control in Cuba. Intelligent observers have pointed out that there are Communists in the Army, labor unions and public communications. Likewise, Cuban education is being penetrated by the Communists, even to the extent of rewriting history books. Reports continue to circulate of contacts by Cubans with Communists from other countries.

Most important are the close advisers of Fidel Castro. His brother, Raul, is one of the most prominent. Raul reportedly was in attendance at a Communist-directed youth rally in Vienna in 1953, later traveling behind the Iron Curtain. As commander of the Cuban armed forces, Raul is in a most strategic position. His friendliness to Marxist-Leninist propaganda is obviously giving the Communists an entree into new fields of Cuban life.

Then there is Ernesto "Che" Guevara, the so-called No. 3 man of the Castro regime. Argentine born, an international adventurer, always ready to fight at the drop of a hat, he has become Fidel Castro's right-hand man. He led part of Castro's army in its bloody struggle for power, later served as commander of the infamous La Cabana fortress. He, too, reportedly has intense Communist leanings and has long been regarded as one of the key party figures in the Caribbean area. A man like Guevara—bold, dashing and ruthless—is not one who would be expected to fight for democratic liberties. He is a promoter of dictatorship.

The handwriting is clear for all who are willing to observe—Cuba is well on the road toward Communist domination. Perhaps Castro himself is not to become Cuba's Lenin—the man who actually sets up the Communist dictatorship. We do not know; perhaps Castro will be a Kerensky, the man who was to briefly head the Russian Government after the czar's forced abdication in March 1917, only in turn to be replaced by Lenin the following November. The important thing is this: anti-American, anti-democratic, anti-liberty forces are on the rampage in Cuba at this very minute. Communism is growing there. Our fear is that the Kremlin will gain either overt or covert control, swinging this lovely tropical island into the Kremlin's control. This, I say, America can never permit.

There are some people who say give Castro time to straighten out affairs. That advice would be excellent, if only the possibility existed that democratic processes might gain the ascendancy. But the whole flavor of the July 26 movement and Fidel Castro personally militate against this prospect.

First of all, there is the fact that Castro gained power through bloody military revolt, not democratic elections. He thinks in terms of ruthless military force—witness his handling of the "treason" trials and those who criticize his regime. "From now on the symbol of our revolution," he told a cheering throng on resuming the Premiership, "will be the machete," the razor-sharp ax used by Cubans. Seldom has history recorded that a military dictator has become a believer in democracy.

Then, in 9 months, the trends are all running contrary to free government: there have been no free elections; establishment of responsible local self-government; no operation of an independent judiciary. Attempts have been made to interfere with the free press. Property has been expropriated without due process of law. Then there is the continual atmosphere of emotion, Castro-sponsored rallies and parades designed to whip the people into frenized acclaim—the familiar trappings of the dictator.

Castro, moreover, is attempting to churn discontent and revolt among his Caribbean neighbors. He has become a firebrand threatening to inflame the peace of Latin America. He talks and acts like a bully, forgetting that nations must learn to live peacefully. If disputes arise, they should be settled amicably—not by name calling, guerrilla invasions,

and subversive infiltration. Castro is running contrary to the principles of Western Hemisphere unity.

When the Cuban jig-saw puzzle is put together, piece by piece, we find a man—Fidel Castro—and a group—26th of July movement—which are basically anti-democratic. This young man, trained to think in terms of violent revolution and dictatorship, represents a severe danger to the United States. As Communist influence grows, as the Kremlin increases in power in Cuba, we must be alert to protect our national security. Let's make no mistake: Fidel Castro is the Achilles heel of our national security. We cannot allow Moscow to gain a foothold too close to our shoreline.

Library of Congress Gives History of Makeup of the American $1 Bill

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 7, 1960

Mr. DOYLE. Mr. Speaker, for years before I first came to this Congress about 14 years ago I was interested in the makeup of the American dollar bill. That interest continued and increased until recently I asked the Library of Congress to answer my letter of August 10, 1959, copy of which is hereinafter set forth, about the American dollar bill. I believe it of such common interest and information among the American people that I am herewith presenting the report of the Library of Congress.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., August 10, 1959.

LIBRARY OF CONGRESS,
Legislative Reference Service,
Washington, D.C.

MY DEAR FRIENDS: Will you please send to me, in duplicate please, a statement which I can insert in the CONGRESSIONAL RECORD—or otherwise use—as to the history and significance and why are they used, etc., of each of the items appearing on the face of the $1 bill of the United States of America, and on the reverse side thereof. For instance, the great seal of the United States. Why is the pyramid there? What does the wording mean and what language is it?

Make it as clear and complete as you can so that folks reading it can sort of get the picture of what it is and why.

Thank you.

Sincerely yours,

CLYDE DOYLE,
Member of Congress.

THE AMERICAN $1 BILL

Over 150 years ago, Benjamin Franklin, colonial champion of liberty and freedom, observed that "in this world nothing can be said to be certain, except death and taxes." This famous inventor, statesman, and philosopher could not possibly have foreseen that the new Nation—to whose creation he had contributed so much—would develop such basically sound currency. The first United States paper currency—the demand notes—were issued in 1861. These demand notes and most other issues since that time are still legal tender at their face value. Some issues will actually be redeemed by the Government at higher than face value.

The preservation of the integrity of American currency has been fostered through sustained faith in the solemn word of the Government, as well as the specie supporting it. The Secret Service of the Treasury Department guards and protects against any losses through counterfeiting; and a system of strict internal checks is maintained at the Bureau of Engraving to pinpoint the responsibility of each operating section. Special ink, prepared within the Bureau, is used for printing all bills. The currency paper, composed of 50 percent cotton and 50 percent linen embedded with small red and blue fibers, is a special formula paper produced by a commercial establishment under close Government supervision. You can be sure that the statement on our currency—"This certificate is legal tender for all debts, public and private"—is more than a slogan—it is an oft-proved fact.

Some of the design features of our $1 bill, and other paper currency are purely ornamental. Others are devised as security checks, and still others are ornamental but also protect against counterfeiting. For example, the etched borders (known as the conventional geometrical lathe design) around both the face and the reverse side of a $1 bill are attractively intricate in design—it would not be easy to duplicate the pattern in the design. The word "one" and the arabic numeral "1" appear numerous times on both the face and the reverse of the $1 bill adding to the attractiveness of the design, but also acting as a safeguard. On our $1 bill the designation "one," in varying form, can be found in 25 instances. On the face, or obverse side, "one dollar" appears twice; there are 8 notations of "one" and five arabic numerals "1." On the reverse side of the $1 bill the notation "one dollar" appears once; "one" is noted 5 times and the arabic numeral "1" appears 4 times.

All U.S. paper currency is printed in black ink on the obverse and green ink on the reverse, regardless of denomination. The serial number of the bills appears twice, in blue ink, on the face of the bill; once, to the upper right of the centered portrait of George Washington; and once, to the lower left of the portrait. A series note, the date of issuance of the series, also appears in small lettering to the left of the portrait.

The items enumerated above, along with the designations, silver certificate, "This certifies that there is on deposit in the Treasury of the United States of America $1 in silver payable to the bearer on demand," and the signatures of Secretary of the Treasury and the Treasurer; all testify to the denomination of the currency and to the authority of the issuing body, but they do not have any particular historical significance.

On the other hand, there are some items with historical interest and meaning. Among these is the Great Seal of the Treasury. This seal is found in one form or another on every piece of paper money issued since the Demand Notes of 1861. Older than the Constitution of the United States, it has been affixed to official Treasury documents since 1782, although the exact date of adoption is not known.

Working as a committee, John Witherspoon—a New Jersey educator, Gouverneur Morris—Pennsylvania statesman and one of the signers of the Constitution; and Richard Henry Lee—Virginia statesman and great-grandfather of Gen. Robert E. Lee, supervised the design of the great seal of the Treasury. Some historians give full credit for the design to Gouverneur Morris, but the Treasury Department credits all three men with the creation of the seal.

The resultng design consists of a shield bearing the scales of justice; a key, symbolizing official authority; and 13 stars representing the original States. The seal is enclosed by a circle which bears the Latin legend—"Thesaur. Amer. Septent. Sigil.," an abbreviation of "Thesauri Americae Septentrionalis Sigillum"—"The Great Seal of the Treasury of North America." All silver certificates ($1, $5, and $10 denominations) carry the seal stamped in blue, immediately to the right of the appropriate portrait. U.S. $2 and $5 notes carry the seal in the same position, in red. The $100,000 gold certificate seal is stamped in yellow and the seal on the $5 to $10,000 Federal Reserve notes appears in green. On each denomination a different portrait appears, but the same Treasury seal—in the colors noted—is an integral part of every piece of paper currency.

Beginning with bills issued in 1935, $1 silver certificates have carried the obverse and reverse of the great seal of the United States. Unlike the great seal of the Treasury which appears on all paper money, the great seal of the United States is found only on $1 silver certificates.

Everyone is familiar with the American Eagle as a National emblem of the United States. Since ancient times, the eagle's form has been utilized in art and symbolism. Ancient Roman armies used the eagle as a standard, and early Christian art used the eagle to personify St. John, the evangelist. To this day, the eagle remains a symbol of war and triumphal trophies. The face of the great seal of the United States is built around the American Eagle.

History does not record the date or time when the eagle was first used as a symbol of our Republic, but it appeared on several versions of the great seal which were submitted to conform with the Founding Fathers' resolution of 1776—"That Dr. Franklin, Mr. J. Adams, and Mr. Jefferson, be a committee to bring in a device for a seal for the United States of America."

On June 19, 1782, William Barton, artist and heraldry expert of Philadelphia, presented the completed replica of the seal, having modified the artwork and description turned over to him by Charles Thomson, Secretary of Congress. The final version of the great seal of the United States as we know it today, was presented to Congress by Mr. Thomson on June 20, 1782, and accepted on that same day. Mr. Thomson had been designated to review and revise the entire collection of proposals submitted to the Congress for approval. Thus, these two men are credited with utilizing to the best advantage all of the various ideas submitted by the many minds and hands having a part in the creation of the great seal of the United States. The great seal was again ratified after the Constitution was adopted in 1789.

The reasons for the use of the symbols found on the seal set forth in the authors', Thomson and Barton, explanation of the design are particularly interesting. Mr. Barton noted that the 13 vertical stripes appearing on the eagle's shield (which are red and white on the full color seal) represent the 13 States supporting the blue chief "which unites the whole and represents Congress." In other words, it is the union of the Thirteen Original States under Congress. The eagle appears in what is termed as the "displayed" attitude; that is, with wings and feet spread. Mr. Barton explained that the displayed eagle reflected the fact that "the American States need no supporters but their own virtue, and the preservation of their Union through Congress."

The eagle grasps an olive branch in its right talon; and a bundle of 13 arrows in the left talon—denoting the power of peace and war. From the beak of the eagle a streamer flows which carries the Latin words, E Pluribus Unum, "Out of many, one." For

the crest, which is a basic part of any coat of arms, a circular field containing 13 stars appears above the head of the eagle. The description of this crest is graphically described in the law regarding the design of the seal. It reads thus:

"For the crest. Over the head of the eagle, which appears above the escutcheon, a glory, or a breaking through a cloud, proper, and surrounding 13 starts, forming a constellation, argent, on an azure field."

With regard to the reverse side of the seal the law reads as follows:

"Reverse. A pyramid unfinished. In the zenith, an eye in a triangle, surrounded with a glory proper. Over the eyes these words, 'Annuit Coeptis.' On the base of the pyramid the numerical letters MDCCLXXVI. And underneath the following motto, 'Novus Ordo Seclorum.'"

It was the thought of the authors, Thomson and Barton, that the unfinished pyramid represent strength and duration, and that the eye represent the eye of Providence. The Latin phrase Annuit Coeptis, translated means "He [God] has favored our undertaking." The phrase Novus Ordo Seclorum, means "A new order of the ages."

In the broadest sense, money is but a representation of wealth. The paper on which it is printed has virtually no intrinsic worth—its value comes from the fact that by common consent it can be exchanged for something of value, such as an automobile or food. By common consent and the solemn faith in the word of our Government the American $1 bill is a reliable medium of exchange, not only in the United States but throughout the world.

Further Economic Damage From Misguided Anti-inflation Measures Can Be Prevented

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 14, 1960

Mr. THOMPSON of New Jersey. Mr. Speaker, amendments to the Federal Reserve Act are necessary to prevent further economic damage from misguided anti-inflation measures. The present law requires the President to name the members of the Federal Reserve Board with "due regard to a fair representation of the financial, agricultural, industrial and commercial interest" as well as the geographical divisions of the country, but only Big Business interests have been appointed to the Board in recent years. My bill, H.R. 5732 would correct present inequities.

The extent to which the Federal Reserve Board and the Federal Reserve System have departed from their historic purposes and become engines to hurt the whole economy and to redistribute income in economically unsound and socially unjust ways is one of the most shocking and disturbing developments of recent years within the American economic scene.

I am pleased to have the support of the purposes of my bill, H.R. 5732, by such fine organizations as the National Farmers Union, and the National Rural Electric Cooperative Association, as well as the National Federation of Independent Business the 130,000 members of which overwhelmingly supported the measure in a recent nationwide poll, and the AFL–CIO.

The distinguished economist, Leon H. Keyserling, in supporting H.R. 5732, wrote me recently that—

In my opinion, the most basic of all remedies is not in the specific monetary legislation, because substantial discretion must be left to the Board and the System. The most fundamental remedy is to reestablish in fact, as well as in theory, the proposition that the Federal Reserve Board and System are publicly created instrumentalities and should be subject to an appropriate degree of true public control in the public interest. Your bill, H.R. 5732, is a very important step in this direction * * * While the enactment of your bill would perhaps not bring enough improvement so long as we have an administration whose cabinet members presumably share the wrongful attitudes toward monetary policies which are now in vogue, nonetheless, your bill would help to restore the basically democratic principle of public responsibility for the things which most affect the whole public.

The AFL–CIO adopted a detailed monetary policy at San Juan, Puerto Rico, on February 24, 1959, in which a number of basic reforms of the Federal Reserve System were called for. Most of these reforms are incorporated in my H.R. 5732. The AFL–CIO statement on monetary policy declares that—

Amendments to the Federal Reserve Act are necessary to prevent further economic damage from misguided anti-inflation measures. Fruitless attempts to stem inflation through the use of monetary policy have already helped cause two recessions in the last 6 years. Fear of inflation has blinded both the administration and the Federal Reserve Board to the Nation's greatest economic necessity—economic growth to promote maximum employment, production and purchasing power. Such growth can stop inflation. Misguided anti-inflation steps, such as tight money, do not halt inflation and do lead to recession.

The AFL–CIO has lashed the Eisenhower administration and the Federal Reserve Board for bringing about one of the tightest credit squeezes most Americans have ever seen and checking the growth of the Nation's economy.

Economic Trends and Outlook, monthly publication of the AFL–CIO Department of Research, pointed out that interest rates reached the highest levels in over a generation during 1959 and are expected to be even higher in early 1960.

"Much of the reason for this credit squeeze is a conscious effort to tighten the money supply—a wrongheaded use of monetary weapons by the Federal Reserve Board," the AFL–CIO said.

The AFL–CIO added that every time the economy starts to move forward rapidly, the Federal Reserve Board and the administration decide that inflation might start speeding and so put on tight-money brakes.

The AFL–CIO points out that in 1953–54 and 1957–58, recession followed money-tightening and that inflation or price increases occurred regardless of the Board's action.

I include here an article from the January 9, 1960 AFL–CIO News.

I include, also, the text of my bill, H.R. 5732.

[From the AFL–CIO News, Washington, D.C., Jan. 9, 1960]

FRB, ADMINISTRATION HIT ON TIGHT MONEY

The AFL–CIO has lashed the Eisenhower administration and the Federal Reserve Board for bringing about "one of the tightest credit squeezes most Americans have ever seen" and checking the growth of the Nation's economy.

Economic Trends and Outlook, monthly publication of the AFL–CIO Department of Research, pointed out that interest rates reached the highest levels in over a generation during 1959 and are expected to be even higher in early 1960.

"That means America's acute housing shortage will worsen and construction employment will be affected," the AFL–CIO said, quoting experts as seeing a 10 percent decline in housing starts this year.

"The consumer is paying more for new cars, refrigerators, etc., as interest rates mount * * *," the publication commented, adding:

"State and local governments are paying higher debt costs or putting off necessary projects. * * *

"Federal Government debt costs are higher than ever and interest rates continue to inflate the cost of the national debt. Interest costs for 1959–60 are estimated at over $8 billion, up about a billion dollars or about 11 percent in the 3 years since 1956–57."

The AFL–CIO noted that homebuilders have said interest charges on mortgages rose about 1 percent from 1958 to 1959, making annual mortgage payments an average of $110 higher.

"Much of the reason for this credit squeeze is a conscious effort to tighten the money supply—a wrongheaded use of monetary weapons by the Federal Reserve Board," the AFL–CIO said.

MOST EFFECTIVE

The publication observed that the money supply is not the only economic factor affecting the economy, but added that the FRB's power is the single most effective way to influence the money supply.

The board influences this area through interest rates it charges member banks for borrowing funds, through the ratio it requires of bank reserves to loans and through purchase and sale of Government securities. The money supply includes the coins and bills in circulation as well as the money in demand deposits, that is, in checking accounts in banks.

The AFL–CIO pointed out that the money supply as a percentage of the gross national product dropped steadily as the Nation reconverted from war to peace, to a level of about 35 percent in the early 1950's.

"As the Eisenhower administration began to make its presence felt, however, as the inflation-preachers scared America out of more and more growth, the money supply as a percent of gross national product, declined from about 34 percent in early 1955 to a level of 29 percent in the first two quarters of 1959," it added.

The reason, the AFL–CIO said, is that every time the economy starts to move forward rapidly, the Reserve Board and the administration decide that inflation might start speeding and so "put on tight-money brakes."

The AFL–CIO publication pointed out that in 1953–54 and 1957–58, recession followed money tightening and that inflation or price increases occurred regardless of the Board's action.

It referred to the view of William McChesney Martin, Chairman of the FRB

Board of Governors, before Congress last summer.

Martin said then that the Board should not support "an undue expansion of bank credit and money" in the face of "developing high-level prosperity and the potential threat of an inflationary boom."

For a nation emerging from the "staggering 1958 recession," the AFL–CIO said, a rapid increase in money and credit to create more jobs, homes, and a higher standard of living need not be undue.

CONCERN MISPLACED

Not only has the Board shown more concern over growth as "an engine of inflation" than for its beneficial effects—"it has been quite satisfied with unsatisfactory growth rates," the AFL–CIO charged.

The Nation's economic growth has been too slow in recent years, the AFL–CIO said, pointing out that even conservative estimates put growth needs at 5 percent annually simply to maintain living standards.

H.R. 5732

A bill to amend the Federal Reserve Act with respect to the number, term of office, and qualifications of members of the Board, to abolish the Open Market Committee and transfer its functions to the Board, and with respect to the qualifications of directors of Federal Reserve banks

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the eleventh paragraph of section 4 of the Federal Reserve Act (12 U.S.C., sec. 302, third sentence) is amended by inserting immediately before the period at the end thereof the following: "or in any business or professional occupation other than banking."

SEC. 2. (a) The first paragraph of section 10 of the Federal Reserve Act (12 U.S.C. 241) is amended to read as follows:

"SEC. 10. The Board of Governors of the Federal Reserve System (hereinafter referred to as the 'Board') shall be composed of sixteen members, twelve of whom shall be appointed by the President, by and with the advice and consent of the Senate, for terms of six years except as otherwise provided by law, and four of whom, the Secretaries of Labor, Commerce, and Agriculture, and the Administrator of the Small Business Administration, shall be ex officio. In selecting the appointive members of the Board, not more than one of whom shall be selected from any one Federal Reserve district, the President shall have due regard to a fair representation of the financial, agricultural, industrial, commercial, labor, small business, and consumer interests, and geographical divisions, of the country. The appointive members of the Board shall devote their entire time to the business of the Board and shall each receive an annual salary as provided by law, together with actual necessary traveling expenses."

(b) The second paragraph of section 10 of the Federal Reserve Act (12 U.S.C. 242) is amended (1) by striking out the second and third sentences and inserting in lieu thereof the following: "Except as otherwise provided by law, each member of the Board shall hold office for a term of six years from the expiration of the term of his predecessor, unless sooner removed for cause by the President. The President shall designate one of the members of the Board as Chairman and one as Vice Chairman, to serve as such for a term of four years.", and (2) by striking out the last sentence of such paragraph.

(c) The last sentence of the fourth paragraph of section 10 of the Federal Reserve Act (12 U.S.C. 244) is amended by striking out "six."

(d) The tenth paragraph of section 10 of the Federal Reserve Act (12 U.S.C. 247a) is amended to read as follows: "The Board of Governors of the Federal Reserve System shall keep a complete record of the action taken by the Board upon all questions of policy, the votes taken in connection with the determination of policies, and the reasons underlying the action of the Board in each instance. The Board shall include a copy of such record in its annual report to the Congress."

SEC. 3. The terms of office of the five members of the Board of Governors of the Federal Reserve System first appointed to the offices created by the amendments to the Federal Reserve Act made by this Act shall expire, as designated by the President at the time of nomination, one at the end of five years, two at the end of three years, and two at the end of one year, after the expiration of the term of office of the member whose term of office first expires after the date of enactment of this Act; and the successor to that member whose term first expires after such date shall be appointed for a term of five years. The terms of office of members of the Board in office on the date of enactment of this Act shall continue to be the terms for which they were appointed, and whenever a vacancy shall occur, other than by expiration of a term of office, among such members, the term of office of the member appointed to fill the vacancy shall be the unexpired term of his predecessor.

SEC. 4. (a) Subsection (a) of section 12A of the Federal Reserve Act (12 U.S.C. 263(a)) is hereby repealed.

(b) Subsection (b) of section 12A of the Federal Reserve Act (12 U.S.C. 263(b)) is amended (1) by striking out "(b)" at the beginning and inserting in lieu thereof "(a)", (2) by striking out "Committee" in the first sentence and inserting in lieu thereof "Board of Governors of the Federal Reserve System", and (3) by striking out "Committee" in the second sentence and inserting in lieu thereof "Board".

(c) Subsection (c) of section 12A of the Federal Reserve Act (12 U.S.C. 263(c)) is amended by striking out "(c)" at the beginning and inserting in lieu thereof "(b)".

SEC. 5. All personnel, property, records, and unexpended balances of appropriations of the Federal Open Market Committee are hereby transferred to the Board of Governors of the Federal Reserve System.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided,* That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

Address by Hon. John F. Kennedy

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, January 18, 1960

Mr. PROXMIRE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a great speech by the junior Senator from Massachusetts [Mr. KENNEDY]. This speech is highly significant because it sets forth the views of one of the leading candidates for the presidency on his conception of the kind of President the Nation and the times demand.

I also ask unanimous consent, Mr. President, that immediately following the Kennedy speech, there be printed in the RECORD a perceptive analysis of the significance of this speech by the chief of the New York Times Washington bureau, Mr. James Reston.

There being no objection, the articles were ordered to be printed in the Appendix of the RECORD, as follows:

TEXT OF SENATOR KENNEDY'S SPEECH

The modern presidential campaign covers every issue in and out of the platform from cranberries to creation. But the public is rarely alerted to a candidate's views about the central issue on which all the rest turn. That central issue—and the point of my comments this noon—is not the farm problem or defense or India. It is the presidency itself.

Of course a candidate's views on specific policies are important, but Theodore Roosevelt and William Howard Taft shared policy views with entirely different results in the White House. Of course it is important to elect a good man with good intentions, but Woodrow Wilson and Warren G. Harding were both good men of good intentions; so were Lincoln and Buchanan; but there is a Lincoln Room in the White House and no Buchanan Room.

The history of this Nation—its brightest and its bleakest pages—has been written largely in terms of the different views our Presidents have had of the Presidency itself. This history ought to tell us that the American people in 1960 have an imperative right to know what any man bidding for the Presidency thinks about the place he is bidding for, whether he is aware of and willing to use the powerful resources of that office; whether his model will be Taft or Roosevelt, Wilson or Harding.

Not since the days of Woodrow Wilson has any candidate spoken on the presidency itself before the votes have been irrevocably cast. Let us hope that the 1960 campaign, in addition to discussing the familiar issues where our positions too often blur, will also talk about the presidency itself, as an instrument for dealing with those issues, as an office with varying roles, powers, and limitations.

CRITICIZES EISENHOWER

During the past 8 years, we have seen one concept of the Presidency at work. Our needs and hopes have been eloquently stated—but the initiative and follow-through have too often been left to others. And too often his own objectives have been lost by the President's failure to override objections from within his own party, in the Congress or even in his Cabinet.

The American people in 1952 and 1956 may have preferred this detached, limited concept of the Presidency after 20 years of fast-moving, creative Presidential rule. Perhaps historians will regard this as necessarily one of those frequent periods of consolidation, a time to draw breath, to recoup our national energy. To quote the state of the Union message: "No Congress * * * on surveying the state of the Nation, has met with a more pleasing prospect than that which appears at the present time."

Unfortunately this is not Mr. Eisenhower's last message to the Congress, but Calvin Coolidge's. He followed to the White House Mr. Harding, whose sponsor declared very frankly that the times did not demand a first-rate President. If true, the times and the man met.

But the question is what do the times—and the people—demand for the next 4 years in the White House?

RULES OUT CASUAL BYSTANDER

They demand a vigorous proponent of the national interest—not a passive broker for conflicting private interests. They demand a man capable of acting as the commander in chief of the Grand Alliance, not merely a bookkeeper who feels that his work is done when the numbers on the balance sheet come out even. They demand that he be the head of a responsible party, not rise so far above politics as to be invisible—a man who will formulate and fight for legislative policies, not be a casual bystander to the legislative process.

Today a restricted concept of the Presidency is not enough. For beneath today's surface gloss of peace and prosperity are increasingly dangerous, unsolved, long-postponed problems—problems that will inevitably explode to the surface during the next 4 years of the next administration—the growing missile gap, the rise of Communist China, the despair of the underdeveloped nations, the explosive situations in Berlin and in the Formosa Straits, the deterioration of NATO, the lack of an arms control agreement, and all the domestic problems of our farms, cities, and schools.

This administration has not faced up to these and other problems. Much has been said—but I am reminded of the old Chinese proverb: "There is a great deal of noise on the stairs but nobody comes into the room."

The President's state of the Union message reminded me of the exhortation from "King Lear" but goes: "I will do such things—what they are I know not * * * but they shall be the wonders of the earth."

In the decade that lies ahead—in the challenging revolutionary sixties—the American Presidency will demand more than ringing manifestoes issued from the rear of the battle. It will demand that the President place himself in the very thick of the fight, that he care passionately about the fate of the people he leads, that he be willing to serve them at the risk of incurring their momentary displeasure.

AS CHIEF EXECUTIVE

Whatever the political affiliation of our next President, whatever his views may be on all the issues and problems that rush in upon us, he must above all be the Chief Executive in every sense of the word. He must be prepared to exercise the fullest powers of his office—all that are specified and some that are not. He must master complex problems as well as receive one-page memorandums. He must originate action as well as study groups. He must reopen the channels of communication between the world of thought and the seat of power.

Ulysses Grant considered the President "a purely administrative officer." If he administered the Government departments efficiently, delegated his functions smoothly, and performed his ceremonies of state with decorum and grace, no more was to be expected of him. But that is not the place the Presidency was meant to have in American life. The President is alone, at the top—the loneliest job there is, as Harry Truman has said.

If there is destructive dissension among the services, he alone can step in and straighten it out—instead of waiting for unanimity. If administrative agencies are not carrying out their mandate—if a brushfire threatens some part of the globe—he alone can act, without waiting for the Congress. If his farm program fails, he alone deserves the blame, not his Secretary of Agriculture.

"The President is at liberty, both in law and conscience, to be as big a man as he can." So wrote Prof. Woodrow Wilson. But President Woodrow Wilson discovered that to be a big man in the White House inevitably brings cries of dictatorship.

So did Lincoln and Jackson and the two Roosevelts. And so may the next occupant of that office, if he is the man the times demand. But how much better it would be, in the turbulent sixties, to have a Roosevelt or a Wilson than to have another James Buchanan, cringing in the White House, afraid to move.

Nor can we afford a Chief Executive who is praised primarily for what he did not do, the disasters he prevented, the bills he vetoed—a President wishing his subordinates would produce more missiles or build more schools. We will need instead what the Constitution envisioned: a Chief Executive who is the vital center of action in our whole scheme of Government.

AS LEGISLATIVE LEADER

This includes the legislative process as well. The President cannot afford—for the sake of the office as well as the Nation—to be another Warren G. Harding, described by one backer as a man who "would, when elected, sign whatever bill the Senate sent him—and not send bills for the Senate to pass." Rather he must know when to lead the Congress, when to consult it and when he should act alone.

Having served 14 years in the legislative branch, I would not look with favor upon its domination by the Executive. Under our government of "power as the rival of power,"

to use Hamilton's phrase, Congress must not surrender its responsibilities. But neither should it dominate. However large its share in the formulation of domestic programs, it is the President alone who must make the major decisions of our foreign policy.

That is what the Constitution wisely commands. And, even domestically, the President must initiate policies and devise laws to meet the needs of the Nation. And he must be prepared to use all the resources of his office to insure the enactment of that legislation—even when conflict is the result.

By the end of his term Theodore Roosevelt was not popular in the Congress—particularly when he criticized an amendment to the Treasury appropriation which forbade the use of Secret Service men to investigate Congressmen.

And the feeling was mutual, Roosevelt saying: "I do not much admire the Senate, because it is such a helpless body when efficient work is to be done."

QUOTES WILSON ON SENATE

And Woodrow Wilson was even more bitter after his frustrating quarrels. Asked if he might run for the Senate in 1920, he replied: "Outside of the United States, the Senate does not amount to a damn. And inside the United States the Senate is mostly despised. They haven't had a thought down there is 50 years."

But, however bitter their farewells, the facts of the matter are that Roosevelt and Wilson did get things done—not only through their Executive powers but through the Congress as well. Calvin Coolidge, on the other hand, departed from Washington with cheers of Congress still ringing in his ears. But when his World Court bill was under fire on Capitol Hill he sent no messages, gave no encouragement to the bill's leaders, and paid little or no attention to the whole proceeding—and the cause of world justice was set back.

To be sure, Coolidge had held the usual White House breakfasts with congressional leaders—but they were aimed, as he himself said, at "good fellowship," not a discussion of "public business." And at his press conferences, according to press historians, where he preferred to talk about the local flower show and its exhibits, reporters who finally extracted from him a single sentence—"I'm against that bill"—would rush to file tongue-in-cheek dispatches, proclaiming that: "President Coolidge, in a fighting mood, today served notice on Congress that he intended to combat, with all the resources at his command, the pending bill * * *"

But in the coming years we will need a real fighting mood in the White House—a man who will not retreat in the face of pressure from his congressional leaders—who will not let down those supporting his views on the floor. Divided Government over the past 6 years has only been further confused by this lack of legislative leadership. To restore it next year will help restore purpose to both the Presidency and the Congress.

AS PARTY LEADER

The facts of the matter are that legislative leadership is not possible without party leadership, in the most political sense—and Mr. Eisenhower prefers to stay above politics (although a weekly news magazine last fall reported the startling news, and I quote, that "President Eisenhower is emerging as a major political figure"). When asked, early in his first term, how he liked the "game of politics," he replied with a frown that his questioner was using a derogatory phrase. "Being President," he said, "is a very great experience * * * but the word 'politics' * * * I have no great liking for that."

But no President, it seems to me, can escape politics. He has not only been chosen by the Nation—he has been chosen by his party. And if he insists that he is "President of all the people" and should, therefore, offend none of them—if he blurs the issues and differences between the parties—if he neglects the party machinery and avoids his party's leadership—then he has not only weakened the political party as an instrument of the democratic process—he has dealt a blow to the democratic process itself.

I prefer the example of Abe Lincoln, who loved politics with the passion of a born practitioner. For example, he waited up all night in 1863 to get the crucial returns on the Ohio governorship. When the Unionist candidate was elected, Lincoln wired: "Glory God in the highest. Ohio has saved the Nation."

AS A MORAL LEADER

But the White House is not only the center of political leadership. It must be the center of moral leadership—a "bully pulpit," as Theodore Roosevelt described it. For only the President represents the national interest. And upon him alone converge all the needs and aspirations of all parts of the country, all departments of the Government, all nations of the world.

It is not enough merely to represent prevailing sentiment—to follow McKinley's practice, as described by Joe Cannon, of "keeping his ear so close to the ground he got it full of grasshoppers." We will need in the sixties a President who is willing and able to summon his national constituency to its finest hour—to alert the people to our dangers and our opportunities—to demand of them the sacrifices that will be necessary. Despite the increasing evidence of a lost national purpose and a soft national will, F.D.R.'s words in his first inaugural still ring true: "In every dark hour of our national life, a leadership of frankness and vigor has met with that understanding and support of the people themselves which is essential to victory."

Roosevelt fulfilled the role of moral leadership. So did Wilson and Lincoln, Truman and Jackson and Teddy Roosevelt. They led the people as well as the Government—they fought for great ideals as well as bills. And the time has come to demand that kind of leadership again.

And so, as this vital campaign begins, let us discuss the issues the next President will face—but let us also discuss the powers and tools with which we must face them.

For we must endow that office with extraordinary strength and vision. We must act in the image of Abraham Lincoln summoning his wartime Cabinet to a meeting on the Emancipation Proclamation. That Cabinet has been carefully chosen to please and reflect many elements in the country. But "I have gathered you together," Lincoln said, "to hear what I have written down. I do not wish your advice about the main matter—that I have determined for myself."

And later, when he went to sign after several hours of exhausting handshaking that had left his arm weak, he said to those present: "If my name goes down in history, it will be for this act. My whole soul is in it. If my hand trembles when I sign this proclamation, all who examine the document hereafter will say: 'He hesitated.'"

But Lincoln's hand did not tremble. He did not hesitate. He did not equivocate. For he was the President of the United States.

It is in this spirit that we must go forth in the coming months and years.

SENATOR'S DISCUSSION OF PRESIDENCY OPENS A PRIVATE DEBATE TO THE PUBLIC

(By James Reston)

WASHINGTON, January 14.—There are really two quite different presidential debates going on in this country: a private debate and a public debate.

The public debate has dealt primarily with secondary issues. It has dealt with the past. It has centered on personalities. It has discussed Vice President NIXON's record in the forties. It has centered on Adlai E. Stevenson's two defeats, Senator John F. Kennedy's religion, Senator Lyndon B. Johnson's Texas heritage, President Eisenhower's popularity, Governor Rockefeller's wealth, and a variety of technicalities on the tactics and strategy of how to win.

The private debate has been much more limited but much more serious. It has looked to the future. It has inquired into the qualities necessary in a President of the sixties. It has dealt a great deal on the difference between what the public thinks is true about the present and what is actually true.

Fortunately, Senator KENNEDY made a genuine attempt today to bring these two debates together. In his performance at the National Press Club this noon, he made the first really serious political speech of the formal campaign.

For he dealt with the primary issue. He dealt with the future. He analyzed the Presidency as it is now being interpreted by President Eisenhower, and how he believes it must be interpreted in the future.

SCORNS SURFACE GLOSS

This was no attempt to ride the current popular waves of illusion. He was highly critical of the President in the full knowledge that the President is at the height of his personal popularity. He scorned today's surface gloss of peace and prosperity and insisted on emphasizing the increasingly dangerous, unsolved and long-postponed problems of the missile gap, the rise of Communist China, the despair of the underdeveloped nations, the explosive situations in Berlin and the Formosa Straits, the deterioration of NATO, the lack of arms control, and all the domestic problems of our farms, cities, and schools.

Honest men and women will differ and differ violently about the Senator's characterization of the President as a man who does not follow through on his own goals, as a bookkeeper who feels that his work is done when the numbers on the balance sheet come out even.

In the present mood of wishful thinking in the country, the Senator has taken a chance. But right or wrong, he has at least started to discuss serious issues in a major arena where they cannot be ignored or brushed off.

The President's news conference yesterday illustrates what the Senator is talking about. In that conference, the President made these statements:

On Vice President NIXON's intervention to settle the steel strike: "Any idea that there was threat or pressure brought to bear upon the companies is silly."

On the assertion of Sir Anthony Eden, former British Prime Minister, that he had stopped a U.S. plan to intervene in the Indochina war: "I do know this: that there was never any plan developed to be put into execution in that particular instance.

On the charges that the defenses of the United States are inadequate: "I want to tell you this: I've spent my life in this, and I know more about it than almost anybody, I think, that is in this country. * * * I believe that the matter of defense has been handled well and efficiently * * *."

CONVINCING TO MANY

Now, these statements dominated the news today. They were widely published, and no doubt they were convincing to most people who read them.

Yet it is a fact that there are a great many well-informed people in the Capital today who still believe that pressure was ap-

plied to the steel companies to settle, who know that there was a National Security Council debate, provoked by Adm. Arthur W. Radford's proposal to intervene with air power in the delta of Indochina in 1954, and who are still dissatisfied with the President's personal defense of the Nation's arms program.

For months the President's popularity has smothered the debate on defense. He has not satisfied many people even in his own administration by assertions of greater personal knowledge of modern defense requirements.

In short, the President has defeated his critics but has not convinced them. They have continued the private debate, but have been increasingly frustrated in the belief that the President was telling the public what it wanted to hear.

What Senator KENNEDY is at least attempting to do is to force these issues into the open. He is saying quite bluntly that the way to begin a presidential campaign is with a definition of what the Presidency should be in the coming years. And he is saying frankly that if the people want the kind of leadership President Eisenhower has given them, they better not choose the Senator from Massachusetts because he does not think this is what the country needs.

Maybe the people will take him up on this. That remains to be seen. But anyway he is bringing the private debate into the public domain, and that at least gives people a chance to make up their own minds.

"The Immortal Names That Were Not Born To Die" American Journalism Has Produced

EXTENSION OF REMARKS
OF
HON. ROLAND V. LIBONATI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. LIBONATI. Mr. Speaker, many great men were learned leaders in the publishing field of American journalism but none can surpass in greatness that of the late Col. Robert R. McCormick, publisher of the Chicago Tribune, as a true patroit.

He was positive in his understanding of the term "true Americanism" and with the ease and familiarity of a college history professor expressed himself in all of its facets. He had a discerning brilliancy of mind, touching upon the leaders of men who gave birth to the Republic; of the others who fought through the years for its continued existence. He sought to preserve its free institutions and the constitutional rights and privileges of its citizens. He was a man of worth and genius. Even in death he was faithful in his loyalties and astute in his knowledge of the training needed by youthful minds, to carry on the traditions of their patriotic inheritance. And he did something about it as the following article indicates—God bless his memory:

HISTORY ON TOUR

The Illinois Historical Society is going to have a traveling museum, called a historymobile. It will be equipped with a variety of showcases in which documents from public and private collections and other materials of historical interest can be put on display. The truck will tour the State under the direction of a competent instructor who can answer the questions of the many thousands of children and adults who will be attracted to the showing.

Of course, the exhibits will be changed from time to time. The first collection will be concerned largely with the Declaration of Independence and the Constitution with its Bill of Rights because these documents were particularly dear to the late Col. Robert R. McCormick, editor and publisher of the Tribune. The historymobile is being paid for with funds from the charitable trust established under the colonel's will.

If space in the traveling museum permits, we hope that on this first tour documents bearing on the Northwest ordinance will be included, for this, too, was a subject of lifelong study by Colonel McCormick and the influence of the ordinance on the development of Ohio, Indiana, Wisconsin, Michigan, and Minnesota as well as Illinois can hardly be exaggerated.

If the historymobile proves to be anything like the success which the historical society foresees, it should serve a variety of useful purposes. Among other things, it should stimulate interest in the history of our country and our State and it should acquaint the people of Illinois, and especially our children, with the richness of their inheritance as citizens. It is hard to imagine any use of the money left by the colonel that would have been more gratifying to him than this one.

Remarks of Hon. Walter Ely at Induction of Judge Joe J. Fisher as U.S. District Judge

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, January 18, 1960

Mr. JOHNSON of Texas. Mr. President, in the interval that the Congress was in adjournment, a distinguished and able member of the Texas bar, the Honorable Joe J. Fisher of Jasper, took office as U.S. district judge of the Beaumont division, eastern district of Texas.

I was privileged to attend the impressive ceremony.

Judge Fisher succeeded a great jurist, the late and beloved Lamar Cecil.

The Honorable Walter Ely of Los Angles, a former Texan who is now an eminent member of the California bar, spoke at the induction of Judge Fisher.

The remarks by this learned and respected member of the legal profession brought enlightenment and inspiration to his listeners.

In recognition of this memorable event in the career of an esteemed member of the bar, Judge Joe J. Fisher, I ask unanimous consent that the text of the remarks by the Honorable Walter Ely be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REMARKS OF THE HONORABLE WALTER ELY, OF LOS ANGELES, CALIF., UPON INDUCTION OF THE HONORABLE JOE J. FISHER, OF JASPER, AS U.S. DISTRICT JUDGE, BEAUMONT DIVISION, EASTERN DISTRICT OF TEXAS, OCTOBER 23, 1959, BEAUMONT, TEX.

May it please the court, Senator JOHNSON, Senator YARBOROUGH, judges all, my fellow lawyers, ladies and gentlemen, this is a happy day for me. From nearly 2,000 miles I have come, as you must know, at the request of my dearest friend, to participate with you in this occasion, a most important one to every citizen of our great land. I thank you for the kindness of your individual welcomes.

Every American is, or ought to be, interested in the quality of his judges, and we ask, "What qualifications need a judge possess?"

In May of this year, writing to the publishers of Look magazine on behalf of my own great bar association, I had the opportunity to say, in part:

"Answering your inquiries in the order put, we say, first, there should be no valid basis of disagreement as to the considerations which should be of paramount importance in the selection of a judge. Integrity is of the first importance, followed by judicial temperament, commonsense, legal ability, industry, maturity, and broad experience in the affairs of mankind."

I speak to you only as a plain man, but as the one who, without question, knows Joe Fisher better than any other man in all the world.

Thirty years and a month ago we entered our great State university—he from east Texas, I from west. Immediately there came about a friendship which has not only endured through the years, but which has grown to an affection almost fraternal.

I see here my friend's mother, the first enobling influence in his life. I remember how she used to cook for us when I enjoyed the warm hospitality of the family home, located in the peaceful piney woods country near San Augustine. I remember the cleanliness of her home, her quiet dignity, and the gentle Christian sweetness of her ways.

I remember Joe's dad, tall and strong and stalwart, always patient, always kindly, always tolerant. His was not the glossy facade of the tutored culture. His mind was keen and highly self-trained. He was an avid patriot and ever maintained an intense, accurate interest in national affairs. Of him it could well be said, "If it were a sin to covet honor, then there was the most offending soul alive." He would have been proud if he could have survived to this hour, for his great ambition for his son was never for material things, but rather for dedicated and honorable service to his fellow man.

There sits my friend's wife, the gracious Kathleen, a woman with a nobility so deep that it cannot be sounded. It seems such a little while ago that I handed him the ring that he placed upon her finger. I thank her for the stability, the encouragement, the gentility, and the faithful devotion with which she has enriched his life and which have contributed in immeasurable degree to his present greatness.

There are their five children, respectful and respected, the very existence of whom and my friend's adoration of whom enhance his affection for his country and his interest in the preservation of its principles, its ideals, its institutions, and its traditions.

Our new servant comes from a beautiful small community, and from the viewpoint of the outsider, this is good. I am an officer of the bar association in a great metropolitan community of 5 million people, and when, from time to time, a man from a remote area is elevated to high office, we pause and take inventory. And there comes to us a

sense of exhilaration to see again tangible evidence that in our country every boy from every rural school has equality of opportunity, and that whether he originate from Denison, or Johnson City, or Chandler, or San Augustine, Tex., he will have his chance to reach beyond the heights. Opportunity in America knows no territorial limits, and that it shall always be so, is the prayer of all of us.

I remember when my friend and I were college roommates and enjoyed from time to time the company of our fraternity brothers, the able, irrepressible Joe Tonahill, and the even then dignified, brilliant, now distinguished Supreme Court Judge Ruel Walker. I cannot honestly say that as we exchanged our dreams, our aspirations, and our ambitions in those days, we dared to hope that one of us might attain the distinction which is soon to be conferred. If we talked of Federal district judges at all in those days of depression, it was perhaps only to wonder how one of them could possibly utilize even a major part of his then salary of $10,000 per year.

Always maintaining close contact, I have watched the growth of my friend to his now great stature. Having seen him sprout his wings, I saw him trim them for level and then for ever-soaring flight. I saw him as the diligent county attorney at San Augustine. I saw him as the hard-working district attorney of the first judicial district, and finally as State district judge, elected by his neighbors. I saw him as the president of his bar association. I watched him become the careful student of the Bible. I saw him appointed to numerous State posts of high distinction, and I saw him come from a small town to become, amazingly, an international director of a great civic service organization. I have hiked with him through the mountains of Colorado. I have swum and fished with him in the seas off several shores. I have hunted with him in the snow and spruce clad hills of Alaska and lain with him in the Arctic night and reverently watched the awesome display of the northern lights. With our sons, we have canoed down raging glacial rivers of the northland. I have seen him as the considerate husband and the devoted father. As I say, as a man, I know him better than anybody else in all the world, and as an officer of this court, I represent to you without reservation or qualification that America will be proud of its new judge.

His personal courage is magnificent. His sense of duty is exemplary. He reveres the law and all it stands for, but above all, his unique honesty and integrity is that which sets him apart from too many men.

We do not fear the brilliant judge, but we do fear the judge who is not brilliant yet fancies himself to be so. Joe would make no pretense to brilliance and will ever receive the assistance of counsel with courtesy and open-mindedness. He is wise and warm and gentle and tolerant, has been strictly tested in the realm of human experience and has been found to be not wanting. Yes, he will be loved and respected as a Federal judge. Upon that, I would stake my life.

I suspect that in the years ahead there will be great decisions to challenge the courage of my friend in this judicial district. I confidently expect him to meet these challenges with deliberation, with wisdom, and above all, with respect for the Nation's law. There is nothing more tragic than the prostitution of an ideal, for one to whom there has been given a sacred trust to permit himself to become inhibited, fettered, or contaminated by prejudices or predilections, or even by friendships, or by the tugs and stresses of society, inchoate but inexorable. There will be no prostitution of justice in Joe Fisher's courtroom. He will not tolerate the corruption or adulteration of the purest of all the priceless virtues of our heritage.

We confer life tenure on our Federal judges. There is no room for inhibitions or nepotism here. There is no room for shackles or for contamination. And speaking of life tenure, I predict that if my friend fulfills the promise of this day, that if he brings into application to the duties he is about to assume, his industry, his warmth, his tolerance, his humanity, his integrity, his respect for law, and his personal courage, the honor we do him now will be as nothing compared to that which will usher him to his eternal peace.

This brings to mind my personal desire to pay my respects to the memory of another great judge who ably performed his duties in this room where we are now assembled. Lamar Cecil was my close personal friend, and I shall never forget the pleasant and inspirational hours which we spent together at meetings of the American College of Trial Lawyers throughout the land. In paying brief tribute to the memory of that great man, I do not intend to inject a note of sadness into this generally happy ceremony. Lamar would have been the last to have wanted it so. It is a significant mark of the grandness of our land that when there passes a distinguished public servant who, for the moment, seems irreplaceable, somehow from out the crucible of this democracy there comes another who either has, or inspired by conscience and traditions of duty, attains or surpasses the stature of his predecessor.

Today, the United States of America acquires a new judicial servant for its people. None of these 180 million human beings is beyond the reach of his judgment, a fact which causes us to feel the awful nature of the responsibility he is about to assume. At firsthand, I have seen efforts at crude justice throughout the world: simple tribal justice in the uncivilized depths of Africa, the execution of summary judgment along the banks of the Nile, in Pakistan, and the Middle East, in India, Thailand, the States of the Malayan Peninsula, and around the world. From my travels, I have returned with a rebirth of the conviction that the American system of justice is the most wonderful work ever evolved by the brain and purpose and ingenuity of man. In all ages, justice has been the ultimate aim and purpose of honorable men. Its attainment and preservation by freemen can be their only lasting triumph. It has been written that no nation can endure and prosper into and through whose life is not found the golden thread of equal, exact, and universal justice.

When men fight for freedom, they fight for justice: and people compelled to defend their countries against attack struggle most relentlessly for those lands wherein there are found impartiality and humanity in the administration of justice.

In the exigencies of war, freedom and security may temporarily depend upon the strength of armed might, but in the end, basic freedom rests upon goodness and humanity of government.

Everything that we have, everything that we hope to obtain, everything that we are, and everything that we hope to be, depends upon the integrity of man and his integrity in the administration of the national law.

May it please the court: I present for acceptance into your honored fraternity a creature of truly consummate charm and wisdom and character, regularly appointed by the President of the United States of America and duly confirmed by the Senate, as U.S. district judge for the eastern district of Texas, the Honorable Joe J. Fisher.

Mrs. Rose Bunch

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. GEORGE P. MILLER. Mr. Speaker, Anita Day Hubbard, one of the feature writers of the San Francisco Examiner, always does a great job; but she outdid herself in a story on Rose Bunch that appeared in the Examiner on Sunday, January 3, 1960.

Every active American Legionnaire in San Francisco since World War I knows and loves Rose Bunch for the work she does, not only on their behalf but out of the goodness of a wonderful heart.

It has been my misfortune not to have seen her for many years but I know that she is as stanch today in her service to her fellow men as she was when I did know and see her regularly.

Rose Bunch was a personal friend of Frank Havener who served in Congress for a number of years.

I am very happy to put Anita Day Hubbard's piece in the RECORD to preserve for posterity her estimation of a grand lady.

The article follows:

MATURE LIVING

(By Anita Day Hubbard)

Mrs. Rose Bunch is, officially, community services chairman of the 7th District American Legion Auxiliary.

Unofficially, she is a sort of den mother to all the oldtime newspaper people and most of the younger ones in the Fred Bunch Post of the Legion, named for her late husband.

In her official job there is plenty to keep her busy.

She has spread out the jurisdiction to cover just about any needy or problem-harassed individual, deserving or undeserving, that she hears about.

Being on a completely amateur and volunteer basis, she can cut across red tape and protocol and professional disciplines without let or hindrance, and does, to help all comers. She knows all the ropes and because the whole town knows her great heart and her ready wit, and her innocent disarming wisdom, she often does the "impossible" and thinks nothing of it.

In straightening out difficult patterns of twisted lives, she sweeps cynics and skeptics to work along with her, often to their startled surprise.

Presently she is organizing, among a host of other things, a senior folk-dancing group for the St. Francis of Assisi Church parish. As usual with her projects it is going swimmingly.

In the meantime she is keeping track of a host of child welfare cases, herding irresponsible fathers back into the home corral, rounding up jobs, looking after aged shutins, and never believing or admitting for an instant that she is doing anything unusual.

"I'm only 74," she says, "and much too young to slow down yet. Maybe when I get to be 80 or so I'll have time to think about it."

BORN IN ENGLAND

Rose was born in Liverpool, England, of an Irish father and English mother, on March 17, 1886.

By the time she was 4, they had brought her to Boston.

At 17, she was teaching Sunday school at St. Philip's Church, in the Roxbury district there. The church needed new stations of the cross, and the parish put on an amateur show to raise funds.

Rose danced a buck and wing, and a soft shoe number. The show ran a successful 3 nights, and the then famous vaudeville team of Ward and Vokes came, with their wives, to all three performances.

They consulted Father O'Donnell, about the shapely young dancer and he decided it was a good chance for the girl's future, and Rose was in show business.

The first theater she played in was the Columbia in Boston. She had never been in a real theater before in her life.

For four seasons they toured the east coast, including New York. There she met young San Francisco born Fred Bunch, of the New York American. Fred had two offers, one to go to San Francisco with Charles Stanton, new editor of the Examiner, and the other in Boston. Fred thought she'd love the good gray city, but she wanted to make sure. So she signed up for 40 weeks of 1-night stands in an act called "Cupid at Vassar," complete with daisy chain and chorus "co-eds." It was 1907, and San Francisco was still a mess of ruins after the big fire. The American theater was the only showhouse in town.

On her birthday, St. Patrick's Day, she went to Mass at old St. Patrick's Church on Mission Street, where there was the altar, but no walls nor roof, only dusty piles of fallen bricks.

By then she had fallen in love with the town. She already felt that way about Fred Bunch. They were married on September 10, 1910, and went to honeymooning in the snug little flat at 1019a Vallejo Street, where Rose still lives. "Same house, same landlady," she says, "and we still speak."

Fred went off to World War I, was badly gassed in France, stayed long enough to help organize the American Legion, and to write the original draft of the famous preamble to its constitution, still read at every meeting.

Back home, he only survived until 1921.

GIFT SHOP

After a short, but successful venture in a tearoom in Coquille, Oreg., Rose came back to the city, where she found a charming setting for a gift shop and tearoom up 44 steps in a studio building on Grant Avenue in Chinatown. The steps didn't faze her friends and customers, but the depression did, and closed the shop.

She worked a while for the State employment department, finding jobs for the thousands of unemployed. Then she moved on to her real avocation, as counselor in the bureau of domestic relations in the district attorney's office, under Mat Brady. For 14 years, and in "Pat" now Governor, Brown's administration, she served valiantly until age retired her in 1951.

Except for not having a salary, she's been working at about the same pace, with about the same sort of people, ever since.

Every May 30, on Decoration Day, at midnight, she joins the Fred Bunch Post, and her fellow members of the auxiliary, to lay a wreath at Lotta's Fountain, at Third and Market Streets.

In the old days, just about every newspaper in town held forth within a stone's throw.

When the buglar sounds taps from the roof of the Examiner Building over the crowd, Rose Bunch can almost see the rollicking, fearless, brilliant crew of oldtime newspaper men and women who wrote and laughed and foregathered there, along with her beloved Fred.

Hon. Homer Thornberry as a Member of the House Rules Committee

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, January 18, 1960

Mr. JOHNSON of Texas. Mr. President, I have referred with great pride on many previous occasions to the qualities of leadership and experience so outstanding in Texas' congressional delegation.

Walter Hornady of the Dallas (Tex.) Morning News, an able, eminent, and respected member of the Washington press corps, has underlined those qualities anew in an article about the distinguished Representative from Texas' 10th District, the Honorable HOMER THORNBERRY, of Austin.

As evidence of the caliber and qualifications of Texas' congressional delegation, I ask unanimous consent that Mr. Hornaday's article, with the remarks of Don Scarbrough, the editor, as carried in the Williamson County (Tex.) Sun, be printed in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A TEXAN IN WASHINGTON—THORNBERRY WIELDS POWER AS RULES MEMBER

(NOTE FROM THE EDITOR: Not a publicity-seeking politician, Congressman HOMER THORNBERRY is, nonetheless, a very effective and respected one. The following article, written by Walter C. Hornady, of the Dallas Morning News, gives some insight into his influence, his work, background, and life.)

WASHINGTON.—When the more powerful Members of Congress from Texas are counted, a modest legislator from Austin shouldn't be overlooked.

HOMER THORNBERRY doesn't go around talking about the influence he wields.

He doesn't have to, for the importance of the position he holds as a member of the House Rules Committee is well known to his colleagues, if not to others, including most of his central Texas constituents.

The rules group serves as a traffic cop for the House of Representatives. Its members say what bills shall be cleared to the floor and under what procedure.

It's a small committee, having only 12 members. Eight belong to the party in control and four to the minority, which means at this time eight Democrats and four Republicans.

The members are carefully chosen and as vacancies occur Democrats assigned the group are screened by SAM RAYBURN, who has been either Speaker or minority leader since 1940. The GOP House leader, or Speaker, as the case may be, exercises about the same control over Republicans named to the committee.

Liberals frequently charge an unholy alliance exists between the southern conservatives on the committee and the Republicans.

THORNBERRY has alined with neither the conservative nor liberal bloc, but weighs each piece of legislation on its merits as it comes along. Even when he intends to be against a bill on the floor, if he believes an issue is involved the Nation has a right to have Congress consider, he will vote to clear it through rules.

HOWARD W. SMITH, Democrat, of Virginia, 76-year-old chairman of the Rules Committee, comes under heavy fire from the liberals for exercising dictatorial power, but THORNBERRY stoutly defends the veteran Virginian.

"Judge SMITH is a man of very firm convictions, but he never abuses his authority," THORNBERRY said.

The Austin Congressman served an apprenticeship on the Post Office and Civil Service and the Commerce Committees before being tapped for the rules group, where Texas traditionally is entitled a place.

He didn't like the assignment the first 2 years, because he had no opportunity to help frame legislation or to obtain a detailed knowledge of bills prepared by the legislating committees he had previously served on.

THORNBERRY now believes the advantages of being on the rules group outweigh the disadvantages.

In addition to the responsibility involved, a Rules Committee member obtains a good idea of every bill sent to the House floor through explanations, for and con, given by interested persons.

The average House Member has to more or less accept the recommendations of the committee that drafted and reported a particular bill, but THORNBERRY is able to size up all of them himself.

THORNBERRY first became interested in politics when he was a 14-year-old page in the Texas Legislature in 1923. He recalls that Representative WRIGHT PATMAN, of Texarkana, was a member of the Texas House at the time. So was W. D. McFarlane, who served for a time as Congressman from the Wichita Falls district. Another member was the late Sam Johnson, father of Senate Democratic Leader LYNDON B. JOHNSON.

The young man was a Travis County deputy sheriff in his spare time while attending the University of Texas. In his senior year in law school, he was elected to the Texas Legislature and reelected in 1938. He was named district attorney in 1940, was reelected in 1942 but resigned to enter the Navy as a reserve junior grade lieutenant.

While stationed at the Corpus Christi naval base, the young officer met Eloise Engle, also from Austin, a civilian secretary at the base. They were married in Austin in 1945.

THORNBERRY left the Navy in 1946 as a lieutenant commander and promptly got elected to the Austin City Council. In his second year on the council he was selected mayor pro tem. Tom Miller, the city's almost perpetual city official, was mayor then as now.

When LYNDON JOHNSON retired from Congress in 1948 to run for the Senate, THORNBERRY announced for the place and defeated half a dozen candidates for the Democratic nomination. He has been reelected every 2 years since then and hopes to stay in Congress as long as his district wants him.

THORNBERRY takes a deep interest in Gallaudet College, a federally supported school in Washington and the only senior college in the world for the deaf. He's on its board of directors and in 1954 was made an honorary doctor of law by the institution.

The Congressman's mother was deaf from infancy and unable to speak during her lifetime. She was educated in the Texas School for the Deaf at Austin and taught there for more than 20 years. THORNBERRY's father was also deaf, attending the Texas school and taught there until his death in 1918. Mrs. Thornberry died here in Washington in 1958 at the age of 85. A new building at Gallaudet

College was recently named the "Mary L. Thornberry Building" in her honor and her son's.

The Thornberrys live in a comfortable old house in northwest Washington. They have three children, Molly, 13, David, 11, and Kate 9. The Congressman goes to his district as soon as Congress adjourns each year and covers the 10 counties thoroughly. His big interest is developing the area's water resources.

The Pennsylvania Electric Co. in Cooperation with the Pittsburgh Section of the American Nuclear Society Sponsored Teachers' Day at Erie, Pa., October 3, 1959, and Altoona, Pa., October 10, 1959

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 13, 1960

Mr. VAN ZANDT. Mr. Speaker, for the purpose of orienting the science teachers of Pennsylvania's high schools in the field of peaceful uses of the atom, the Pennsylvania Electric Co., in cooperation with the Pittsburgh section of the American Nuclear Society conducted two interesting symposiums, one at Erie, Pa., October 3, 1959, and the other at Altoona, Pa., October 10, 1959.

Both of the symposiums were well attended and consumed the entire day. As a participant in these two symposiums it was my privilege to deliver the following address titled "Human Energy: A Necessity in the Atomic Age."

HUMAN ENERGY: A NECESSITY IN THE ATOMIC AGE

(By Representative JAMES E. VAN ZANDT, Member of Congress, 20th District of Pennsylvania, on the occasion of Nuclear Science Day sponsored by the Pittsburgh section of the American Nuclear Science Society, Altoona, Pa., Saturday, October 10)

When a Member of Congress speaks to a gathering of science teachers about atomic energy, it seems to me only fair that he should first describe the margin of his authority.

I cannot pose as an expert on the theory of atomic energy, but am simply a Member of your National Legislative Body who has enjoyed special advantages in serving on the Joint Committee on Atomic Energy.

The Joint Committee on Atomic Energy was established by the Atomic Energy Act of 1946, and has continued under subsequent legislation to make continuing studies of the activities of the Atomic Energy Commission and of problems relating to the development, use, and control of atomic energy.

Our committee is kept fully and currently informed with respect to the Commission's activities.

Legislation relating primarily to the Commission or to atomic energy matters is referred to the committee.

The membership is composed of nine Members of the Senate and nine Members of the House of Representatives.

The release of atomic energy presented to mankind perhaps the greatest challenge of all time.

Either we must rise to heights of international cooperation undreamed of in the past, or we shall see our civilization, and a great part of all humanity itself, wiped out in a new war in which the atomic bomb will be the chief, perhaps the only weapon; a war which, in horror, will be beyond imagination—more terrible than anything mankind has experienced in the past.

And conversely, if we can manage to live peaceably together, the energy the atom will give us will become a limitless source of power.

The cost will be slight in proportion to the usefulness.

The arrival of the atomic age made most of our past thinking about military and naval strategy obsolete.

Yet if we can only manage through the years to use atomic energy for constructive and not destructive purposes—what a vision of the future we can see.

The scientists who worked on the bomb devoted themselves strictly to that task.

It was the consensus among them that engines using atomic power were not more than 10 or 20 years away.

They were entirely correct.

I recall that following a meeting of the Joint Atomic Energy Committee held aboard the *Nautilus* on March 20, 1955, I predicted that nuclear-powered submarines soon would replace most surface warships other than carriers and cruisers, and that large surface craft such as carriers and cruisers would be powered by nuclear engines.

You explain to the young folks in your classrooms that the atomic energy of a pound of coal exceeds its energy, when it is burned, by more than a billion to one.

Someone has pointed out that the atoms in a dime would drive a train a thousand miles; a glass of water would send the *Queen Mary* half a dozen times across the ocean—and so on.

We cannot forget, ladies and gentlemen, that we must walk before we can run.

We cannot solve the stupendous new problems which confront the world unless we prove ourselves capable of solving the lesser, stubborn questions which were facing us before the first atomic bomb went off on that rainy July morning in New Mexico.

For long and weary years we have been devoted to defensive purposes.

We have been trying desperately, and much of the time against heavy odds, to keep alive human freedom and the dignity of the individual.

In the past decade the United States has taken enormous strides in technological development.

Whole new vistas have been opened as a result of these advances and consequently the demand for skilled talent in almost all fields of endeavor is unprecedented.

This has been particularly evident in the fields of science and engineering where shortages in some instances have reached the critical stage.

At a time when science and technology are the key both to military superiority and to economic strength, the popular consciousness of the need for men and women to man the laboratories, the drawing boards, and the production lines is essential and understandable.

These statements form the basic opinion of the Subcommittee on Research and Development of the Joint Committee on Atomic Energy.

As a member of that subcommittee, I have been vitally interested in the solution to our shortage of scientific and engineering manpower.

In April and May of 1956, the subcommittee conducted extensive hearings and subsequently has issued several reports.

It is important that we recognize our serious shortages are not entirely signs of failure.

There are indications of success.

A way of life has been created in which the demands made for superior skills in every field have become so tremendous that growth and expansion have become constant elements in our normal pattern of living.

A society has been created in which progress is not simply a matter of occasional spurts and short-term crises.

Rapid progress has become a normal part of our national life.

The skilled manpower to keep up with this steadily and rapidly advancing march of progress will be in demand for years to come.

I think it is important that we understand the basic principles which have guided Congress in the formulation of the legislation that has created and given authority to the Atomic Energy Commission, particularly in the light of peaceful uses of atomic energy.

The Atomic Energy Commission was established by the Atomic Energy Act to effectuate the declared policy of the United States that, subject at all times to the paramount objective of making the maximum contribution to the common defense and security, the development, use, and control of atomic energy shall be directed so as to promote world peace—improve the general welfare, increase the standard of living, and strengthen free competition in private enterprise.

The Atomic Energy Act provides for the following major programs relating to atomic energy:

1. A program of conducting, assisting, and fostering research and development in order to encourage maximum scientific and industrial progress;

2. A program for the dissemination of unclassified scientific and technical information and for the control, dissemination, and declassification of restricted data, subject to appropriate safeguards, so as to encourage scientific and industrial progress;

3. A program for Government control of the possession, use, and production of atomic energy and special nuclear material so directed as to make the maximum contribution to the common defense and security and the national welfare;

4. A program to encourage widespread participation in the development and utilization of atomic energy for peaceful purposes to the maximum extent consistent with the common defense and security and with the health and safety of the public;

5. A program of international cooperation to promote the common defense and security and to make available to cooperating nations the benefits of peaceful applications of atomic energy as widely as expanding technology and considerations of the common defense and security will permit; and

6. A program of administration which will be consistent with the foregoing policies and programs, with international arrangements, and with agreements for cooperation, which will enable the Congress to be currently informed so as to take further legislative action as may be appropriate.

The amendment of 1954 to the original act laid down the principles that have guided our Government's policies and actions in fostering development of a private atomic energy industry, and in furthering worldwide cooperation in peaceful uses of atomic energy.

The revision of the basic atomic energy law was sought for three reasons:

1. To permit the entry of private enterprise into the field of atomic power.

2. To make it possible to give the Nation's allies sufficient information to train troops in the use of atomic weapons.

3. To pave the way for the international atomic energy pool previously proposed by the President.

Under the amended law, private companies may apply to the U.S. Atomic Energy Commission for permission to construct atomic powerplants.

The Atomic Energy Commission has relied upon industry to exert its initiative in the atomic energy industry and, as the record shows, private companies have moved ahead in many aspects of the industry.

Moreover, industry at all times has supported the Commission through consultation and advice in planning actions and policies to encourage further participation by industry.

All the research programs of the Commission, except for those areas primarily of military importance, are conducted in support of the progress in the peaceful uses of atomic energy.

This includes:

(a) The broad underlying structure of research in biological and medical fields which contribute to safety and health.

(b) It includes the fundamental work in the fields of chemistry and physics—of metallurgy and materials—of controlled thermonuclear reactions.

(c) It includes research on fundamentals of reactor design, reactor materials and processes, and reactor safety, as well as in the specific fields of attaining economic power.

We are, in essence, engaged in a battle for brainpower.

The price of progress and prosperity continues to be an increasing effort to develop our intellectual resources to the maximum.

It is almost universally conceded that there is a critical shortage of technically trained manpower in this country.

But the nature of the crisis is not generally understood and the remedies frequently suggested tend to deal with the superficial and immediate problems rather than the more basic causes of the shortage.

In the interim report of the subcommittee on research and development on the shortage of scientific and engineering manpower, we came to the sharp conclusion that the fundamental problem is not that the United States lacks manpower in one limited, clearly separable area.

Modern defense is total.

It cannot be achieved in the ancient manner of putting up a few strong, scattered forts.

To the contrary, it demands strength throughout the entire fabric of national life.

And further, it requires the kind of cohesion and total national well-being that no military or peacefully competitive contest of the past has ever demanded.

The important fact is that the shortages of educated, skilled brainpower extend to all areas—from the drawing boards to distribution—from engineering to management—from the laboratory to the classroom.

There is an unprecedented demand for more skilled, educated brains.

The demand will increase for many years to come.

Therefore, the shortage will become more critical.

But it would be tragic if—as the committee was warned—the United States is stampeded into shortsighted action.

The committee was reminded of widespread forecasts made shortly after World War II, which predicted an oversupply of engineers and, at least by implication, encouraged high school guidance counselors to steer young people into other vocational channels.

These estimates were not inaccurate—at the particular time and based only on the immediate, short-range picture.

But our committee determined they were tragically wrong in terms of the future.

The point, therefore, is that the critical shortages of manpower should be considered a total shortage of trained individuals in every field, and that in our efforts to remedy short-term deficiencies we should be careful not to create imbalances which will threaten our overall strength in the long run.

With clarity of vision, the Founding Fathers realized that our form of government could not survive without education, and the infant Republic set its face toward a goal of free and universal education.

According to our present standards that goal has not been perfectly realized, but the principle is established and we have moved steadily forward toward its achievement.

The urgency of education becomes preeminent if human freedoms are to survive.

But education for freedom in the atomic age takes in much more territory than education for freedom in the horse-and-buggy age.

World War II had a tremendous influence upon education and educational methods.

Men had to learn well and to learn quickly.

The GI bill of rights opened the doors of higher educational institutions on a more common basis than ever before in our history.

Men who raised the flag on Iwo Jima or stormed the beaches of Normandy brought a grim determination to their studies.

The development of atomic energy affected education because of our realization that educational opportunities had to be broadened and educational methods had to be improved if we are to save our heritage of freedom.

Atomic energy is toil saving only for certain groups.

It may make it possible for the stoker to lay aside his shovel, but it will not permit the scientist to leave his laboratory, or the public servant to forget the cares of his office.

Most emphatically, it will not permit the schoolchild to discard his books.

The schoolboy and schoolgirl must learn geography and mathematics and economics and physics and chemistry and biology—and all the rest—to a degree of thoroughness never before approached.

Now I should like to bring to your attention the words of Vice Adm. Hyman G. Rickover of the Bureau of Ships and more specifically—Assistant Chief of the Bureau of Ships for Nuclear Propulsion.

Admiral Rickover was also head of the atomic powered submarine projects—the *Nautilus* and the *Seawolf*.

For the past 11 years his work has been in the field of nuclear power.

His concern has not only been with the problems of developing the new source of Energy—atomic energy—but he has recognized, and has expressed before our committee, his awareness of the larger problem—how to provide the trained men and women to maintain the momentum of our rapidly expanding technical civilization.

His approach has been realistic and I should like to quote the following remarks he made before our committee in 1956:

"The failure in education is not the fault of the educators alone.

"It is the fault of all of us in not recognizing the impact of the 20th century scientific revolution and taking the necessary measures in time."

Admiral Rickover said further: "First, we must see to it that every young man and woman who is qualified obtains a college education.

"Today less than half of those capable of acquiring a college degree enter college.

"Sixty percent of the best students graduating from high school do not go to college.

"This is a tremendous loss of talent amounting to 250,000 students each year.

"And nearly half of all those who do start college do not graduate."

In addition, Admiral Rickover stated that, "for every high school graduate who eventually earns a doctoral degree there are 25 others who have the intellectual ability to achieve that degree, but do not.

"We simply cannot afford a waste such as this."

Admiral Rickover has reminded us, and again I quote, "Unless we quickly remedy the present treatment of our teaching and scholarly resources we will inevitably have morally and intellectually incompetent teaching staffs."

He continued by saying, "the United States, if it is to succeed in its role of world leadership, must produce citizens who have the wisdom, the vision, and the knowledge to grapple successfully with world problems; citizens who can see critically through conventional values and who are able to subject to principle and to reason all claims to power.

"In the conditions of modern life the rule is absolute, the race which does not value trained intelligence is lost.

"It will matter little what other educational institutions possess if they neglect to recognize and to foster high ability wherever it is found."

My friends, we are continually led to the basic fact that there is no single or final solution to the shortage of skilled manpower and that the efforts of all—Government and private—will be required if we are to make progress.

The shortage of scientific and engineering manpower is only part of a larger national problem.

It involves the need for trained and competent people in all fields of endeavor.

Our main objective should be the development of all our intellectual resources.

No longer do we stand merely at the threshold of atomic power development.

Vague promise has now turned into reality the perplexing problems which accompany a complicated technique.

Scientific advances are coming so fast that it is difficult to predict the ultimate place of nuclear power.

All of man's freedoms have come into existence only as results of his conquest of the power beyond that in his own muscles.

In recent centuries the tempo of civilization can be linked directly to the amount of energy man has had available to him for carrying on his activities.

When coal gave us a large increase in available energy, we went forward through a rapidly expanding phase of civilization.

Now, as atomic energy becomes available, we are going forward with a resounding crescendo.

We must remember that even though a man has fine ideals of citizenship, is thoroughly socialized, always votes, and appreciates the need for learning to live together, if he is ignorant, he is a poor citizen.

If he has not learned much subject matter in his schooling, he will add little or nothing to our Nation's needs for trained manpower.

Therefore, we look to you, the science teachers, for much guidance.

You and I know that nature's laws and the inventions based upon them are not in themselves evil.

It is only the use which men make of these things that leads to constructive or destructive results.

In closing, I would leave with you a short quotation from "The Education of Henry Adams," which wisely asserts that "A teacher affects eternity; he can never tell where his influence stops."

Ladies and gentlemen, this is my salute to you, with the added hope that the years ahead will be marked by increased coopera-

tion between nations in the development and utilization of atomic energy for peaceful purposes.

Tribute to Milton Fleetwood

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES

Monday, January 18, 1960

Mr. TALMADGE. Mr. President, on December 18, 1959, Hon. Milton Fleetwood, editor and publisher of the Cartersville (Ga.) Tribune-News, and one of my State's most respected and beloved journalists, was honored at a testimonial dinner given by the Cartersville Chamber of Commerce. On that occasion he was installed into the "South's Hall of Fame for the Living," an honor paid to outstanding leaders of the South by the Dixie Business magazine, of Decatur, Ga. No Georgian is more deserving of this recognition than Milton Fleetwood; and I ask unanimous consent, Mr. President, that the text of remarks by Hon. Hubert F. Lee, for 30 years editor of the Dixie Business magazine, upon the occasion of the installation, be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

MILTON L. FLEETWOOD INSTALLED INTO THE SOUTH'S HALL OF FAME FOR THE LIVING

(By Col. Hubert F. Lee)

It is an honor and privilege to come back to Cartersville tonight to join in this fine tribute to one of the great men of our time, our mutual friend Milton Fleetwood.

It has been my privilege to have known Mr. Fleetwood for nearly 40 years or to have known of him during almost the years I have been in the newspaper field since 1921.

Milton Luther Fleetwood, president of the Tribune Publishing Co., of Cartersville, Ga., is a leader in the field of publishing and journalism in the South.

The Tribune-News, which he publishes, has won national recognition on several occasions and is considered one of the best weekly papers in America. In 1934, it was selected by John H. Casey, professor of journalism, University of Oklahoma, for a place on his all-American group, an honor which is accorded only 11 weekly newspapers each year. The University of Illinois has pronounced it one of the Nation's most representative newspapers and uses it as a model in the course of study in its school of journalism. In a national survey of weekly newspapers, the Tribune-News, over a period of 12 months, ranked third in paid advertising lineage, carrying more than 1½ million lines. The daily Tribune-News also is one of America's finest.

The success of Mr. Fleetwood is due primarily to worthy traits of character. His perseverance and determination, combined with hard work and a progressive outlook, have enabled him to surmount many obstacles standing in between him and a realization of his ambitions. At the same time, he evidences the highest respect and consideration for the rights of his fellow citizens, whose confidence and esteem he enjoys. He has been honored with a number of important offices—local, State, and national—and has been a strong influence in Democratic State and National politics, without ever seeking public office. In addition, he has found time to take a prominent part in the religious, civic, and fraternal life of his State and community.

The man we honor tonight is truly a modern day Horatio Alger. Success has come to him in great measure but he has used this success to help others. Milton Fleetwood is a fine example and inspiration to every one of us and particularly to the new generation today. I have looked up to Milton Fleetwood for many years as a fine example of a newspaperman and civic leader. Some people think that a leader need hail from a metropolitan center, but I tell you that it is the heart, spirit and willingness to serve others and that some of the truly great men I have known have been known only within their own small communities. That is one of the fine things about the "flowers for the living." It gives friends an opportunity to turn the searchlight on the good deeds of a living man and to honor themselves by honoring him.

Milton Fleetwood, as you know, was born in Asheville, N.C., September 11, 1892. His father, John Webb Fleetwood, was a native of Perquimans County, N.C., and devoted his life to teaching and farming. His mother, before her marriage, was Lenna Leonora Brown, of Thomasville, Ga. The paternal grandparents were John William Fleetwood, a well-known physician of Perquimans County, N.C., and Lovie (Trafton) Fleetwood, a native of Camden County, N.C. The maternal grandparents, Allen and Mary Anne (Duggar) Brown, were among the pioneer settlers of Thomas County, Ga., having moved there from Liverty County, Ga., more than a century ago.

As a youth, Mr. Fleetwood attended the public schools of Thomas County and Thomasville, but was forced by circumstances beyond his control to give up his classroom studies in the first year of high school. He then determined to learn all he could about printing and advertising, working in the offices of the Thomasville Times-Enterprise, and elsewhere, until he achieved some proficiency in his chosen work. Later, he made a more intensive study of advertising and newspaper technique, gaining practical experience by writing for the Times-Enterprise under the guidance and counsel of loyal friends, including Edward R. Jerger and Walter D. Hargrave. They gave Mr. Fleetwood constant encouragement and every opportunity for advancement.

In 1918, he went to Cartersville, upon invitation of the late Oscar T. Peeples, with whom he was associated for 2 years in the operation of the Tribune-News and the commercial printing plant of the Tribune Publishing Co., the plant which Mr. Fleetwood now owns.

This plant, occupying its own building on Main Street, is one of the most modern plants in the South. Its equipment includes two Mergenthaler Linotypes, a Miehle flat-bed press, a Duplex high-speed press, and other machinery in keeping with an establishment of its rank in the printing and publishing field.

For two terms, 1934 and 1935, Mr. Fleetwood was president of the Georgia Press Association, receiving a unanimous nomination, after serving that group as vice-president for 2 years, and in other capacities for two decades. In 1933, he was a member of the special Georgia board named by President Roosevelt to act as mediator and counsellor for the NRA throughout the State. He also served as vice chairman of the State Democratic Executive Committee during 1935 and 1936.

Mr. Fleetwood has been active in the civic development of his community. He is a charter member of the Centersville Rotary Club and served as its president during 1932–33. Prominent also in fraternalism, he is, in the Masonic Order, a charter member and past eminent commander of Cavalry Commandery, Knights Templar, a master mason of the Blue Lodge, Chapter, and Shrine. He is a past councillor of the Junior Order in Cartersville and also served as council commander of the Tourist City Camp, Woodmen of the World at Thomasville. In religion, he gives his support to the First Baptist Church of Cartersville, serving as a member of the board of deacons. He has been superintendent of the Sunday school and teacher of a number of classes at various times.

On October 5, 1913, Mr. Fleetwood was married to the lovely Beulah Mae Smith, second daughter of Mary Ella (Shepherd) Smith and the late John Edmondson Smith, Sr., of Thomasville, Ga. Mr. and Mrs. Fleetwood have had four children: Milton, Jr., who was born November 30, 1914, and passed away January 16, 1921; Mary Lenna, born on April 18, 1917; John Trafton, born July 6, 1921; and Betty, born July 23, 1923.

During his leisure hours, Mr. Fleetwood enjoys reading fiction, history, and biography. He follows closely the trend of current events and is a close observer of both State and national politics. He is an enthusiastic motorist and has made pilgrimages to the shrines of many of the Nation's immortals.

Mr. Fleetwood has been invited to address graduating classes in high schools and colleges in various parts of the State, has appeared on programs of State and Southwide import, and has often been called into conference by leaders in the national and civic life of Georgia, the South, and the Nation.

During his long tenure as publisher of the Tribune-News, Mr. Fleetwood naturally has had difficulties to overcome. He has at times been criticized for his vigorous editorial views, but always had the courage, nevertheless, to speak and to write his convictions. Sometimes he has been wrong and when this proved true, he has cheerfully acknowledged it. Upon other occasions, he has had those who were once his most severe critics come to him and candidly admit his position was right. Possessing a generous and understanding nature and big heart, he has been of service as counselor to scores of people in various walks of life. He has helped them solve their problems, through his keen perception and broad judgment. In return he enjoys their confidence, a fact he naturally appreciates more than any other success which may have come to him through the years.

In 1936, the late Gov. Eugene Talmadge, father of the present U.S. Senator from Georgia the Honorable HERMAN TALMADGE, named Mr. Fleetwood to become a member of the Georgia Library Commission for a term of 4 years.

Earlier this year of 1959 he was awarded the 50 Years for Distinguished Service to the Georgia Press Association Award.

Also the Georgia Association of Soil Conservation Districts this year honored him as the Outstanding Man of the Year, for his distinguished service to Georgia in soil and water conservation.

I remember more than 20 years ago when Lake Altoona was only a gleam in Milton Fleetwood's eye and a hope in his heart. I remember talking with him and how great was his enthusiasm and optimism that the lake would bring great things for his beloved Cartersville area. I remember so many fine things about Milton Fleetwood these many years since I was a cub reporter in 1921 and he was an active and enthusiastic leader of the fourth estate and the press circles in Georgia over the years.

As I have watched Mr. Fleetwood, so have I watched with pride the important part

his son John has taken following in his father's footsteps. And the fine spirit of cooperation that flows over into all the activities of all the Fleetwoods.

So it is with vast personal pride that I come here tonight to give you this token of the high esteem in which you are held by all who know you. On behalf of the advisory council, and editors of Dixie Business and all those who have aided the flowers for the living program, I give you this citation naming you to the South's Hall of Fame for the Living.

At the Crossroads

EXTENSION OF REMARKS
OF
HON. ROBERT W. LEVERING
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 13, 1960

Mr. LEVERING. Mr. Speaker, Murray D. Lincoln, a very distinguished Ohioan, recently addressed the 41st annual meeting of the Ohio Farm Bureau Federation. Mr. Lincoln is a pioneer in the formation and growth of this national farm organization. He has devoted a lifetime to the improvement of American agriculture. I commend this message to my collegues because it deals in a new light with the crisis in our farm economy and its impact on the health of our national being and, more importantly, with the greater question of how America can use our greatest asset of food abundance in winning the battle of peace and survival.

The address follows:

AT THE CROSSROADS

(Address by Murray D. Lincoln at 41st annual meeting, Ohio Farm Bureau Federation, Columbus, Ohio, November 10, 1959)

I want you to know that it gives me a real feeling of pride and satisfaction to congratulate you on having attained the ripe old corporate age of 41. A brandnew corporation has a life expectancy of maybe 5 or 6 years—so just to be in business at age 41 is quite an accomplishment. So, congratulations.

I'd like to talk with you today not only as one Ohio farmer talking with other Ohio farmers, but also as one member of the world community talking with other members of the world community. For today, more than ever before, the farm has become an important part of the whole world. What happens down on the south 40 helps determine what happens north, south, east, and west, all around the globe.

It used to be that you could look at the farm problem from a fairly simple point of view. As the farmers told me when I went to work as a county agent in Connecticut, fresh out of farm college, all they wanted was more money for milk and cheaper fertilizer. That would just about solve all their problems. Well, I taught the farmers how to home-mix fertilizer and if I remember correctly, it saved them about $17 a ton. Then we started a cooperative milk plant and cut the cost of processing and distributing milk right in two. But still the farmers had problems. And I suppose always will. And, of course, I don't think it helped any, either, that the Department of Agriculture sent a man out to tell me I should stop getting into the business end of agriculture, that it was OK to teach the farmer how to top-dress grass, spray apple trees, kill potato bugs, and stop army worms, but to lay off economic things like pool-buying of fertilizer and starting co-op milk plants.

Well, anyway, farm problems have persisted and grown and multiplied.

Net farm income today is about the same as it was 10 years ago. In 1949 it was $13½ billion. This year it's expected to be under 12 billion. Farmers account for 13 percent of the U.S. population, but they are getting only 3.8 percent of the U.S. income. In 1947 they did more than twice as well; they got 8.6 percent of the total national income.

In the last 10 years retail prices of food have increased 20 percent; prices received by farmers have gone down 8 percent. In 1946 the farmer got 52 cents of each food dollar. In 1959 it's estimated he will get only 39 cents, the lowest it has been since the early thirties. Meanwhile, wages have gone up and processing companies and chainstores show increased profits.

Obviously, a farm crisis is boiling up, and something ought to be done about it.

Reviewing my own experience as it relates to such farm headaches is not always pleasant for me. These agricultural troubles not only seem to suggest impending economic depression, but they're also associated in my mind with something worse, and that is war. From the history of this century, I can't escape the impression that the farmer is really prosperous only just before, during, and just after a war. Other folks may enjoy prosperity in peacetime, but not the farmer. It's hard for me to believe that we must have war if the farmer is to prosper. Yet that's exactly what the record seems to say.

But war has never been a real solution to any problem. And it seems obvious now, at this critical point in human history, that civilization cannot withstand another war, even though American farmers could feed one. Food has won many wars. What we've got to do is find a way for food to win peace. I'm convinced there is a very close relationship between food and peace. That's a big reason why the farm problem doesn't concern just farmers; it concerns everybody in the land, everybody in the whole world. And the problem, strangely enough, isn't that we farmers don't produce enough food, it's that, in this country at least, we produce more than enough—by which I mean more than enough to sell through regular market channels, as they now exist.

In other words, the farm problem has become the plenty problem, and it is global in its scope. A world revolution has occurred which has tremendous implications for the welfare of mankind; it is one of the most important revolutions in the development of man down through the ages. Now, for the first time in history, human beings have the experience and knowledge to make it possible either to eliminate or greatly alleviate all the old scourges of mankind, such as hunger, poverty, and disease. Arnold Toynbee, the great historian, puts it this way: "Our age is the first age since the dawn of civilization in which people have dared to think it practicable to make the benefits of civilization available for the whole human race."

So we are confronted now with a problem never before faced by any people—how to live with plenty, how to make use of plenty so that the whole world, including ourselves, will benefit. We in America have had much to do with creating this revolution of plenty, and it would be a pathetic fact of history if we were not to recognize the full meaning implicit in the creation of an era in which plenty can be the hope of mankind. This is a revolution that does not maim and kill but instead revives and builds. It is a revolution that makes possible the nourishment of life itself on this planet earth. And it has made plenty a problem only because we do not as yet fully recognize the fullness of opportunity it has made available to us.

I spent several weeks in Europe this past summer, and I had the privilege of discussing economical, social, and political affairs with a number of well-informed people in government, in private business, and in cooperative business. I came home convinced beyond the shadow of a doubt that in general there is no such thing as a national problem, there are only international problems. The country crossroads is an international crossroads. It is on an international scale that the decision will be made as to whether democracy will survive the cold war. It is on an international scale that the farm and plenty problem will have to be solved. (That's why, in a world where a billion or so people are continually hungry for food, the word "surplus" makes no sense whatever.)

To my way of thinking, then, people's institutions such as our Ohio Farm Bureau and Nationwide Insurance and cooperatives generally, in this country and elsewhere, must act to take the same positive roles in international affairs that they have taken in domestic affairs. The penalty for failure to act along this line is to struggle to stay alive in a world that could well be hostile to cooperative and democratic institutions.

We have made a small start. I learned the other day that, according to the International Labor Office, cooperatives operate now in 120 countries or territories. The number of people all over the world who are members of at least one cooperative must be approaching 200 million. Those are impressive figures, but I must confess that my enthusiasm is tempered somewhat by the suspicion that, as yet, international cooperative influence has fallen far short of what it should be and what it could be. Cooperatives, I'm afraid, are afflicted with the same mass disease of apathy and conformity that has invaded the rest of society. It distresses me, as I'm sure it must you, to see cooperatives trying to ape their competitors, trying to do as they do—not differently and better than they do.

At Nationwide, we have taken some first steps into the world federation of cooperatives, the International Cooperative Alliance, to promote cooperatives in newly developing countries. Working through the Cooperative League, we've helped set up an International Cooperative Bank in Switzerland and a cooperative lending agency in Rome, Italy. We're trying to make it possible for people in Korea to use rice straw in manufacturing a building product called Tec-Pan, similar to the Tectum which we make. We think Tec-Pan would not only help Koreans solve a bad housing situation, it would also provide additional employment. We do not, furthermore, intend to maintain ownership of a Tec-Pan factory in Korea; we plan simply to help the Koreans set it up, get it going and, when our services are no longer required, get out.

In this connection I'd like to tell you about a conversation I had with a prominent Philippine businessman. He came to this country looking for financial help on a project to develop oil-refining facilities in the Philippines. Somebody in Washington told him to talk to me. He didn't know who I was but he told me what he was up to and asked, "Have you got any answer?" Well, I said at least I have an idea and then I suggested that we help them get going by providing capital and technical aid and then, after we were paid off, we would get out or just provide management service and the oil development would belong to the Filipinos.

He looked at me and he said, "Now you know what you're saying, do you?" I said "Yes, because I've been at it for nearly 40 years." "Well," he said, "nobody else has

put up that kind of a proposition." I said "No, and I don't believe you'll find anybody else who will." I'll never forget his reply. "Mr. Lincoln," he said, "if you'll help us make this one experiment, then we who are brown can go to our brothers who are yellow or black and say now here's a new way to develop a country that has never been tried before."

And he told me something else. He said, "You know, Mr. Lincoln, you fellows are never going to lick communism for us. You've got to help us lick it if we want to. I happen to be one of those who wants to, but a lot of others there don't know yet, because they don't see that you folks have done much different than others to exploit them, and unfortunately we haven't had this kind of an example to point to."

Well, this was a very illuminating conversation; we're still working to help this Philippine oil enterprise get off the ground. I think we're going to do it, too.

But as I have said, the start we have made is only a very small one. We need a lot of help—from you people and from all people who are concerned with the fate of their children and their children's children in this new era. Obviously, there is much to do before we can make a dent in the farm and plenty problem. I'm convinced that we're never going to solve these bigger world problems until people everywhere have gotten hold of the ability to feed themselves and to get the good things of life that we have, and they know that we have, but that they don't now have. And I'm convinced, too, that as people working cooperatively together to solve our own and each other's problems, we're on the right track to make that very thing possible.

I have spent my whole life in agriculture, farm organizations and industries connected with agriculture. And I've arrived at certain opinions I believe to be true. Perhaps you won't agree with them, but it seems to me worth while to get these beliefs out on the table. It seems to me that in trying to reach any long-term solution of the farm and plenty problems we must stick closely to these four general principles:

1. The solution must follow the plenty way, not the scarcity way.

2. It must benefit the whole economy—all the people, not just some of them, and not just American people.

3. It must seek to cut costs of food and fiber distribution.

4. It must encourage the use of cooperatives.

Let's take up these principles one by one:

1. To me, anyway, it is unthinkable that we should regard the farm problem as one of surpluses or overproduction and try to figure out ways not to produce so much food. That's the scarcity way, and while reducing or stopping production may work to some extent where businessmen and labor are concerned, it just isn't natural and it won't work with farmers. You can't tell a cow to stop giving milk for 90 days without ruining her. You can't ask a bred sow to postpone the birth of her litter until a more favorable market comes around. And once planted and given proper weather, crops have a way of coming on whether you want them to or not. Furthermore, as you lower the price of farm products, the farmer, because his costs are pretty well fixed, has no choice but to try to increase production to stay in business. We Americans cannot for long enjoy a high standard of living while the rest of the world struggles in poverty, hunger, and sickness. You can draw a dramatic contrast of the poor and rich countries by shrinking the 2½ billion people in the world into a town of a thousand inhabitants, keeping approximate proportions and relations of population and national groups. In this make-believe town of 1,000, 60 people would represent the United States in relation to the rest of the world. These 60 people would have half the income of the town; the remaining 940 would share the other half of the total income. The life expectancy of the 60 would be 71 years; of the other 940, 41 years. Now, as one of the 60, would you expect to be loved or trusted by the 940? Especially when you represent a country where every person pays annually somewhere near $257 for military expenditures but spends less than $5 a year to share, through government or private agencies or church programs, anything related to the Christian cause or the Christian way?

Unless we continue to help other people to help themselves attain a higher standard of living, I predict that you will see existing economic, governmental, social, and perhaps religious institutions overturned throughout the world.

So I cannot accept the widely held premise that our vast food and fiber resources are an evil. On the contrary I think our ability to produce this abundance is one of our country's most precious assets. The sole purpose of production is consumption. The purpose of production is perverted when farmers grow for warehouses, not for men, women, and children.

I say emphatically that we will never find a way out of our dilemma by going down the road of scarcity. I respect the motives and efforts of the many people, in and out of government, who have worked many years on the programs now in use. At the same time, I believe we need desperately to about face. It seems to me foolish, as well as dangerous, to try to solve the farm problem with scarcity programs. We must plan for a growing America, not a shrinking America; we must make an intensive study of ways to expand the market for foodstuffs at home and abroad. The preamble of the food and peace bill introduced in the recent session of Congress declared: "It is now possible and practicable for mankind to take cooperative steps to abolish human hunger." Let us be about doing it.

2. Attempts to solve the farm problem must benefit the whole economy—all the people, not just some of them, and not just American people. It must be as much as possible a public interest program as well as a farm program. Every group, whether it be farm, business, or labor, tends to act largely in its capacity as producers, without too much regard for the effects of those actions on other groups or on the consumer economy. So business has its tariffs, its fair trade laws, its tax depletion allowances, and its borderline or actual monopolistic practices.

Labor has its guaranteed minimum wage, unemployment insurance and, in some areas, its legalized featherbedding practices. Farmers have their price supports and protection controls. Now I have a feeling that we are never going to solve our major problems as producers alone. As I see it, our actions as producers are apt to be selfish and divisive. They do not recognize the interdependence of the many elements of American economic life.

Government subsidies, however, which benefit the whole economy as well as the subsidized group itself, are quite in order. And it's pretty well agreed that farmers are one group of people who deserve governmental favors, for they will return those favors to the rest of the economy in the form of food, purchasing power and a stronger, healthier country. The main question, then, is not whether to subsidize agriculture, but how to do it with the most benefit to the whole country. As Kenneth Galbraith, Harvard economist, says: "Any farm policy must put a floor under prices or income. A farm policy that doesn't deal with these matters is like a trade union that doesn't bother about wages."

3. Attempts to solve the farm problem must aim to cut distribution costs to the farmer and from the farmer. The parity formula is based upon farm costs as well as farm income, and one is about as important as the other. When farm income drops, as it has been doing, farm costs—for machinery, supplies, etc.—stay up. During the past 10 years, wheat prices have dropped 16 percent, while cereals, bread and other bakery goods have risen 33 percent.

Furthermore, we are paying far too little attention, it seems to me, to lowering the cost of getting goods to consumers. Farm prices may drop but wholesale and retail food prices keep going higher. Duplication of services, inefficiency, waste, and perhaps profiteering are taking a toll that is preventing food from getting to consumers at sufficiently low prices. Nor is it any explanation to say that two-thirds of every dollar spent for food goes to satisfy housewives' demands for services and packaging. Since 1947, the amount spent on food has increased some $500 per family. Farmers got only $45 of that increase; fish importers got $55, and the other $400 went to food processors. Thus, the consumer pays too much for food, while the farmer receives entirely too little for his share. Both the farmer and the city consumer are victims of the administered pricing practices of middlemen.

4. Attempts to solve the farm and plenty problem must take cooperatives into consideration. Cooperatives are ideally suited to the job of fulfilling farm and plenty needs. Basically, they are democratic people's institutions—owned, operated, and controlled by the people who use them.

Cooperatives are by no means a cure-all for farm or other economic ills. But our success here in Ohio over the last 40 years shows what can be done in reducing purchasing costs and increasing income. Our family of organizations lately have been working together in excellent fashion. Results of our sponsorship arrangement with the Federation have proved the practical value of the theory that people's organizations which have generally similar interests and objectives can multiply the effectiveness of their efforts if they work together on a basis of mutual help. Groups cooperating with each other with similar goals in view can move faster together than they can separately. The arrangement under which Farm Bureau members can obtain Nationwide auto insurance at rates below those ordinarily charged is a case in point. Latest figures show that Farm Bureau members have nearly 45,000 auto policies in force under this special arrangement, and that due in large part to the leadership of women's committees of the Farm Bureau in stressing safety precautions and programs, the loss ratio of this group of policyholders has been considerably less than that for all Nationwide policyholders.

But we can do much more together. We've somehow got to acquire the knack of growing together instead of separately. We've got to put the pieces of our movement together so that it presents a solid front for mutual self-help.

We can set up coperatives all the way from the source of the raw material through delivery of the processed food to the consumer. If we did this in an integrated manner, price spreads would shrink, farm income would improve and consumer purchasing power would gain.

The kind of cooperative structure I suggest would embrace more than farmers alone; it would also include part-time farmers—an ever-growing group of people who encompass city work and a rural way

of life, workers in retail stores, factories, warehouses, and mines, businessmen and consumers—to the benefit of all. Here, I believe, is one way to a true solution of our dilemma. Farmers will get the most for their product; consumers will get the most food and fiber for their dollar. This alliance of farmers and consumers is also needed to help change public attitudes and regain consumer good will for the farmer.

What I am saying is that farmers, with the help of consumers, should get control of more of their own economic machinery through cooperatives. In this way, they could get the added income they need without Government help. For example, the net profits of just three of our big companies, General Motors, Standard Oil of New Jersey, and American Telephone and Telegraph, would equal the entire amount ($2.5 billion) needed to raise the incomes of 5 million farmers to full parity with other groups.

A good example of how cooperative action—with government aid—brought improvement in the farmer's standard of living is the story of our Ohio rural electric cooperatives. Prior to 1935, only 18 percent of the farmers had electricity. The utility companies did not believe farmers would ever use enough power to warrant building lines. We went to work on this with the REA and today, the figure approaches 100 percent, and power rates all over the State have dropped 40 percent.

One of the most interesting developments is in New York State where the 4,000 farmer-members of the National Grape Cooperative Association have acquired ownership of the facilities of the Welch Grape Juice Co. The transfer to ownership took place in 1956, and the grape growers now cooperatively own the $35 million Welch plant. The outlook for these 4,000 farmers is excellent. They have all the advantages that accrue to ownership of an outstanding trademark, including established consumer acceptance of Welch's top quality, well-known products developed by nearly a century of outstanding advertising and marketing achievements. For the consumer it means continued availability of Welch's quality products at fair prices. For the taxpayer it means that these grape farmers need no government subsidy; they're enjoying a real participation in ownership and profits. In my opinion this method of transition to cooperative ownership sets a pattern capable of widespread application.

We've got hold of something unique here. We have in our hands a piece of machinery designed for democracy and freedom that no one else has got. With it we can give everyone a helping hand. We can, indeed, change the face of the world.

So let us close ranks. Let us so combine our manpower and our financial resources that cooperation can take its rightful place as a major world force for human welfare—economically, socially, and spiritually. If we can figure out how to spread and strengthen cooperatives all over the world, we can literally change the course of history.

It is my firm opinion that in this great cold-war struggle between democracy on one side and communism on the other, the victory will eventually go to the side which devises a system to get the most goods to the most people. I urge those of you who believe in the dignity of the human individual and in the intrinsic worth of what we call the democratic process, to concern yourselves more with helping other peoples make some of the material advances we have made in this country. For I believe that in eliminating hunger, disease, and poverty from the world, we will have found the answer not only to our own farm problem but to the world's—and our—plenty problem.

Small Business Opinion Poll

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, January 18, 1960

Mr. JAVITS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a tabulation of opinion among small businessmen throughout the country and in New York State, submitted to me by the National Small Business Men's Association. This survey, conducted last summer, deals with five questions of great interest to the small businessman and to the Nation as a whole. It is of interest to note that percentagewise the small business community of New York State—numerically the largest in the United States—is in agreement on all five issues with the U.S. small business community. Each of us—whatever may be our views on each issue—can certainly be helped by this information.

I wish to compliment not only the National Small Business Men's Association for the splendid service they perform in keeeping the Congress informed of the currents of small business opinion—information vital to the effective execution of our legislative duties—but I would like to extend a special word of commendation to the small businessman himself, whose sense of responsible citizenship prompts him to take time out of a busy day to fill out his opinion ballot so that his views may be recorded and made known to us. The motto engraved on the front of each ballot reads: "Eternal Vigilance Is the Price of Liberty." I believe that the small businessman of this country is giving proof of his understanding of these words by his display of civic responsibility in recording his opinion.

There being no objection, the tabulation was ordered to be printed in the RECORD, as follows:

	National percentage			New York State percentage		
	For	Against	No vote	For	Against	No vote
1. Faster tax writeoff for equipment and machinery	83	14	3	87	9	4
2. Ending farm subsidies	87	11	2	90	7	3
3. Fair trade laws	43	52	5	39	55	6
4. Government insurance to provide old folks' medical care	21	76	3	16	79	5
5. Tax-exempt pension plans for self-employed	67	30	3	61	32	7

Mandatory Death Penalty for Oldsters

EXTENSION OF REMARKS
OF
HON. GEORGE A. KASEM
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 18, 1960

Mr. KASEM. Mr. Speaker, I request unanimous consent to revise and extend my remarks in one instance inserted in the CONGRESSIONAL RECORD, and include therein a letter which I have received from Mr. G. W. Heinecke, 1317 W. Ramona Road, Alhambra, Calif. Mr. Heinecke is a frustrated and embittered man, who feels he has been unjustly treated by the social security program. He has my deepest sympathy and my resolve toward working to correct this foolish defect that makes a farce of our show of caring for our elders. Mr. Heinecke speaks with far greater force and direct eloquence than I. His letter follows:

Hon. GEORGE A. KASEM,
Member of Congress,
House of Representatives,
Washington, D.C.

DEAR MR. KASEM: I hereby acknowledge receipt of the Washington Letter publication mailed to me by your office, and I am happy to get your views on the work of the 1st session of the 86th Congress.

My analysis of the letter indicates that very little has been accomplished as a result of the enormous amount of work and expense involved, perhaps to a great extent as a result of the attitude of the present administration.

I was particularly interested in the bill setting up a health insurance plan for 2 million Federal employees. That is fine.

Now, how about the health of 15 million aged, who are forced to live on the pitifully small social security or pensions, and pay full doctors' fees, including dentists, and the excessively priced medicines. Or, don't the aged poor fit into the national scheme?

And how about making the so-called social security what it should be, instead of the farce that it is?

I am 67 years of age and have paid full social security taxes since its inception. When I reached 65, I applied for my social security and received it for a few months. However, I told the social security representative that I hoped to earn more than $1,200 in 1958, and was immediately cut off the rolls and was finally forced to return the major portion of what I had received.

Of course, I had to return to full-time employment in order to earn an existence for my wife and myself.

In my opinion, I have been effectively cheated out of all payments due me until I reach 72 years of age, if I live that long, and I feel quite sure that some means will then be found to stop collection of my social security, even then.

In addition, I am now forced to pay full social security taxes on my entire meager earnings, including the amount that would not have been taxable, had I not been cheated out of it.

What kind of a law is it that will deny a man of what is rightfully his, and then tax him on the very thing that he is denied? Some racket.

Some class persons with large incomes get their social security without question, yet some poor oldster, without social connections needs nothing, even if he has paid for it for 23 years in advance. Is it then not even a prepaid dole for it gives to those not in need of it.

Now, Mr. KASEM, we as a Nation must have reached an all-time low when we tax the poor to give to the rich, so the rich can be socially secure.

If that is the case, the poor oldsters are thorns in the side of our society, may I suggest a new national law, essentially as follows:

Make it a felony, punishable by a mandatory death penalty for any persons, male or female, or any couple, to reach the age of 65 without having accumulated a comfortable personal income of perhaps $5,000 per year, or more as required by the men of class. It should make no difference how this income was secured.

This will eliminate perhaps 99 percent of our oldsters and permit raising the social security payments to those in the proper class.

We are at present witnessing the interesting sight of a group of officials flying around the world, at taxpayers' expense, including the aged, and undoubtedly committing us to many more billions, again at our expense. If we can do this, certainly we should be able to help the aged toward a better life. And, speaking of pensions, the head of the group lost no time in signing his $40,000 a year into law, and tax free, but it almost broke his arm to sign the law giving a few pennies more to the aged.

In conclusion, why shouldn't I be permitted to earn enough for a little more than existence, and still be permitted to collect my social security? If not, why am I doubly penalized by being forced to pay taxes on any earnings equivalent to what I would be getting from social security?

I am very much interested in getting your views on the aged and on our great social security and health program, and earnestly request that you enlighten me.

Yours very truly,

G. W. HEINECKE.

ALHAMBRA, CALIF.

Significant Progress in College Integration Reported From Southern States

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, January 18, 1960

Mr. NEUBERGER. Mr. President, very frequently only the adverse or discouraging side of racial and religious controversies in the United States become topics of news in the past. This occassionally blinds us to the genuine progress being made in some areas. Encouraging advances in the integration of white and Negro students in southern colleges have been reported in the Washington Sunday Star of January 3, 1960, by George W. Oakes, contributing writer to the Star and a noted author in the field of educational matters generally.

While much remains to be done in the field of integration in southern colleges, Mr. Oakes has reported that far more progress has been made in college integration than in the elementary schools and high schools of the South. Because integration is a goal of all Americans who respect the U.S. Supreme Court, I ask the consent of the Senate that the article by George W. Oakes from the Washington Sunday Star of January 3 be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

COLLEGE INTEGRATION MAKING PROGRESS

(By George W. Oakes)

Integration of Negro students in formerly all-white southern colleges and universities has been making considerably more progress than integration in the public school system in the same section.

In only four States of the Deep South—South Carolina, Georgia, Alabama, and Mississippi—is strict segregation in force in all public and most private colleges and universities. Now about half of all southern white colleges are integrated, a remarkable increase since 1948, when desegregation extended to less than 20 border State institutions.

Today more than 250 public and private colleges in the 17 Southern and border States admit Negro students. Integration has proportionately advanced the most in Catholic institutions (80 percent of which are desegregated) and the least among lay private colleges (26 percent desegregated), while public institutions of higher learning are 52 percent desegregated.

However, despite the wide extent of integration, probably only 3,000 or so Negroes attend integrated colleges or universities in the South and are a tiny proportion—perhaps 2 percent—of the total number of students. As might be expected, the higher ratios occur in the border States, like Kentucky, where several hundred attend the University of Louisville. But in many Midsouth colleges there are only a handful of Negro students.

Since integration started at the graduate and professional level, most Negroes in southern universities are doing advanced work or attend university summer sessions. But as integration has advanced—largely, of course, because of the Supreme Court decision of 1954—more southern colleges have opened their doors to Negro undergraduates.

WHY IT IS SUCCEEDING

The Southern Regional Council of Atlanta, an organization devoted to promoting equal opportunity in the South, attributes the greater success of integration in higher education to the following factors:

1. The Supreme Court decision was clearer earlier for professional and graduate education.

2. Negro colleges were obviously less comparable to white institutions than Negro schools were to white schools. Only ardent segregationists argued that the States should duplicate the expensive facilities required for higher education, especially in the graduate and professional schools.

3. Colleges are less influenced by community pressures than schools.

SOCIAL RELATIONSHIPS

Mainly for these reasons the most remarkable thing about this revolution in Southern education and race relations is the fact that it has been accomplished so rapidly and so peacefully, according to Prof. Guy B. Johnson of the University of North Carolina, an authority on college integration in the South.

There has been much less difficulty in social relations than many anticipated. Although the dormitory question is the chief social problem in integrated colleges, several like the University of Louisville have Negroes living in the same buildings as white students. At the University of North Carolina Negro girl undergraduates live in dormitories. In one university a Negro was elected president of the men's dormitory association and in another a Negro woman was elected president of her dormitory by her white coresidents.

Professor Johnson points out that "Negro students have shared freely in social affairs such as picnics, dinners and dances. White students have been quick to learn that they can share in such interracial 'social' contacts without feeling any serious threat to their sense of personal privacy. But, while the color line has been redefined, it is still there, for in the more intimate social realm of dating, partying, and fraternity life, the social worlds of the white and Negro students have remained entirely separate." Therefore he concludes that "coracial use of the same schools has little if anything to do with intermarriage." Professor Johnson finds that the "majority of the white students take the Negro as a part of the campus environment—a human being, a fellow student with whom they interact in pleasant and courteous ways."

However, Negroes in desegregated colleges have academic problems. Although many have achieved outstanding distinction, particularly in tough professional graduate schools, a large proportion encounter scholastic difficulties because of their inferior preparation in segregated public schools. For this reason the Negro student probably has more than his share of flunks and academic probations.

In some cases, professors try to compensate for the Negroes' academic handicap by grading them more sympathetically.

STATE-BY-STATE SURVEY

Here are some significant highlights in the integration of Negro college students in various Southern States based on a recent survey by Southern School News.

Arkansas: The first Negro to enter a State university in any of the former confederate States enrolled at the University of Arkansas. This year the university has 15 Negro students in a total enrollment of 5,500, but larger numbers attend graduate summer sessions. In general the university accepts qualified Negro students for graduate or undergraduate work not otherwise available in the state. Negro students are not housed in dormitories but use university cafeteria and other facilities.

There are 25 Negro students in the other six white State colleges. All but one has admitted Negroes.

Florida: In 1958 the University of Florida accepted a Negro Air Force veteran who had won high scholastic standing and had a normal college experience. Last summer the university admitted three Negroes for graduate study and in September accepted a young Negro woman into the medical school.

No Negro applications have yet been made at the University of Miami, the State's largest university, with 11,000 students.

Kentucky: The University of Louisville, first southern university to enroll Negro undergraduates, now has several hundred Negro students in a total of 8,000, mainly because more than one-third of Kentucky's Negroes live in the Louisville area. In 1958 a Negro professor was made head of its sociology department. At the University of Louisville, Negroes reside in the dormitories, use cafeterias and other facilities and are leaders in college athletic and extracurricular activities. The university's success with Negro students has helped considerably in the extremely successful desegregation of Louisville's public school system.

Thirty of Kentucky's 41 institutions of higher education are racially integrated, most in terms of actual enrollment. However, the

University of Kentucky only has 80 Negroes out of 9,019 students.

DESEGREGATION IN LOUISIANA

Louisiana: Eight of Louisiana's 18 public and private colleges and universities are desegregated.

Louisiana State University's New Orleans branch, 2 years old, has more than 400 Negroes attending classes with 1,700 white students, the largest Negro registration in any former all-white State college or university.

Southwestern Louisiana Institute has 150 to 200 Negroes while Loyola University in New Orleans has a handful of Negro graduate students in law and specialized courses.

North Carolina: Desegregation is closely limited to State institutions, with the largest number of Negro students at the University of North Carolina. There 22 Negroes are enrolled out of 7,959—all but 2 doing graduate work, mostly law. At the university's woman's college there are 32 Negro students (20 undergraduates) out of 2,641. The university's technical and agricultural branch, North Carolina State, which had 15 Negroes 2 years ago, still has a few.

Oklahoma: Since 1955 all State and independent colleges and universities have been officially desegregated. In 1957–58 there were 446 Negroes out of some 50,000 college and university students. Many of these were teachers attending summer sessions.

Tennessee: Since the University of Tennessee first admitted Negroes in 1952, the number has increased to 69 students in the current academic year out of 15,300. All of these are in the graduate of professional schools. This fall Memphis State University, with 4,500 students, admitted 8 Negro undergraduates for the first time in its history. Vanderbilt University has 4 Negro graduate students this year out of an enrollment of 1,800.

Texas: Although half of Texas 80 colleges have accepted integration in principle, the number of Negro students remains small. For example, the University of Texas has only 150 Negroes out of a total enrollment of 18,560. Nevertheless, integration has become more accepted in Texas colleges than public schools.

Virginia: Forty-eight Negro students are currently attending six formerly all-white colleges, of which four are tax supported. At the University of Virginia all 18 Negroes are graduate students. The next largest number, 16, attend the Medical College of Virginia.

Salute to National Editorial Association on Its 75th Anniversary

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, January 18, 1960

Mr. WILEY. Mr. President, we recognize that in a free country a well-informed citizenry is a must, if freedom is to survive.

During the history of the United States—a unique venture in government "of, by, and for the people"—men have risen, fortunately for us, to provide our people with the means of being well-informed, intelligent citizens. This has resulted in outstanding progress in information media.

Among the significant efforts have been the pioneering efforts to create good, hometown newspapers, providing communities throughout the country with a flow of information of local, State, national, and international significance.

To carry out their objectives, an association of editors was formed 75 years ago. It is the National Editorial Association.

Now entering its Diamond Jubilee Year, 1885–1960, the NEA—the oldest national newspaper association in America—can be justly proud of the outstanding service it has performed, not only for its members, but for the citizens of this country.

Upon its anniversary, the association, I believe, merits the warm-hearted congratulations and expression of gratitude of the Nation.

The current issue of National Publisher, the official magazine of the hometown newspaper industry, contains an informative article reviewing the early efforts toward establishing the National Editorial Association. The article is reflective of the pioneering spirit which since then has contributed so much in this field; and I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SEVENTY-FIVE YEARS AGO: THE BEGINNINGS OF NEA

This is NEA's Diamond Jubilee Year.

The association was founded at a convention that was called to order in New Orleans on February 19, 1885—75 years ago.

Birth was not painless. Benjamin B. Herbert, of the Red Wing, Minn., Advance-Republican, broached the idea of the association at a meeting the previous fall of the Minnesota Editors' and Publishers' Association of which he was president.

At that meeting Mr. Herbert said in his annual address:

"There is no other calling in the country that would be so much benefited by a national organization as would the publishers of weekly newspapers in the smaller cities and villages."

On December 26, 1884, a circular went out announcing plans for a convention in New Orleans, starting February 12, to form the association. Then came trouble—from nature. As Mr. Herbert put it in his history of NEA:

"One of the most extensive snow storms known in history swept over the whole North country, reaching as far South as Georgia.

"The writer, who for months had been patiently working alone for the accomplishment of this one object of organizing the editors of the United States into an association that would benefit them, and the Nation through them, was hopelessly snowbound at the Palmer House, Chicago, until too late to reach New Orleans at the appointed time."

Behind railroad snowplows—at least for part of the way—Mr. Herbert finally got to New Orleans and the convention, a week late.

On the second day of the convention, Mr. Herbert became the first president of NEA. C. H. Jones of Jacksonville, Fla., was vice president; Col. John G. Elliott, of Dallas, Tex., was secretary, and Ezra Whitman, of Baltimore, Md., treasurer.

So NEA started. Although Mr. Herbert in his proposal mentioned only weeklies, dailies have been members from the start.

The diamond jubilee will be marked at the annual convention May 4 to 7, 1960, at the Dinkler-Plaza Hotel in Atlanta, Ga., and at other events throughout the year.

Mr. Herbert was not only a principal founder of NEA. He also founded, and owned the predecessor to the National Publisher magazine. (The present magazine, of course, is not owned by any individual but by NEA itself.)

Harlan P. Hall, founder of the St. Paul, Minn., Evening Dispatch and Daily Globe, explained how Mr. Herbert started his paper for NEA:

"At the meeting of the national convention held at Denver in 1887 he was requested by a unanimous vote, to establish a paper in the interest of the association. He had a previous year been a candidate of his party for Congress, and if he had remained in Minnesota would doubtless have gained much political prominence, but putting these opportunities aside, he decided to establish the desired national publication. With that end in view he bought a printers' paper in Indianapolis, and began his work in that city.

"Mr. Herbert's reputation is no longer circumscribed by State lines. His paper, the National Printer-Journalist, is not only a most excellent typographical production, but its proprietor is also personally popular, and everywhere known in person or by reputation among the fraternity."

At NEA's second annual convention, at Cincinnati in February 1886, Mr. Herbert set forth his ideal of the live newspaper. He said it "transforms every citizen, however remote, into the intelligent ruler." It is "the good family physician to the community in which it is published; the suggester of improvements; the leader in every local enterprise, and the most enterprising of all enterprises * * *. It goes to every hearthstone; speaks to young, old, and middle-aged; catches up the grandest thoughts of the greatest divines."

Establishment of a "college of journalism," he told the convention, should be one of the association's first objectives.

Succeeding conventions were described by Mr. Herbert himself in a style which conforms beautifully with his own luxuriantly bearded appearance. He wrote:

"The third convention took the editors to Denver, the magic city of the mountains and plains, and taught them of the matchless attainments of the Centennial State, aided and accelerated by all the improvements of the century, backed by the wealth of mines, quarries of unequaled stone, and productiveness of irrigated plains, and the push of the most highly educated pioneers that ever settled a new State. The inspiration of the unsurpassed grandeur of mountain scenery, of rocky cliffs, gorges, and dashing cataracts, was experienced, and the results and needs of irrigation in turning arid plains into fruitful gardens, and the wants of mining industries, as well as their possibilities, were studied.

The next year the mighty Empire State of the Southwest—Texas—with a territory six times as large as the great, important, and wealthy State of Pennsylvania, welcomed the association, and made the delegates her guests from the time the State line was crossed. Here, at San Antonio, first settled by the Spainards in 1716, the editors studied not only newspaper making, but the interesting results of the mingling and unifying of varying civilizations under the influence of American institutions; had the fires of heroic sentiment stirred by visiting and re-

hearing rehearsed the story of the Alamo—the Thermopylae of the Western Hemisphere.

"In the State of Michigan, whose educational, benevolent and industrial institutions have served as useful and worthy models for many Western and Southern States, and even in some instances, for old cultured Massachusetts, and for the countries of Europe, the fifth annual convention of the association was convened. The place of meeting was Detroit, the beautiful city of the straits, "those Dardenelles of the new world." From this city, settled by the French in 1701, with its generous hospitality, its magnificent institutions, its healthy, water-girt park on Belle Isle, its cleanliness and refreshing coolness, its delightful rural and water resources, from its model newspapers, flower show and great exposition, the editors carried to their several States many delightful and instructive lessons.

"Cultured Boston, with Fanueil Hall, the cradle of American liberty, the home of the oldest American university, the fountainhead of American scholarship, the mainspring of American literature, philosophy and art, wealthy and refined, welcomed the Sixth Convention of the Association. That welcome was not less generous and hearty than those in the broad and hospitable West, or in the sunny Southland, if it was more graceful by reason of longer practice, the esprit de corps of the more perfect autonomy of this older and wealthier commonwealth.

"More than a thousand miles to the west, in St. Paul—a city that was the home of the Indians, the Dakotas of Longfellow's song—in the land of clear skies, pure air and crystal lakes, of broad prairies and of golden fields, the seventh convention gathered and received another genuine western greeting * * *. The mammoth business blocks, splendid parks, paved streets, electric cars, universities, mills and factories and the immense railway system all built in half a century and centering at St. Paul, at the head of navigation on the Mississippi River, showed as in a glass what the eloquent words of the Senator foretold of the possibilities of the developing trade of a country inexhaustible and immeasurable in its agricultural resources, in its forests, and in iron and copper mines.

"To the eighth convention, the whole State of California gave a greeting as broad, magnificent and munificent as the State is long in its reach of 750 miles north and south, as it is rich in golden fruits, in flowers and genial sunshine, in goldbearing mines and a great-hearted people. Crossing the Rocky Mountains seemed to have warmed the hearts of the residents toward all those who represented the States which these pioneers had left behind them in seeking fortune's smiles.

"No words need be said of the ninth convention, in Chicago, and the visit to the "White City," the very acme and consummation of the grandest dreams of the "Princes of Industry," through all the rapidly progressing centuries since the discovery of the Western Continent touched the latent springs of hope and sent a thrill around the world."

Hon. Gordon Canfield

EXTENSION OF REMARKS

OF

HON. JAMES C. AUCHINCLOSS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, January 18, 1960

Mr. AUCHINCLOSS. Mr. Speaker, I am very pleased to include in my brief remarks a letter dated January 15, 1960, which I have received from the former senior Senator from New Jersey, H. Alexander Smith, who is now special adviser to the Secretary of State. Senator Smith who knows our colleague, GORDON CANFIELD, very well, well expressed his appreciation of his service and his character in the following letter:

OFFICE OF THE SECRETARY OF STATE,
Washington, January 15, 1960.

Hon. JAMES C. AUCHINCLOSS,
House Office Building,
Washington, D.C.

DEAR JIM: I have just read in the CONGRESSIONAL RECORD of January 11 the very appropriate and able comments by yourself and other members of our New Jersey delegation in connection with the announced retirement of our beloved and esteemed friend, GORDON CANFIELD, at the end of his present term.

As former senior Senator from New Jersey, I wish to add my personal word in connection with GORDON CANFIELD'S retirement. GORDON has had a longer service in the House, which included his former secretaryship to Congressman Seger and his own 20 years as Congressman, than any other member of the New Jersey delegation, either House or Senate.

I share with you the high regard and affection we all have for GORDON and the magnificent service he rendered his State and his district as a Congressman. As one of the senior members of the Appropriations Committee of the House he rendered a special service to his State and Nation.

We all regret to see him leave the Congress, and I join with others in extending to him, in which Mrs. Smith joins me, our affectionate best wishes for the full recovery of his health and the wish that he may have many more years of usefulness.

Always cordially yours,

H. ALEXANDER SMITH,
Special Adviser to the Secretary of State.

Retirement of William M. Tugman, Publisher of the Port Umpqua Courier, Reedsport, Oreg.

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, January 18, 1960

Mr. NEUBERGER. Mr. President, one of the most brilliant and outstanding editors in the modern chronicles of the State of Oregon has been Mr. William M. Tugman, formerly of the Eugene Register-Guard and more recently publisher of the Port Umpqua Courier, of Reedsport, Oreg.

Mr. Tugman has been an editor dedicated to the economic and social progress of Oregon. Particularly, he has been an advocate of the preservation of the scenic beauty and recreational opportunities in which our State abounds. I am particularly grateful that Mr. Tugman has been a supporter of my legislation proposing an Oregon Dunes National Seashore Park.

In the Roseburg News-Review for January 4, 1960, Mr. Charles V. Stanton, editor of the News-Review, paid tribute to the distinguished career of Mr. William M. Tugman, as he retires from active participation in the field of journalism. I ask unanimous consent that this editorial, "Tugman Retires," be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Roseburg (Oreg.) News-Review, Jan. 4, 1960]

TUGMAN RETIRES

(By Charles V. Stanton

Retirement of W. M. "Bill" Tugman as publisher of the Port Umpqua Courier, Reedsport, is a blow to the Oregon press. Tugman has long been one of the State's outstanding editors and editorial writers.

It is my prediction, however, that Tugman's public service, one of his principal contributions as an editor and publisher, will not be lost. Bill can no more quit public and civic service than he can quit eating. He is too much a part of what goes on around him.

Following a number of years in various phases of the newspaper field, he became managing editor and editor of the Register-Guard in Eugene, serving that newspaper for nearly 28 years.

He purchased the newspaper at Reedsport in December 1954, stating that he wanted to take things easy. But he found that publishing a weekly newspaper is no easy task. He admits that he worked harder than ever before.

But his work wasn't all connected with running his newspaper. He was constantly on demand for civic service. He was a part of the Reedsport Chamber of Commerce. He spent a great deal of time on highway matters, particularly with regard to the Umpqua highway from Drain to Reedsport, and the route between Sutherlin and Elkton.

ON STATE COMMITTEE

He is serving on the Douglas County Library Board. He was chairman of the travel and information advisory committee of the Oregon Highway Commission, and as chairman directed the committee's study, at the request of then Gov. Paul Patterson, now deceased, into proposed separation of state parks from the jurisdiction of the highway commission.

When the recommendation was made that Oregon's system of state parks as a part of the highway department was far better and more economical than found elsewhere, but that the highway commission should be aided by an advisory committee, Tugman was the commission's selection for the first committee chairman, an office he still holds.

His job of chairman of the advisory committee is almost a full-time position, yet he has carried on the work with outstanding success, and at much personal cost, while still running a newspaper.

In late years Tugman has been subject to heart trouble. His condition indicates the necessity that he slow down in his activities. Yet there has been little slowing down except for the periods spent in the hospital.

He says that he now proposes a slower pace, while continuing to make his home in Gardiner.

He may be freed from the tension of meeting newspaper deadlines, from the strain imposed on the nervous system by the daily newspaper chore, but it is my prediction that he will never slow down in the matter of being of service to the public.

SERVED THE COUNTY

Wherever he has been, Tugman has been dissatisfied and impatient with the rate of progress in the community he served. No matter how rapidly his community might be

advancing, it was never rapid enough to suit Tugman. In that respect he has been of the greatest service to Douglas County. He has been most impatient, most critical, with the Lower Umpqua area and, as its No. 1 booster, has pleaded, argued, and fought to improve the area, culturally and economically.

While he will not have a newspaper to use as a lever in his promotions, I predict he will be constantly prodding the new publisher of the Port Umpqua Courier in the matter of civic enterprise.

The paper has been purchased by Earl Sykes, Jr., a newcomer to the Oregon press from northern California. He comes to Oregon with the highest recommendations as a young man of enterprise and integrity and doubtless will be a fine addition to the publication field.

Incidentally, the transaction is the first to be negotiated by Harris Ellsworth of Roseburg who, since retiring from service with the Federal Government, has established a newspaper and radio brokerage service.

Gifts for National Debt Reduction

EXTENSION OF REMARKS
OF
HON. CHARLES E. BENNETT
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 18, 1960

Mr. BENNETT of Florida. Mr. Speaker, in the January 15 issue of the Washington Evening Star it was reported that a patriotic American, the late Mrs. W. L. (Will) Clayton, has bequeathed a sizable sum "to my beloved country, the United States of America, to be used for the retirement of the national debt." It does not detract from the splendid patriotism shown by Mrs. Clayton to point out that other Americans also feel deeply about the necessity of reducing our national debt and, from time to time, spontaneously come forward with gifts and bequests to reduce the national debt. On September 3, 1957, it was reported that the late Arthur E. Lamper bequeathed U.S. bonds valued at between $5,000 and $10,000 for this purpose. On May 8, 1957, the press carried the story of Miss Sheila M. Martin who gave $120 to Treasury Secretary Humphrey for national debt reduction. On March 5, 1959, it was reported that an 11-year-old Miami, Fla., girl, Kathy Hewitt, had offered her life savings of $61 to help pay off the national debt.

Unfortunately, Mr. Speaker, the Treasury tells me that under present law it cannot give absolute assurance that a gift or bequest for reducing the national debt will be devoted exclusively to that purpose. I have introduced a bill, H.R. 6292, which would make it possible to give such assurance. Once this legislation is enacted, it will be possible for a private organization to make concerted efforts to obtain debt reducing contributions from American citizens who feel that they would like to make special contributions to show their love for their country. If Mrs. Clayton and the others mentioned above will make such contributions spontaneously and without assurance that their gifts will be used to reduce the national debt, how many others will come forward with contributions if given that assurance.

Urgency of School Needs

EXTENSION OF REMARKS
OF
HON. OREN E. LONG
OF HAWAII
IN THE SENATE OF THE UNITED STATES
Monday, January 18, 1960

Mr. LONG of Hawaii. Mr. President, the Honolulu Star-Bulletin, in an editorial entitled "Urgency of Education Needs," published on January 12, effectively summed up the problem now facing the educational system in the United States—the need not only for more schools, but also for a higher quality of teaching. I believe there can be no argument with the Star-Bulletin's statement that "education all over the United States will be put to its severest test in the sixties that are now insistently upon us."

The editorial is particularly pertinent in view of the fact that the Senate will soon be called upon to vote on Federal aid to education and on whether such a program should include Federal aid for teachers' salaries. I therefore ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD as follows:

[From the Honolulu Star-Bulletin, Jan. 12, 1960]

URGENCY OF EDUCATION NEEDS

Education all over the United States will be put to its severest test in the sixties that are now insistently upon us.

At the same time that enrollment is putting heavier demands than ever on schools and colleges there is an insistent cry for better quality in teaching. Not only more but better education is demanded.

The urgency is on the State of Hawaii as on almost every one of our sister States.

It's specially heavy here because of our rapidly increasing population of youngsters; and because building costs are relatively high.

Statisticians give us the formidable national figures. Ten years ago there were 25 million pupils in public elementary and secondary schools.

Now there are 36 million.

Ten years hence there will be 44½ million.

The growth in college enrollment will be even greater.

Ten years ago there were 2 million college students. Now there are just a little less than 4 million. Ten years hence the number will be between 6½ and 10 million.

School costs have grown at an even faster pace.

Ten years ago public elementary and secondary schools cost $5 billion. This year they'll cost $14½ billion.

What the cost will be 10 years from now depends upon too many imponderables to be forecast accurately. But it will be a figure almost incredible today.

Of one thing most educators are sure. More time will be spent in the classroom. There will be longer school days and shorter vacations.

There will be more emphasis on the gifted, the ambitious student, less on shaping all to a common mold.

Some of the demand for better quality in U.S. education is stirred by Soviet Russia's scientific and technological growth. When the Russians launched Sputnik I in October 1957, Americans began to take a more critical look at American education—as compared with Soviet education.

They found the Russians offering more educational meat, more science and mathematics, than American schools. So there was a great outcry for more science and mathematics in our own schools.

Educators hastened to meet the challenge to keep up with the Russians. But the wiser ones among them realized that the need then was not for more classroom hours in scientific or technical subjects, but more attention to quality in all aspects of education—the liberal arts and humanities as well as physical science.

With this came the realization that more attention was being given to the slow learner and the handicapped than to the gifted student in whose abilities lie the best hope for the future.

It was realized, also, that most pupils were not being stimulated to do the best work of which they were capable. Experimental programs quickly showed that bright high school seniors could easily handle work intended for college freshmen. By inference, pupils at all levels were being asked to produce less than their maximum capabilities.

At the same time, taxpayers were being told with increasing emphasis that the best teachers are being lost because their incomes fall far below those paid to professional people in other categories.

Most of this critical examination of public education was a consequence of public clamor to keep up with the Russians. Thoughtful educators do not see this as the mission of education for the sixties.

Rather they are aware of an even greater need to educate mankind to the proper use of the tremendous forces science has placed in mankind's hands. Now more than ever is there need to educate the entire world toward progressive and productive peace with freedom.

The mission of American education in the sixties is not to catch up with or to pass the Russians, but to bring our own education level in the humanities up to that achieved in the physical sciences.

This is going to require great sums of money.

Educators must educate more than the children and young people placed in their charge.

They must educate the taxpayer—not only to financial needs of the schools, but to the urgency of the task of planning a world for peace as the the one sure barrier to calamitous nuclear war.

Adapting to Change

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 18, 1960

Mrs. ST. GEORGE. Mr. Speaker, under unanimous consent, I include the following excerpts from President Charles B. Shuman's annual address be-

fore the Farm Bureau convention in Chicago.

The Farm Bureau now has a total membership of 1,608,117. As usual, President Shuman's suggestions for a sound program for agriculture are progressive, forthright, and encouraging to anyone who believes in the future of American agriculture and the future prosperity of the American farmer.

The excerpts are as follows:

ADAPTING TO CHANGE

As the problems and needs of farm families change, as they must in times like these when the business of farming is experiencing such dynamic change, the nature of the Farm Bureau organization must also change.

The continued growth in Farm Bureau membership during a time when the number of farmers is steadily declining is an indication that the organization is successfully adapting to the changing needs of farm families.

The financial future for farmers would be much brighter if we could be sure that agricultural prosperity would be more closely related to our national economic health. This conclusion is based on the assumption that our national economy will continue to be strong.

Government programs which delay or discourage adjustment to change invariably hurt the very ones whom these programs are intended to help.

The Government price-fixing program which generated a $9 billion crop surplus has caused farmers to delay needed adjustments—it has slowed or prevented important changes in agriculture.

The postwar price-fixing and control programs must bear the principal responsibility for the decline in farm income during a period of national prosperity.

There is little point in trying to eliminate surpluses or speed up their disposal until action has been taken to stop the input into the surplus stockpile. The Agricultural Act of 1958 moved in the direction of eliminating Government price fixing for corn, cotton, and rice. The greatest unsolved problem is wheat. The next session of Congress should act to eliminate the price-fixing features of the wheat price support program.

The greatest single threat to a sound national economy is inflation. The principal cause of current inflation is Federal Government spending in excess of receipts.

We are beginning to win the fight against inflation; however, we cannot afford to relax our vigilance.

The economic strength and success of the United States is largely due to our free competitive capitalistic system. If we wish to continue to grow in strength, we must be certain that we do not unduly restrict or discourage new capital accumulation.

If farmers are interested in a continuing opportunity to earn a good income in a healthy industry, they will not seek subsidies or monopoly powers from the Government. Rather, they will work for elimination of existing subsidies and special legislative privileges to all groups.

Government regulation of subsidized business farm or nonfarm reduces income opportunities.

If we wish to have a healthy, competitive economy, we must resist the temptation of Government granted powers for ourselves and attack with every resource at our command the subsidies and monopoly powers of others. The response of Congress to the public demand for labor legislation should be encouraging to farmers and all others who are interested in the future well-being of this Nation.

A healthy two-way foreign trade is another important bulwark for a dynamic and expanding domestic economy.

We should immediately review and drastically reduce our entire foreign assistance program. In doing so, we will gain respect throughout the world. We have a challenging opportunity to take advantage of the growing prosperity in Western Europe and develop markets for an expanded volume of U.S. farm products.

There are five major planks in a platform for a prosperous agriculture geared into a sound national economy:

1. Discontinue Government price fixing and control programs in agriculture so that farmers can intelligently adjust their operations to changing conditions. Cushion the shock of these adjustments by restricting CCC disposal operations, and by temporarily expanding the soil bank in certain areas.

2. Encourage increased capital accumulation as necessary for an expanding economy and a high level of employment by checking inflation and reducing Federal taxes. Decreased Federal Government expenditures is the key to controlling inflation and reducing taxes.

3. Vigorously attack and eliminate Government subsidies to business, labor and agriculture and destroy, or effectively regulate, monopoly powers which have been developed or granted to various groups.

4. Expand two-way foreign trade on a nonsubsidized basis. Reduce foreign aid expenditures which tend to perpetuate Socialist economies and drain our financial resources.

5. Improve the bargaining ability of farmers in ways that are consistent with a free society and a competitive, capitalistic form of government.

Department of Science

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Monday, January 18, 1960

Mr. KEFAUVER. Mr. President, it is our responsibility as Members of the Congress to do everything within our power to combat juvenile delinquency. I was particularly impressed by recent hearings conducted by my distinguished colleague, the senior Senator from Missouri [Mr. HENNINGS], chairman of the Senate Juvenile Delinquency Subcommittee, in connection with the need for additional juvenile judges in the District of Columbia.

These hearings got down to the root of the matter. Recognized authorities in the field were given ample time to express their opinions and to make recommendations. The hearings were conducted with dignity and with a forthright desire to correct an intolerable situation.

The Washington Evening Star, in an editorial which appeared on January 7, 1960, made certain observations which should be of interest to everyone.

I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE RECORD IS CLEAR

We hope that the congressional leaders will, as Gov. Al Smith used to urge, take a look at the record. And by this we mean the record on Washington's juvenile court problem which has been made before Senator HENNINGS' subcommittee—not the inadequate and misleading record compiled in the the truncated hearings conducted recently by Representative DAVIS of Georgia.

In a 2-day hearing, Mr. DAVIS took testimony from only 3 of 15 witnesses who had expected to testify. Senator HENNINGS, on the other hand, heard many witnesses, including those especially well equipped to discuss the problem. And of these, it seems to us that Chief Judge Prettyman of the U.S. Court of Appeals summed up the case for more juvenile judges in clear and forthright terms.

Judge Prettyman pointed out that our juvenile court was set up with one judge in 1906 when the population of Washington was 300,000. There is still only one judge, although the population has risen to 870,000 and although the juvenile problem has assumed very disturbing proportions. How does this compare, in the same time period, with our other courts? The bench of the municipal court has been increased from 7 to 16, and a 3-judge municipal court of appeals has been created. In district court there are now 15 instead of 5 judges And in the U.S. Court of Appeals there are nine judges where there used to be three. If an expanding population required this increase in judge power in the other courts, how can a lone judge in juvenile court cope with the vastly increased workload in that tribunal?

The answer is that he can't. Last year there were 3,003 hearings in juvenile cases and 2,194 hearings in juvenile court cases involving adults—nonsupport, paternity, and the like. This is an average of 20 hearings each working day, and hearings are but a part of the juvenile judge's work. Obviously, under these conditions, the court will never be able to do a decent job of handling the children, both the dependents and the delinquents, who have been assigned by law to its care.

The "crying need," as Judge Prettyman has put it, is for more juvenile judges. And this crying need cannot be met by such devices as lowering the court's jurisdictional age limit or by reassigning nonsupport and paternity cases to other courts. All of this is part of one package, and it belongs, with one exception, in the juvenile court. The exception has to do with juvenile hoodlums who commit serious crimes. The juvenile judge, however, already has and is exercising the authority to send cases of this type to the district court for criminal trial. As to the other types of cases, nothing would be gained by reassigning them, for this would merely require more judges in the courts to which they might be sent. The end result of such a misguided step would be, we think, to seriously impair the usefulness of the juvenile court.

The Senate last April, without a dissenting vote, passed a bill to add two judges to the juvenile court. It has been buried since then in a House subcommittee headed by Mr. DAVIS. Meanwhile, the juvenile problem in the Nation's Capital goes from bad to worse, and we see no hope of improvement unless the responsible leaders will do two things: First, take a look at the record which Senator HENNINGS has compiled. Second, find some way to go through or around the one-man roadblock which has been raised by Representative DAVIS.

Senator Humphrey for President

EXTENSION OF REMARKS
OF
HON. EUGENE J. McCARTHY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, January 18, 1960

Mr. McCARTHY. My distinguished colleague from Minnesota [Mr. HUM-

PHREY] is an announced candidate for the Presidency of the United States. In his campaign for the Presidency, he is demonstrating his willingness and ability to discuss the real and serious issues that face this country and the world today. I am pleased that the Berkshire Eagle, of Pittsfield, Mass., has noted this important aspect of Senator HUMPHREY'S campaign. I ask unanimous consent that the editorial from this paper on December 31, 1959, be inserted in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE HONEST HAT OF HUBERT HUMPHREY

When Senator HUBERT H. HUMPHREY launched his formal campaign for the Democratic presidential nomination yesterday, he was frank to say that it will be an uphill fight all the way. This was about the only noncontroversial statement in the course of a long and interesting press conference.

Indeed the reaction to his announcement has been almost annoyingly patronizing. Most commentators—even conservatives—concede his very considerable talents. But virtually none takes his candidacy at all seriously, because it is taken for granted that he hasn't a Chinaman's chance of prevailing at the convention.

This in a sense is a sad commentary on presidential politics. HUMPHREY'S biggest liability as a White House prospect is the fact that he has strong opinions on most subjects and is not in the least hesitant about expressing them. This is regarded as a serious debit in an era when the smart operators rarely make a move without consulting the opinion polls and when the top prizes generally go to politicians who (as HUMPHREY said of NIXON yesterday) have "several points of view on each issue."

This quality of candor is not, of course, HUMPHREY'S only presidential disqualification. As an inheritor of the New Deal tradition (and, as James Reston notes, a "son of the old agrarian reformers") he is deeply concerned with the need for economic reform and the plight of the minority of Americans who have not shared in the booming prosperity of the past decade. At a time when the majority is well-fed and complacent, this is not a popular theme.

But however much HUMPHREY may seem to be out of step with the prevailing mood of complacency, there can be no doubt that his forthrightness and his remarkable familiarity with the issues would make him singularly well equipped for a rough-and-tumble campaign of the sort that the Nixon candidacy will probably impose on the Democrats. As "T.R.B." put it in a recent issue of The New Republic: "He would not approach such a fracas reluctantly nor as a martyr. His eyes glitter at the possibility: frankly he would love it. It would be the bare knuckle battle of the century."

And it is not at all impossible that in the course of such a battle the voters might be jolted out of their complacency, might be made to see the size of the public needs confronting us, might indeed be persuaded that a thaw is not permanent peace and that chromium prosperity can look pretty shabby in a world where hunger and grinding poverty are still the lot of most. It may be only a dim possibility, but it is not one that the Democratic politicians should dismiss out of hand.

The Poland I Saw

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, January 18, 1960

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article which appeared in the November 14, 1959, issue of the Saturday Evening Post. "The Poland I Saw" is a revealing, inside story of the tragic plight of the Polish people and bears out the harsh truth that, even though this country has achieved more freedom and independence than any of the other Iron Curtain countries, she is still very much under the yoke of Communist oppression.

The article follows:

THE POLAND I SAW

(By Greta Van Dyke Turska)

When I ended my last visit to Poland I was in tears and could not stop crying—but I clutched in my pocket a few Polish beans. Those beans grew strong and all in the small garden behind my house this last summer as a talisman for the family I had left behind—and especially for my brother-in-law, Stefan, who sent the beans to free soil because he never expected to reach it himself. He thought that if the beans could get to the free soil of America—and if the outside world even knew anything about how ordinary people exist in a Communist country—somehow there still might be some chance for those people, in spite of all the indications.

The later visit of Vice President RICHARD NIXON to Warsaw obviously aroused some similar belief in the shouting thousands who greeted him and reaffirmed the affection of Polish people for America. Stefan wrote to me shortly afterward. Most of his letter concerned family affairs: the drafting of his son into the Polish Army despite poor health; the failure of my letters and packages to get through, although I send mail and small amounts of money weekly.

But he also wrote: "About the politics, we are so happy that yesterday your Vice President arrived in Warsaw. Now I have hope that a change will come. He visited the places of murder and said we never again should permit conflict of that nature. * * * How wonderfully he talked about our universities. * * * Now I close. I am very tired and cannot go on."

I know Mr. Nixon did not see Stefan, who was working in Gdynia and was much too sick and too poor to have gone to Warsaw; but I can hope that he had a chance to look beyond the expectant faces of the crowds to the thousands of people like Stefan, to see a little of the hopelessness which is worse than their broken shoes; their constant fear; the galling bitterness they express in two words—"our friends"—while never mentioning the Russians by name. I hope he saw a little of it and remembered it as I do.

I have been to Poland twice. The first trip was in 1932, with my Polish-born husband, John, a veteran of the U.S. Army in World War I, and our small daughter. I myself was born in Stettin (then in Germany), but came to the United States in 1920.

I shall not forget that first trip. Poland was like a little fairy country. John's home village so beautiful that I wanted to paint the old church on a hill, the houses scattered below it. The church organ still was played by a man who had been John's teacher. The village had only a single water well, but people sang as they carried big wooden buckets to it. In the evenings folk singers serenaded us because we were visitors; and now and again the church bells pealed in the cold air.

John had eight brothers and sisters still in Poland, five in America. His old father, Joseph, greeted me as a daughter. Because one relative was a navy officer, we were invited to an admiral's ball in Gdynia; and the admiral chose me as his partner for the first dance. Christmas was a joyful holiday, filled with celebrations and with all the food a bountiful country could provide. Open markets were in every town—live fowls in cages, produce spread on the ground, pickled fruits, cakes and huge Polish hams for sale. Our Christmas table included a goose and roasts of veal; and hot holiday breads came from the tile ovens in every house. My husband's people had trouble finding a dowry for their last daughter; but they were healthy, happy and thankful for their blessings. Of them all, Stefan was the most gay, proud of his Polish Air Force uniform, strong and confident.

Only once was there a jarring note; the radio blaring some announcement about Adolf Hitler. Then Stefan's face darkened and under his breath he said two words, "psia krew" (dog's blood). For a while they all were quiet; but then the laughter and singing began again.

This was the Poland I first knew: a quiet village, a gay port city, a happy family. Until 1939 I corresponded irregularly with Stefan, he testing his German, I trying a few words of Polish. Then there was no word during the war, only a brief relayed message shortly after the peace: if we could send medicines through the Red Cross, lives of two sisters might be saved. Then more silence. My husband died; but I did not know whether the family in Poland received the news, or whether there still was a family in Poland. My letters were not answered and not returned.

I don't know just when I decided that I must go there again. But I began saving a little each week from wages I earned in a department store, and traveled by tourist-class ship to West Germany in 1955, flying to Berlin. The East German Communist Government gave me a four-day pass; but at a border station within Berlin a female customs guard forced me to strip while all my clothes were examined. Streets beyond the border still were littered with rubble; beggars followed me everywhere, and I could not even find the station for a railroad which might have taken me to the part of Stettin still under German control, and—I hoped—to Poland. Completely unnerved and frightened after only 4 hours, I retreated to West Berlin. In Witten and Aachen, West Germany, I found two of John's sisters. Both families had come to Germany after Poland's defeat in 1939, and the husbands had spent the rest of the war working in coal mines. But each sister had the same story, "We never hear from Poland. We don't know whether any of the family is still alive."

I was out of money and had failed completely. So I returned to the United States and my job. Two weeks later the first letter

in more than 15 years arrived from Poland. In it Stefan wrote: "Those of us still here are anxious to see you. We hear nothing. Is it possible that you still are alive? Will you ever again come to Europe? Why do you never write?"

I wrote to him—and again began saving my money, earning a little extra by doing housework for other people during my spare time. In three years I had enough—just barely. By 1958 restrictions on travel directly to Poland had been eased. I obtained a 16-day visa by sending the Polish consulate $120—$7.50 for each day I would be in the country. In return they sent me the necessary state-travel-agency coupons to be exchanged for zlotys in Poland or used for hotel bills. I took cheap tranportation to Europe. From Amsterdam I wrote Stefan that I would be in Poland in 2 weeks. There was no answer, but I boarded a Dutch airliner anyhow. This landed me on the cold Warsaw airport on November 4.

I expected another disrobing demand, as in East Berlin, but there was none. After 45 minutes I was called into the customs office, where all my possessions were listed, to be checked against what I might take out later. Then I was directed to another room to have my Orbis coupons exchanged. Here hollow-eyed people in shabby dress were all around; but it was minutes before I recognized one sick-looking, old-looking man, hardly more than a skeleton, as Stefan, who had been so strong and so gay. When at last I was free of the officials, Steffan fell on his knees and kissed my hands, weeping. He had stood in the aisles of a train for 8 hours in order to meet me. Slowly we walked out, trying in a few minutes to wipe out the strangeness of 25 years.

In a 1930-model taxi with flapping side curtains, we bumped over rutted streets to a building where an American serviceman stood on guard, barring the way to Stefan, although he admitted me. When I came out, after completing papers in the U.S. Embassy, Stefan still was staring at the American flag above the door. He whispered, "I have never been so close to American freedom before."

In the same weary taxi we rode to a railroad station. New recruits were being sent to army training camps—thin, underfed boys. Waiting, some sang sad, chanting folk tunes; and all around were the bitter faces of their families, ragged, hungry, and dirty. I sat on my luggage while Stefan went to buy tickets for the Gdynia train, and the people stared at my clothes, my shoes, everything. The cold was intense, but the air was foul. I was sure I was having a nightmare.

Finally, a train arrived. We pushed through the crowd to a first-class compartment; but 16 people already were in it, with bundles and rotting suitcases filling the luggage racks. There were no seats for us until one young man gave me his place. I piled all the luggage I could hold on my lap, while Stefan continued to stand, holding other bags. Outside in the train corridor, the army recruits stood or sat on the floor. No one talked. There was no dining car, but I had a sack filled with white bread, butter, meat, cake, fruits, and chocolate I had bought in Holland. After a long time, I offered some of this food to Stefan.

In German he asked, "What about the others?"

I'd bought this food for the family, so I hesitated; but a murmur rose all around me: Food, food, food. Where did it come from? How much does it cost? Does everyone in America have this sort of food? Quite suddenly faces which had been wooden were animated and curious. I could not resist. As I passed bits of food to one after another, the compartment buzzed with more inquiries: What was happening in the West? How was the United States? The train swayed through flat country, stopping at windy stations, while I was battered with questions.

I tried to tell them how an American family lives—the food, the medicines, the freedom. Some things they had not heard about; some they did not believe. They changed places so that each could sit next to me briefly and ask questions. My food bag presently was empty, but I did not care. The train stopped again to disgorge the recruits, and some people left the compartment—but kissed my hand. One old man—he looked 80, but I could not judge these people with their pinched faces and rotted teeth—whispered a parting question, "Does anyone care about us?"

For this I had no answer.

Only three of us now remained. Stefan collapsed beside me. Across the aisle, the one other man watched us thoughtfully. Middle-aged and Russian, he was better off than most Poles in that he did have an overcoat, although his clothing and his briefcase were shabby. He said he was from Moscow, going to a conference in Poznan. "All those things you told the Poles about life in America," he asked suddenly. "Were they really true? I can hardly believe——"

I said I was a working woman and that I had no reason to lie. Oddly, he appeared convinced by these simple statements. He noticed that I was shivering with cold and fatigue and he said, "Come over to this bench and lie down. I will sit with the man." I did so, and he spread his heavy overcoat over me. After 8 hours we struggled off the train at Gdynia. I shook hands with the Russian, but neither of us said anything. He was a gentleman, and he believed me.

My nephew, Boleslaw, was waiting. A tall very thin boy of 20, he had dark circles under his shy eyes, and horrible boils on his face and hands. My surprise must have showed, because he spoke immediately in English, "Yes, Auntie, Boleslaw hungry, sick, tired, not want to live. Mother and father give me their piece of bread and extra potato, but Boleslaw always hungry."

Stefan's apartment was one of four—with a single set of plumbing—on the third floor of a walk-up apartment house. Janina, my sister-in-law, stood on the landing, shouting, "You made it! You made it! God be praised that he let you come so far. Come in, please, and let us realize that it is not a dream."

I climbed to a dark hallway. On one side was a kitchen, on the other a room where the three slept—and beside this, another very small room where one more man stayed, keeping a violoncello beside him. In time I learned that he was a Hungarian refugee, once well-to-do, now destitute, with nothing but the clothes on his back and the cello which he had dragged, somehow, when he fled Hungary. What this man ate I never learned. He must have represented great danger to Stefan; but they did not ask him to leave nor ever explain, entirely, why he was there. To me he said one thing of importance. "Go back to America and tell someone. Tell them how we live; tell them about these Russians. They are glad if we just die."

Stefan suggested that the three members of his family could sleep in one bed and I could have the other in their bedroom. But I chose chairs and a bench drawn together in the kitchen, with a feather bed to serve both as mattress and cover.

Quickly the family story was told. By 1939 Stefan was only a reserve officer and he never had reached his air-force unit during the brief and confused Polish resistance to Germany. When the Germans came to Gdynia, he had refused to swear allegiance and had been sent to a concentration camp in Pomerania, along with a younger relative. Miraculously both had survived, but Stefan never would discuss the terrible scars on his legs.

World War II had been even worse for others. The naval officer in the family had been killed. The admiral with whom I danced had gone down in a submarine. One sister-in-law, seeking to save her children by sending them away, had watched while their ship pulled out of the harbor, only to strike a mine and go down with all hands. John's mother had died early in the war; but Joseph, the old father, had survived, only to die of food poisoning in the early peace, when no one could afford to worry about whether food was entirely fresh. The two sisters, for whom we had sent medicines, nevertheless had succumbed to tuberculosis.

While Stefan told me these things, Boleslaw stood by the door, watching down the hall. Stefan explained, "You never know who may be coming." He said the city had been full of Russians immediately after the war, and Janina had worn a pillow inside her dress to feign pregnancy and avoid rape. Gradually the Russians had restored discipline; and many had departed. But since protest demonstrations in Poznan and the Hungarian revolution, Gdynia again was filled with Russian soldiers—big, well-fed men, their fine boots and uniforms contrasting sharply with the shoddy equipment of the Polish soldiers, who looked only like sick men expecting to be slaughtered.

A woman member of the people's police had been quartered on the ground floor of the apartment house, beginning just before my arrival—for what reason, no one appeared to know. When I presented my passport to her, as required, she spoke perfect English, but did not bother to ask me any questions—only kept the passport overnight. Possibly she knew the answers in advance.

Before each apartment door was a small pile of bricks and mortar. Janina explained, "It is an order. We are to put the bricks into each firebox of our stoves, to make it smaller by half. But Stefan managed to have the installing delayed until after you leave." The family had a cooking range in the kitchen and a ceiling-high tile heating stove in the bedroom; but they were allowed to buy only one small bucket of coal daily and had to haul that up the stairs. This barely heated the food, and tiles of the bedroom stove seldom were even warm in near-zero weather. Sadly used to this, the Poles wore most of the clothes they owned—ragged sweaters over ragged shirts, two pairs of trousers, the lucky few with overcoats on top of everything.

Gdynia, incidentally, is a coal-shipping port; and many of the 90 cranes on the waterfront are used to load it. Stefan was assigned to dock work, although by civilian trade he had been a cabinetmaker. He told me that while the city shivered, Russians were storing tons and tons of coal underwater in artificial lakes; and that Russian ships had made off with American wheat sent to Gdynia for the relief of Poland. Russians, he said, substituted weevily wheat of their own in the relief supplies, then told the Poles it was the best America could produce.

Both Boleslaw and Stefan worked, but brought home only about 2,400 zlotys a month—the equivalent of about $24 at the black market rate of exchange. This had to cover rent, coal, transportation, and meals, which ordinarily consisted of bread, potatoes, and tea or coffee substitute, with fish perhaps once a week. Real coffee was $16 a pound, and the famous open markets offered nothing appetizing. One which I visited contained only a handful of peddlers offering live fish, chunks of pork meat set out in the open, soggy bread, undersized potatoes and a few onions. Butter was absent, milk unpasteurized, and soap missing. At 20, Boleslaw could not remember tasting an orange

or a banana. Stubbornly I hunted a lemon for days but never found one.

After one frustrating visit to a market Stefan said, "Why bother? Let's just buy a herring and eat it raw."

Butter, some meat and Polish money, however, could be obtained on the black market. Although 24 to 1 was the legal monetary exchange rate, 100 or even 120 zlotys could be obtained for American dollars in large denominations. Traders sometimes were shoemakers, sometimes tailors or seamen, operating on the street or on the waterfront. The same man never appeared twice, and the rendezvous always was changed—but always there was someone ready to sell Polish money.

Vodka and beer, however, were cheaper than bread and were sold from stands on the street, where unwashed salespeople poured out purchases, then recapped the bottles. I saw 12-year-old children buy vodka, then sit beside a wall sipping it. But Stefan was not disturbed. "What difference does it make?" he demanded. "For a little while they're warm and don't think about food. Let them enjoy it if they can."

I was required to report to the town police as well as to the woman in the apartment building, and this rapidly turned into another nightmare. Dark halls of the police station were lined with benches, the benches filled with silent people. When I knocked on the door of the proper office, a woman's harsh voice told me to come in—alone. She looked as rough as her voice; and when I started to sit down, she barked, "I'll tell you when to sit down."

My papers appeared to enrage her. "Why do you come here and to whom?" she demanded—and then insisted on my entire family history. She told me to wait, but after a full hour admitted that someone else would have to check my papers. I spent another 2 hours in the corridor with my frightened relatives before she called me into the room again and threw the passport at me.

A few minutes later four of us were standing on a downtown sidewalk when two Russian soldiers suddenly pushed between us and ordered, "Move on." Quickly my family pulled me away as the Russians looked back at us suspiciously. I noticed afterward that no sidewalk group ever contained four Poles: it was too conspicuous. The only large groups were Russian soldiers, moving as if on patrol with pistols slapping their legs.

There were, however, many people on the streets. Dozens merely sat on the sidewalks with their backs against buildings or stone walls, not moving and not talking. Many had small bundles beside them. Stefan explained, "They're people from other towns. They have come here looking for something or someone, but they have no place to go."

Once while I was watching, a police patrol passed, followed by a horse drawing a high-sided cart. A patrolman looked hard at each of the sitting people and now and then touched one with his foot. If the sitter moved, the patrol passed on. But one policeman touched an outstretched foot and received no answering movement. The men muttered to one another and two of them picked up a small body—a young girl or a child—still stiff in the sitting position. Without ceremony they heaved her into the cart.

Stefan said, "The girl is dead. Just come along."

I was shaken and weary. We waited for a bus, but when the ancient vehicle arrived, it was jammed with people. A young woman with a face like a ghost's collected fares and called stops to the driver, who sometimes heard her. Once as we started up again a child tried to hang on in the doorway, but fell off. People screamed, but the driver kept going. I could not tell whether the child had been struck; but as the noise lessened, a woman said softly, "One less mouth to feed." That was all.

I wanted something to take home to my grandchildren and for days tried to find a record of the Polish national hymn or a small statue of the Madonna. But all I found were a few pieces of jewelry set with amber and a small girl's costume vest in velvet. As we came into the street from one shopping foray, however, half a dozen young Russians soldiers strolled ahead of us, and ahead of them an old Polish man propelled himself in a wheel chair. The Russians—I can't say whether they were drunk—chattered to one another, then ran up and dumped the old man into the street. While he cried piteously, they played a game with the chair—two sitting in it and making honking sounds, two others pushing and yelling, "Aftomobilo! Aftomobil!" At high speed they disappeared around a corner.

Dozens of Poles were nearby, but nobody said anything. I turned on Stefan. "Aren't you going to do anything? Stop them! That man could be your father." But Stefan walked away.

I hurried after him, finding him on another corner, his hands in his pockets. He said, "Do you think I want a bullet in the back? Nothing can be done. It is better to leave when 'our friends' are involved. You must do nothing to 'our friends'." I wish I could convey the bitterness of those two words.

The days passed slowly. Boleslaw wondered aloud whether I told the truth about the outside world—perhaps the whole world lived as they did. In evidence, he showed me a newspaper clipping declaring that Americans ate grass and tree bark to keep from starving. I told him the clipping erred only slightly—we used the grass for chlorophyll, the bark for medicines. I had told Stefan I'd like to go to church, and he admitted one evening that we could. But Boleslaw would not go.

Certainly it was like nothing I had experienced before. In secrecy and in the dark we crossed a rough field. Stefan warned, "If anything happens, you both go back. Don't wait for me or try to find out anything." At last we came to a building, but I could see only dark walls, no lights. Stefan stooped, and we followed him through what must have been a window and into a semicellar. All was dark except for a tiny light on an altar. We fumbled for room, with people kneeling all around. Next to me I could see a young woman with a baby nursing. Tears ran down her face as she fingered a rosary and muttered without clear words. Only such murmurs could be heard. If there was a real service, I could not see it. So we only knelt until Stefan touched my arm, then went back the way we had come, alone and in the dark.

Thus one church operated. In John's home village, however, both the Catholic and Lutheran churches were deserted—the Lutheran boarded up.

These people no longer worried about cleanliness. When I tried to show Boleslaw how young Americans wash, he only laughed—and Stefan shrugged. "What's the use?" he said. "I don't care any more. There is no soap, there is nothing." But both men were interested in a small razor I carried to shave my legs. I gave it to them, but had to show them how to keep my only two blades sharp by rotating them in a water glass. Previously they had trimmed their beards with the same old shears they used to cut each other's hair.

In the bedroom they had a small, weak radio which somehow had survived the looters; but the Polish programs were hours apart, many of them political talks. They all knew when the Voice of Free Europe broadcasts were scheduled; but each time howls and squeaks—the deliberate Communist jamming—would drown out the station after a few words of Polish.

One Saturday evening we went to a navy officers' club. One relative still had a navy job, although another young man had resigned his commission and now was a common sailor on a merchant ship. His wife expected that he would jump ship at the first opportunity in a free port; but she said, "It will be all right, if only he can be free."

Perhaps 250 persons jammed the club, including 75 Russian men. Their tables had great platters of food, but the Poles could order only vodka or thick Turkish coffee from a lone, madly running waiter. Because the Polish women would not dance with the Russians, the Poles in their shoddy uniforms did all the dancing. The women were dressed much alike, with flat shoes and no makeup or jewelry; but Stefan had said, "Wear your American clothes. We'll show them how Americans look." So I sat in this somber throng in a new black suit, high heels, crystal earrings, costume jewelry, and ordinary cosmetics. Certainly I attracted enough attention, and we decided not to dance. But a Russian officer, perhaps 20 years younger than I, pushed into the middle of our Polish group. In perfect English he courteously asked me to dance. I hesitated, looking at the people in our party. Immediately the Russian, using English—which my family does not understand—demanded, "Do you have to ask these Polish swine for permission?"

I said, "Perhaps I am Polish swine too."

But he would not go away. To avoid a scene I arose and talked to him at a little distance from my family, while they sat as if frozen. The Russian kept asking personal questions, so I finally told him I was married and had 10 children—and that my husband had stayed home to care for them.

"Don't lie," he said. "I don't believe you even have a husband. From now on, I command you to dance with me."

I told him I was a citizen of a free country, and his command meant nothing to me. But he then insisted that I come to his table and eat some of the heaped-up food. Instead I complimented him on his American-accented English. Immediately he swelled with pride and said he was glad about the accent because he could use it when he came to America. But, he added, "7 years is too long to wait."

I didn't know what he meant—whether he expected to make a visit or whether someone had told him the Russians would be in America in 7 years—but I said, "Well, that's all right We expect you. You just come on. We're always ready for guests, invited or not."

"I don't understand why you're talking to me at all," he said. "Don't the Americans hate us?"

"I do not see your uniform," I told him, "only another human being."

This could have gone on and on, but I felt like a traitor to my family. I returned to our table, but now we were a center of attention. Stefan wished to leave, although the dance was to continue for hours. But at least 50 Russians followed us to the club lobby, demanding that we stay. I told the young officer that we would come back the next night, but that did not satisfy them. Finally they stopped the music and told everybody else to go home, just because we were going.

Quickly and close together my alarmed family and I hurried home through dark streets. As he did every night, Stefan piled furniture against the doors before he want to bed and put old glass jars on top so that the slightest movement would cause them to fall and break. But nothing happened.

The only people who did visit us at night were two strange men and a woman who arrived several nights later. One man handed me two pictures of the Madonna and Child, asking me to give them to some Polish people in the United States. The second had a very large, handmade book filled mostly with snapshots about the life of Polish people since World War II—scenes of misery and poverty. He insisted that I take this with me, so people in the West could know what life was in Poland. He was sure I could get it through customs, perhaps under my clothing; but when I repeatedly refused, he said he would get it to me somehow, perhaps via Sweden; and I agreed to show it to as many people as possible. But in the months since my return, the book has not arrived.

The woman had a different plea: Would I buy the heavy and expensive Persian lamb coat she had wrapped in a bundle? It had survived burial, like most things the Poles still had. Now she did not dare to wear it, but needed food and medicines for her family. I paid her $30 in U.S. currency—all I possibly could afford. The three strangers blessed me as they went out into the dark. Janina and I took a label out of a coat I had brought with me and sewed it into the lamb, and I gave the second coat to her.

After 12 days I became ill, suffering chills and fever. The apartment building had no telephone, and no civilian doctor was available—these people had not even been able to see a dentist in a decade—but Stefan ran in the night to another relative, who induced a navy doctor to walk to see me. But he said, "I know what you need, but I do not have such medicines. Just brew strong tea and drink that." This was the extent of my medication, except for a few sulfa tablets. I lost pounds daily, and my visa was running out. So I gave many of my belongings to the family and packed the rest. On a frigid morning Janina held me close. "You pray for us," she said, "and I will pray for you. Thanks so much for rekindling our hopes."

Stefan and Boleslaw went with me to the airport, where a single-engined airplane waited on an unpaved runway. There was delay after delay, and the tension finally was too much for Boleslaw, who turned away in tears and left. I could say only, "God give him strength."

Stefan stayed, however, and when I finally was told to board the plane, he reached into his pocket. Carefully he dropped a handful of beans into my palm. "Take these," he said. "I will never leave here, but perhaps these Polish beans may grow in free soil."

I knew of nothing to say to him.

On the airplane five men and I sat on wooden benches in the unheated cabin, without safety belts—and the plane took off after another hour's delay. This was the last day in Poland allowed by my visa. At customs in Warsaw, officers confiscated my last 150 zlotys—then took from my baggage all my nylon clothing, a small camera, family pictures, soap and toilet articles. If I could pay a luxury tax, they blandly informed me, I could have them back, although they were things I had brought to Poland. Finally an exit seal was entered on my passport, and I was sent to another building to await a Dutch international airliner. But no plane appeared. Finally I found an official who said the plane to Amsterdam would not stop at Warsaw that day.

I was in despair, alone, sick, cold, my Polish money gone. I begged a Polish policeman to telephone the American embassy; but he said, "Come with me quickly, before the Russian police wonder what all the trouble is." I thought, is there no one in this poor country not living under a shadow of fear?

An embassy chauffeur took me to a hotel, although I had only my handbag. My tiny third-floor room was equipped with a chair and a bed—the blankets dirty, the sheets indescribable. There was no water for washing nor any warmth in the radiator—but there was a chamber pot. Hours later a young man from the embassy brought me 100 zlotys for food, but warned me not even to leave the room. In the hallway, a sleepy maid shook her head at the Polish money, but produced tea and bread when I showed her an American dollar.

I could not stomach the bed, so spent the night in the chair—the longest, coldest night I remember. In the morning another dollar produced more bread and tea, and at 11 a.m. the embassy man came back to take me to the airport. He could not locate my confiscated possessions, but did get me onto a plane for Amsterdam. The last thing I saw in Poland was a Polish officer handing up my passport; and I thought I read in his eyes a wish that he, too, could be going away.

Four men on the plane must have thought I looked like a refugee, because one gave me an orange and another handed me a cooky in a cellophane bag. The stewardess offered the first real coffee I'd tasted in 2 weeks.

I began to cry and could not stop. I still was crying as the plane lifted off the soil of Poland.

Misconceptions in Public Understanding of Monetary Policy

EXTENSION OF REMARKS
OF
HON. A. WILLIS ROBERTSON
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Monday, January 18, 1960

Mr. ROBERTSON. Mr. President, the November 1959 issue of the Monthly Review of the Federal Reserve Bank of St. Louis contains an article, entitled "Some Misconceptions in Public Understanding of Monetary Policy." The article, which was written by Dr. Carl T. Arlt, director of research of the Federal Reserve Bank of St. Louis and a former member of the staff of the Committee on Banking and Currency, is an excellent explanation of Federal Reserve objectives and controls, and also includes a clear examination of current criticisms of monetary policy.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SOME MISCONCEPTIONS IN PUBLIC UNDERSTANDING AND MONETARY POLICY

The rise in the level of interest rates in recent years, and more particularly the sharp rise since mid-1958, has created considerable public interest in monetary policy.

Public reactions to Federal Reserve policies reflect sharp differences of opinion with respect to the forces raising interest rates and the principles guiding Federal Reserve authorities in this connection. Many people are generally aware of the reasons for current monetary policy and accept the rise in interest rates as the inevitable result of the bulging credit demands of a boom pressing against a supply of credit which is necessarily more limited in amount. There are others, however, who regard the rise in interest rates with alarm and resentment. They consider the present level of rates a product of an inappropriate monetary policy.

The generalizations most frequently used by critics of current monetary policy are the following:

1. Federal Reserve authorities are deliberately fixing interest rates at high levels.
2. Rising interest rates, by increasing the cost of borrowing, contribute to inflation.
3. Interest rates are abnormally high as evidenced by the fact that they are now at a 25-year peak.
4. Federal Reserve authorities have the power to keep rates down and should use that power.
5. Rising interest rates reflect a policy of excessive monetary restraint which inhibits economic growth and full utilization of resources.

The purpose of this article is to suggest that these generalizations in the main reflect (1) public misunderstanding of Federal Reserve policy and operations, and (2) preoccupation with immediate goals without sufficient regard for longer run consequences.

A REVIEW OF FEDERAL RESERVE OBJECTIVES AND CONTROLS

Since many of the above generalizations apparently reflect some basic misconceptions in the public's understanding of what the Federal Reserve authorities are attempting to do and how they are doing it, a brief review of the objectives and the mechanisms of credit control seems to be in order.[1]

Objectives

The primary objective of the System is to influence the monetary and credit situation so as to encourage growth and resist both inflation and deflation.

The focal point of Federal Reserve action is the volume of member bank reserves available for lending and investing, since generally each new bank loan or investment, with its simultaneous creation of a new deposit balance, represents an addition to the money supply available for spending on goods and services.

In a boom period, the monetary authorities will attempt to influence member bank reserves so that the lending ability of commercial banks does not increase at a faster rate than is compatible with the economy's capacity to increase its real product. In other words, as expanding credit demands of the economy impose growing pressures on banks to extend more credit and to seek additional reserves to meet expanding reserve requirements, the Federal Reserve System strives to limit the increase in reserves and total bank credit to an amount compatible with sustainable economic growth without inflation.

Since interest rates are the prices paid for credit, it is not at all surprising that in the boom phase of our economy the strong credit demands of Federal Government, State and local governments, businesses and consumers generate an upward thrust in interest rates. The supply of credit, limited as it is by the volume of current savings, accumulated idle balances, and new commercial bank credit, does not and cannot keep pace with the virtually unlimited credit demands of a booming economy.

Instruments of control

The Federal Reserve authorities have three major instruments for influencing member

[1] For a more detailed description see Board of Governors, "The Federal Reserve System—Purposes and Functions" (Washington, D.C., 1954).

bank reserves and total bank credit—open market operations, discount policy, and changes in reserve requirements.

Open market operations: These are the transactions which increase or decrease Federal Reserve holdings of U.S. Government securities at the initiative of the System. Purchases of securities supply reserves to member banks. Sales of securities extinguish member bank reserves. These operations may be used not only to change the volume of bank reserves within the framework of a credit policy of ease or restraint, but also to offset losses or gains in reserves from changes in such factors as currency in circulation, gold stock, Treasury balances at Federal Reserve banks, and float.

In view of the complexity of forces operating on member bank reserves and changes in the velocity of money, a period of monetary restraint may not necessarily be characterized by net sales of Government securities by the Federal Reserve. The System may find that it has to feed additional reserves into the banking system to offset the absorption of reserves caused by such factors as outflows of gold, increases in Treasury balances, or increases of money in circulation. In this situation the open market operations, although aimed at moderating the growth of commercial bank lending, will involve net purchases of securities to offset the losses of reserves mentioned above. It is also important to note that net purchases of Government securities by the Federal Reserve may be quite consistent with a policy of monetary restraint. Such a policy permits bank reserve growth compatible with a noninflationary expansion of bank credit.

The impact of Federal Reserve policy may be better judged by observing what happens to total bank reserves than by looking at purchases and sales of Government securities. Thus, the most powerful instrument of control, and the one that directly changes the total reserve positions of member banks, is understandably masked and quite likely to be ignored by the public.

Discount policy: This relates to Federal Reserve bank lending to member banks. The initiative in such credit extensions is taken by individual member banks when it is necessary for them to build up their reserve positions to required levels.

The discount mechanism, as now used, is largely complementary to actions in the open market. At a time of credit restraint, for example, open market operations furnish banks less reserves than they need to meet existing credit demands. The impact of such action is generalized for banks as a whole. Necessarily it hits some banks harder than others. Those individual banks which find their reserve positions especially hard hit in the process may borrow at the Federal Reserve Banks as they face prospective reserve deficiencies.

Borrowing by any individual bank is a temporary expedient to carry over until more fundamental changes in asset position can be effected. Under these circumstances the discount window operates as a safety valve, not to frustrate the impact of open market operations, but to permit that impact to be spread more evenly and smoothly over the banking system as a whole.

The member bank tradition against borrowing, in addition to Federal Reserve bank policy on this matter, normally assures that the discount window is no more than a safety valve for individual banks. However, to guard against the use of the discount mechanism as a means of offsetting restraint through open market policy, the discount rate may have to be raised. If, during a period of credit tightness the discount rate is far below the market rate on Treasury bills, for example, banks find it more desirable from the cost standpoint to borrow at the Federal Reserve bank than to sell off short-term Government securities. If the discount rate is raised to a level comparable to the market rates on short-term Government securities, individual banks facing reserve deficiencies may prefer to sell off their securities rather than borrow from the Federal Reserve, thus contributing to the intended tightness in the money markets and passing on the reserve pressure to other banks whose customers may buy the securities being sold.

It is important to emphasize that open market operations are the primary instrument of control and that the discount mechanism and the discount rate serve to reinforce the intended impact of open market policies. More often than not the rise in the discount rate will follow the rise in market rates, reflecting the monetary tensions created by a bulging credit demand pressing against a supply of credit which has not been permitted to grow as fast as the credit demand.

Reserve requirements: The Federal Reserve at its initiative may also diminish or enlarge the volume of funds which member banks have available for lending by raising or lowering reserve requirements. Unlike open market operations, reserve requirement changes affect immediately and simultaneously all banks in each reserve class. It is a powerful instrument which has usually been employed only when large-scale changes in the country's available bank reserves are desired.

Since sharp changes in excess bank reserves are not desired in a period when the Federal Reserve is attempting only to moderate the growth of reserves, the system depends on open market operations and discount policies as the more sensitive and flexible instruments of credit control.

AN EXAMINATION OF THE CRITICISMS OF MONETARY POLICY

Does the Federal Reserve deliberately fix interest rates at a high level? The above review of the basic instruments influencing member bank lending makes clear that it is the lending ability of commercial banks and not the interest rate which is the major target of Federal Reserve credit policy. Unfortunately, from the point of view of public understanding of monetary policy, the most important credit control, namely open market operations, is the least dramatic and least likely to attract the attention of the public. What the public does see, however, is that in a period of rising interest rates the discount rate also rises. Observing no changes in legal reserve requirements and being unaware of the credit impact of open market operations, the public frequently jumps to the conclusion that the rising discount rate is the instrument and the cause of rising interest rates. In so doing they fail to realize that interest rates reflect the interaction of credit demand and supply forces and that the primary cause of the sharp rise in interest rates in 1959 has been the greatly expanding credit demands of a booming economy pressing against a growing but limited amount of credit. In this connection it is appropriate to point out that bank credit is only a portion of the total credit volume, and that an important limit on total credit availability is the volume of savings.

Are interest rates abnormally high? Often heard today is the statement that current monetary policy has raised the interest rate to the highest level in 25 years; that such a rise in rates is clearly abnormal and one that the monetary authorities can and should avoid.

That interest rates are at their highest level since the early thirties is not to be denied. The implication, however, that the low levels of interest rates marking the period from the thirties through the early 1950's constitute a "norm" is indeed suspect. Clearly, the depressed years of the thirties, with business flat on its back and credit demands at a low ebb, do not provide a basis for judging the rate structure of the present day, marked by tremendous credit demands of Federal, State, and local governments, businessmen, and consumers.

It is equally obvious that the low rates of the 1940's and the first year or two of the 1950's are not appropriate benchmarks for appraising the current level of rates. There we had a period in which monetary policy was subordinated to the policy of stabilizing the Government securities markets. That such a policy made virtually impossible effective control over commercial bank reserves, demand deposits, and the money supply appeared to be a consideration secondary to the prevailing fear that any upward movement in rates would bring a collapse of the bond market and perhaps "destroy public credit."

The most recent comparable period free from severe depression and war was that running from 1920 to 1930. Compared with the interest rates of that period, the current rates do not appear to be abnormally high, as some believe. During the first 5½ years after World War I yields on long-term Treasury obligations partly exempt from taxation ranged from 5¾ to 4¼ percent. It may be recalled that that was also a time when the Federal budget was in balance and with the Government debt declining from $26 billion to $16 billion. During the entire 11-year period, the average yield on long-term Governments was slightly under 4¼ percent.

Do rising interest rates raise costs and contribute to inflation? Much of the criticism of current monetary policy centers on the interest rate as a cost element confronting Government at all levels, businessmen, and consumers. Impressive figures on mounting interest costs to Government are intended to show that increased public expenditures and related inflationary pressures are directly attributable to rising interest rates. In short, the system's critics charge that monetary restraint, instead of holding back inflation, actually promotes it by permitting the rise in interest costs.

There is a basic weakness in this position. The critics ignore the fact that rising costs attributable to advances in general price levels are much more substantial than those due to rising interest costs. For example, State and local purchases of goods and services are now four times what they were in 1946. It has been estimated that approximately one-half of this increase has been due to rising price levels since 1946, while the balance of increased expenditures stems from a growth in real State and local needs. Clearly, interest costs which reflect no more than 2 to 3 percent of State and local budgets are not the important factors in the aggravated problems of State and local finance.

It is equally obvious that the cost of servicing the Federal public debt has not played the most important part in the mounting Federal expenditures, built up to a large degree by the sheer magnitude of national security needs and by the rise in prices in the years following World War II.

Although rising interest rates are relatively more important in mortgage financing, it is no less true that rising wage rates and higher building costs have played the dominant roles in determining the size of the mortgage that has to be financed.

The defenders of current monetary policy do not deny that interest rates are costs, and at times, painful to the borrower. They do insist, however, that rising interest rates merely reflect the tremendous market demand for credit pressing against a limited supply which, if expanded substantially in a boom period, would unleash a flow of spending and lead to a costly rise in prices far

more painful and disruptive than the cost impact of interest rates.

Should the Federal Reserve attempt to hold interest rates down? Reflecting the feeling that interest rates are too high and that such rates as costs are contributing strongly to inflation, many have urged that the Federal Reserve Board authorize the buying of Government bonds to support bond prices and thus restrain the rise in yields.

Here again those who support this proposal have failed to look at all aspects of this problem. They overlook the fact that to halt the upward trend of interest rates in this expanding period of our economy would require a tremendous volume of open-market purchases of Government bonds. This could not be done without promoting inflation and, indeed, without converting the Federal Reserve System into an engine of inflation.

As pointed out earlier, when the Federal Reserve purchases Government bonds, it increases the reserves of member banks, and thus their ability to make more loans, in an amount which is a multiple of the increase in excess reserves. Actually, each dollar of open-market purchases of Government bonds by the Federal Reserve makes available about $6 for additional loans or investments—a tremendous inflationary factor.

Most of us recall the difficulties involved when the Federal Reserve System pegged interest rates on Government obligations during and following World War II. The rates were held down, but a dangerous inflation developed under the blanket of direct price, wage, and materials controls, and when these wartime controls were removed the inflation broke out under the pressure of tremendous money demands on relatively scarce goods and services.

Even if the inflationary consequences were accepted, it is doubtful whether the Federal Reserve System could peg interest rates on Government obligations under normal peacetime conditions. The inflationary influence of such huge increases in credit would accelerate a further diversion of savings from investments in bonds and other fixed-income obligations into stocks and other equities. It would lead to speculative buying of commodities and securities to beat higher costs and prices in the future. Thus, such efforts to stabilize interest rates would have a reverse effect and would push up interest rates in most sectors of the credit market.

Does current monetary policy inhibit growth and full utilization of resources? Monetary policy critics frequently point to the existing volume of unemployment and the absence of supply shortages as evidence of an expansion potential that could be realized if monetary restraints were relaxed. Some critics broaden this position to include the general proposition that price stability as an objective of monetary policy is bound to inhibit growth and the full utilization of resources.

A noteworthy feature of this criticism of monetary policy is that it reflects a preoccupation with shortrun objectives while ignoring the importance of long-run considerations governing Federal Reserve policy. If the sole objective of monetary policy is to be considered maximum employment and growth in the short run, the argument of monetary policy critics is plausible If, however, the objective of economic society is orderly and sustainable growth over the long run, the defenders of monetary policy have some compelling arguments to submit in behalf of a monetary policy geared to the avoidance of longer run consequences of inflation and violent instability.

Utilized resources not evidence of inhibited growth: While the problem of unemployment is never to be minimized, the existence of unutilized resources in an expanding economy does not necessarily argue for additional injections of credit to support a higher money demand for goods. In this type of economy, expansion is cumulative—and at times explosive—increasing at rates that cannot possibly be sustained.

If the objective of society is growth at a sustainable rate, it is quite evident that monetary policy must at times moderate the bursts of expansion that would occur in the absence of some restraint. In other words, it is necessary to impose restraints on demand before it pushes on to the extreme limits of supply, if the economy is to avoid violent downturns in production and employment.

In this case, monetary restraint may be accompanied by an employment and output level lower for a time than that obtained in a high pressure economy with no restraints. In the long run, however, economic activity, although moderated in the short run by monetary restraints, can be expected to enjoy a more sustained and, averaging the boom years with the others, a higher rate. This is, of course, a longrun argument, and since it is always possible to get more out of an economy in the short run by running it at high speed, the advocates of less monetary restraint always appear to have a plausible case.

It is also significant that although unemployment in mid-1959 was substantial—approximately 5 percent of the labor force—it was not generally distributed over the Nation. A significant amount was concentrated in declining industries and distressed areas. Such unemployment does not respond quickly, if at all, to general increases in demand. Any attempt to remove such unemployment by large injections of new money would tend only to strengthen the inflationary pressures on those industries already strong and expanding with little impact on those industries such as coal mining, textiles, and so forth, which have been hit hard by longrun shifts in demand and an uneconomic allocation of resources.

Creeping inflation not a prerequisite of long-term growth: The history of past relationships between prices and growth do not support such a claim. At some times in our history notably in the period 1875 to 1890, a declining price level accompanied an extraordinary rate of growth. It may also be of interest to point out that the greatest economic strides of any foreign country in recent years were made by West Germany with one of the best records of price level stability.

Critics of monetary restraint often point out that the upward price movement in the United States from 1933 to the present was accompanied by substantial growth. This is regarded as evidence that prolonged inflation is not as harmful as alleged.

Those who accept this as evidence overlook the important fact that during this period the price increases were not regarded as inevitable or as a continuing process. There was always the possibility that prices might decline.

The idea that inflation—a creeping inflation—is inevitable and necessary for growth is one that must be resisted by the monetary authorities for reasons well described in the following quotation:

"The distortion of investment decisions, the discouragement of saving, the compulsion to speculate, the misallocation of resources, the strengthening of the monopoly position of firms owning old and low cost equipment—all are familiar dangers that have been pointed out many times. The inherent instability of an economy in which everything is worth what it is only because it is expected to be worth more next year; the fluctuations in the value of 'inflation hedges' produced by the uncertain speed of the inflation; the need to concentrate all efforts on staying ahead of the game—all this does not add up to a satisfactory picture of a stable and rapidly growing economy. And, as the moralistically inclined may feel tempted to add, a society in which all contracts and financial promises are made with the afterthought that they will be partly cancelled by inflation, does not offer a morally elevating picture either.

"Few of the critics of inflation would claim that they can foresee its ultimate consequences. It may lead to collapse into deep depression, or simply to more inflation with stagnating growth. Or more likely, it will lead to price controls imposed under the pressure of impatient citizens and politicians. The immediate sacrifices that a policy of stable prices demands seem preferable to any of these." [3]

The rejection of creeping inflation as a matter of policy is a must if we are to avoid an economic situation in which every decision—whether by business, consumer, or Government—is made in anticipation of rising prices.

The Missile Mess

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, January 18, 1960

Mr. McCORMACK. Mr. Speaker, in the January issue of Harper's magazine there is an article titled "The Missile Mess," which makes a searching and disturbing examination of our national deficiencies in the vital field of space and missilery. The author, Frank Gibney, is a journalist by profession, who has made a careful study of this problem for the last 2 years. In 1958 he came to Washington and worked for over a year as a special consultant to the Select Committee on Space and Astronautics, of which I was chairman. Mr. Gibney rendered invaluable service to the select committee. I find this article a challenging appraisal of what this country has failed to do—but must do quickly, if we are to win the critical race for space with the Russians.

The article has received nationwide attention. I append two thoughtful editorials, from the Chicago Sun-Times and the Louisville Courier-Journal, commenting on it. As the Courier-Journal's editorial noted "it should be read by every member of the Space Committee, if not several million other Americans."

THE MISSILE MESS

(By Frank Gibney)

(A former congressional aid tells why we have fallen so far behind the Russians in building the decisive weapon—and how bungling in Washington is making the dangerous gap still wider)

The Americans—as Nikita Khrushchev explained to a Soviet audience after his trip to the United States—have the scientists and resources for successful exploration into space. The reason they have not equaled the achievements of the Soviet Union, he said,

lies in the defects of their Government, of their capitalistic system.

Viewing our space and missile programs, we might easily conclude that our Government is inexplicably engaged in an effort to prove Khrushchev correct. For most of the indignant words said recently about the missile lag and our inglorious second place are all too true. The sugar-coated explanations offered by the American leadership only deepen the impression of a gross national failure.

Briefly, the situation is this:

It is 6 years since the United States discovered the urgent necessity of intensifying its effort both to develop long-range military missiles and to further the exploration of space. The two aims, as we shall see, are indivisible. During this period ample warning has been given of the Soviet Union's huge strides in these fields. The United States has worked out military missile systems and lofted its own earth satellites. A new Government agency, the National Aeronautics and Space Administration, has been set up to direct and co-ordinate space projects. A multi-billion-dollar industry has grown out of this work.

But no concerted effort has yet been made to counter the Soviet advantage. The United States—as General Medaris noted before retiring as the Army missile boss—is now roughly 5 years behind in the development of space vehicles. Our relative strength in missiles is little better. In its 1960 budget the administration has committed the country to several more years of inferiority in what is acknowledged as the ultimate military weapon: the intercontinental ballistic missile. Although the Secretary of Defense estimated that the Russians have three missiles to every one of ours, their real superiority is more likely double that.

If this were the result of a spectacular Soviet scientific breakthrough, it might be understandable. It is not. As Khrushchev so rightly conceded, the United States has long had the necessary talent. In 1955, for example—2 years before the appearance of sputnik—the Army first began fruitlessly asking the White House for permission to put up a space satellite. But the talent and the materials—all ready, willing, and able—have been handcuffed by executive mismanagement, apathy, and a feckless Micawberism, almost unparalleled in our history. This has not only exposed us to military danger—it has, for the first time in all our history, turned this country away from the challenge of a new frontier.

This article has been written out of a sense of fear, alarm, and national shame. I am not a technical space "expert," and I am aware of the tendency to dismiss anyone discussing such matters without a "doctor" or at least "general" before his name as equivalent to the scoundrel who practices medicine without a license. Yet space is only one of the complex and partly technical issues which must be decided not by specialists, but by the public debate of ordinary citizens. It is a pressing issue, and largely a political one.

In the spring of 1958, 6 months after the appearance of sputnik, I went to Washington as a part-time special consultant for the newly founded House Committee on Space and Astronautics. The mood in Congress at that time was one of deep, honest concern. A permanent blue-ribbon committee was set up quickly to consider the space and missile problem, chaired by JOHN MCCORMACK, the House majority leader, with JOSEPH MARTIN, then minority leader, as the ranking Republican member. Its sense of urgency was reinforced by the testimony of the specialists already at work on space and missile programs. We received the impression—which turned out to be correct—of a group of talented and dedicated men engaged in the frustrating task of trying to wake up their fellow citizens—and their Government. Our hearings went quickly. Both Houses of Congress passed a bill for a new space agency in record time. With all too trusting an attitude, Congress gave the President virtually a blank check for cleaning up and redirecting the whole space effort. This very authority, concentrated in the White House, later proved to be the chief stumbling block.

This accusation against the Eisenhower administration by no means absolves its predecessor. The Truman administration fostered space and missile developments to a degree. But it displayed little or no imagination in assessing their potential.

It was not that the facts were unavailable. The Air Force signed its first contract for a study of a long-range missile in 1946. By that time the Army had already installed Wernher von Braun and the German V–2 missile experts at a testing range. In 1948 the first report of James Forrestal as Secretary of Defense noted some research work on an earth satellite. But the United States in those days was still recovering from the heady illusion of its early atomic lead over the Soviet Union. Those on high scarcely thought of planning ahead for a less comfortable military future.

In 1953, however, the picture dramatically changed. Scientists at the Atomic Energy Commission reported a thermonuclear breakthrough which permitted a devastating amount of explosive to be packed into a small warhead. This discovery should have moved the most unimaginative minds into a drive for the fastest possible ballistic missile program. The Truman administration might have taken refuge in the then limited scientific knowledge: The only available warheads were too big to be lifted by any feasible missiles. But after 1953, such an excuse was no longer tenable. Every available fact pointed to a speedy development of missilery and space exploration.

There are five specific reasons why this development barely sputtered off the launching pad: (1) A mania for reorganization as a substitute for executive direction—coupled with a disastrous emphasis on "public relations"; (2) the cult of scientists-know-best; (3) budget worship; (4) interservice and interorganizational rivalry; (5) an unwise and unworkable distinction between "military" and "civilian" efforts. These factors all grew out of one overriding deficiency: A lack of decision in the White House and the Secretary of Defense's Office.

Each of the failings can still be corrected. But the time margin for doing so has dangerously dwindled.

THE REORGANIZATION MANIA

At the last reading there were roughly 60 governmental committees and organizations concerned in one way or another with space and missilery. Some are new, some old. Some are military, some civilian. But they all cling tenaciously to life and authority.

The three services have had their own space and missile programs from the beginning. Although the Air Force has lately been assigned most of the so-called military space mission, the Army continues to hold onto some part of it. The latest organization—the National Aeronautics and Space Agency—has expanded in less than 2 years from roughly 8,000 to 18,000. But its forerunners and their affiliates are still there, and woe to the contractor, the military administrator, or any man with an idea who neglects to touch all the bases.

In one year, 1957, the Air Force's leading space and missile officer, Lt. Gen. Bernard Schriever, spent some 200 days appearing before various committees—only a few of them congressional. Dr. Walter Dornberger, the former German V–2 general, now working for the Bell Aircraft Corp., had to make no less than 678 presentations before various groups, in his 6-year efforts to get the Air Force's Dyna-Soar project—the basic step to a manned space vehicle—off the drawing boards.

One way to get order and decision out of this bouillabaisse would be to break through normal service and departmental systems with a centrally controlled project like the wartime Manhattan District, which made the atom bomb. But this involves admitting a national emergency—the very thing the administration has been unwilling to do. Instead it has reshuffled existing agencies and their responsibilities every time a new process is discovered, or a new kind of missile needed. Washington seems actually proud of such constant reshuffling, like a compulsive executive who feels he has done a day's work in rearranging the piles of papers on his desk.

A typical reorganization effort was the transfer to the new space agency of Wernher von Braun's Army Ballistic Missiles Agency at Huntsville, Ala. The decision was made by President Eisenhower last October at a meeting of his nine-man Space Council, and it was presented as another bold step forward. Actually, it settled almost nothing. It left open the question of how much of ABMA would go to the new agency. It gave no firm mandate to NASA for the speedy development of the Army's Saturn, the 1.5 million-pound rocket cluster which holds the most immediate, if not the only, hope for matching Soviet propulsion. It did divorce the most successful single group of space technicians from its long-standing command and logistical support by the Army—a dubious gain.

On September 2, 1959, the able staff of the military subcommittee of the House Committee on Government Organization published a report on the progress of the missile effort. Its tone was patient and objective, its implications disturbing. The record, as the report unfolded it, was not merely an account of interservice rivalry. Underlying the continual changes and counterchanges in administration (e.g., "in March of that year (1956) Secretary of Defense Wilson appointed a Special Assistant in Guided Missiles, thus recreating a post he had abolished 3 years earlier") was a basic confusion over whether the Defense Department should run the missile effort directly, or leave it to the services.

This confusion was never resolved, either by Secretary of Defense Wilson or by his successor Secretary McElroy. And what little action either took seemed disturbingly negative. ("Let's clean up this Democratic mess" was the only mandate one of the first missile czars received.) The temporary departmental organ, the Advanced Research Projects Agency, was founded to coordinate the military missilery effort among three services. It has dragged on long after its important work projects have been parceled out to the Space Administration or the Air Force. And-ARPA was not alone.

"It is good sense and sound administration," the subcommittee asked, "to have conjointly an Advanced Research Project Agency, a Director of Guided Missiles, [since transformed into the head of the Civilian-Military Liaison Committee], and a Director of Defense Research and Engineering, with their associated technical panels and advisory committees, all seeking on behalf of the Secretary of Defense to keep on top of the fast-moving missile and space programs? * * *"

Within the military programs, the subcommittee found a pattern of hasty improvisations growing into unwieldy institutions. A prime example is the dependence of the Air

Force on private contractors to do its military decision-making. In 1953 the hard-pressed Air Force staff asked two brainy scientific administrators, Dr. Simon Ramo and Dr. Dean E. Wooldridge, to set up a corporation to mastermind the contractors working in the ICBM program. This decision was based on a report of a committee, in which, incidentally, Ramo and Wooldridge were the prime movers.

Since then, through successful corporate reorganizations—and mounting corporate profits—the Ramo-Wooldridge Co. and its independent affiliate, Space Technology Laboratories, have continued to act as a kind of outside brain. They decide, as Dr. Ramos said: "How big the missible should be, what warhead it carries, what accuracy it can be expected to have, now to get that optimum accuracy, etc. * * *"

There is nothing sinister about this. Drs. Ramo and Wooldridge and their executives are dedicated, able men. They have agreed to numerous safeguards to avoid making capital of their privileged position. But the spectacle of a private profitmaking company rendering national decisions makes the old Dixon-Yates concept look as harmless as a Ford Foundation research project.

OPERATION SALVE

The new Space Administration, in contrast, has displayed a violent do-it-yourself mentality—enough to recall Admiral Rickover's general comment that "if we keep on getting every agency in the Government set up with all of its own facilities, pretty soon we will not have enough space for cemeteries." NASA's boss, Dr. T. Keith Glennan, may not have brought a heavy administrative record with him from the Atomic Energy Commission, but he has yielded to no bureaucrat in his zeal to gobble up manpower and facilities.

Yet he views his charter as a restricted one. His philosophy has been to do as much work as possible within the agency—and rely on private contractors, or other Government agencies, as little as possible. The Air Force, for example, had been working on a man-in-space project, the highly touted Project Mercury, for a year and a half before it was turned over to NASA. (At the House hearings in early 1958 the new deputy head of NASA had brushed off a similar man-in-space proposed as a circus stunt "like shooting a lady out of a cannon.") After protracted studies, NASA turned over work on the Mercury space capsule to a new and untried contractor, dismissing the old ones. The result inevitably was an 8-month delay.

The reason for NASA's parochial attitude lies in the agency's origin. Instead of setting up a new organization—a Manhattan District, or a commission like the AEC, as many in Congress hoped—the White House asked permission to entrust the civilian space effort to a body already in existence, the National Advisory Council on Aeronautics. NACA was a good, gray, research organization, but neither its tradition nor its leadership was suitable for the type of operational agency which Congress hoped it would become. As Dr. Glennan himself said in 1959: "We do not conceive our job as taking us into operational systems."

When the Congress was readying its first hearings on the Space Act of 1958, there was a brief orientation session with one of the Washington officials who were pressing the President's proposals. In a tone of patronizing popular contempt, he explained why the space program had been drafted at that time.

"The people in this country," he said, "are getting hysterical about the sputnik business. We thought we'd better give them something to salve their mood."

If nothing else in the missiles and space program has fulfilled its potential, "Operation Salve" has succeeded magnificently. For 2 years the U.S. public has been led to believe that everything is doing just fine. This intensive propaganda effort, one can assume, resulted from a high-level conviction that the public could not be trusted to hear any bad news.

The first Soviet successes, for instance, brought assurances that if Russian "thrust" was strong, American "guidance mechanisms" were far superior. When Russians proved the virtue of their guidance mechanism by hitting the moon (after the United States had failed) the tune was changed. The Washington experts then pointed out the superior "sophistication" of American hardware and lauded our triumphs in "miniaturization." (They did not explain that we had to miniaturize because we lacked the propulsion for heavy equipment.) By virtue of repeated press releases (NASA's public relations staff rose in 1 year from 1 to 28½) the public was led to believe that the seven U.S. astronauts of project Mercury were on the point of going into space any minute in 1959, although it was highly doubtful that any non-Russian astronaut would make a real space journey before 1961.

As chief of NASA, Dr. Glennan became a past master of the salve technique. Headlines like "Administrator Admits Lag in Propulsion but Calls for 'Sane Course'" correctly report the tenor of his message. Other Washington administrators have displayed equal skill. The Pentagon's Director of Research and Engineering, Dr. Herbert York, coined a really happy phrase when he called the Soviet lead in space propulsion more a question of acute embarrassment than national survival. Glennan topped York, admittedly, when he told the country that the Soviet moon rocket achievement, Lunik III, leaves this country no further behind than it was yesterday.

In October, President Eisenhower called the U.S. program in military missiles remarkable. The ICBM, he noted, was operational. (How many ICBM's—as distinguished from the short-range IRBM—are operational, the President did not say; but those Americans who know the true number sometimes have difficulty sleeping nights.) In the same month the Vice President—almost the only administration leader to worry about space—loftily warned against anyone using the space lag as a political issue. If this happened, NIXON said, "the only recourse we would have would be to go into past history to find out why we fell behind."

Unfortunately for Mr. NIXON's premise, a look at past history would be far more damaging to the Eisenhower administration than to anyone else.

THE CULT OF SCIENTIST-KNOW-BEST

Not long ago there was a meeting at the Pentagon to discuss some particular of our hundred-handed space program. A lieutenant colonel was there, in full uniform, to give the presentation. His superiors respectfully introduced him as "doctor." (It seems that he had, somewhere in the past, acquired a Ph.D.) A general who was present stamped out of the meeting.

"They thought," he said, "they were impressing the audience by calling this guy doctor instead of lieutenant colonel. I got mad."

If this case was extreme, it was not untypical of the awe in which Washington holds its doctors these days—an ironic commentary on the administration which so ineffectually opposed Joe McCarthy's anti-intellectualism. If a Government science official did not have the forethought to write his doctoral thesis, he often manages to make do with an honorary degree as a substitute. Dr. Glennan of NASA, for example, never worked for any higher degree than his B.S. from Yale.

The scientific administrator from Massachusetts Institute of Technology, Dr. James R. Killian, brought doctor worship to a new high in Washington during his incumbency as the President's scientific adviser. His successor Dr. George Kistiakowsky, has a going tradition to continue.

"You want to see where this city is run from," said a Washington military man as he stalked past U.S. science's social stronghold, the Cosmos Club, "just go inside and look at those two or three tables having lunch."

No one would quarrel with the proposition that scientists are indispensable in a scientific age. But unfortunately, the scientists have been drifting into the role of policymakers. It is a role for which they are only rarely fitted. In abdicating so much of its authority to this new race of scientific "advisers," the Eisenhower administration is making the classic confusion between the mechanic and the driver of the vehicle.

Nor is it wise to place behind trust in the scientist when he is speaking outside of his own specialty. It was, after all, none other than Dr. Vannevar Bush who assured Congressmen shortly after the end of World War II that any instrument like the ICBM was an impossibility.

Yet the Washington doctors go on influencing and sometimes controlling policy, in default of strong Executive action. It is a peculiarity of some scientific minds that they enjoy running things, but dislike being held accountable for their actions. For this type of mind the present Washington scene is made to order. It was Dr. Killian, for instance, who laid down the law about the civilian use of space, ruling out military applications before the possibilities had been adequtaely explored. But no one in Congress was able even to question him about what may well be a rash decision. The reason? As the President's adviser, Dr. Killian was automatically covered by the doctrine of Executive privilege, as the Eisenhower administration most broadly interprets it. Unlike a Cabinet officer, he was not accountable to Congress.

BUDGET "UEBER ALLES"

Newcomers to Eisenhower's Washington are understandably surprised by the sacramental character of the word "budget." The man from the Bureau of the Budget, in most Government programs, is the man who calls the turn. During the hearings of the House Committee on Space and Astronautics, the accent on budget was apparent in almost every statement from members of the Executive branch. Not only was the language of the bill outlining the new space agency drawn up by the Bureau of the Budget, the Budget experts also pegged the new program at a minimal level of financing.

The result was a paradox. Congress was painfully anxious to give the new space program every penny it needed. The committee to which I was attached, made this abundantly clear. Yet the budget estimates presented were worked out with the caution of the controller's office in a smalltime factory—hardly the mentality expected of people supposed to trail-blaze a new and only partly known frontier.

In the fall of 1959, after the Soviet Lunik bounced itself off the moon, the administration leaders of Operation Salve were able to criticize Congress for having lopped something under $30 million from the latest appropriation of some $485 million. This

particular action of Congress was ill-advised. But there was a huge irony in the sudden howls of criticism coming from voices so long mute on the subject of further money needs. At the 1959 appropriation hearings Dr. Glennan, as Dr. Dryden before him, had answered congressional offers of more money with the usual assurance: "At the present state of our development I think we have the money to carry through this program on an urgent basis. * * *"

This budget-watcher's philosophy does not necessarily save money. There is much sense, on the contrary, in Wernher von Braun's assertion that dragging out a program tends to make it more expensive, and in addition you are likely to wind up with an obsolescent vehicle. For example, work crews on the critical Atlas program have yet to go on a double shift.

Moreover, the really big waste is being caused by lack of purpose at the top—and sheer sloppy administration. Since 1945 roughly $2.3 billion has been spent on missile projects which were scrapped or used only in an extremely limited sense. Most of this money could have been saved if decisive action had been taken in the 1950's on selecting or rejecting various programs.

THE INTERSERVICE MAYHEM

From the start, interservice rivalry—"bloodletting" would be a more accurate term—has existed primarily between the Army and the Air Force. (The big Navy admirals are content to build up their own dubiously effective carrier force on the sidelines; the undersea Navy's own brilliant contribution to missilry—the submarine-based Polaris missile—is so obviously indispensable that even the Air Force has rarely questioned its value.) The Army-Air Force contest has long been far nastier and more destructive than the rough but friendly football game which the defenders of autonomous services like to depict.

The extreme was reached in the development of two rival missiles—the Army Jupiter and the Air Force Thor—and their rival air-defense systems, Nike-Zeus and Bomarc. Each service withheld information from the other and treated the other's representatives as virtual spies. The Army circulated a written memorandum on the virtues of Nike among Members of Congress while the Air Force divulged results of a top-secret test which showed the Nike performing unfavorably under simulated attack.

Each service charged mismanagement. "In the Army's view," as the House Operations Subcommittee report noted, "the failure of the Air Force to employ the retainer fix [a device in the missile's motor] when the Army did in March 1958, led to the destruction of four Air Force missiles at a cost of many millions of dollars and the loss of nattional prestige, since the Thor-Able of August 1958 failed in the free world's first lunar probe attempt."

Such tooth-and-claw rivalry flourished largely because of inaction in the office of the Secretary of Defense. Charles Wilson, for one thing, allowed both services to build their respective ICBM's for a full year, before deciding which service was to operate them. His successor, Neil McElroy, made so many oversea inspection trips, according to bitter jokers in the Pentagon, that it became virtually impossible even to find him, let alone force a decision from him.

The cost of this rivalry has been staggering. Whatever competitive gain resulted was more than canceled out by the millions thrown away on processes already obsolete or defective—which could have been avoided if there had been any real sharing of information.

The only arbiter of these conflicting interests is the President's Space Council. This body has not been known for its activity—at this writing it has not yet appointed the permanent secretary provided by law. When events forced the Council to bestir itself, the decisions rendered were often contradictory, e.g., the 1959 verdict to send Von Braun's organization to NASA directly reversed a Council edict of the year before. The rare meetings of the Council, incidentally, are hidden from both Congress and the public by the now-familiar excuse of executive privilege.

THE MYTH OF CIVILIAN VERSUS MILITARY

A major part of the confusion in the space effort has arisen from the glib and unworkable distinction between civilian and military components. In particular, the President's insistence on this distinction has been fanatic, his one piece of enthusiasm in the whole space picture. This insistence played a large part in grounding the Army's Redstone powered satellite for over 2 years, while scientists of the Office for Naval Research worked on the ill-starred Vanguard satellite—a precocious technical development with no direct connection to the military space effort (The Vanguard, incidentally, had cost the country $111 million by the beginning of 1959 as against an original scientific estimate of $20 million. The successful Army Explorer satellite cost all of $5.9 million.)

In a press conference early last November, President Eisenhower gave a revealing look at this philosophy.

"Now, for the life of me," he said, "I cannot see any reason why we should be using or misusing military talent to explore the moon."

Moon exploration, the President explained, "is something that deals in the scientific field, and to give this to the Air Force or Army or Navy, it just seems to me is denying what we really—a sort of doctrine in America. You have given to the military only, only what is their problem and not anything else. The rest of it stays under civilian control and that is the reason for having this agency (NASA)."

The President's intention in trying to separate "military" from "scientific" programs is praiseworthy. But of all the experts called before Congress, not one has been able to make a satisfactory distinction. Most of them have wisely testified that any generic separation is impossible.

What the attempted distinction sometimes amounts to is an effort to keep the military on the missile pads and out of space. But the same principles govern both space exploration and missile-firing. The same discoveries are vital to both.

One of the most provocative spokesman for a military effort in space projects as well as missilery is Brig. Gen. Homer A. Boushey, the Air Force's Director of Advance Technology. Boushey makes the point that military satellites and space weapons at least for the next 20 years will be of primary importance to the defender. Out in space, se suggests, may lie the one possibility of neutralizing the appalling of offensive capabilities of nuclear missile warfare. In other words, space vehicles may provide a deterrent against aggression more stable and enduring than any known system of retaliatory counter-weapons.

Boushey lists the following possibilities for military space use: (1) several varieties of reconnaissance satellite, including an almost instantaneous early warning system against missiles (there are no adequate anti-missile warning systems at present); (2) manned space platforms; and (3) defensive satellites capable of attacking any object in space or of constituting a constant mobile deterrent against attack.

He has also broached the possibility of a military deterrent base on the moon—an idea that brought down the White House's disapproval and either howls or smirks from many scientists. Yet the moon could be the perfect place to locate a system of really massive retaliation. It could not be knocked out in advance. Why? Because it would take a good 48 hours for an earthly-located weapon to travel to the moon—and it would be observed from the moon at the moment of firing. On the other hand, weapons could be directed from the moon to earth in far less time, thanks to the moon's lighter gravitational pull.

Is this fantastic? Many sober, scientifically intelligent Air Force officers do not think so. Naturally no project for a moon base should be put ahead of the urgent demands of the earth-sited missile program—our national survival may depend on its success in the next 2 years. But the point that Boushey and others make is that the two programs are not conflicting. One naturally flows from the other. And with the Russians so close to lunar exploration, this country cannot afford to dismiss uses of space out of hand.

All of the space projects mentioned above have, of course, civilian uses. The gains from the uses of satellites in navigation, communications, and weather forecasting would be tremendous. Satellites might anticipate, also, some of the problems the world is about to face in matters like the split-second scheduling of jet airliners.

In sum, the military and the civilian applications of space and even of missilery can no more be separated from each other than can military and political power, which in an age of such fearful war potential, come inevitably to be seen as one. In the first place, all concede that ultimate military power is too destructive to be used, as long as—and this is an important qualification—the non-aggressor party possesses enough deterrent strength. Where total warfare is accounted impossible, the equivalent of military pressure is exerted by the very fact of a country's technical and scientific achievement.

A so-called scientific achievement like the Soviet sputnik amounted to a military-political victory. Sputnik symbolized what the strategists call a force-in-being, which admitted of no competitor. The effect in sensitive areas, like the Middle East and Eastern Europe, was enormous.

The Russian moon probe has reinforced this political-military lead. Where two systems of great military power are locked in a bitter, but bloodless struggle—and looking for allies—a glance at the chessboard can have the same effect on a neutral as 2 years of World War II. At the moment, whatever the experts in Operation Salve say about "overall U.S. scientific superiority" (which presumably includes advances in American dental equipment and swimming-pool construction technique), the American side of the chessboard looks lousy.

WHAT SHOULD WE DO?

The basis for a successful space and missile effort is not another series of scene-shifting government reorganizations. We do need purpose, authority, urgency, a sense, as General Medaris put it, that we are "in a race." We have had enough broadcasting of our achievements. We now need a few honest words about how and where we are behind, from the people in authority who should have said them long ago.

Of first urgency is a massive speedup of the military missile program. This should not only embrace as yet untested missiles like the Minuteman, but should include our operational ICBM's as a stopgap. The time is fast coming when we can no longer count on the Strategic Air Command as a deterrent against the missiles which Khrushchev boasts are on his assembly lines.

In the field of space, two specific projects should receive top priority besides the much discussed Mercury project. They are: (1) the Air Force's Dyna-Soar, the forerunner of a

manned space vehicle; and (2) the Saturn project for a 1.5-million-pound thrust rocket cluster. The Saturn is the prelude to big-league space exploration. The 1.5 million thrust Nova motor, now under development by NASA, will have to be clustered itself to get into interplanetary space—and the lessons learned in the Saturn cluster are essential for any further steps. The Saturn, furthermore, is necessary for the space stations and heavy satellites in warning and reconnaissance systems. Space is the highway of the immediate future, as surely as Mahan's broad highway of another day was the sea. Its control will be equally decisive.

If any reorganizations do occur, Dyna-Soar, Saturn, and a few projects like them must continue unimpeded beneath the scaffolding.

NASA in its present form and under its present leadership has not succeeded in becoming the directing agency of the space effort. Either it should revert to the status of a smaller research agency, dependent for support on the military services—as many experts suggested to Congress—or it should be integrated into a large new Manhattan project for space. This should be directed by an officer of Cabinet rank, with a Cabinet title. It should incorporate both civilian and military components, in the knowledge that no real separation is possible.

The military services do need a real reorganization, with different services built around the tactical needs and possibilities for armed forces. The decision of the services in the missiles field has only highlighted the fact that the present system is fast becoming archaic. The military themselves are aware of this. Lt. Gen. James M. Gavin's proposals in his recent book offer firm guide lines for such a reorganization.

In its September report, the subcommittee of the House Government Operations Committee thought this service reorganization problem pressing enough to warrant a merger of the Army and the Air Force—the Navy's function remains separate and still capable of departmentalizing. Said the subcommittee:

"The logic of new weapon technology has virtually destroyed the traditional basis for services organized around strategic land, sea, and air missions. * * * Land-based strategic missiles, whether organized in squadrons or battalions, require technical capabilities that have no unique service orientation."

The strategic missile with nuclear warhead is the decisive weapon of the next decade. In its land-based aspect, particularly, it calls for a single military organization to develop, produce, and deploy the weapons.

IS COMPETITION NECESSARY?

The United States is not in the space business as a scientific hobby. The ringing words of Dr. Killian, "the compelling urge to explore the unknown," might make a good motto for a college mountain-climbing society; but an urge, however noble, is not a firm base for national policy. Bluntly stated, the United States must make a major effort at space conquest because the national interest demands it. Khrushchev does not share the President's view that space exploration is not competition. His crude saber-rattling shows his awareness of its political-military importance. To ignore this is as dangerous as if we had failed to develop nuclear physics in the 1940's.

The exploration of space, like nuclear physics, is beyond the point of individual discoveries in the laboratory. It is being translated from a scientific into an engineering problem. Its results have been concrete enough to justify a major national effort. If the expenditures for future big space programs are huge, they are not insupportable. They can be made up partly from the clear economies of a sensible command setup. Ultimately, if some kind of gradual disarmament can be achieved, the money now given to necessary, but unproductive, military costs could be diverted to the peaceful purposes of space exploration.

But let's not enjoy our peace before we win it. The surest way to win it is to march into space first. A sure way to lose it is to continue at our present hop, skip, and crawl—allowing the Soviet Union to command this new realm, and incidentally proving Khrushchev's boast that there is nothing inherently wrong with Americans or their machines: it's just the capitalistic system.

[From the Louisville Courier-Journal, Dec. 31, 1959]

IN THE SHAMEFUL MISSILE MESS, NO TIME NOW FOR COMPLACENCY

Eleven long years ago Defense Secretary James Forrestal, first American to hold that title, publicly announced assignment of the earth satellite vehicle program * * * to the Committee on Guided Missiles for coordination.

Two years ago, when Sputnik I orbited an astonished earth and shocked the United States into alarmed awareness of its missile-and-space lag, there was a general demand for remedial action. Senator MIKE MANSFIELD, of Montana, among others, urged an all-out program, centered in one agency, and provided with whatever funds necessary to win us at least parity with Soviet Russia—the kind of unified program known as the Manhattan project that had given us the atom bomb.

And that was no partisan demand. A Republican Assistant Secretary of the Air Force, Trevor Gardner, had fought for the same thing in 1955, had resigned in grief and anger in 1956 when the Eisenhower administration cut missile-research funds by $200 million. What made things worse than such parsimony and complete lack of imagination, according to Mr. Gardner, was that the whole program was snarled up in bureaucratic redtape.

THE SAME CRY IN SEPTEMBER

The same cry went up in September of this year when the Soviet moon-shot success, dramatically following the failure of our own effort, gave fresh shock to officially encouraged public complacency. Military men and scientists urged that we double our expenditures on missile and space programs. Members of Congress recalled the earlier tart summation of the Army's missile boss, General Medaris, now in retirement with other disappointed men:

"Some place there has to be one man who can make a decision, who can give a command, and who has been given the resources to carry it out."

Instead of that we have today, as Frank Gibney puts it in a disturbing article in the current issue of Harper's, "roughly 60 governmental committees and organizations concerned in one way or another with space and missilery, some new, some old, some military, some civilian"—and all clinging "tenaciously to life and authority."

And today we have official estimates that we are roughly 5 years behind Russia in the development of space vehicles, with our relative strength in missiles little better (a 3-to-1 disadvantage in intercontinental ballistic missiles, if the Defense Department's estimate is not too complacent), while in the 1960 budget, as Mr. Gibney puts it, "the administration has committed the country to several more years of inferiority."

This is the background against which Senator LYNDON JOHNSON and the Senate Space Committee next week will begin a critical inquiry into the Nation's entire space, missile, and defense programs. We hope that every member of the Space Committee, if not several million other Americans, will read Mr. Gibney's detailed description of "the missile mess," written, he says, "out of a sense of fear, alarm, and national shame"—and respond at last with a program that meets "the challenge of a new frontier."

WHAT CONGRESS COULD DO

Congress on its own cannot create a unified agency and program of the Manhattan type. It went as far as it could in giving the administration everything and sometimes more than it asked for in funds, and in 1958 in record time it passed a bill creating a new space agency which might have been a new Manhattan but instead became just one more of the multitudinous groups with "power to say 'No,' when not one of them can say 'Yes'." But it can put enough facts on the line to make millions of long-complacent Americans vehemently opposed to accepting a permanent, inglorious, and perilous second-place in the space age, and they in turn could induce Washington to turn to the Trevor Gardners instead of the Wilsons and McElroys and Humphreys.

[From the Chicago Sun-Times, Dec. 29, 1959]

SPACE: HOBBY OR BUSINESS?

"Bluntly stated," writes Frank Gibney in the current Harper's magazine, "the United States must make a major effort at space conquest because the national interest demands it. Khrushchev does not share the President's view that space exploration is not competition. His crude saber rattling shows his awareness of its political-military importance. To ignore this is as dangerous as if we had failed to develop nuclear physics in the 1940's."

Gibney's article should be required reading for every U.S. Senator and Congressman as they reconvene to decide, among other things, what to do about an administration space budget request that freezes the United States in the No. 2 spot behind Russia for the indefinite future.

Gibney, a former congressional aid who has studied the space mess at close range, cites five reasons for our critical lag—none of which has to do with any shortage of scientific talent:

1. A mania for reorganization as a substitute for executive direction—with a disastrous emphasis on publication relations.

2. The cult of scientists-know-best, which finds power of high policy decision abdicated by those specifically charged with policy responsibility.

3. Budget worship.

4. Interservice and interorganizational rivalry, which has led to such ridiculous practices as mutual espionage and deliberate withholding of scientific knowledge between the services.

5. An unwise and unworkable distinction between military and civilian efforts, when as a matter of fact, all practical distinction between the two has long since been erased by the comprehensive scope of the cold war.

Gibney's indictment is based upon all-too-manifest evidence.

It is incomprehensible that the men charged with responsibility for U.S. space policy should persist in kissing off the whole business as a scientific hobby. But that is the only conclusion that can be drawn from the administration's pinchpenny 1960 space budget, and from the layers of confusion that are smothering the whole program.

Congress cannot run the space program—that's the executive department's job. But Congress can raise questions and demand answers, and we offer a couple to start with:

Why can't enough money be wrung out of the budget for conventional defense costs to provide the space program with the extra couple of hundred million dollars it needs to move into high gear?

When is the world's foremost scientific and technological Nation going to move into the space age?

Program of Weyerhaeuser Co. To Eliminate Stream Pollution From Pulp

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, January 18, 1960

Mr. NEUBERGER. Mr. President, during the recess, the Senate Select Committee on National Water Resources, under the able leadership of Senator ROBERT KERR, held extensive hearings throughout the country on water, in which one of the major points of discussion was the assurance of water quality. One of the substantial pollutors of our rivers is the pulp industry which utilizes a tremendous amount of chemicals to change wood into wood pulp and wood pulp into an endless variety of paper.

I ask unanimous consent to have printed in the Appendix of the RECORD, as the conclusion of my remarks, an article entitled "H_2O" from the December 1959 issue of the Weyerhaeuser magazine. This article describes in detail the efforts being advanced at the Weyerhaeuser Co.'s Springfield, Oreg., plant to reduce the pollution of the lovely Willamette River.

I do not want to imply that the problem has been completely solved, for it has not. However, many concerns like Weyerhaeuser are making strong efforts to find ways to utilize economically and reuse all the material that enters their plant. Success in this endeavor will preserve water purity.

In my talks with industrial leaders in my State of Oregon, I sense a growing awareness that water quality is of paramount concern. Our industrial plants need pure water for their processes and they are affected when up-river firms discharge wastes and pollute the rivers. I have inserted this article because it does tell some of the accomplishments that have been made. I am sure that, as the select committee continues its study, it will chart a course for the purification of our priceless American rivers.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

H_2O: THE MOST IMPORTANT FORMULA IN THE SCIENTIFIC BUSINESS OF PULPMAKING

Water, clear and cold, flashes down from the snowbanks of the high Cascades. Countless tiny rivulets race through mountain canyons to a common meeting point. Here the McKenzie River begins its journey across Oregon's fertile Willamette Valley.

The McKenzie, one of Oregon's finest streams, is a rich natural resource—one that can be used in many ways along the river's 75-mile route to the Willamette River. The McKenzie provides irrigation water for thousands of acres of farmland. The river serves as a spawning ground for great runs of Pacific salmon. It supplies the 45,000 citizens of Eugene, Oreg., with their water requirements. The river water is a vital commodity for industry also. Many plants, among them the Weyerhaeuser pulp mill at Springfield, Oreg., owe their continued existence to this constant source of clean water.

It takes water—plenty of it—to make high quality pulp and paperboard. The Weyerhaeuser plant at Springfield drinks in nearly 8½ million gallons each day to cook and wash wood chips and fibers as they make the transformation from wood to pulp and paperboard.

Once this water has done its work, it is returned to the stream. One of the important tasks facing the men of Weyerhaeuser's Springfield pulpmill is to return the water to the stream clean and suitable for other uses.

Oregonians work hard to keep the McKenzie beautiful. This job falls on the shoulders of the sportsmen, campers, farmers, cities, and industries that rely on the river. Few work harder at keeping the river clean and pure than the crews operating Weyerhaeuser's Springfield mill.

"The company demands that we run this mill to avoid pollution," said Mill Manager J. O. Julson. "Our best weapon is the attitude of the whole crew. We build this attitude by continually emphasizing the importance of pollution control measures."

This emphasis on attitude pays off for the pulp and papermakers at Springfield. They are proving that the water can be used and returned to its stream source without impairing water quality for other uses.

Pulp making, in a modern-day kraft mill like the one at Springfield, is largely a chemical process. Wood chips are cooked in sulfate-base liquids called cooking liquors. The cooking separates the tiny cellulose fibers, which in turn are transformed into strong kraft paperboard.

About 95 percent of the chemical ingredients used in the pulpmaking process are recovered, purified, and reused again and again. Recovery and reuse of the ingredients used in cooking liquids are the keys to maintaining a safe waste disposal flow. If the recovery is high, it pays dividends, not only in lowering the possibility of pollution, but in monetary savings as well.

The spent cooking liquors contain traces of wood residues that could impair McKenzie water quality if they were allowed to enter the stream flow. The small percentage of materials that does enter the mill's waste flow, however, is carefully treated to further reduce any possibility of lowering the water quality. Ingenuity, plus plenty of hard work on the part of Springfield pulp employees, has led to tremendous improvements in pollution control methods in the past 4 years. Today these same employees are working to improve these control measures even further.

Springfield pulp crewmen pride themselves on operating a "tight plant." In everyday language this means that they are cutting off spills of effluents, lubricating oils, or other materials into the waste flow wherever possible. However, pollution control measures include more than just preventing spills. "We are constantly seeking new methods for improving our pollution controls," Julson said. "We're not afraid to experiment. We are willing to try something new," he said, "even though there is a chance the new method may not work."

The scientific problems of pollution control are handled by a technical staff at Springfield and by research personnel from Longview, Wash. For example, Project Chemist Ray Westenhouse devotes full time to water pollution problems. There is a completely equipped laboratory at Springfield built exclusively for this project.

With the help of Analyst Keith Johnson, Westenhouse maintains a constant check on the river waters. Effluent samples are taken daily and tested. If the tests show any indication that waste materials may be lowering the water quality, these two scientific pollution detectives work quickly to discover the source and then take steps to correct the problem.

Pollution control is more than just a laboratory problem, however. An intricate instrumentation system, maintained by instrument technicians like Phil Tussing and Al Buell, keeps its electronic eye constantly trained on the waste material leaving the plant. If the waste materials in the effluent flow go over the maximum limit set, a warning bell sounds at one of the conductivity recorders. The shift foreman can trace the source of the trouble and cut it off fast. When the pulp is being processed, washer operators like Jerry Hampson maintain a regular check on the conductivity recorders as a double precaution.

The big problem, according to Technical Director Oliver Morgan, was to cut down the oxygen requirements of the organic materials in the waste flow. A major step toward keeping the McKenzie River clean was taken when Weyerhaeuser technicians devised a system that drastically cut the oxygen requirements of waste materials going back into the river.

"It has been one of our biggest accomplishments," Morgan explained. "Some of these liquids (called condensates) were going into the waste flow. We knew they were one of the causes of reducing the oxygen content of the stream. We have worked out a system that enables us to accumulate these condensates and reuse them in the pulpmaking process. Now they no longer enter the waste flow."

Oil loss from the big paper machine provided Springfield technicians with what Morgan termed another relatively serious problem. To prevent the oil wastes from entering the stream, it was necessary to channel the flow of effluent to a point where an oil trap could make the separation. This oil trap now skims off the oil wastes. Bernard Sullivan's yard crew tends the trap regularly. They drain off the oil, so only oil-free effluent reaches the retention ponds.

Springfield has additional safeguards against pollution as the papermaking process enters its final stages. Here, after the water is drained from the pulpy material, it is treated once again in a big "save-all" tank. This final treatment prevents all escaped wood fibers from entering the flow of water returning to the river.

A strengthening additive also proved to be another double dividend for the Springfield pulpmakers. They discovered that a starch solution, added to help strengthen the paper, removed a large portion of dissolved materials that had previously entered the effluent.

As a final precaution, effluents are held in a retention pond. Here any remaining heavy materials are allowed to settle to the bottom, and the water is allowed to return to the stream in controlled quantities.

During periods when the river is low, effluents are held in the log pond. Because of this precaution, the quality of river water cannot be impaired during low-flow periods.

The process of pollution control is at best highly complex. It is one that calls for the services of topnotch technicians. It takes more, however, to do the job right. Care and effort by every mill employee is the first requirement.

"It's our job to protect the river," Jo Julson said. "Our best weapon to do this is the attitude of the people who operate the plant. We've got the right kind of an attitude now. We're proving it by helping keep the McKenzie clean."

Gas and Germ Warfare

EXTENSION OF REMARKS
OF
HON. ROBERT W. KASTENMEIER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 18, 1960

Mr. KASTENMEIER. Mr. Speaker, I was deeply pleased last week that when the President of the United States was asked in his press conference what he thought of the use of gas or germ warfare, he replied that his own instincts would be against United States use of these agents unless they had first been employed against us.

The President also said that no official proposal had reached him to change the long-standing American policy, which is that only if they are used first by an enemy will the United States employ these agents. But it is clear, as a story in the New York Times of November 10, 1959, said and as a letter to me from the President indicates, that a reevaluation of the policy is taking place. The President's letter to me said that "the Defense Department is reviewing the status of this matter," that is, the use of chemical and biological weapons.

It seems to me that, despite the President's laudable personal view, it is necessary to have a formal national position on record, to stand beyond Mr. Eisenhower's term and to restrain the efforts of certain elements in the Defense Department to free gas and germ warfare to be used "like any other weapon." Last September, I therefore introduced House Concurrent Resolution 433, now before the House Foreign Affairs Committee, to reaffirm the statement of President Roosevelt in 1943 that "the United States shall under no circumstances resort to the use of biological weapons or the use of poisonous or obnoxious gases unless they are first used by our enemies."

I hope that the President's expression of his personal views will serve to stimulate the passage of House Concurrent Resolution 433, and I am pleased to say that there has been increasing public concern on this matter. For the information of the Congress, as to the President's view, I should like to insert at this point in the RECORD my correspondence with him and his statement at the press conference:

DECEMBER 21, 1959.
The Honorable DWIGHT D. EISENHOWER,
The President of the United States,
The White House, Washington, D.C.

MY DEAR MR. PRESIDENT: I write in the wake of your journey for peace to ask you to restrain unpeaceful demands of the Army.

During the last several months, a public relations campaign has been waged in the press by present and retired armed service officers to change our basic policy of not using chemical and biological weapons.

From various newspaper accounts, it now appears that the Army and other groups within the Department of Defense have recommended, both officially and unofficially, that we change our policy concerning the use of chemical and biological weapons.

Many citizens and Members of Congress, including myself, are very disturbed about these recommendations. They negate our position as enunciated by President Roosevelt on June 8, 1943, when he stated that the United States under no circumstances would use poisonous or obnoxious gases unless first used by our enemies. The abhorrence of chemical and biological weapons stems from our basic belief that even in war we must preserve the essence of humanity and humane principles.

It strikes me as utter folly that we should accede to the judgment of certain members of the Defense Department, when it is now more important than ever that the United States continue to express itself as repudiating the use of chemical and biological weapons as a preventive or preemptive means of attack.

It is interesting to note that the Soviet Union has recently been taking the propaganda initiative regarding the use of CBR during wartime. At the end of August of this year, Premier Khrushchev stated in a message to a conference of leading scientists who met in Canada:

"We share the concern of scientists, who justly point out that the use of these weapons may have no less horrible a consequence than the use of atomic or hydrogen weapons. Not by chance were chemical and bacteriological weapons condemned by mankind, and their military use prohibited by international agreement through the Geneva protocol of 1925. As is well known the Soviet Union strongly supports the prohibition of all types of weapons of mass annihilation, including nuclear as well as chemical and biological weapons. We hold that their use runs counter to humane principles, the rules of international law, and the conscience of all peoples."

Conversely, it disturbs me that our Nation, which repudiates naked power politics, should consider sacrificing its unassailable position regarding chemical and biological weapons when the people of the world are hoping for a settlement on the armaments question.

While we may be constrained to develop these weapons qualitatively and quantitatively if international negotiation in the CBR area fails and if the realities of the situation demand that we continue to produce these weapons, we should not change our long-standing policy of not using these weapons first in any eventuality. We must reaffirm our resolve never to initiate the use of these weapons.

Because of this, and because of the urgency of the problem, I earnestly suggest international negotiations in the field of chemical and biological weapons. Although this question is one which will be very difficult to negotiate, this should not deter us from seeking both solution and negotiation in this area of armaments activity.

Because of the urgency of the problem, I have introduced in the Congress a concurrent resolution which will reaffirm our policy of nonuse of biological and chemical weapons unless they are first introduced into warfare against us. I sincerely hope that the American position will not be changed. Knowing of your interest in and admiring your efforts on behalf of world peace, I am sure that our policies will not be changed in this area.

Sincerely,

ROBERT W. KASTENMEIER,
Member of Congress.

THE WHITE HOUSE,
Washington, D.C., December 31, 1959.
The Honorable ROBERT W. KASTENMEIER,
House of Representatives,
Washington, D.C.

DEAR MR. KASTENMEIER: I appreciate the concern which prompted your December 21 letter concerning the use of chemical and biological weapons. The Defense Department is reviewing the status of this matter with particular reference to some of the new features mentioned in your letter. You will of course have a further reply as promptly as possible.

Sincerely,

DWIGHT D. EISENHOWER.

PRESIDENTIAL PRESS CONFERENCE, JANUARY 13, 1960

Ronald W. May, Capital Times, Madison, Wis.: "Mr. President, Representative KASTENMEIER, of Wisconsin, has suggested that there might be a change in our traditional policy of not using chemical, germ, or poison gas warfare first. He said that Army people have tried to—indicated that they believed that maybe we should change our policy and use these first either in a large or even in a small war. Is this true?"

Answer: "I will say this: No such official suggestion has been made to me and so far as my own instinct is concerned is to not start such a thing as that first."

Some Fallacies About Agriculture

EXTENSION OF REMARKS
OF
HON. FRANK CARLSON
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Monday, January 18, 1960

Mr. CARLSON. Mr. President, one of the unfortunate situations in our Nation is the misunderstanding that is developing between the rural and urban areas.

This situation is developing largely as a result of press statements and articles written by individuals who are not familiar with the rural areas and the farm problem. The writers of these articles are no doubt honest in their intentions, but, unfortunately, are painting a picture of rural America that is most unfair to the farmers of this Nation.

Everyone must agree that we do have a farm problem. On the other hand, the farmers who are exposed to unusual economic and natural hazards are entitled to the help of Government as a cushion against unfortunate events which they cannot well avert through individual or organized action.

It must be of more than passing concern to our national economy that farm income last year dropped 15 percent, or approximately $2 billion, and present indications are in 1960 the farm income will drop another $1 billion.

This reduction in farm income comes at a time when labor is enjoying ever increasingly higher wages and when industry is operating at the highest level in our Nation's history and at its greatest profit.

The farm problem today resolves itself into one of farm income, regardless of all of the other issues that try to camouflage the major one, which is farm income.

This trend cannot long continue without having definite economic effects, not only on the farmer and the community he lives in, but the Nation as a whole.

Recently Dr. C. Peairs Wilson, director of the School of Agriculture of Kansas State University, presented a paper at

the farm forum conducted by the University of Missouri, which I believe should be read by everyone interested in agriculture and our entire economy.

I ask unanimous consent that this article be made a part of these remarks and printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SOME FALLACIES ABOUT AGRICULTURE

(By C. Peairs Wilson, director, School of Agriculture, Kansas State University)

Agriculture is being misunderstood. The principal reason it is being misunderstood is that a large segment of our population reads metropolitan newspapers and magazines which are written by people who have little knowledge or understanding of agriculture. They see in the present situation a big story on the sizable number of dollars that the Federal Government spends through the U.S. Department of Agriculture and they appeal to the average city dweller who feels his taxes are already too high.

I would be the first to admit that we do have farm problems, that these problems are the concern of every citizen in his country and we ought to do our level best to study our farm problems and give consideration to reasonable alternatives to our present farm programs. But in doing this, let's put farm problems and farm programs in proper perspective. This, the motropolitan magazines, newspapers, and commentators have for the most part failed to do. They have frequently misrepresented facts, given half-truths, or even outright false statements. Let me illustrate what I mean:

(1) The Chicago Tribune: "What industry enjoys an annual subsidy from the Federal Government of $7 billion? The answer is obviously American agriculture."

Let's set the record straight.

The total budget of the U.S. Department of Agriculture is nearly $7 billion. But much of this is not for agriculture at all. Billions of dollars worth of foreign-aid programs and military assistance for other countries are paid for with agricultural commodities, the cost of which is charged to farm programs. But what is the public led to think? The dairy products consumed by our Armed Forces is a part of the $7 billion, but does the public know it? Children in city schools which have a school-lunch program consume some of the $7 billion—but do the children's parents know this? The meat-inspection system that provides city folks with the most healthful food in the world is pair for from the $7 billion. But what has the Chicago Tribune done to clarify the fact that not all of the $7 billion appropriated to the U.S. Department of Agriculture is a subsidy to farmers?

(2) Washington Daily News: "Farmers have an advantage over nonfarm people, because of Government aid to agriculture."

Let's set the record straight.

Per capita farm income in 1957 was $967.

Per capita nonfarm income was $2,082.

If we drop out the noncommercial farms subsistence and part-time farms and include only the commercial farm families, the farm family income was $5,415 in 1956. In the same year the nonfarm family income was $6,900 and this includes the unemployed, those on strike, those on sid row, etc. Do farmers have an advantage?

(3) Reprint of an article written by the mayor of New Haven, Conn., on urban renewal, carried in the Kansas City Star: "Congress gives 20 times more aid to the 12 percent of all Americans who live on farms than it does to the 65 percent who live in cities."

How is this for a gross fabrication?

I wrote the mayor asking the source of his figures but I haven't heard from him. As was pointed out earlier, not all the appropriations to the U.S. Department of Agriculture are for farmers. But if you take the $7 billion and divide it by the $1 billion which I understand is the current rate of spending urban-renewal funds you still get less than 20 times as much. But this is not all, city folks get many many other kinds of subsidies which I will comment on later.

Maybe the mayor of New Haven should reconsider his rash statement.

(4) New York Times: "The ordinary Iowa farmer has a minimum of two cars and they are usually brandnew Buicks, Oldsmobiles, or Cadillacs."

Let's set the record straight again.

Wallace's Farmer made a sample survey of Iowa farmers in 1957 and found that 15.6 percent had two or more cars, 5.7 percent owned Buicks, 6.7 percent owned Oldsmobiles, and three-tenths of 1 percent owned Cadillacs.

Now I come to my prime example of misinformation about agriculture.

(1) "We (Life magazine) who have often deplored the blunderland world of unwanted farm surpluses."(See Life magazine editorial, October 26, 1959.)

How big are the "unwanted farm surpluses"? For the period 1953–58 farmers overproduced by about 2 percent. This represents an economic waste of about $4 billion. Industry underproduced by about 5½ percent. Unemployment averaged 6½ percent. Idle capacity in the steel industry averaged 17 percent and in the automobile industry amounted to 25 percent. Total production of the economy fell short by $150 billion, according to the Conference on Economic Development. Which represented by far the greater economic waste?

Let's look at farm surpluses from a different point of view. Through most of history, recurring famine has been the usual experience of man. Everybody wants to eat every day at the lowest possible cost. The amount of agricultural production is not accurately predictable or controllable because of weather, disease, insects, time lags, etc. From a worldwide point of view, how large should world food reserves be? Ask a businessman how large his financial reserves should be? Or how large his reserve stock of goods should be—5 percent, 10 percent, 20 percent, 50 percent of a year's turnover? This will vary. Mr. Volker of the United Nations staff says world food reserves amount to about 10 percent of a year's consumption—enough for about 36 days' consumption. In this light, food reserves do not seem excessive. The trouble is a large share of this is in the United States. There is no way farmers can collect, in the marketplace as it now stands, the cost of carrying this reserve which is the insurance against hunger for consumers in this country and against mass starvation almost anyplace in the world. Hence, it has been shifted to the Federal Government. Perhaps it should be shifted to the U.N. so that the cost of carrying the reserve would be carried by all nations.

Another interesting point was made by Senator DOUGLAS last week when he revealed that the Federal Government is continuing to dispose of large amounts of surplus property for a few cents on the dollar while buying the same or similar items. The Nation would save $2 or $3 billion a year. It is interesting that carrying and disposing of surplus farm products is considered a subsidy to farmers but disposing of surplus industrial products is not considered a subsidy to industry. It is interesting, too, that when aircraft or trucks or other industrially made military or even civilian products owned by the Government become obsolete it is considered one of those things and no criticism is made of the manufacturer even though obsolescence is often built into the product. But let some wheat deteriorate in Government storage and farmers and farm programs are immediately criticized.

Critics of agriculture have pointed out that twice since 1933 the farm program has been bailed out by unexpected events, namely, by World War II and the Korean war. In each case surplus stocks accumulated under the Government farm program were disposed of at a profit. We can't foresee the possible emergency situation that might bail us out again. Let me turn the argument around and say that twice the farm program bailed our consumers and the consumers of friendly nations out of a food shortage situation and it may be as sound an investment to carry a food reserve as it is to carry a reserve of military facilities and personnel when we are not directly involved in warfare.

(2) "As if they (the farmers) can't stand the rigors of our economic climate."

Who can't stand the rigors of our economic climate?

(a) What about all our industries operating behind a tariff wall? Have you ever seen a compilation of tariff regulations? The most enduring and greatest subsidy ever enacted is the tariff designed to protect city industries. What about those industries that protect their market with patent copyrights, trademarks, brands, etc.?

(b) What about the newspapers and magazines that cannot afford the cost of distributing their publications except through a subsidized mail rate? *Hannagen* v. *Esquire*.

(c) What about our industries that produced war materials on a cost-plus basis and then were paid billions of dollars in reconversion payments, including tax amortization benefits?

(d) What about our cities that now receive $2 from the Federal Government for every $1 they put up for urban renewal and are asking for $5 of Federal money for every $1 from the city?

(e) What about our railroads, merchant marine, and airlines that have all been subsidized?

(f) What about all those service industries where licenses are required for the primary purpose of restricting entry into those industries?

(g) What about labor with its closed shop and its monopolistic bargaining?

I see all over the land industries, groups and fractions that can't stand the rigors of a purely competitive system.

If Mr. Canham, head of the U.S. Chamber of Commerce, will recommend that we cease treating tariff-protected industries as hothouse plants and make them compete in an open market, make the publishing industry and advertisers pay their full share of mail costs, require cities to pay for their own urban renewal and flood protection, cease the legal protection of patents and copyrights, dispense with licenses as a means of restricting entry, do away with the closed shop and monopolistic practices of both labor and management, then perhaps farmers could reasonably be expected to stand the rigors of our economic climate. After all, tariffs, patents, licenses, and monopolistic practices all preceded farmers' protection by many decades.

(3) He (the farmer) too must go along with the changes which are inevitable in our type of economic order.

What does he mean the farmer must go along—the farmer is leading the way.

We are all familiar with figures such as these: in 1803 one farmworker produced enough food and fiber for himself and three others; today one farmworker produces

enough for himself and 28 workers. But how many are aware of the tremendous increases in efficiency in just the last few years? Big city newspapers and magazines have been telling us of the efficiency of industry—of the increased output per man-hour, how automation is saving man-hours per unit of production, etc. And the record is impressive. For example, during the 6-year period 1951 to 1957, the output per man-hour in the entire nonfarm sector of our economy increased 14 percent or more, than 2 percent per year. If we drop out the service and distributive industries the record is even more impressive. Considering only the manufacturing industries, output per man-hour increased 21 percent in the 6-year period or 3½ percent per year. But how many people know that a farm output per man-hour during the same 6-year period increased 42 percent—twice as much as in manufacturing and three times as much as in all the nonfarm sector of the economy?

No; the big city newspapers and magazines have not told us much about the dynamic increases in efficiency in farming. They miss the real story in the farm picture which is the tremendous contribution that American agriculture has made to the economic progress of the Nation.

Economic progress is defined as the ability of a nation to produce the basic necessities of life with a smaller and smaller proportion of its manpower, thereby releasing a larger and larger proportion of its manpower for the production of the comforts and luxuries of life. Food is cheaper in the United States than in any nation in the world in terms of the number of hours of wages required to purchase a family's food. With a smaller number of hours of wages required to purchase food, there are more hours of wages left over for the purchase of industrial goods. This is why we have the high standard of living in this country. The efficiency of our agriculture has made it possible for our large scale industry to develop. Dean Weber recently said: "Those who take food for granted and make snide remarks about farmers forget that few other people in the world can indulge in such extravagances."

Increasing efficiency in agriculture is where every underdeveloped nation in the world has failed. Any nation that must devote most of its manpower to the production of the bare necessities of life cannot have a high standard of living. In my opinion, Premier Khrushchev was more impressed with the efficiency of our agriculture than with any other one thing. Khrushchev was able to brag about the accomplishments of his nation in such fields as space science, satellites, missiles, atomic energy, etc. But he did not brag about the accomplishments of their agriculture after he visited Beltsville and Iowa. He is shrewd enough to know he cannot match our standard of living until he can develop an efficient agriculture. His boast that he will "smother us in the U.S.S.R.'s output of industrial goods" is an idle boast as long as 50 percent of his manpower is tied to the land.

Yet there are those in this country who do not appreciate the fact that it is America's productive agriculture that has made it possible for us to have productive industry and it is productive agriculture and industry that has made America strong. If we do not maintain our agricultural superiority—and by a wide margin—our industrial superiority cannot continue. That is why it is so terribly important that the general public knows the contribution that agriculture has made, is making, and needs to make to economic progress in the future. It is almost inconceivable to me that the big city newspapers and magazines, almost as if by malicious intent, have striven to distort public perspective about agriculture.

(3) He makes reference to endowing into perpetuity the "self-sufficient family farm."

Hasn't Mr. Canham heard that the self-sufficient family farm is as obsolete as the buggy? Does he not realize that today's family farm is a commercial farm? Where does he think industry sells $16 billion worth of farm machinery, petroleum products, electrical power etc.? Does he realize agriculture uses more finished steel in a year than is required for the production of a year's output of passenger cars, more petroleum products than is used by any other industry, more rubber than enough to make tires for 6 million automobiles, more electrical power than is used by the cities of Chicago, Detroit, Houston, and Baltimore? Does he realize that the inventory of farm machinery alone is greater than the assets of the American steel industry and five times that of the automobile industry? Does this sound like agriculture is made up of a bunch of self-sufficient family farms? Where does he think food for 175 million people comes from—from self-sufficient farms that occasionally sell a few dozen eggs or peddle a few boxes of strawberries? Where has Mr. Canham been and where have the editors of Life magazine been since 1890?

(4) "A migration from the farm is inevitable."

Does Mr. Canham, head of the United States Chamber of Commerce and Life magazine know that there has been a migration from the farm every year since 1910 except during the 1930's when city folks could not take care of their own unemployed so they sent them back to the farms and let farmers take care of them? Does he realize that there have been 500,000 people leave the farms of this country each year since 1948. Is the United States Chamber of Commerce and the businesses that support it willing to provide jobs for these farm people at a faster rate than they are now leaving the farm? Are they ready to provide housing for them in the cities? Are they willing to take care of their training for new job skills? It is my observation that business is scarcely able to provide jobs for workers they now have in cities—at least I have heard some rumbling and unemployment in some cities and I have heard of housing shortages in some cities. And city folks seem perfectly willing to have farm communities pay for the primary and secondary education of young farm people who migrate to the cities which is a farm subsidy to the cities that has not been recognized.

Is it any wonder that city folks misunderstand farmers? Is it any wonder that farm people are distressed. Those of us in agriculture have been hit over the head so many times we seem almost afraid to hold our heads up and tell the truth. Maybe we too have lost our perspective and maybe even our confidence. But agriculture has a record of which we can all be proud. We can and should be able to refute those who are misinforming the public. Unfortunately, we have been put on the defensive by our critics. In my opinion the best defense is a good offense so let us come out swinging when our critics stray from the truth.

I suggest that every spokesman for agriculture, whether he be president of a county farm organization, a professor of animal husbandry, a county agent or a Dean of Agriculture write to Life magazine and to the United States Chamber of Commerce protesting this particular editorial in Life or to any other newspaper, magazine or commentator when they treat the truth lightly. I notice in this particular issue of Life, Henry Cabot Lodge is not afraid to set the record straight when Life was inaccurate with respect to his assignment as escort to Premier Khrushchev. Why should agriculture be afraid to set the record straight?

Again, my purpose is not to justify the particular farm program we have at present or to condemn tariffs, patents, closed shop or other programs in the non-farm economy. My only purpose is to try to view the farm situation in perspective.

Congressman Brock Lauds Truckers

EXTENSION OF REMARKS

OF

HON. DONALD F. McGINLEY

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 18, 1960

Mr. McGINLEY. Mr. Speaker, the Midwest provides the Nation with the finest meat to be found in the world, and it does it in great volume. This is no accident and is not the single accomplishment of any one group. It is a huge and efficient industry the effects of which are felt throughout the entire economy of the area.

One of the component parts of the livestock empire is a business that has in itself grown to be a strong and valuable industry. This is the livestock trucking industry.

I think the importance of this industry, made up of many big lines and small, independent truckers, is very well outlined in a speech made by my colleague from the Third District of Nebraska, LARRY BROCK, who spoke to the farm-to-market truckers at their 17th annual get-together of truckers and businessmen in Sioux City, Iowa, last month.

I commend to the attention of our colleagues the following address given by my good friend and colleague, LARRY BROCK:

The trucking industry has often been called the mainspring of the Nation's economy in recent years. Throughout the country the motor truck is the important link in the transportation of virtually all commodities, an estimated 75 percent of all tonnage moving daily in the Nation's commerce moving by this method. Although other means of transportation play an important role, their scope of operations is limited by peculiar facilities requirements. All of these methods of transport must be supplemented by the use of trucks for cargo to reach its ultimate destination. The motor truck is the only form of transportation available to more than 25,000 communities in the United States.

In absolute terms, no single transportation service has advanced so rapidly over the past 20 years. But it is significant that the greatest advances in truck transportation have been accomplished without the impetus of major technological breakthroughs which have so drastically changed the airline and water carriers, and even the railroad industries. Though vastly greater in size, trucking seems not to have changed much in character, being still a highly volatile, competitive industry.

The trucking industry has grown from a few thousand one-man one-vehicle operations to include 18,000 common carrier companies subject to ICC regulation; yet these comprise only one-quarter of the trucking industry, the other 75 percent consisting of private and contract carriers.

Common carriers operate about 1.5 million of the approximately 11 million trucks on the highways. Some 800 class I carriers (those whose annual revenues exceed $1 million) were responsible for more than half the industry's earnings in 1957. An estimated 260,856 million ton-miles of intercity freight traffic moved by truck in 1957.

Freight hauled by trucks during the second quarter of 1959 rose 20.5 percent over the similar 1958 period with all geographic regions showing gains. The growth in trucking was particularly great in the Central regions of the country where tonnages of truck-hauled freight increased 33.4 percent over a year ago.

The trucking industry is both young and dynamic and will continue to grow with the expanding national economy.

Dr. Frank Rose Named to Dixie Hall of Fame for the Living

EXTENSION OF REMARKS
OF
HON. JOHN SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Monday, January 18, 1960

Mr. SPARKMAN. Mr. President, recently Dr. Frank Rose, president of the University of Alabama, was named to the South Hall of Fame for the Living, in Decatur, Ga.

In the some 15 years that this program has been going, three presidents of the University of Alabama have been so honored. They have been Dr. O. C. Carmichael, the late Dr. George H. Denney, and now Dr. Frank Rose.

There recently appeared in the Birmingham Post Herald a news item regarding the naming of Dr. Rose. I ask that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNIVERSITY OF ALABAMA HEAD NAMED TO DIXIE HALL OF FAME

UNIVERSITY, ALA., January 6.—Dr. Frank A. Rose, president of the University of Alabama, has been named to the South Hall of Fame for the Living in Decatur, Ga.

Dr. Rose is the second president in the history of the school to be so honored. The late Dr. George H. Denny was previously chosen.

In nominating Dr. Rose, Robert Jemison Jr., one of the honor group said: "The South needs the vision, initiative and accomplishments of its young men, particularly in the field of education. In fact, this is the age of the young man. Dr. Rose is an outstanding example of this age."

Dr. Rose's nomination was seconded by Hill Fergusan, chairman pro tempore of the university's board of trustees.

The University of Alabama president's selection to the group brings the total number of college presidents named to the hall to seven.

Auburn University's Dr. Ralph Draughon is also a member.

The 1960 selections mark the 15th year for the naming of new honorees.

The Man of the South will be selected in the spring from the 200 members of the honor group.

It's There To Be Read: A "Right" of Citizens

EXTENSION OF REMARKS
OF
HON. PHILIP A. HART
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Monday, January 18, 1960

Mr. HART. Mr. President, the Senate Rules Committee has opened hearings on new proposals now before the Congress to protect voting rights. I ask unanimous consent that a pertinent editorial which appeared just last week in the Detroit News be printed in the Appendix of the RECORD. It is my hope that my colleagues will read it and agree with its message: That the Congress must act on the recommendation of the Civil Rights Commission on this question.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

IT'S THERE TO BE READ: A "RIGHT" OF CITIZENS

"The right of the citizens of the United States to vote shall not be denied or abridged by the United States or by any State on account of race, color, or previous condition of servitude.

"The Congress shall have power to enforce this article by appropriate legislation." (15th amendment to the U.S. Constitution.)

Nearly 90 years have passed since the above words became part of the fundamental law of the land yet there remain many places in this country where this writ does not run. The Negro's right to vote is denied and in this regard he remains a voiceless slave.

In his state of the Union message on Thursday the President referred to this denial of civil rights in this fashion:

"In all our hopes and plans for a better world we all recognize that provincial and racial prejudices must be combated. In the long perspective of history, the right to vote has been one of the strongest pillars of a free society. Our first duty is to protect this right against all encroachment. In spite of constitutional guarantees, and notwithstanding much progress of recent years, bias still deprives some persons in this country of equal protection of the laws."

The President then said that he hoped the Congress would give serious consideration to constructive recommendations aimed at eliminating practices discriminating against the basic rights of Americans.

The President will be joined in this hope by millions of Americans who refuse to engage in any conspiracy to deny to another American his right to be heard through the ballot. Indeed, we would wish that the second paragraph of the amendment could be itself amended so that it not only granted power to Congress but imposed a duty upon it.

For political reasons that remain constant and obvious, the action to be taken by Congress in this session is at the moment unclear, but it seems certain that there will be action. The House has been invited by its Speaker to force a civil rights bill out of the Rules Committee and onto the floor. The leaders of the Senate have agreed to a full debate on civil rights next month.

The Civil Rights Commission has recommended that Federal registrars be sent where their presence seems required so that the Negro can be registered to vote in Federal elections. Whether this will suffice to overcome the social and economic intimidation and downright terrorism to which the Negro who desires to vote is subjected is an open question. But the law must frequently precede any real move toward elimination of an evil and the presence of registrars might serve to sharpen the issue involved.

There are always those who consider patience to be the ultimate virtue and who will seek to delay and postpone. Ninety years would seem to be a reasonable interval for the United States to devise a method whereby its own Constitution will mean what it so plainly says.

What Will the Western Hemisphere Do About the Rapid Increase of Communist Activity and Power in Latin America, Spearheaded by Red Chinese and Other Communist Agents in Cuba?

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 18, 1960

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include broadcasts by Mr. Ray Henle, editor in chief of the daily NBC news program called "Three-Star Extra." It has been known for some time that while Mr. Khrushchev waves the olive branch toward the West, his partner, Communist China, continues unabated the dirty work of the Communist world conspiracy in Tibet, India, the Middle East, Africa, and Latin America. The chief center just now is Cuba. What will the hemisphere do about it?

The broadcasts follow:

BROADCAST BY RAY HENLE ON JANUARY 12, 1960

Three-Star Extra has just had a revealing interview with Dr. Emilio Nunez Portuondo about the situation in Cuba. Dr. Nunez is an outstanding Cuban citizen—he once was President of the United Nations Security Council, a longtime Cuban diplomat with world standing. He was a foreign service officer while Batista was in power and, therefore, was separated, as foreign service officers almost always are, from the domestic political affairs of his government. Dr. Nunez never did, and does not now, support or defend the Batista regime, and does not now even countenance any thought that Batista should return to power.

Dr. Nunez informed us that he's convinced that the solidification of Communist power in Cuba under Fidel Castro will be the beginning of a Communist sweep throughout the entire Western Hemisphere unless Castro is checked promptly.

He thinks the only practical way this can be done is for the United States to support military intervention in Cuba.

Dr. Nunez thinks we would have a perfect right under the Caracas resolution to intervene in Cuba. He says there is no doubt among the leaders of the Latin American countries that Castro's government is Communist and the rest of Latin America would grant us the right to take action.

He thinks it should be done through U.S. support for an anti-Castro movement in

Cuba which would be started by the Cubans themselves.

Dr. Nunez says the alternative to speedy U.S. action is the loss to the Communist world of all the Latin American Republics. He says that once the Reds consolidate their foothold in Cuba, revolution will sweep the rest of the hemisphere. Pro-Communist governments will be set up, U.S. properties all over Latin America will be seized, and the United States will have lost its own hemisphere.

There was one major surprise in our meeting with Dr. Nunez. Namely, his declaration that the primary influence in Cuba is Red China, not Russia. He says 40 to 50 Red Chinese Army officers are arriving in Cuba every day. They are being integrated into the Cuban Army as fast as they arrive and are gradually assuming control of the army training. Therefore, he says, it will be the policies of Red China, not those of a somewhat more reasonable Russia, which we will face across those few miles of water between Cuba and the United States once the Reds get full control.

Dr. Nunez says that Chinese influence in Cuba is further demonstrated by the fact that "Che" Guevara, Castro's economic czar, has sold 50,000 tons of Cuban sugar to the Red Chinese. This sugar will be delivered during January and February at a price of slightly less than 3 cents per pound. This is just about half the price the United States pays Cuba for sugar.

Nunez told us he had been informed that early in December Castro was becoming seriously concerned over the possibility that the United States might support a movement to oust him from power. He sent emissaries to Moscow and Peking to relay his concern and ask for their support if the United States attempted to overthrow him. Peking replied immediately with assurances that it would give Castro whatever aid he needed. There was no reply from Moscow for more than a week, during which Castro became increasingly alarmed. It was during that period, Nunez says, that Castro remained silent, making none of his long radio and television speeches.

On December 15 Castro received a reply from Moscow. It stated that Russia was willing to give him aid but that there was no need for any. The message said that Russian intelligence in the United States had informed the Soviet Government that the United States would not intervene in Cuba under any circumstances. Therefore, the message said, Castro should feel perfectly free to pursue his anti-U.S. policy with all possible vigor.

On the following day, December 16, Castro resumed his radio and television speeches with new and bitter denunciation of the United States.

BROADCAST BY RAY HENLE ON JANUARY 13, 1960

You'll recall our report last night on our interview with Dr. Emilio Nunez Portuondo who feels that prompt and forceful action by the United States is necessary to prevent Castro-type communism from sweeping all of the Western Hemisphere.

Tonight you may like to hear some additional comments on Dr. Nunez. He is a man you'll be hearing about more and more. He's not the kind of man you forget.

He is a diplomat of world standing, former president of the United Nations Security Council and one of the principal authors of the Caracas resolution empowering the Latin American countries to take action against communism.

Because of Dr. Nunez' denunciation of the Communist policies of the Castro government, he has become one of Castro's pet hates. Castro attacks him on every occasion. He charges him with associations with gangsters and calls him a tool of Batista. Unfortunately, some of Castro's apologists in this country may be impressed with these charges.

Dr. Nunez was a member of the Cuban foreign service while Batista was in power. But he had nothing whatever to do with Batista's domestic policies and he has no ties with him now or with any Latin American dictatorship.

Perhaps Dr. Nunez' greatest crime in the eyes of some who now denounce him is that he has been a loyal and unbending friend of the United States. Our staff reporter, Fred Morrison, recalls how when the United States was being heckled from all sides during the Caracas conference in 1954, it was Dr. Nunez who took the floor in its defense. Mr. Morrison was an eye witness to that incident. When the United States needed support for its proposals in the United Nations, it could always rely on Dr. Nunez.

There aren't too many people in the world who are willing to stand up and be counted in this way. The strength of Soviet policy is that it knows its friends and supports them. It's a good rule for us.

Roscoe Ammon and Airport Facilities for Manchester, N.H.

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES

Monday, January 18, 1960

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the New Hampshire Sunday News of January 10, 1960, written by the well-known feature writer for the Manchester Union-Leader and the New Hampshire Sunday News, Mr. Jay Hanlon.

This story deals with the success of one of New Hampshire's distinguished young industrialists, Mr. Roscoe Ammon, who has demonstrated a highly commendable sense of civic responsibility. Recently, Mr. Ammon gave to the city of Manchester a sum in excess of a half million dollars to be used for the development of more adequate airport facilities for New Hampshire's largest city. As is pointed out in this article, New Hampshire is believed to be the only State in the Union which does not enjoy the benefits of a class A, all-weather airport. It is my hope, and one which I know is shared by my distinguished colleague from New Hampshire, the Honorable NORRIS COTTON, that the Federal Aviation Administration will find it possible to provide sufficient matching funds during fiscal year 1961 to correct this situation and justify the confidence which Mr. Ammon places in the future of his community.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FANTASTIC CLIMB TO SUCCESS—AMMON'S 30 PATENTS INCLUDE PARTS TO X-15

(By Jay Hanlon)

When the X-15 eventually takes a man into space and brings him back to earth, that historic flight will be made possible by, among other things, an electronic instrument invented by a Manchester man.

When giant jet airliners crisscross continents and oceans, those flights are made safer by, among other things, electronic instruments invented by that same man.

The inventor is Roscoe Adams Ammon, 41, a tall, rugged individualist who, until little more than a year ago was owner and president of the Marion Electric Instrument Co. here. Now Ammon is retired from business. But hardly is he retired from Manchester's community affairs.

GAVE HALF MILLION

Indeed only last week Ammon executed a promise he had made to the city 6 months ago—he gave the city of Manchester a half million dollars for development of Grenier Field. And because of that gift New Hampshire's Queen City now stands on the threshold of a new era through the prosperity of modern aviation.

Ammon, now a Bedford resident, is quite literally a self-made man. Born into a family of modest means in the Tottenville section of Staten Island, N.Y., Ammon started contributing early in his life to the family income.

Times were generally hard and at the age of 12 Ammon was helping at home. At the age of 14 he opened his own radio repair shop while attending public schools, then under a split-sessions arrangement, in the morning. He studied by day and repaired radios by night.

"I had no particular gift for radios. I just liked to putter over the damn things. Besides, you did what you could for a dollar in those days," he explained.

TURNED TO RADIO

When he completed his education he turned to radios as a full-time business, joining a radio wholesale firm in New York City.

One day the boss sent him to Brooklyn's waterfront where oil tycoon Earl Halliburton's 1,800-ton diesel, twin-screw yacht *Vida* was undergoing overhaul. The radios and sperrygyroscope stabilizers needed some repair.

On the third day of the job, Chief Mate Al Larsen invited Ammon to lunch with the crew and during the course of the meal Larsen discovered that Ammon also was of Norwegian extraction. "That did it," says Ammon. "He offered me a job in the crew and I jumped at the chance."

After a couple years on the *Vida*, Ammon switched to tugboats and plied the harbor of New York. That only lasted a year, however. At 21 he turned his back on the sea and went ashore, rejoining the radio business. "That's when I stopped living by my brawn and started living by my brain," he explains it.

When he wasn't working on radios during the day he dabbled with several projects by night. One of these was an engineroom telegraph system.

Ammon's invention interested a friend, Perry Mack, also a New Yorker, who was one of the founders of the Marion Electrical Instrument Co. in Manchester.

Ammon, then 22, joined the company in 1941 as an engineer and set about reorganizing and building. He worked in various capacities as the company grew by leaps and bounds. He was plant manager when he bought out William F. McElroy in 1953.

In 1955 Ammon moved the flourishing business from the mill yard into the sprawling modern plant, now with 275 employees, at Grenier Field.

He continued to invent and manufacture his own products for the aviation industry. Before many of the new devices were offered to the industry, they were first tested in the company's planes, usually with Am-

mon in the cockpit. Many refinements were made while Ammon worked aloft.

Time and again major companies such as Sperry, IBM, or Bendix came to the New Hampshire company with problems that had not been solved.

FOUND SOLUTION

Time after time Ammon came up with the solution. One of these is a fundamentally new instrument mechanism on the experimental rocket ship X-15, in which U.S. scientists hope to send a man into space. Incidentally, the patent for that particular instrument was issued by the Government only recently.

This instrument, as well as many others that have come from Ammon's brain, has received wide attention in national aviation and electronic publications. Ammon has written numerous technical papers for these magazines.

In all, he holds more than 30 different patents.

All of his patents are assigned to the Minneapolis-Honeywell Regulator Co. to which Ammon sold Marion Electric in the fall of 1958. When Ammon retired last March, he left behind a company which had grown from a dozen employes in 1941 to well over 400; a company which in 1941 had gross sales of less than $100,000 to a company which now records gross sales of well over $4 million annually. Minneapolis-Honeywell itself is a nationally known company with gross annual sales of nearly $400 million.

In 1943 Ammon married Priscilla McElroy and they have four children, Judy, 15, Nancy, 13, Mary, 10, and Roscoe Ammon, Jr., 8. The Ammon family lives on Bedford Center Road in Bedford.

CIVIC LEADER

Ammon has long been active in community affairs. He has long been the champion of civil aviation in the greater Manchester area and led the battle with the Air Force to open Grenier to civil aviation.

That was the first step in Ammon's dream. The second was development of Grenier into a first-class airport of which New Hampshire has none. That was the reason underlying his half-million dollar gift to the city of Manchester last week.

Of that gift, Ammon had this to say:

"I have been asked by the Sunday News to state my reasons for making the recently announced gift to the city of Manchester.

"The general question of giving is substantially a personal one and I have no comment to offer on it. However, the specific objective of this gift does perhaps deserve some comment.

"There are many worthy organizations and projects in this community to which substantial contributions could well be directed with sound but probably transient benefit. The provision of 'seed money' or pump-priming funds for well-directed economic development of our community offers the promise of substantially greater benefits for all of our community and for probably a longer period.

"Economic development for this community and most others has its roots in industrial development. Industrial growth is significantly influenced by the facilities and atmosphere the community provides. The State of New Hampshire is the only one of the 50, and the city of Manchester one of the very few of its size, without a class A all-weather, modern airport—the 'gateway' to nearly all the progressive industrial communities of America.

NEEDS GATEWAY

"Manchester needs this 'gateway' for the specific tangible benefits it can provide in improving our badly deteriorating public transportation system and to serve the needs of our industries, old and new, with improved market access and expedited executive travel. A modern airport can become an impressive 'gateway,' and, one might hope, an attractive symbol of a progressive community.

"One of the major phenomena in the field of industrial development in the last decade has been the growth of the 'airport industrial park' in the Midwest, the Southwest, the Far West and, more recently, in the South. In these areas one rarely finds a modern airport associated with an industrial community that does not have clustered on its periphery thriving young (a few old ones, too) industries that consider their airport locations essential to their growth and success.

"The industry groups which predominate in these airport industrial parks are aviation including services and manufacturers, electronics including component and equipment manufacturers and research and development organizations in many fields.

"With the planned development at Grenier Field, Manchester will have a unique 'first in northern New England' opportunity to offer to airport-based industry some of the finest industrial sites available.

"The foregoing comments are based on some considerable firsthand observations and experience gained in some 10 years of flying all over the United States, and in operating Manchester's first airport-based industry at Grenier. I believe very strongly in the future that this development holds for Manchester.

"When it became apparent that due to other pressing municipal problems, funds for development of our municipal airport could not be made available in the foreseeable future, and believing as I do that Manchester's economy requires a modern airport if it is to remain competitive, I have made this gift which should permit the accomplishment of the development objectives without cost to the city."

Poplarville Editor Defends Hometown and Rejects a Cruel Stigma

EXTENSION OF REMARKS

OF

HON. WILLIAM M. COLMER

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, January 18, 1960

Mr. COLMER. Mr. Speaker, under leave to extend my remarks, I include the following editorial which appeared in the Jackson, Miss., Clarion-Ledger of Wednesday, January 13, 1960.

Mr. Speaker, because of my personal knowledge of the facts stated with reference to the town of Poplarville and the high esteem I have for Mr. Murphy Weir, editor of the Weekly Democrat, I desire to give wider circulation to Editor Weir's editorial, "Our Town." I can truthfully state without any reservation whatever, that I know of no community in any section of our great common country that is populated by a more peaceful and honorable people than the town of Poplarville, Miss. The fact that a Negro by the name of Mack Charles Parker, charged with a heinous offense, was killed in that vicinity is neither condoned by Editor Weir nor the residents of Poplarville no more than the daily murders that occur in Washington, New York, or any other city, are approved by the good people of those cities. The Parker incident could have occurred in any of them or any other community in the United States.

If Poplarville has become a "world-wide symbol of race violence," as Look contends, it is because of the biased and prejudiced reporting.

The editorial follows:

POPLARVILLE EDITOR DEFENDS HOMETOWN AND REJECTS A CRUEL STIGMA

At a time when agitators and hatemongers are heaping abuse upon his Mississippi community, Editor Murphy Weir of the Weekly Democrat at Poplarville has written a calm, dispassionate presentation of facts which deserve nationwide circulation as a matter of fairness.

We cannot, unfortunately, pass it along to the Nation but we can and do pass Editor Weir's editorial, "Our Town," along to our Mississippi readers, in the hope that they may see fit to mail it to friends and relatives beyond the South.

"Why did the people of Poplarville fail to act, making it necessary for the Federal Government to move in? To get this answer, Look writer George B. Leonard, Jr., a native of Georgia, spent several days talking with white and Negro residents of the town that has become a world-wide symbol of race violence" (Look Magazine, Jan. 19, 1960).

To which the Poplarville editor has replied:

"This writer has lived in Poplarville since October 1, 1940. During those 20 years we have come to know Poplarville as an average American town—a town no better or no worse than any other town of 2,000 population in these United States.

"It is a town in which people of both races—white and Negro—live and work in harmony. We do not remember any racial friction of major importance between residents during those 20 years.

"It is a town with an average number of churches of various denominations—supported by an average number of members who gather to worship God in the church of their choice.

"It is a town with average schools, teaching young people ideals of citizenship and theories designed to aid tomorrow's adults to live and work in the free traditions of America.

"It is a town that has produced and trained some fine ministers of the Gospel.

"It is a town that has produced and trained some excellent educators who have contributed to the training of youth in various sections of the Nation.

"It is a town that has produced and trained some honorable political leaders who have contributed to local, State, and national political betterment.

"It is a town whose people pitched in to help a fine Negro couple celebrate their golden wedding anniversary—more than a 100 whites joined the hundreds of Negro people in paying respect to Pete Peters and his wife December 27.

"It is a town whose people pitched in to help secure treatment for a Negro youngster injured in a football accident.

"It is a town whose people annually finance a Christmas party with gifts for children of both races.

"It is a town whose people annually provide funds with which to present Christmas baskets to the needy of both races.

"It is a town and area whose people are now spending almost a million dollars to build entirely new school plants and recreational facilities for the children of both races—between a quarter and a half million

dollars going directly to facilities for the Negro pupils.

"It is a town that has worked to construct new housing and adequate hospital facilities for people of both races during recent years, pouring dollars from its pockets for this cause.

"It is a town with a culture: staging annually flower shows, musicales, religious meetings, band concerts, athletic events and other things that contribute to the inner man.

"It is a town in the process of planning additional facilities for the health and the economic well-being of people of both races. It is a town of progress.

"It is a town in Mississippi, sharing with the State the distinction of having the second lowest crime rate of any State in the Nation.

"It is a town in which members of both races can walk down any street at any hour of the day or night without fear of being molested—something that cannot be said for the cities in which Look's circulation is concentrated: New York, Washington, Chicago, and Detroit.

"Yes, it is an average American town."

To us, these things are elementary things that may be said of the hundreds of towns across this great land—and should not need pointing out.

Knowing that there are good and bad in every town throughout the land, how can any publication violate the traditions of truthful journalism by branding any one town as being the "symbol of race violence"?

Review of 1959 Traffic Through the St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, January 18, 1960

Mr. WILEY. Mr. President, we recall that during 1959 the St. Lawrence Seaway was completed and dedicated.

After a 50-year struggle for its completion, the seaway now stands as the open door to the ports of the world for the Great Lakes navigation system, the greatest inland waterway system in the world. Overall, it carries about 25 percent of the waterborne traffic of the United States, with both imports and exports, averaging about 227 million tons annually.

In the days ahead, Congress will be faced with decisions on how best this system can be more fully developed in the interest of the whole economy. The decisions will cover such aspects as, first, completion of the Great Lakes connecting channels; second, further development of ports and harbors; third, working out some of the problems that have arisen in the operation of the seaway itself; and other challenges.

We recognize, of course, that it would be strange, indeed, if in an operation of the magnitude and complexity of the Great Lakes-seaway system, difficulties did not arise. However, the increase in traffic through the seaway—following its completion—promises to fulfill, I believe, the expectations of those of us who supported this tremendous project.

During 1959, for example, many "firsts" were established: In Milwaukee—a major port on the Great Lakes—these included, first, oversea commerce tripled; second, port income jumped 50 percent; and, third, waterfront employment doubled. This increased economic activity was a reflection of similar occurrences all around the Great Lakes.

As we face decisions in regard to further improvement of the Great Lakes system in this session of Congress, it is, I believe, particularly important to be fully appraised of the problems, as well as the progress and potentials involved in this system.

Recently, the Milwaukee Journal and the Janesville Daily Gazette—both outstanding Wisconsin newspapers—published articles reviewing the results of the 1959 seaway operation. I ask unanimous consent that these articles be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Milwaukee Journal, Jan. 7, 1960]

MILWAUKEE—MANY "FIRSTS" SCORED IN OPENING YEAR OF SEAWAY

It was a big year for Milwaukee's port following the opening of the St. Lawrence Seaway—oversea commerce tripled, waterfront employment doubled, port income jumped 50 percent, and 332 big ocean ships called here.

These were the important statistics in the board of harbor commissioners annual report. But the report contains a lot of other matters of interest, too. All told there were more than 40 "firsts" chalked up at the port during the year. Consider some of them:

Ten additional shipping lines paid their first calls at Milwaukee.

For the first time a naval task force could get into the lakes, and it highlighted Milwaukee's opening of the seaway with a 2-week operation.

Queen Elizabeth II of England in the royal yacht sailed into Milwaukee bay past the harbor entrance.

For the first time Milwaukee had direct ocean connections with Egypt, Jordan, Saudi Arabia, the Sudan, Eritrea, French Somaliland, British Somaliland, Iraq, Iran, Bahrein, Kuwait, Pakistan, India, Ceylon, Burma, Vietnam, Cambodia, Indonesia, and Japan.

Flags of Israel, Switzerland, and Spain flew from the masts of vessels here for the first time. And the first American flag on an ocean vessel was seen here when the *Santa Regina* of the Grace Line put in last May.

Other firsts included shipments of United Nations cargo, South America timber, zoo animals, sake from Japan, and steel scrap to Japan.

There were other "firsts" but they take too long to list. But one must list the biggest of all—the "first" Milwaukee realization of a 50-year dream that one day it would become a real ocean port by means of a direct deep water seaway.

[From the Janesville (Wis.) Daily Gazette]

FIRST ST. LAWRENCE SEAWAY SEASON ONE OF BOTH HURRAHS AND HEADACHES

(By William J. Conway)

CHICAGO.—The first deep-water season of the St. Lawrence Seaway was one of hurrahs and headaches.

The huzzas greeted ocean ships that steamed into Great Lakes ports last spring. Those vessels were pennant-spangled symbols of the linking of North America's vast interior with the sealanes of the world.

But the foreign freighters brought problems as well as cargoes. They encountered delays caused by canal bottlenecks, shortages of skilled longshoremen, inadequate loading and unloading equipment.

The Associated Press has made a survey of port cities, looking back to the 1959 season that ended December 3 and ahead to the 1960 season that will open about April 1.

VOLUME INCREASES

The main findings:

Export and import volume in the ports rose to record levels.

But tonnage through the seaway—the 185-mile stretch of canals and river between Montreal and Lake Ontario—fell short of expectations. The total was 20,103,767 tons. That is 20 percent under advance estimates of 25 million but far above the 10 million or so tons in recent years.

There is not so much blithe talk about the future now that the historic opening year has passed. But some planners are moving along the line suggested by the old gambling challenge—"Put your money where your mouth is"—and investing millions in port betterment.

TONNAGE TRIPLED

Here, in brief, are reports from a dozen ports:

Ocean cargo topped 200,000 tons in 1959 at both Milwaukee and Cleveland, tripling their 1958 totals.

Chicago's export-import business added up to 784,206 tons of general and bulk cargoes, exclusive of grain. That more than doubled the figure for the previous year. Grain exports shot up to 384,412 tons from a meager 18,384 tons.

Buffalo's tonnage soared to 108,267 from 12,650 the previous season. Toledo's direct oversea freight totaled 115,383 tons, a gain of 277 percent.

DULUTH-SUPERIOR

General cargo export-import traffic at Duluth, Minn., and nextdoor Superior, Wis., increased to 16,381 tons, while grain exports totaled 86 million bushels, almost three times the preseason forecast.

Muskegon, Mich., with 45,000 tons of foreign freight, doubled its 1958 business.

Some ports handled their first shipments from overseas. Erie, Pa., had 6,959 tons of export-import freight. At the twin ports of Port Arthur and Fort William in Ontario foreign vessels landed 25,000 tons of general cargo and carried away 31 million bushels of Canadian grain. Foreign ships had hauled off slightly more than 1 million bushels in 1958.

SHIPS ARE LARGE

Increasing export and import volume added up to 8,500,000 tons in Montreal at the eastern end of the seaway. Foreign cargo totaled 251,000 tons in Hamilton, Ontario, several times the 1958 handle, and more than double in Toronto in reaching a record 700,882 tons.

Calls at Great Lakes ports by vessels in overseas trade increased from 20 to almost 50 percent. They ranged from 22 at Erie, Pa., and 51 at Bay City, Mich., to 522 at Chicago and 583 at Toronto.

The ships were larger, too, because seaway canals have been deepened from 14 feet to 27.

Eastern ports watched competition get off to a modest start along what has been termed the new north coast.

NEW YORK LITTLE AFFECTED

New York and Boston reported it had little effect on them.

Philadelphia's general cargo volume held to 1958 levels but grain exports declined.

The Maryland Port Authority commented: "Baltimore has suffered mostly in grain and coal exports, along with the loss of some general cargo."

The upturn in seaway traffic did not touch off a wild boom, but it did bring benefits.

In Milwaukee it has been estimated the seaway brought more than $2½ million in additional money into the city and created 200 new jobs, half of them on harbor installations and the others on docks.

WELLAND BOTTLENECK

The big bottleneck was at the Welland Canal, a link between Lakes Ontario and Erie that detours Niagara Falls. As many as 60 ships at one time waited for passage. Delays ranged up to 72 hours.

Improvements are under way, at a cost of $7,500,000, aimed at a 25-percent expansion of the canal's current capacity of 28 vessels a day.

Other programs of the money-in-hand variety, some already in progress, include:

Chicago, dock improvements, $7 million; Milwaukee, pier and rail track projects, $7,500,000; Cleveland, dock and crane additions, $500,000; Toledo, terminal and grain elevator development, $7 million; Port Huron, Mich., port development, $300,000.

The Canadian Government is constructing an $8,500,000 seaway terminal at Port Arthur-Fort William. Montreal harbor officials are working on a 5-year development plan involving an outlay of $66 million.

The State of Television Around the World

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, January 11, 1960

Mr. REUSS. Mr. Speaker, the broadcasting industry in the United States is today under the careful scrutiny of committees of Congress, individual Members of Congress, Federal agencies, and the general public.

Television, particularly, is being criticized and defended, dissected and examined from many angles. In our examination of our own television operations, it is appropriate to look at the television situation in other nations.

Mr. George W. Oakes, a Washington, D.C., writer on many subjects, has prepared such a worldwide television roundup, which appeared in the Washington Sunday Star on January 10, 1960, accompanied by a most interesting table:

THE STATE OF TELEVISION AROUND THE WORLD

(By George W. Oakes)

While the United States struggles with the problem of what should be done about television, what are the apparently satisfied customers of TV in other countries around the world doing?

A survey shows that 50 other countries now have television. This is almost all the major countries with the exception of some in Africa and Asia.

The survey would allow these conclusions:

We have the most TV—almost 20 hours a day. Next is Argentina with 15 hours. Most countries have only 4 to 10 hours a day. India has only 1½ hours.

People who make a career of watching foreign broadcasts think that government-owned TV is best, generally speaking, but believe, also, that Italy's commercial TV shows probably the most imagination of any in Europe.

In at least 15 countries no advertising at all disturbs the flow of the programs.

Programs, in general, range from light entertainment to heavy cultural, just as they do in this country, with a larger share of the cultural abroad.

Great Britain is regarded as the top foreign country both in influence and operations.

Here is the way TV operates in the major countries:

GREAT BRITAIN

In 1937, Britain inaugurated over the BBC the first public TV programs anywhere. Today British TV reaches more than 90 percent of the population on 2 networks—the BBC, a publicly owned corporation, and the Independent Television Authority, a commercial chain of stations.

The BBC TV network does not sell advertising but is financed almost entirely by an $11.20 annual license fee paid by 10 million set owners. Although it is a government-established corporation, operating under royal charter, it receives no funds from the taxpayers—only the viewers—and therefore can maintain an independent, non-partisan policy. It is directed by a board of prominent citizens. There is no government censorship.

The BBC broadcasts every day on a national network. There are about 60 hours TV a week, usually 8 hours a day between 8 and 11 p.m.

The programs strike a balance between information, education, and entertainment. On the average they are seen by about 6 million to 9 million people but a big event, such as the opening of Parliament or a championship football game, might reach 12 million to 20 million viewers in a country of 50 million people.

Typical program

A typical program might include: news; a 90-minute play; a light entertainment show; a movie; a "brains trust" discussion among such outstanding talkers as Bertrand Russell, Prof. D. W. Brogan of Cambridge or Sir Isaiah Berlin of Oxford; a "live" broadcast of a big sporting event; music and art items.

In general the BBC is inclined to accent information and cultural interests more than entertainment. This high level policy seems to be popular too, for one of the BBC's best programs, "Panorama" entirely devoted to current affairs, attracts 50 percent of the viewers able to tune in on commercial TV which stresses mainly light entertainment. The BBC has also pioneered in documentary programs sending teams to make animal films in Indonesia or archeological shots in Jericho. It has even dealt with controversial subjects like abortion and suicide. The BBC has been particularly successful in televising the great pageants of British life like the Queen's review of the annual "Trooping the Color" ceremony on the Horse Guards parade ground in London. In major sports programs the BBC has maintained its lead through long-term contracts for the most popular events.

In addition to its general program, the BBC presents daily programs for children and women, regular religious telecasts, special telecasts for the schools in term time, and a weekly farmers program.

The British commercial network is controlled by the Independent Television Authority, a public corporation established by Parliament in 1955 whose chairman was the highest ranking diplomat in the Foreign Office. The ITA built and operates eight TV stations which broadcast 60 hours a week in the major population areas. It is financed on a nonprofit basis by fees which it receives under contract from the private companies that have been formed to produce the programs. Generally each region is served by one company but certain popular TV areas are divided between two contracting companies, one for weekday programs and the other for weekend programs. However, the ITA is responsible for maintaining a proper balance and quality of the presentations.

How sales are made

The program producing company sells commercial spot announcements to the advertiser, usually 6 to 8 minutes per hour. Each commercial, which runs for about 20 seconds, occurs every 15 minutes or so at the start and finish of a program or during a natural break. Perhaps once a day there will be an advertising magazine, a group of commercials in story form. This plan separates the program material from the advertising and thus pretty well keeps the program content out of advertiser control.

Commercial TV has been successful financially. In 1958 British commercial TV accounted for 10 percent of all British advertising revenue of $140 million. The top charge for the peak viewing hour in London is $3,500 per minute.

The independent TV, usually on the air from 12:45 p.m. to midnight, specializes in light entertainment such as variety shows and for this reason attracts twice as many viewers as the BBC in areas served by both networks. Many American TV presentations, especially western movies, appear on this network. It also goes in for several weekly quiz shows, but all prizes never exceed more than $6,000 a week.

However, ITV (as it is called) also produces many public affairs programs, talks, documentaries, etc. There is a separate company that supplies news for all ITV stations and not only produces two 15-minute bulletins but also conducts TV interviews with leading public figures.

In addition, ITV covers musical events, produces special children's programs like "Robin Hood," as well as afternoon school features on science, literature, geography, etc.

In general British observers feel that ITV has had a stimulating effect on BBC programing by providing a choice for the TV audience.

JAPAN

Television has developed tremendously in Japan. Seventy-one percent of all families can receive TV, with a total of 3.8 million receivers. There are two major networks, the Japan Broadcasting Corp., which is comparable in organization and output to the BBC, and a chain of commercial stations.

The Japan Broadcasting Corp., called NHK, has six stations throughout the country each of which has the power of a major station in Washington. The network broadcasts 11 hours a day on the average, and slightly longer on weekends.

The NHK programs consist of 40 percent entertainment, and the rest education, news, sports. The entertainment program encompasses orchestral music, variety shows and plays. Both the traditional and modern Japanese theater are presented on TV. Westerns are given in eastern terms with a samurai warrior and sword replacing a cowboy and his six-shooter.

News usually is televised in the mornings, women's programs in the afternoon and entertainment at night. Quiz programs are presented frequently but the largest prize is about $50.

Two stations, in Tokyo and Osaka, are devoted entirely to educational TV and each broadcasts 4½ hours daily. There is one series of programs lasting 1 hour and 20 minutes for classroom use on weekdays in different public school grades. Once a week in the evening a half hour juvenile and youth program is televised featuring a musical, athletic, and science series. Also

there are youth and adult education programs including courses in languages, fine arts, science for daily life, natural science and the relation of law and economics to daily life.

The programs of the 14 commercial stations divide their time as follows: 45 percent entertainment, 20 percent cultural, 15 percent news, 15 percent sports, 4 percent advertising.

Advertising is handled by placing short commercial announcements at the start, middle and end of the program. Chief advertising sponsorship comes from manufacturing, food, drug, and cosmetics companies in that order of importance.

In general it is estimated that, while viewers watch NHK for news and education programs, the largest audience in Japan probably favors the commercial network because of its stress on the best type of light entertainment.

GERMANY

German TV operates over one national network that has regional subdivisions. It is publicly controlled and is financed by a $5 monthly license fee for the 9 million sets. The network has 4 hours of national programs per day and also 1 hour of a regional program divided into 30 minutes of regional news and 30 minutes of a regional commercial program.

These 30 minutes include the only advertising on the German TV. Commercial announcements are handled in the same way as on the TV in Britain so that the sponsor buys only time for spot advertising but does not control the program content.

German TV accents the cultural or public service program much more than in this country and is modeled largely on the BBC pattern. Some critics regard it as a bit stodgy and dull.

The 4 daily network hours include 1 educational hour in the afternoon for children and students and 3 hours at night. Nighttime programs from 8 to 11 p.m. start with 25 minutes of news, then either a live play or opera or perhaps a documentary film. Opera appears quite frequently on German TV as it is a national art. Particularly on Sundays there is considerable sports coverage, including all major sports events. Quiz programs also are presented.

ITALY

In Italy TV is operated by a private corporation—known as RAI—in which the Government has about a one-third interest. Each of the million and a half sets pays a license fee of $25 a year. There is one national network which can be heard all over the country and on which advertising appears once during the evening for 15 minutes.

Programs usually run from 2:30 p.m. to midnight. The afternoons are largely devoted to education, mainly for children who cannot attend school. They emphasize vocational and language training. At 8 p.m. there is a telenews for 15 minutes, followed by a movie or English and French lessons. Then for 45 minutes a Western movie or play will be given. The major show of the evening runs from 8 to 11 p.m. and usually features a live broadcast of opera, musical revue, or a play, often by Shakespeare or Moliere.

The advertising magazine runs from 8:15 to 8:30 p.m. and takes the form of prominent actors doing skits in which they usually mention the advertised products. In between the skits there are inserted several advertising spots lasting a few seconds each. The use of nationally known actors serves to maintain viewer interest in this advertising program.

The daily broadcast ends with a 15-minute news summary.

American observes regard Italian TV as imaginative, resourceful, well produced, and probably the best seen anywhere on the Continent. Camera teams are sent to all parts of the world to make documentaries. "Brains trust" quiz shows, run as a contest between teams in different cities, stir widespread interest in general knowledge, history, and sports. Considerable attention is given religious programs. Church influence also is evident in a rather strong moral censorship of the programs.

FRANCE

In France TV is completely run by the Government and financed by license fees. No advertising is permitted. There is one national network that broadcasts 5 hours daily, mostly in the evening. Programs are not outstanding because of lack of money to finance them. They include news documentaries, women's and children's programs, old movies, variety shows, and sports events. One outstanding accomplishment on French TV was the relay to France of Bastille Day ceremonies in Algiers in 1958 by means of an airplane flying 20,000 feet over the Balearic Islands.

SWEDEN

Sweden, with one TV set for every seventh person, operates a privately owned corporation which has a TV monopoly and does not accept advertising. There is a license fee for viewers. Programs similar to the BBC are imaginative and are noted for a special TV repertory company that produces live plays. However, only about 18 hours a week are presented.

RUSSIA

Russian TV, state-owned, operates 4 hours on week nights, 6 on Saturdays, and 7 to 8 on Sundays. There are two TV channels in Moscow and a national network. Programs are divided roughly as follows: 30 percent movies, 20 percent live sporting events, 20 percent special official or public events, and 30 percent miscellaneous. Russian TV features live broadcasts of the Bolshoi Ballet and leading dance groups. Although, of course, it is a major propaganda medium, the programs concentrate heavily on entertainment in order to give them a wider popular appeal.

EUROVISION

Eurovision—the European TV network—now unites in a common cultural bond 12 European countries. Five years old, Eurovision links viewers from Scotland to Yugoslavia for major public occasions, championship sports events, religious and musical festivals, etc.

The following countries now participate regularly on a two-way basis: Austria, Belgium, Denmark, France, West Germany, Italy, Luxembourg, Monaco, Netherlands, Sweden, Switzerland, and the United Kingdom. In addition, Eurovision programs are often carried on the Finnish and Yugoslav networks and to Norway on special occasions.

An indication of the frequent use of Eurovision is the fact that during the first quarter of 1958 the BBC received 68 programs or inserts to programs and sent out 30 items.

The most formidable problem faced was not technical (for different screening standards were overcome by converters) but cultural—the language barrier. This has been solved by arranging for a separate commentator on the spot to talk to each nation in its own tongue.

Each country is responsible for originating programs it sends out. Also it pays the transmission tolls. Programs are selected by a joint committee on which all countries are represented. Every member country doesn't carry each program. One result of this arrangement is that Scandinavia can only receive programs if Germany is willing to use them.

Television: Country by country

Country	Daily hours of telecasting	Number of receivers	Public or commercial
WESTERN EUROPE			
Austria	3½	100,000	1 public network.
Belgium	5	350,000	2 public networks.
Denmark	2½	320,000	1 public network.
Finland	4	21,000	1 commercial network.
France	6½	1,500,000	1 public network.
West Germany	5½	2,500,000	1 public network with regional commercial program.
Ireland		60,000	
Italy	5	1,500,000	1 network, limited commercial operation.
Luxembourg	4	4,000	Commercial.
Malta		7,000	
Monaco	2½	11,000	Commercial.
Netherlands	3	500,000	1 public network.
Norway	Irregular	1,800	Public.
Portugal	3	35,000	Partly commercial.
Spain	7	150,000	Do.
Sweden	2½	450,000	1 public network.
Switzerland	3	70,000	2 public networks.
United Kingdom	7½	10,000,000	1 public network, 1 commercial network.
Yugoslavia	4	12,000	1 public network.
ASIA AND AFRICA			
Algeria	6	32,000	Public.
Cyprus	3	3,000	Do.
India	1½	300	Do.
Iran	5	20,700	Commercial.
Iraq	3½	9,000	Public owned; advertising accepted.
Kuwait		600	
Lebanon	4	5,000	Commercial.
Libya		300	
Saudi Arabia	2½	2,500	Privately owned; noncommercial.
Turkey	3	1,000	Private; experimental.
CANADA			
Canada	12–15	3,500,000	2 public networks; 1 English, 1 French, both accepting advertising.
FAR EAST			
Australia	9–14	618,000	1 public network, 1 commercial network.
Hong Kong	5½	3,000	Commercial.

Television: Country by country—Continued

Country	Daily hours of telecasting	Number of receivers	Public or commercial
FAR EAST—continued			
Japan	4½–12	3,800,000	1 public network, 2 commercial networks.
Korea (South)		6,000	
Philippines	5–10	25,000	Commercial.
Thailand	5	40,000	1 commercial, 1 public owned; advertising accepted.
LATIN AMERICA			
Argentina	15	300,000	Commercial.
Brazil	8–12	550,000	8 commercial, 1 experimental.
Chile	Irregular	32	Public.
Colombia	5½	120,000	Do.
Cuba	10–12	365,000	2 commercial networks.
Dominican Republic	2	13,000	Commercial.

Propaganda Move by Khrushchev

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Monday, January 18, 1960

Mr. BRIDGES. Mr. President, the recent two-pronged pronouncement from the Kremlin has caused quite a stir throughout America, which is indicative of the impact of the Soviet propaganda machinery.

To my mind, Nikita Khrushchev's statements are merely a continuation of the time-worn Russian practice of talking peace and waging war at one and the same. His boasts about Soviet missiles and rockets came on the heels of an offer to reduce Russia's land armies.

A careful analysis of Khrushchev's announcement appeared in the January 15 edition of the Washington Evening Star under the byline of David Lawrence. I ask unanimous consent that this column, entitled "Propaganda Move by Khrushchev," be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PROPAGANDA MOVE BY KHRUSHCHEV—TROOPS CUT OFFER AND MISSILES THREAT HELD EFFORT TO BLUFF US INTO SUBMISSION

(By David Lawrence)

The Soviets are great imitators as well as propagandists. Nikita Khrushchev's latest announcement that he is going to cut down on the size of the Soviet Army means really that he is adopting the new look policy which the United States put into effect several years ago.

For there is not much use these days for Russia to spend the bulk of her money for land armies when nuclear weapons are available to threaten attack and conduct what is known as blackmail diplomacy. This Mr. Khrushchev carried on in the same speech in his boasts about the Soviets' incredible weapons in missiles and rockets.

The truth is that there is a stalemate today in nuclear weapons, and all the claims about new rockets and new missiles will not lessen the responsibility of the Soviet regime to refrain from plunging its own people into a nuclear war.

Inside the United States, the new look has resulted in a big debate as to whether land armies aren't still important for what is known as limited war. Undoubtedly, if a foolproof agreement were ever signed that would prohibit the use of nuclear weapons, then conventional forces would come into their own again. In the present stage of international propaganda, however, while conventional forces are not being abandoned, nuclear weapons are being developed with increasing intensity of effort.

One of the troubles with the Khrushchev announcement is that nobody can be sure what he means when he says he is cutting the army by 1.2 million men. It could mean merely the transfer from uniform to civilian clothes of great numbers of men who still would be engaged in arms production. Also, there is no way of knowing what the true potential of the Soviet regime is on the military side, for it can count upon huge forces recruited in Communist Asia.

The United States demobilized shortly after World War II the great bulk of its Armed Forces from a peak level of 12.3 million in wartime, but in view of Communist aggression, as the State Department says, "the level was later raised and stands today at approximately 2.5 million." The Soviets now claim their total forces will be reduced to 2,423,000 in the next year or two.

It has been suggested that Mr. Khrushchev's speech indicates that the Soviet Union is moving more toward the "massive retaliation" strategy followed by the United States in recent years. Although in America this policy has been derided by some critics—largely by those who advocate a buildup of conventional forces for "limited wars"—the fact is that the phrase still carries a world of meaning in preventing a big war today.

The United States does not any longer stress the phrase "massive retaliation" but emphasizes its "deterrent power." It all amounts to the same thing. One side will not start a war without counting the possible extent of destruction that could be inflicted on it by the other side.

There was for a time a belief that the Soviet Union, with its missiles and rockets, could destroy in one "first blow" the bomber bases inside the United States and wreak such wide destruction that the retaliatory power of this country would be frustrated. But since the development of missiles and rockets that can be launched from submarines, there is danger to a country like the Soviet Union that it would receive tremendous punishment if it ever started a war. For, obviously, it would be difficult to find and destroy submarines, and it cannot be forgotten that the water areas of the world are far greater than the land surfaces.

What, then, is the purpose of the Khrushchev speech at this time? Plainly it is a propaganda move. The Soviet dictator believes, as did Adolf Hitler, that the free world can be bluffed into submission. With a controlled press inside Russia and with the press of the free world printing everything the Soviet leader says, the wide circulation of Communist pronouncements is assured.

But it is apparent the West is not going to be fooled by the propaganda. The comments from Members of Congress, irrespective of party, are highly critical of the Khrushchev speech. Senate Democratic Leader JOHNSON declares the Soviet Premier "holds out an olive branch and at the same time tries to hit us over the head with it."

It certainly is a contrast to the so-called spirit of Camp David which only a short while ago gave the world an impression that peace was just around the corner and that tensions certainly would be eased in the year 1960.

There are, to be sure, important negotiations going on with respect to disarmament, and it would be a big victory for Mr. Khrushchev if he could get the West to disarm on the basis of a paper agreement, while he would refrain from giving the necessary guarantees that would make it possible for outside inspection teams to determine whether the terms were being carried out.

The West is not likely to be cowed by the Khrushchev utterances, and the world will witness in the next few weeks a resumption of threats and counterthreats and warnings. It makes one wonder what all the summit meetings really accomplish.

The Other Side of the Coin

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 18, 1960

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues

the following article by Ben Segal as it appeared in the Progressive, September 1959 issue.

Mr. Segal is director of the educational department of the International Union of Electrical, Radio, and Machine Workers. He was formerly on the staff of the Fund for the Republic.

The article, under unanimous consent, is as follows:

"Labor Monopoly Endangers Economy."
"Corruption Permeates Labor Movement."
"Financial and Political Power of Unions Threatens Democracy."

These are the themes of the current barrage of essays, reviews, speeches, newspaper, and magazine articles on labor unions. The New York Times' labor reporter, A. H. Raskin, recently commented: "In the last few years a discernible shift in sentiment [among college professors toward labor unions] has set in. The sordid revelations of the McClellan committee on racket penetration into unions and on the abuses committed by union autocrats have been a major factor in this shift. Professors who rallied to labor's standard when they felt unions were underdogs are finding it hard to applaud the tactics of some unions in their emergent role as overdogs."

This shift in the academic image of organized labor reflects a more general public change of attitude. Both images result from the tendency to generalize from a few sensationalized cases; both are based on assumptions which require careful reappraisal. On the basis of many years of work in the trade union movement, I would like to challenge some of these underlying assumptions.

Perhaps the assumption that demands the greatest scrutiny is the glib assertion that unions have come of age; that labor-management relations have reached maturity; that industrial warfare is a thing of the past, that management accepts unions as here to stay. Yet there is growing evidence of continuing and even intensifying efforts by industry to weaken or destroy free labor unions.

Take the southern textile industry, for example. Of 550,000 workers in southern mills, the unions claim only about 70,000 members, and even this low figure is constantly being reduced because of the determination of the industry to eliminate unions from their mills.

The Harriet-Henderson Colton Mills in Henderson, N.C., had been under union contract since 1944. When the contract expired in 1957, the company refused to renew, and for a year the employees worked without a contract. Finally, in November 1958, the Textile Workers local announced that it was willing to renew the old contract without wage increases or other improvements. The company, however, demanded a no-strike clause and the elimination of a standard arbitration clause which had been in the contract for 14 years. The removal of arbitration provisions in the contract would give the company complete freedom to handle job classifications, grievances, hire and fire, with the union virtually powerless to protect the workers.

The company closed down for 3 months and then began importing strikebreakers from Virginia and elsewhere. During this strike, on February 24, 1959, Boyd Payton, TWUA vice president and regional director, was attacked and beaten by company hoodlums in Henderson. As this is being written, 400 bayonet-armed North Carolina National Guardsmen still surround the mill to ensure safe entry for the scabs. The outcome is likely to be decertification of the union when a new election is held in which only the scabs will be allowed to work and vote—a provision of the Taft-Hartley Act that has given union-hating employers a powerful weapon with which to break a union.

This bitter opposition to unions is not confined to the South. The Chemical Workers Union struck the Mastic Tile Corporation in Long Beach, Calif. The next day the company obtained an injunction imposing severe limitations on picketing. It followed this with advertising in the local press for scabs. Approximately 1,200 jobless workers applied for the openings to replace the 275 strikers. The company hired some 350 workers and is now moving to decertify the union.

Antiunionism is even more menacing when it occurs among the large employers. The International Union of Electrical, Radio, and Machine Workers represents more than 100,000 workers employed by the giant General Electric Co., recently cited by the Kefauver Subcommittee Investigating Antitrust and Monopoly as one of four companies which together control more than 50 percent (sometimes as high as 90 percent) of the business in 79 product lines. GE made the highest profits ($247,851,871) in its history in recession year 1958 despite reduced sales.

The corporation spends tremendous sums to convince the public and its employees that "progress is our most important product." Yet there is probably no company which devotes more money, staff, and time to fighting the unions. GE's vast propaganda machine utilizes daily employee newspapers, news bulletins, special memoranda for all employees, letters to employees, full page advertisements in newspapers wherever plants are located. In addition, GE has a mailing list of prominent members of the community who receive frequent letters and periodic bulletins. GE also sponsors a number of radio and TV programs which it uses for antiunion commercials.

GE deliberately overemphasizes strikes by the IUE and other unions. Almost every issue of its various publications has a report of a strike or a reference to IUE as "a strike-happy union." GE was especially active in the autumn of 1958 during negotiations on employment security when strike authorization votes were being taken in the various locals. The company's propaganda was effective, and several large locals in the GE chain, including Schenectady, the largest, voted against striking. In Schenectady the propaganda barrage was particularly heavy. An article in the Wall Street Journal, October 10, 1958, reported:

"Through a concentrated campaign in newspapers, on the air, and by letter, GE dramatized the crippling impact a strike would have on that upstate New York community of 142,000 and what the loss of the company's $4 million weekly payroll would mean.

"Talk with a drill press operator in a medium motors shop. He digs into his pocket and produces a letter from his department manager warning that he will be voting on whether or not you will sacrifice your livelihood for the program of the National IUE.

" 'My wife and I get a letter from the company every day,' he smiled."

The strike scare is only one technique employed by GE. It uses the divide and conquer method, playing off the Communist-dominated United Electrical Workers Union against the IUE; the production workers against skilled or white-collar employees; white against Negro; union members against the union leadership. It alleges that dues and assessments of unions are excessively high and hints at improper expenditure of funds. It urges members to quit the union during the 10-day withdrawal period each year—GE calls it the escape period. It attempts to cast doubt on the legitimacy of all union elections. It plays up every derogatory piece of news about unions that it can get hold of. It ridicules union organizers. It blackmails the community with threats to move out unless the proper business climate is maintained. It takes credit for gains by unions, calling the benefits negotiated in the union contract, "GE's 5-Year Better Living Program."

GE's tactics are an extension of a policy which originated in 1950 and has become known in labor-management relations as "Boulwareism," after its author, GE Vice President Lemuel Ricketts Boulware. According to Harvard's professor of business, Benjamin M. Selekman, writing on Cynicism and Managerial Morality, in the Harvard Business Review, Boulwareism has these principles:

Management knows best what should be done for its employees.

It should, therefore, make up its mind prior to any negotiation what should be the maximum offer.

It should refuse to recede from or alter this offer in any substantial way.

It should take a strike, if necessary, and hold out until the union capitulates.

Even in the steel and auto industries where observers have glibly said for so long that unions were at least accepted, there is evidence in last year's auto negotiations and this year's steel talk of a much tougher policy.

Boyd Leedom, NLRB Chairman who has been frequently criticized by union leaders for antilabor bias, in a speech to the Florida Bar Association recently laid the blame for much union misconduct on some companies' "behind the scenes, illusive, undeclared warfare" against union activities. Behind the facade of general acceptance of our national labor concept, great segments of employers, Leedom charged, "take every legal step possible—and many employers overreach legality—to thwart their employees' efforts to organize even when the union involved is a respectable decent union." He cited the philosophy of "avoiding dealing with a union even at the expense of going out of business."

He added: "Since hostility is likely to beget hostility, I raise the question as to whether this attitude may in turn be at least partly responsible for union conduct that many people regard as quite unreasonable even though lawful. It is quibbling to embrace the abstract principle of collective bargaining and then fight tooth and nail to deny it to one's own employees."

While the instability of industrial relations should not provide an excuse for whitewashing the shortcomings of unions, it provides a clue to understanding why many unions still behave as if they were the helpless insecure underdog of the pre-Wagner Act days. The fact is that many unions still are. Many unions still face a long slow uphill fight for basic gains, with the law on the other side—especially in the South.

Another basic assumption of the new attitude toward unions which also springs from the tendency to generalize from the revelations of the McClellan committee, is a belief in the absence of democracy in local unions throughout the labor movement. This belief goes hand in hand with the notion that tremendous power is wielded by the international, in whose hands the local unions are merely pawns in a giant chess game with management and, perhaps, with Government.

This picture simply does not stack up against the realities of the situation in most local unions. On the contrary, in any number of local unions, internal democracy is carried to the point where it has interfered with the effective collective bargaining of the union. In the IUE, for example, the refusal of several locals in the General Electric chain to back the negotiating committee with a strike vote crippled the international's efforts at negotiating on employment security. As a result, the company broke off negotiations.

There are many examples of the international union's name being blackened because

of the local's refusal to follow the parent union's position in support of racial desegregation and nondiscrimination. Unfortunate as it may be, it can hardly be called a case of the international dominating the local union or inadequate internal union democracy.

There are locals that devote so much time and effort in campaigning for local union office that they weaken the effectiveness of the local union in looking after the economic interests of the membership. As one international representative put it, "They spend so much time fighting each other they have no time to fight the boss—the boss just waits around and picks up the pieces."

With all the headlines on labor racketeering and corruption, very little is said about the great many positive efforts of unions to strengthen constitutional guarantees of the individual's basic rights, to prevent corruption and abuse of power by union officials, and to increase participation in the activities and decisionmaking functions of the union.

The IUE, for example, was one of the first unions to develop an ethical practice code. At its 1958 convention, the union incorporated the major provisions of the code into its constitution. To cite just a few examples: The funds of the international may not be loaned, invested, or dealt with in any way that results in personal benefits to the officers or employees of the union. No officer or employee of the union may have personal financial interests which conflict with performing his duties; or have substantial interest in a business enterprise with which the union or one of its subordinate bodies bargains collectively or which competes with such enterprise; or have an interest in an enterprise dealing substantially with an employer with whom the union bargains.

In the section dealing with health and welfare funds, no rebates, retention of dividends, or payment of any kind can be accepted by union representatives, nor may they have any personal ties with outside agencies. Program administrators must make full disclosures to beneficiaries and to the union at least annually, including a detailed statement of receipts and expenditures; salaries and fees; retentions, claims paid, dividends, commissions, and charges; and a detailed account of the manner in which funds are invested.

One would be hard put to find a corporation which could match these standards of financial responsibility.

Members' rights are guaranteed in other ways: Biennial conventions, election of officers, local and international, every 2 years; referendums and secret ballots, and a host of other protections. Elaborate trial procedures have been designed to protect the rights of members threatened with expulsion. These include the right to have charges presented, to hear all evidence, cross-examine witnesses, right of appeal to the district council, the international executive board, and finally the convention. Barred from holding elective or appointive office in the union are persons convicted of any crime involving moral turpitude offensive to trade union morality or anyone who is commonly known to be a crook or racketeer preying on the labor movement. Determination of ineligibility is based on regular trial procedure.

The pending labor reform bill, even with the McClellan so-called bill of rights amendment, would not require changing in any way the policies, practices, rules, constitutional provisions or bylaws of the IUE, financial or otherwise. Its only effect would be to provide burdensome forms to be filled out with information which is already readily available to IUE members and the public.

Similar safeguards are provided in the constitutions and practices of other unions—the United Rubber Workers and the UAW, for example.

The United Auto Workers' quasi-judicial protection of membership rights, the public review board, merits special attention. This seven-man tribunal includes three clergymen, the president of one of America's largest universities, two judges, and a nationally known professor of economics. The board serves as a kind of supreme court in cases involving alleged violation of the appellant's right as a union member and alleged violation of AFL–CIO ethical practices codes.

In the first report of the public review board, which covered an 18-month period, the chairman, Rabbi Morris Adler, said that "the very existence of the public review board as an impartial tribunal, uninvolved in the mechanisms of union operation and government, is eloquent assurance to the most humble member of the smallest local that when the need should arise, he can have his day in a 'court' that is neither influenced by partisan considerations nor related to any group in power."

The report commended the UAW as being "free from corruption and gross perversions of the democratic procedures." It pointed out that in addition to the public review board there were many other "instruments of self-discipline which the UAW has developed in the course of its growth. * * * The entire democratic process by which its leadership, local, regional, and international, is selected is a safeguard against the seizure of authority by those who do not reflect the will of the constituency. The constitution under which the UAW operates and the principles of the AFL–CIO of which it is part are similarly restraints upon the usurpation of power and the performance of acts that contravene justice and democracy."

A heartening example of a union's attempt to rid itself of its corrupt elements is the story of the American Bakery and Confectionery Workers Union (ABC). ABC was chartered by the AFL–CIO in December 1958, after the federation expelled the old bakery union on corruption charges. The infant union has organized more than half of the members of the old bakery union. At its convention in September 1957, the ABC adopted a series of constitutional provisions, some of them unique in union history, and hailed even by the Wall Street Journal as important and workable guarantees of rank-and-file control of the union.

For example, the constitution includes a new system dealing with trusteeships. This calls for a hearing by a panel of 20 local union officers who are not on the payroll of the international. Also, the union's general executive board must always have a majority divorced from any financial connection with the international. Rank-and-file control is assured by the provision calling for the election of 10 out of a total of 18 general executive board members who must be nominated and elected by the locals and membership in each of five regions. None of these 10 board members can be nominated if he is on the payroll of the international union.

The American Newspaper Guild's Representative Assembly is an excellent illustration of how unions are striving to increase membership participation. Guild locals in such cities as San Francisco, Philadelphia, Los Angeles, and New York have had for almost a quarter of a century a representative assembly system which encourages the membership to take part in decisionmaking through their elected representatives.

It would be extremely difficult for the Guild's New York Local 3, for example, to have effective and representative local union meetings. Local 3 has 8,400 members employed on some 50 different newspapers, news services, news magazines, a radio station, and miscellaneous publications, scattered throughout five city boroughs, Connecticut, and New Jersey.

Local 3's representative assembly was deliberately patterned after the representative assembly idea used by Congress, and for similar reasons. Assembly delegates are elected by units; a unit is a shop division. The New York Times employees form one unit; Saturday Review employees form another. The assembly meets once a month; it elects its own chairman and vice chairman. The local executive board members have no votes in the assembly unless they are given votes by their respective units. The assembly reviews or requests board decisions; it may authorize a strike subject to unit approval.

I have attempted to question some of the glib assumptions made about the maturity of labor-management relations, to indicate how different the situation looks to someone working on a daily basis within the trade union movement, and to point out a few of the many sincere efforts currently being made to strengthen internal union democracy. At the same time, I do not want to minimize in any way the importance of exploring further possible remedial steps that might be necessary to eliminate all vestiges of union corruption and racketeering. But this exploration should take place not within an abstract academic framework, nor in the heated and distorted atmosphere of sensational disclosures of a McClellan committee, but should be based on firsthand observations and understanding of the changing nature of the problems that confront the labor movement today.

Treatment of Albania by the Soviets

EXTENSION OF REMARKS
OF
HON. JOHN SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Monday, January 18, 1960

Mr. SPARKMAN. Mr. President, recently I received a letter from an old friend of mine who enclosed a copy of a letter that he had written to Nikita Khrushchev, Prime Minister of the Union of Soviet Socialist Republics. At the time Mr. Grant sent this to me he said that he had received no acknowledgment from the Soviet Embassy. Later, however, he wrote me that he had received an acknowledgment.

Hugh G. Grant, of Alabama, served 4 years as U.S. Minister to Albania, September 1935 to October 1939, or until after the great war broke out in Europe on September 1, 1939. He was in charge of the American Legation at the time of Mussolini's invasion of Albania on April 7, 1939, he, Mrs. Grant and the legation staff housing several hundred refugees at the American Legation in Tirana during the Italian Fascist attack. Minister Grant had the last audience granted to any foreign representative by His Majesty, King Zog, on the day Mussolini delivered his ultimatum to the King to capitulate and surrender the sovereignty of his country. King Zog re-

fused. The little Albanian Army of less than 15,000 men attempted to defend the country, but was soon overwhelmed by some 50,000 Fascist troops. King Zog, his Queen, Geraldine, her 2-day-old baby, and members of the Albanian Cabinet escaped to Greece and have been refugees from their beloved country since that time. The German Army followed Mussolini's Black Shirts in Albania and finally the Russian Communists arrived, subsequently taking over control of Albania through a puppet government.

Mr. President, believing this is a matter of general interest, I am asking unanimous consent to have printed in the RECORD the letter to Premier Khrushchev and the copy of Mr. Grant's letter to the Soviet Embassy.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

COUNTRY CLUB APARTMENTS,
Augusta, Ga., September 13, 1959.

OFFICE OF THE EMBASSY,
UNION OF SOVIET SOCIALIST REPUBLICS,
Washington, D.C.

DEAR SIRS: I would appreciate your courtesy in transmitting to the Honorable Nikita Khrushchev, Prime Minister of the Union of Soviet Socialist Republics, during his visit in the United States, the enclosed letter.

Thanking you for your courtesy, I am,

Sincerely,

HUGH G. GRANT,
Former U.S. Minister to Albania.

OPEN LETTER TO THE HONORABLE NIKITA S. KHRUSHCHEV, PRIME MINISTER OF THE UNION OF SOVIET SOCIALIST REPUBLICS, CARE THE SOVIET EMBASSY, WASHINGTON, D.C.

DEAR MR. KHRUSHCHEV: Coincident with your visit to the United States, upon invitation of President Eisenhower, I wish to suggest and urge that you give serious consideration to the views of many American citizens in regard to the tragic situation of the smallest Soviet Satellite. I refer to Albania, located on the shores of the Adriatic Sea, far removed from the frontiers of your country, Russia.

I have read with great interest press reports of your recent visit to Albania. According to these reports you spent 12 days in Albania together with a large Soviet delegation, including your Defense Minister, and in addition East Germany's Prime Minister and Communist China's Defense Minister. You and your associates were reported to have visited most parts of Albania in the company of Enver Hoxha and Mehmet Bey Shehu, leaders in the seizure of Albania in the name of the so-called "People's Democracy" near the end of World War II and today the puppet rulers of the freedom-loving Albanian people.

You spent 12 days in Albania. I was there 4 years, as the representative of the U.S. Government. On the basis of this long residence and personal contacts with thousands of Albanian citizens in every walk of life, I can say with the utmost sincerity that in all of my travels in many parts of the world I have never witnessed a more intense patriotic feeling for their country and its ideals than that exhibited by the Albanian people.

This love of country has existed during the long history of Albania, whose people are believed to be the oldest race in southeastern Europe. Despite countless military invasions of Albania throughout the centuries from the days of the Romans, the sturdy Albanians have retained their national language, their customs, their way of life, and their intense love of individual freedom.

Symbolic of this national patriotism is the thrilling story of Skenderbeg, Albania's national hero, who, as the leader of the Shqipetars, the Eagle Men, in the 15th century, fought and held back the invading Turkish armies for a period of 20 years.

After nearly 500 years of Turkish rule the independence of Albania was proclaimed on November 28, 1912, and 3 weeks later, the Conference of ambassadors of the Great Powers, Austria-Hungary, France, Germany, Great Britain, and your own country, Russia, recognized Albania as an independent and sovereign state.

The independence of Albania was confirmed at the end of World War I at the Peace Conference of Versailles. About this time there emerged in Albania a young military leader, Ahmet Bey Zogu, member of an old Albanian family. Zogu was destined to become minister of the interior, prime minister, president of the republic, and finally, on September 1, 1928, King of the Albanians, Zog I.

As the accredited U.S. chief of mission to Albania during the last years of Albanian independence (1935–39), I had the opportunity to observe first-hand the activities of King Zog and his government. I came to the conclusion that Zog was a true Albanian patriot, with the best interests of his people at heart, a very capable leader, and that he and his government were making real progress in the face of great obstacles, chief of which was the poor economic condition of Albania. This resulted from the fact that less than 10 percent of the land surface of the country is arable, while some 90 percent of the population is dependent upon farming for livelihood. The Albanian people were intensely patriotic, but desperately poor.

Fascist Italy, under Mussolini, pretending friendship for her neighbor, made loans to the Albanian Government and then, on April 7, 1939, following a stern ultimatum to King Zog, designed to destroy Albanian sovereignty, invaded the little country with some 50,000 troops. The small Albanian Army was soon overwhelmed and Mussolini's Fascists took over control of the country through a puppet Albanian regime, as King Zog, his Queeen, with a 2-day-old baby, and members of his Cabinet, left Albania, to become wandering exiles from their beloved country. Queen Geraldine's mother was American born, her father a Hungarian count.

The Albanian people are today again controlled by a puppet regime which has ruthlessly destroyed the forces of resistance of freedom-loving Albanians. Back of this puppet regime are the power and military might of Soviet Russia and the object—not the welfare of the Albanian people, through communism, socialism, or any other ism, but solely to capitalize upon the strategic importance of Albania as a military base of the Soviet Union in the prosecution of the cold war. Obviously, your recent visit to Albania in the company of the Defense Ministers of the Soviet Union and Communist China point up to this fact.

On August 30, Mr. Prime Minister, you were quoted in Moscow by Taas, as having declared that you were going to the United States with a burning desire to relieve international tensions.

May I respectfully suggest, Mr. Prime Minister, that the abandonment of Albania as a Soviet military base and the withdrawal of Soviet agents from Albanian territory would go a long way toward relieving one cause of the international tensions, of which you speak, and at the same time provide the opportunity for the restoration of Albania as an independent nation.

Sincerely,

HUGH G. GRANT,
Former U.S. Minister to Albania.

AUGUSTA, GA., *September 13, 1959.*

Lyndon Johnson Stands Out Among Democratic Contestants

EXTENSION OF REMARKS
OF

HON. BOB CASEY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 18, 1960

Mr. CASEY. Mr. Speaker, many Members of the House of Representatives, like myself, fully endorse our great Senate majority leader, Senator LYNDON JOHNSON, to receive the Democratic Party's nomination for President. In this respect, the Houston Post of January 9, 1960, summed up more eloquently than I possibly can the many qualifications of this distinguished American, and the reasons why he should be nominated to lead the Democratic Party ticket.

Under unanimous consent, I include the editorial from the Houston Post at this point in the RECORD:

SENATOR LYNDON JOHNSON STANDS OUT AMONG DEMOCRATIC CONTESTANTS

The American people, in this opening year of a new decade, face the necessity of making a political decision which will affect most profoundly not only their own future but the course of human history for the next four and perhaps eight years.

The man they choose as President of the United States in November, by virtue of his office, will be the most important and the most powerful single leader of the Western world. His selection calls for exercise of the soundest judgment and the greatest wisdom of which we as a people are capable. It also calls for recognition by all participants in the electoral process of a responsibility that transcends all partisan considerations.

By November, the choice will have been narrowed, for all practical purposes, to the two men chosen as nominees of the Democratic and the Republican Parties. This year, more than ever before, these partisan selections are of the most crucial concern for all Americans regardless of party affiliation, inclination or sympathies. Both major political parties are under a greater obligation than at any time in the past to nominate men who have the talent, experience, capacity for leadership and dedication that the times demand.

As things now stand, it appears practically certain that Vice President Richard M. NIXON will be the Republican candidate. It seems equally probable that the Democratic nominee will be one of five men: Senator Hubert Humphrey, of Michigan, Senator Lyndon B. Johnson of Texas, Senator John Kennedy, of Massachusetts, former Gov. Adlai Stevenson of Illinois or Senator Stuart Symington of Missouri.

All of the Democratic possibilities present excellent credentials of experience, intelligence and integrity in the conduct of public affairs. Four of them have had distinguished careers in the U.S. Senate. The fifth served creditably as Governor of Illinois and, in the course of two campaigns for the Presidency, established himself in the eyes of the world as a thoughtful and able leader.

Of the five Democratic candidates, however, only Senator JOHNSON has been in an official position during the past few years that has brought him to grips with the entire broad range of complex problems that will confront the new President during the fateful years ahead.

Senator JOHNSON stands out among the contestants for his party's nomination as a man of stature, breadth, ability, temperament, and character who is preeminently qualified for the duties and responsibilities of the Presidency. As minority and later majority leader of the Senate, he has been concerned with the entire spectrum of international and national problems. He has an intimate knowledge of them in all their complexities and ramifications. He has, even more importantly, demonstrated a greater capacity for leadership, for statesmanship, for diplomatic skill and for human understanding than any other leader of his party.

There would, of course, be political handicaps to JOHNSON's candidacy, and those handicaps should be taken into account by any citizen in deciding which of the Democrats he believes would make the best President.

Senator JOHNSON has had a heart attack. But, as far as one can judge from the pace of his activities, he has fully recovered. Three of the other Democrats have had serious ailments requiring surgery within the past few years. Yet the illnesses of Symington, Stevenson, and Kennedy are not urged against them. And indeed they should not be.

Senator JOHNSON is a southerner and a Texan. It is regrettable but true that in some areas of our Nation, these labels are accounted political liabilities. Geographical prejudice is no more rational than racial or religious prejudice, but no less real.

Senator JOHNSON may lack the political glamor of, for example, a Kennedy or a Stevenson, but he would be an eminently suitable man to head the Democratic ticket in November.

Sugar and Coffee

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Monday, January 18, 1960

Mr. BRIDGES. Mr. President, in a column appearing in the January 14 edition of the Washington Post, George E. Sokolsky decries the policy of the United States in paying more than the world market price for such commodities as sugar and coffee.

I certainly agree with him that such a practice is tantamount to subsidizing another nation by placing a hidden financial burden on the American consumer.

I think our policy regarding the purchasing of sugar is particularly disturbing, Mr. President, in light of the anti-American attitude of the Castro government in Cuba, during the past year. If we must pursue such a practice at all—and I definitely do not subscribe to this theory—then we can at least stop paying premium prices to those who are constantly attacking us.

I ask unanimous consent that Mr. Sokolsky's colum entitled "Sugar and Coffee" be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post, Jan. 14, 1960]

SUGAR AND COFFEE

(By George E. Sokolsky)

The principle of subsidizing a nation out of the pockets of the American people, not by taxes but by agreeing to increase the price of that country's commodity in our stores, is wrong. It places upon the American people a heavy but hidden burden. When Americans buy sugar, they do not realize that they are subsidizing Cuba because Americans pay more than the world market price; when they buy a pound of coffee and pay an outrageous price for that commodity, they do not know that they are paying a hidden tax to aid the economy of such countries as Brazil and Colombia.

All reports establish that there is a surplus of coffee and by the law of supply and demand, the price of coffee should decrease sharply. However, by market rigging and price manipulation, the price of coffee is kept high. This is policy designed to aid the coffee-growing countries. It is the economics of the good neighbor policy.

But the American consumer was never asked whether he wanted his coffee to cost so much that he has to drink the new-style powdery stuff that provides more cups of coffee per pound. This is an ingenious method of beating the high price of coffee.

As things still stand, the United States is subsidizing the Castro government in Cuba by paying higher price for sugar than sugar costs in world markets. We are doing the same with coffee. It is one thing, having an item in the budget, including it formally and legally in an aid program against which a protest is possible in Congress; it is another loading it on the price. The gimmick used in the matter of sugar and coffee is to tell the people nothing but to make a deal with a country to fix a price for a commodity which Americans like to buy. How false such a policy is became clear in the conduct of Fidel Castro who despite the fact that the American Government is subsidizing Cuba through the price of sugar, operates an absolutely anti-American government. Do we need to subsidize our enemies too?

As regards coffee, no coffee country is our enemy, but is that a reason to subsidize this product? To what extent is the American household to be taxed? And how is it possible for the American people not to become demoralized by the enormous burden of taxation, high cost of living, subsidy prices?

This then, is the major problem of this campaign year and the politicians ought not to be permitted to confuse us with side and unimportant issues. If prices continue to rise, we shall have an increasing number of strikes. These strikes occur during a period of the devaluation of the currency and thereby endanger the value of the dollar. The basic peril to the United States, at this particular moment in our history, is not bombs or missiles or rockets but the value of the dollar—that is, what happens to our money.

A Free America: It's Up to You

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 18, 1960

Mrs. ST. GEORGE. Mr. Speaker, it is most fitting that portions of Mrs. Haven Smith's address before the Farm Bureau's annual convention in Chicago appear at this time in the Appendix of the RECORD.

Mrs. Haven Smith is the chairman of the American Farm Bureau Women's Committee. She is typical of the life and thinking of the women of this great organization, which is constantly growing and now represents over 1,600,000 farm families in our Nation.

The programs and ideals that these farm families believe in are the programs and ideas that made our country great and that will insure her future.

Under leave to extend my remarks in the RECORD, I include the following:

A FREE AMERICA: IT'S UP TO YOU

We live in a land where we have more freedom than any other people have ever known. We were dropped in a land where there is happiness and laughter; where there is generosity and compassion; where church spires rise from every city, town and hamlet; where there is triumph of merit over family and poverty; where there is absence of fear; where there is freedom of choice—the right to speak, to worship, to dissent, to dream, to build, to fail, to succeed, to fall down, to get up and try again. Yes, that's our country. And what a proud heritage.

When I was a youngster, one of my Sunday School classmates went abroad with his Senator father. People didn't go abroad much in those days. He told us that every night they draped the U.S. flag, which they carried with them, over the head of their bed. His father told him it would protect them—that no one would dare molest anyone under the protection of the powerful "Stars and Stripes."

Then there was the little speech my father made about the silver dollar. "Virginia," he said, as he laid a dollar on the table, "this is the strongest money on the face of the earth. All people of the world want our money." This, too, impressed me greatly.

Well, we have come a long, long way.

Is there anyone, anywhere who is no naive as to think the Stars and Stripes could protect him in the world of today? And what about our dollar? Well, it is no longer the kingpin of the world's economy. We, ourselves, are destroying it.

For 20 years we have been spending more money than we have been taking in. We have been giving ourselves and also foreign countries handouts of money—much of which we had to borrow. Our money has eroded 2 to 3 percent every year for 20 years and now is worth 47 or 48 cents on the dollar, compared to 20 years ago.

We have an unbalanced Federal budget. We owe almost $292 billion, up $12 billion, a billion a month in the last year. We are losing our industrial leadership because of our eroding money and we are also losing the respect of the world. And still our Federal spending merrily rolls along at $80 billion annually.

Fiscal experts have warned us that if our Government continues to spend money it doesn't have, the spiral tornado of inflation will destroy us. In that case, communism will have won without dropping a bomb. It doesn't make much sense to spend billions for defense when we ourselves are imperiling the Nation's safety.

Recently I heard a man bemoaning that there were no more free frontiers. A historian notes "there never were any free frontiers."

Frontiers are never free, and they are not east or west or north or south. They are found wherever men face a new threat—a new danger.

We are facing a new danger today. We have a frontier to conquer.

You are leaders of the Farm Bureau women. You have chosen me as your chairman. I plead with you—make your first responsibility this year to stand shoulder to shoulder with your men in restoring fiscal responsibility to this Nation.

I urge every Farm Bureau woman to write to her congressman showing informed intelligent concern over the fiscal condition of our country, demanding that unnecessary spending and waste be eliminated, that our budget be balanced, and telling them that if they can't do this we will seek to replace them with people who can.

We must recognize the forces which will be lined up against us, and prepare ourselves to meet them.

1. The Communists, who wish us to bankrupt ourselves, so they can take over the free world. For I say to you that only as we remain rich and powerful, does freedom have any hope in this whole world.

2. The centralizers—perhaps the most dangerous of all. The Federal aid to education issue will be on the front burner this year. To win on this, everyone of us will have to be on the job.

3. The spenders and wasters, who regard our tax money as only "silly dollars."

4. The do-gooders who think our unique gifts rightfully belong to the world.

5. The foreign aid program, which needs closer scrutiny as to need, quantity, and methods.

6. Ourselves. It is easy to say what the other fellow should do, but much harder to push the elixir of Government handouts from our own lips. But it is our responsibility to work for farm programs that are less of a burden on our Government Treasury.

We contain within ourselves resources of strength and power which will enable us to do whatever needs to be done. There is enough power and strength right in this convention to change the course of this Nation.

Roscoe Drummond Asks if Steel-Strike Settlement Will Contribute to Inflation in Prices

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, January 18, 1960

Mr. NEUBERGER. Mr. President, one of the fairest and most prudent syndicated newspaper columnists in the Nation is Roscoe Drummond. He is not an extremist, nor is he given to making extravagant charges.

In the Washington Post and Times Herald for January 16, 1960, Mr. Drummond asks some very penetrating questions regarding the recent settlement in the steel strike. He wants to know, for example, if the general public soon will pay the price for the settlement in terms of higher steel costs. And Mr. Drummond expresses his skepticism over the insistence of certain participants in the steel controversy that the settlement is not inflationary.

I shall ask unanimous consent to include Roscoe Drummond's column in the CONGRESSIONAL RECORD because many great issues of a similar nature soon will face the United States—the wages and working conditions of railroad employees, the pay of Federal Government employees and Post Office Department workers, and so forth. The administration, having sponsored the handsome steel-strike settlement for the steelworkers, now faces the dilemma of what it is to do in these other situations. Will the administration be consistent, or will it be only unilaterally interested in the steelworkers and nobody else?

What will be told a faithful letter carrier earning $4,800 a year by an administration which promoted a generous pay increase for a steelworker already earning $5,600 a year?

Mr. President, I ask unanimous consent that Roscoe Drummond's article, entitled "Has the Public Been Had?" be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

STEEL SETTLEMENT—HAS THE PUBLIC BEEN HAD AGAIN?

(By Roscoe Drummond)

There is no doubt that many people, including the Eisenhower administration, have drawn a tremendous sigh of relief to see the 116-day steel strike ended without a further walkout.

That's understandable, but nothing could be more awkward than for these people, including the politicians, to hold their breath until it is shown that it is a good settlement.

What can be said is that it is a settlement which the steel companies and the labor unions deem to be in their own best interests.

It cannot be said that it is a settlement demonstrably in the public interest.

As the President stressed many times, the public interest could only be served by a settlement which was not inflationary, which did not add a further push to the wage-price spiral.

It is perfectly true that it is not instantly provable that the wage-and-benefits package which prevented a second walkout will generate a sequence of price rises throughout the economy. But there are many indications that it will.

The cagey way the steel agreement is being expounded by those who have been closest to the facts must cause those who read the small type to be apprehensive that the public has been had again. What I am trying to say is that the razor-fine words which the defenders of the settlement use to show it is good, increase my doubts about it.

Secretary of Labor James Mitchell, who certainly knows what he is talking about, says that the settlement will not have highly inflationary effects. But the settlement does not have to be highly inflationary to be hurtfully inflationary.

Vice President NIXON, who is chairman of the administration's anti-inflation committee, says, through an authorized spokesman, that the settlement is "not largely inflationary." But it wouldn't have to be "largely" inflationary to be inflationary enough to abet seriously the wage-price spiral.

The defenders of the settlement point to the fact that the increase in wages and benefits is fully 50 percent under the other postwar agreements and is only 65 percent as high as the pattern of wage increases in other contracts this year.

On the ground that the steel settlement this year is not as high as in other postwar years some of its defenders argue that "it is not inflationary," when, in truth, all that can fairly be said is that it is not "as" inflationary as the earlier agreements.

The Eisenhower administration was making a real impression upon the public consciousness, including management and labor, of the critical necessity of holding the line on further wage increases which mean further price increases. It had, for a time, succeeded in stiffening the steel company negotiators to resist a kind of settlement, the costs of which would have to be passed along to the consumer.

But, if the best that can be said for the agreement which the administration helped to bring about is that it is not highly inflationary, it seems to me that the administration's whole crusade has been unhorsed in midstream.

Perhaps Secretary Mitchell can himself help avert the inflationary impact of the settlement by using his credentials—which ought to be very large—with both sides to bring them together on work-rule improvement. The goal would be to raise productivity sufficiently to avoid a steel-price increase a few months hence. If he can do that, he will deserve the Republican vice presidential nomination.

My own conviction is that nothing in the steel settlement assures that the public interest is going to be protected in the next round of collective bargaining at the end of which the public pays the bill and others collect.

Salute to Deeds of Non-Ugly Americans

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 18, 1960

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article which appeared in Life magazine by William J. Lederer and Eugene Burdick, the authors of "The Ugly American." In this article the authors pay well-deserved tribute to certain Americans who are winning friends for their country abroad by their devoted and selfless assistance to the world's needy.

The article follows:

SALUTE TO DEEDS OF NON-UGLY AMERICANS

Last year we wrote a novel called "The Ugly American." It was about Americans at work overseas in the service of the United States and freedom. Some of the people we described were doing a great job. Others were stupid, fearful or just plain incompetent—and a few of these were the very people who ran our various foreign aid programs at the local level. We wrote the book hoping it would stimulate Americans to think about the mission of our country in foreign lands all over the world.

We were hardly prepared for the explosion that resulted. Although thousands of readers understood the book and wrote us asking how they could help make America's foreign aid more effective, thousands more were outraged. Streams of angry letters poured in to Congress asking why, if the foreign aid programs were so badly run, taxpayers should support them at all. "The Ugly American" became one of the most frequently mentioned books in the recent history of the CONGRESSIONAL RECORD. Senator WILLIAM FULBRIGHT, of Arkansas, its sharpest congressional critic, recently called it "sterile, devoid of insight, reckless and irresponsible." Angry letters came to us, too, attacking us

for daring to say that Americans overseas are all doing a bad job.

We were astounded and dismayed. Astounded because the book told about a number of people—including specifically the "ugly American" of the title—who with intelligence and devotion were bringing practical, human help to backward areas. We were dismayed because, although the book was intended to help correct the errors in America's foreign aid programs, it was now being used as a weapon to destroy foreign aid entirely. Canceling the foreign aid programs now on the ground that they contain weaknesses would be as illogical as throwing away a rifle because it sometimes jams—just when the enemy is about to attack.

More than anything else we were depressed that so many readers should fail to appreciate the fact that thousands of "ugly Americans" overseas are doing practical work with a no-nonsense application of elbow grease. These men and women should be supported. In a large sense we wrote our book to praise them. Thousands of these Americans are performing their good works in the line of duty, as employees of the State Department, the International Cooperation Administration, and other Government agencies. Still others are doing it entirely on their own—which, in a way, makes their efforts even more spectacular. We would like you to meet some of these people:

THE SERGEANT AND THE SCYTHES

M. Sgt. Eugene Hoops is a balding, muscular, outspoken man of 40 who has made the Air Force his career. He was raised in Nebraska's Keya Paha County, a district of thin land and hard farming.

"You can bet a pretty penny that the farmer who makes a living in Keya Paha is a good one," Hoops says. "Lots of erosion, tricky rainfall. You get smart quick or you're in trouble."

When Hoops was assigned to Korea in 1954, he could not resist walking out into the fields, running the soil through his hands, watching the farmers at work. What he saw made him itch with excitement.

"It was like Keya Paha, except these guys didn't know what to do about it," Hoops said.

For one thing they were not harvesting their cereal crops efficiently. Using a small blade attached to the end of a long handle, they were cutting only a fistful of grain at a time. On a trip to Japan, Hoops picked up an American scythe. Back in Korea he took it to the main office of the Ministry of Agriculture in Seoul. He took along a Korean friend to translate.

Things started slowly at the ministry, but soon Hoops and his translator were moving from one room to another. Each time the room got more elegant and the Koreans more excited. The translator was beginning to sweat. Finally he stammered to Hoops that they were now in the office of the Minister of Agriculture himself. Hoops made a few swoops over the carpet to demonstrate the scythe. These regal gentlemen asked Hoops if he would give a practical demonstration of the strange instrument.

A half hour later he was standing in a small field that was ready for harvest. Within a short time Hoops had cleared an area that would have taken five times as long to do with the old tool. The Koreans were delighted. An official asked if the scythe might not be too heavy for small-statured Koreans to operate.

"Why hell, mister," Hoops said, "when I was a 12-year-old boy, smaller than anyone here, I would sometimes work one of these 4 or 5 hours a day." The sweating translator produced a more respectful and elegant version of Hoops's words. The official was pleased and even tried a few swipes himself.

Then, with Hoops's scythe as a reminder, someone remembered that several hundred scythe handles had mysteriously arrived from the United States months before, but no blades had accompanied them. The Koreans had pored through an old Sears, Roebuck catalogue until they found a scythe and had them attempted to hammer out some blades, but they were unsuccessful. The handles were put aside and forgotten. Now Hoops, who had once been an apprentice in a blacksmith's shop, helped the Koreans figure out how to forge the blades.

Only later did Hoops learn that the crop he had harvested was cannabis sativa, or marijuana. The crop, Hoops reasoned, was not his concern; what mattered was the technique. He was right. For Hoops's blade has become the model for thousands of others.

There are other things that disturbed former farm boy Hoops. "When it rained, the farmers would squat there and watch the red topsoil run off into the Han River until I damn near wept. I asked them about cover crops and the like, but they never heard of them. I remembered that back home wherever wild plum trees were, the soil held and didn't erode. So I wrote my sister in Nebraska and she sent me 15 pounds of wild plum seeds. I showed the Koreans how to plant them. So far they're concentrating on growing a seed crop, but after they get those new seeds planted they're going to stop losing that topsoil. You watch."

Hoops is now stationed in Japan, but his interest in Korea continues. On a visit to the United States some time ago he found an old-fashioned corn planter and shipped it to Korea. Hoops is now assembling it. He is sure it will be ideal for Korea's present level of agriculture.

"Right now a tractor is a joke to them," Hoops explains. "Too expensive, too hard to maintain. But those bulls they have are stronger than a horse. Of course, they'll have to drive the bull instead of leading him by the nose, but once they learn that they'll be in business."

Hoops has other ambitions for Korea. First, he would like to recruit a half-dozen Amish families to go to that country.

"See, those Amish are patient, independent people who don't go for big machinery or expensive equipment," Hoops explains. "An Amish farm is a complete unit by itself. An Amish family could teach Koreans exactly what they need to know. I don't know if the Amish would do it, but I wish someone would give them the chance."

Hoops would also like to use the rich adobe hills of Korea for building materials. The Koreans have never found the knack of using adobe properly for building, although they have tried. Hoops would like to bring some Mexican-American boys from the United States and have them show the Koreans how to convert this cheap material into snug houses. Wood in Korea has little strength and tends to split when a nail is driven into it. A few teams of efficient adobe-brick makers could well change the building pattern of the country.

Are there enough Americans willing to do these things all over the world? We are convinced that there are thousands of them. All they need is the chance and some idea of how they can help.

Hoops' example illustrates some vital principles of grassroots foreign aid. First, the initial steps should involve simple tools which can be understood by the user. Second, more complex tools should be introduced systematically when the user is ready for them. Third, the recipient should be encouraged to help himself. Fourth, the American in the field should have a powerful voice in what kind of aid is to be delivered from the United States and when it is to arrive. His bosses in Washington should listen to him, not dictate from behind a desk.

This is not easy when big bureaucracies are involved. Projects recognized as sound in India or Indonesia or Ghana tend to be shifted aside as they go through official channels in Washington—especially if the projects are small. Bureaucracies, by their nature, tend to prefer big projects, sweeping proposals. One reason that private citizens often are able to accomplish so much is that they do not have to route their requests and suggestions through the labyrinth.

A HAPPY MOUNTAIN FARM

They asked me: "How can we help 90 million Japanese live off these islands? Only 16 percent of the land is arable. The rest is mountains," said an American with crinkles around his eyes. "I gave them the only answer I could: find things that will grow on the mountains. That was the problem and we solved it."

The man is a chunky, ruddy-faced sophisticated Kentuckian named Paul Rusch, who not the least bid embarrassed about being a complete amateur in agriculture. He is, in fact, mildly proud of the fact. He should be, for there is a good chance that what he has accomplished may bring about important agricultural changes in Japan.

Rusch has done his work on the cold, stark slopes of Mount Yatsu, which rises out of the warm rice plains 70 miles west of Tokyo. His farm is not much to look at: a break in the scrub pines, a few barns, some buildings, a hospital. It is called Kiyosato Educational Experiment Project, or KEEP for short.

"I was teaching at Rikkyo University in Tokyo before the war," Rusch says. "The Japanese Government arrested me on Pearl Harbor Day, and I spent 7 months in a concentration camp. Then I was exchanged. I came back to Japan as a G–2 colonel on MacArthur's staff. Some of my former Japanese students were around and began pressing me for a precise definition of 'American democracy.' I was damned if I knew, but I began to think about it."

Although Rusch twinkles like Mr. Micawber, he can talk like Thomas Jefferson. When his students came back for an answer, he was ready. He explained how the Pilgrims, arriving in a bleak wilderness, had threshed out political problems in town meetings, helped one another raise barns and houses, and slowly clawed out a mastery over both their physical and political environment. The lesson was simple, but it was hard: self-help and optimism. No one else can do it for you, Rusch explained. Let America or the Communists or the Samurai run Japan for you, and the result will be something other than democracy.

The Japanese listened, discussed and finally agreed with Rusch. But in a Japan that was racked with the guilt of a catastrophic war, faced with shortages of all sorts and lacking a tradition of local cooperation, the problems seemed insurmountable. Finally debate and a relentless logic squeezed out an answer: Japan needed more food and better kinds of food. The warm, wet rice plains that make up half of Japan's arable land had been developed to a fantastic level of productivity, but the rest of the land had been virtually ignored. In any case a rice diet was inadequate. Children needed milk, adults needed protein. The first objective seemed obvious: raise dairy and beef cattle on the unused 84 percent of Japan's land. If a start could be made, it might set an example that would help millions of Japanese peasants who live at the very edge of subsistence.

Rusch and a few of his former students agreed to make the experiment. They approached the Japanese Government and were given 857 acres of unwanted mountain land that used to be the imperial household's hunting area. The mountain was covered with a jungle of scrub pine and azaleas. "Nothing else will grow there," said the offi-

cials. "It is 5,000 feet high, cold, and mostly rock. But we wish you luck."

Rusch then approached his fellow officers on MacArthur's staff and asked for their financial support. For members of a victorious army at the end of a bitter war, this was a strange request—but it worked. They gave Rusch almost $14,000 and KEEP was in business.

The problems were enormous. The wild azaleas, which had spread over the mountain for centuries, had turned the soil acid. The land was studded with rocks and ancient roots. There was no strain of cattle in Japan adapted to mountain foraging. But in a nearby hill Rusch and his people found lime that could be used to sweeten the soil. On a junk heap in Tokyo they discovered a 17-year-old bulldozer. They bought it and nursed it back to life. It still rips out roots and rocks with gusto. Hundreds of cattle were donated by people in the United States and other countries. A Nebraska farmer sent a prize bull.

The first building that went up on Kiyosato was, true to the Pilgrim example, a meetinghouse and church. Later there was a small hospital and a nursery school. There was also a library. Almost everything was secondhand, inexpensive—and still is. The place has an ancient bus, an antique dentist chair, a discarded X-ray machine. But everything now works and works well. The roads around Kiyosato are incredibly bad, but they do carry vehicles.

"If this place were surrounded by hard-topped roads and glittering machinery marked 'Made in America,' it would reassure American farmers," says Rusch, "but it would depress the Japanese. They would know they could never afford it. Kiyosato is an example, the beginning of hope for people who had almost lost it—so it has to speak in their terms."

This does not mean that Kiyosato speaks in a somber or dismal voice. The place has a rowdy, puckish, happy air about it. On cold mornings one hears student farmers singing on their way to work. There is constant joking. Everyone seems determined not to take himself too seriously. Much of this is due to the volatile personality of Rusch. He loves a joke. But he is as practical as a Yankee trader. He had the problem of getting a first-class staff, so he quite deliberately saw to it that his bachelor Japanese chaplain was introduced to an attractive young female doctor from Tokyo. Today she is the chaplain's wife, the head doctor at the Kiyosato hospital and the mother of four children.

Has this small, inexpensive, bold experiment been successful? It would seem so. Ten years ago there were only a few cows. Today more than 2,000 fine cattle graze on the hills around Kiyosato. Almost every peasant in the neighborhood has a cow staked in his yard. Parents who never tasted milk as children watch their children drink two brass bowlfuls a day. And the children are taller, their teeth finer, their health better than their parents. All this has been accomplished without 1 cent of expense to Japanese or American taxpayers. Paul Rusch has done it with nickels and dimes he has raised from private citizens.

Other areas of Japan have asked Rusch to do for them what he has done for Kiyosato. Rusch politely declines but points out that what he has done any Japanese could do. He suggests that they send young farmers to be trained at Kiyosato and this they do. Helping one's self is faster and more dignified than asking for help. Apprentices from all over Japan are beginning to sign up.

Foreign governments such as Canada and New Zealand have expressed great interest in the project. The Communists have paid the place a great compliment by their implacable opposition. They have fought KEEP at every step, but lately their opposition has been tempered by the simple fact that peasants do not take kindly to criticism of Kiyosato.

The surest tribute of all to the success of KEEP occurred some months ago. On Children's Day, one of Japan's favorite holidays, almost 70 local villagers who could have been relaxing at home appeared at one of the particularly beat-up roads around KEEP. Without a word they began to work cheerfully on the road. Later that afternoon they walked up to Rusch's small cabin and sang two or three songs in his honor. He came to the doorway, waved to them and expressed his thanks. But he made no speeches. It would not be in the spirit of the man or the place.

We are not, of course, suggesting that all agricultural problems can be solved by the easy introduction of Sergeant Hoop's scythe, or by the intuition and energy of one man such as Paul Rusch. Some solutions involve great expenditures of money, especially on such things as dam construction in areas where there is not enough water. The ICA and its ancestor agencies have done a magnificent job in many cases. The drilling of tube wells on some farms in India, for example, has increased the yield per farm by 45 to 100 percent. Potato yields in Indonesia were boosted 80 percent by the use of fertilizers and insecticides. Yet there is a place for men like Hoops and Rusch alongside the great agencies. And their work need not be limited to the field of farming.

A DOCTOR OF DEMOCRACY

The life expectancy of Americans is 69 years, that of Asians 48 years. Even this brutal statistic does not reveal the character of the truncated life that the Asian lives. One day in a Southeast Asian country a doctor interviewed a group of laborers. Most had malaria. Seven had trachoma. Eight had intestinal worms. There were 52 rotted teeth among them. Twenty-two had festering sores, origin unknown.

These men were cheerful and they drove their imperfect bodies hard. But they were forced to live their short lives against a constant dreary background of pain. Our doctor friend estimated that the expenditure of $23, 1 day of work by a doctor and a half-day by a public health specialist and a dentist could have made the majority of these men almost healthy again.

A single disease such as malaria can cause a staggering loss of productivity. In the relatively small country of Thailand, time lost from malaria is estimated at 9.5 million man-days of work per year. In India the total is a fantastic 130 million man-days. Bilharziasis, an exhausting parasitic disease of the intestines, affects half the people of Egypt. It could be cured by eliminating the snails that transmit the disease.

One person who has recognized the necessity for bringing health to the people is Dr. Tom Dooley. While serving as a Navy doctor at a refugee camp just after the fall of Dienbienphu in 1954, Dr. Dooley saw at first-hand the iron-hard link between malnutrition, ill health, and ignorance on one side and the appeals of communism on the other. He was aware that the Russians, quietly and without fanfare, are sending medical and surgical teams through Asia. In a world of misery the healer will be admired—so medicine had become a branch of Communist politics.

Dr. Dooley responded in the only way he knew. Three years ago he resigned from the Navy, organized a volunteer medical team that was supported partly by the royalties from his book, "Deliver Us From Evil," and partly by generous contributions from individuals and American pharmaceutical firms, and took off for Laos.

Since then Tom Dooley has traveled widely in the Lao back country, caring for the sick and training native workers to treat the more common diseases. On his trips back to the United States he has raised large sums to further the work. Last August he underwent a successful operation for cancer. Staying on in the United States to recuperate, he has made double use of his time by scheduling a grueling round of lectures—51 talks in 36 cities—to get money for medical work in Laos. In less than 3 months he raised more than $200,000.

Dooley plans to return to the Far East next month to rejoin his workers in Laos. He has two assistants there, both volunteer Americans. They go into the steaming jungles without families or luxuries. They are paid $100 a month. Another American doctor, Emmanuel Voulgaropoulos, of Lowell, Mass., also is working in the area—one more "ugly American" who was ready to do a needed job in a foreign land once the way was opened for him.

WOMAN'S WAR ON ILLITERACY

Ho Chi Minh, a thin, sparrowlike man, has a rasping voice that can set a crowd to jangling with excitement or hatred. He is the leader of the Communist Vietminh across the border from Laos in North Vietnam. Following a trip to Communist China he once said, "China is 100 percent literate." To many Americans Ho's statement will seem unimportant, almost trivial. It happens also to be a whopping lie. But all over Asia his words caused a restless ripple, a muttering of wonderment—for Asia is overwhelmingly illiterate and does not like that condition.

Take India. In a sense this great land is a vast sea of illiteracy. In some areas the percentage of literacy is below 8 percent and seldom goes above 20 percent anywhere. More than 400,000 of the nation's villages have no school at all. The most sophisticated arithmetic the villagers know is the mahajan (moneylender) system, an elaborate series of marks on a stick that help the villager know if he is being cheated.

A woman named Mrs. Welthy Honsinger Fisher decided to do something about this.

The American widow of the late Methodist bishop of India and Burma, Mrs. Fisher, has an astonishing ability to understand common problems. With the daring that comes from innocence she aimed at teaching everyone in India to read. The prospect was heartbreakingly difficult, for Mrs. Fisher had no money and the people she hoped to teach had very little spare time. She wanted to teach adults who in turn could teach their children, but in India the adults work from dawn to darkness. There are no lights in the villages at night, and the people are tired.

Besides, new teaching techniques had to be developed before the project could even get started. Mrs. Fisher found that she could not use children's primers to teach grown-ups. Indian villagers are proud, dignified people. They were embarrassed by primers that said, "This is a cat. Sirona sees a cat."

Mrs. Fisher and her Indian staff wrote new primers that used the rhythm of the seasons, seeds, political parties, and agricultural lessons as examples. Slowly the numberless tongues of India were worked into primers: Tamil, Telugu, Bengali, Gujarati, and others. Methods of instruction were streamlined.

Today Mrs. Fisher's establishment, Literacy Village, and its itinerant teachers can teach a farmer to read and write within 5 months. Working with the CARE organization, Mrs. Fisher has developed a "literacy kit." This consists of slates (paper is too expensive), slate markers, primers, and exercise books. It also includes a kerosene lamp. Now the villagers can study at night.

One literacy kit can help 25 people learn to read and write. In hundreds of villages little groups squat around the lamps and scratch on their slates. Those who have learned to read and write are proud of their accomplishment. They, in turn, become teachers to their friends and children.

Mrs. Fisher's records show that the cost of teaching an Indian to read and write is only $10. "It is interesting," Mrs. Fisher said recently, "that for the price of one Sherman tank I could make 5,000 people literate."

One of her students replied, "Yes, and you also get 5,000 people who can learn about truth for themselves and who will always love the person who taught them to read."

Bearing in mind the low pay and the hard work, we asked Mrs. Fisher if there is a sufficient supply of Americans to volunteer for her organization.

"Of course there are enough," she said. "Give me the money to transport them and maintain them, and I'll find you enough Americans to wipe out illiteracy from the whole world."

We are not suggesting that the massive and difficult problems of the uncommitted countries of the world can all be resolved as simply as in the cases we have cited. At the same time that Americans are doing these things, we must also do others that are terribly expensive, complex and sensitive.

But we do suggest that the perspiration of the ugly Americans is a magic medicine that can cure some ailments of our foreign policy. It should be encouraged. Unfortunately it sometimes is not.

In one South Asian country a number of our soldiers who in civilian life were skilled workers formed a volunteer team of carpenters, plumbers, electricians, and painters to help the natives improve their homes. They simply could not stand by and see things done badly. They met a blank, unyielding wall in the person of their commanding officer: he refused to let them do the work on the grounds that they might get in trouble with native women.

The fact is that if our entire foreign aid program were conducted with the spirit these men displayed, the program might be in less trouble today. We are fast becoming frustrated and fearful over the program's past performance and frequent scandals. There is a rumbling both from the public and the Congress to terminate all overseas assistance.

"I helped start the foreign aid program," one Senator told us recently, "and I have worked hard to make it operate. Now I'm about to give up. If things don't improve by next year, I'll recommend that we cut out the whole thing."

This would be a deadly error. Foreign aid is one of the major weapons in our struggle to keep free nations from turning toward communism. It is a vital element of our current foreign policy. To give up because we are discouraged and lack the national vigor to take corrective action would be to stick our heads under the blanket and invite communism to take over the world.

Foreign aid probably will grow more expensive. America must realize that if we and other prosperous nations do not help the restless millions of the world, the Communists surely will. If we withdraw from the struggle, we must realize the terrible price. We will become slack and fat spectators to one of history's great dramas—and we will be the last victims in the tragic last act.

The Lag in Statesmanship

EXTENSION OF REMARKS

OF

HON. STEWART L. UDALL

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 18, 1960

Mr. UDALL. Mr. Speaker, the quality of American statesmanship has been the object of frequent comment by students of American history.

A perceptive analysis of the present condition of American statecraft written by the eminent historian, Dr. Henry Steele Commager, appeared in the New York Times Sunday magazine yesterday.

Dr. Commager's article is highly provocative, and I know that his insights will be of interest to many of our colleagues.

The Commager piece follows:

URGENT QUERY: WHY DO WE LACK STATESMEN?—A HISTORIAN ARGUES IT IS MORE THAN CHANCE WE HAVE HAD SO FEW SINCE OUR FOUNDING

(By Henry Steel Commager, professor of American history at Amherst College, has written many books, including "The American Mind" and "Freedom, Loyalty, and Dissent")

The United States of the seventeen seventies and eighties was a new nation on the frontier of civilization, with a population of some 3 million (far less than that of Los Angeles County today) spread thin over an immense territory, without a single real city, without an aristocracy or a ruling class, and with few of those institutions of science and learning that sustained the societies of the Old World. Yet out of this America emerged, in a single generation, Washington, Franklin, Jefferson, Hamilton, John Adams, James Wilson, John Jay, James Madison, John Marshall, and a score of others scarcely less distinguished in the realm of statesmanship.

Now we have everything that we then lacked. Our population is 50 times as large as that of 1780, our territory spreads across the continent, we count a hundred cities larger than the largest of that time, we boast an educational level higher than any other in the Western World, as well as immense wealth and power. We have, in fact, all the elements that should produce statesmen. Yet in the past half century we have produced perhaps three men comparable to those of the Revolutionary generation: Theodore Roosevelt, Woodrow Wilson, and Franklin Roosevelt (some would add Adlai Stevenson but he is as yet untried).

Indeed, the most conspicuous feature on the American political landscape is the absence of statesmanship.

Nor is this a matter of individuals or of personalities; if so, our analysis might well be suspect. If we look away from the great figures of history to the principles they formulate, the contrast between the Revolutionary generation and our own is even more striking. The generation of the Founding Fathers invented—or perfected—almost all of our major political institutions: the Federal system, the Constitutional Convention, the written Constitution, a new system that did away with the colony-mother country relationship, a system of checks and balances that really checked and balanced, and even the modern political party.

What has the 20th century invented, in the realm of politics? Two things, perhaps, that can bear comparison with the great institutions of the past: the concept of regional development crystallized in TVA, and the Marshall plan. Both both of these, important as they are, are chiefly administrative contrivances rather than political institutions. The fact is that for a century and a half we have been living on the political capital piled up by the generation of the Founding Fathers and have added little to it.

How explain what appears to be a precipitous decline in statesmanship? Why is it that a nation so great and a people so fertile in so many fields are so unproductive in this field of such paramount importance?

It is not easy to answer questions of this kind, for we do not know what accounts for greatness. How, after all, explain the outburst of genius in the Athens of Pericles and Sophocles, the Florence of Michelangelo and Raphael, the England of Hakluyt and Shakespeare, the Copenhagen of Hans Andersen and Kierkegaard and Thorvaldsen, the Vienna of Haydn and Mozart and Beethoven?

It would be absurd to ascribe all these to coincidence or to chance. Sculptors and painters didn't just happen in 15th century Florence, nor navigators and poets and dramatists in the little England of Elizabeth; nor was it chance that frontier Virginia, with a white population less than that of Knoxville or Syracuse, gave us Washington, Jefferson, George Mason, John Marshall, James Madison, George Wythe and a dozen others of distinction. Perhaps if we can find out why art was the specialty of Florence and Venice, music of Salzburg and Vienna, and statesmanship of Revolutionary Virginia, we can find some explanation of the decline of statesmanship in our own day, and some clue to the secret of its revival.

The most obvious consideration is that of contingency. Talent is infectious, even genius is infectious. In a society where everybody is interested in art, where artists are the objects of admiration and of patronage, where the visible achievements of the artists confront one at every turn, every boy will want to wield a painter's brush or a stonecutter's chisel. In a society where to be ignorant of music is to be ignorant of life, the most natural thing is to learn to sing, to play a fiddle or a pianoforte. A society where to sail in the service of the Quen is the highest honor, where all the talk is of new lands and new oceans, is one that almost inevitably produces Drakes and Frobishers and Raleighs.

What is decisive, in each case, is the standard of excellence and of patronage or—to use the current idiom—of prestige. And a society where lawyers argue political principles before the jury, where parsons expound them from their pulpits, and judges from the bench, where the talk is everywhere of great political issues, is one where everyone of talent naturally gravitates to the public service.

For the young are creatures of contingency. They pattern their lives on the standards which their society in fact (not in theory) exalts. They will adopt standards that are held up to them, but only on the condition that these are genuine standards, only on condition that their elders do subscribe to them and live by them, in deed as in word. Thus, as Pericles asserted, they "draw strength not from twice-told arguments * * * but from the busy spectacle of our great city's life, as we have it before us day by day, falling in love with her as we see her."

What is that busy spectacle which our young see before them day by day, from which they are to draw inspiration? What are the things we most admire and most generously reward? And let us not ask what is said in commencement addresses or at Fourth of July celebrations, what is earnestly argued in unread editorials or in the solemn articles sandwiched between the advertising matter in the popular magazines, what is expounded on the public service programs of television and radio. Let us ask rather what it is the newspapers put put in their headlines; what programs are assigned the choice spots on radio and television; what aspects of school life really command the enthusiasm of the public?

If we ask what our young people are expected to admire and to emulate, the answer is easy enough. It is private enterprise. The great rewards in our society go to the leaders of business, industry and finance. It is the businessmen, the bankers, the corporation executives, who run their communities. They are the men who sit on the boards of the universities, the hospitals, the

orchestras and the museums; they are the men who garner the richest harvest of honorary degrees from universities whose business is presumably scholarship.

They are the men President Eisenhower appoints to Cabinet or ambassadorial posts, puts on committees—even on committees dealing with education or with science—and invites to his important White House dinners. As the specialty of 19th-century Virginia and Massachusetts was statesmen, our specialty is businessmen and technicians.

"What is honored in a country will be cultivated there," said Plato. We are reminded, too, of the proud boast of Pericles: "Our citizens attend both to public and private duties, and do not allow absorption in their own affairs to interfere with their knowledge of the city's."

Washington might have made the same boast, and Jefferson, but how many can make it now?

There are a number of reasons for this:

Consider first the connotations of the terms involved. The term "private enterprise" has glamour; the term "public enterprise" is dull and prosaic. Day in and day out, in a thousand media, private enterprise is equated with the American way of life. It is "private enterprise" that has made us what we are. It is "private enterprise" that most sharply distinguishes us from the Communists. It is "private enterprise" that will save us. One of our major political parties poses as peculiarly the spokesman and champion of private enterprise, and its two titular leaders never cease to extole that concept, or to throw suspicion on the alternative. Witness the attitude toward the TVA or public housing or socialized medicine.

School boards enjoin teachers to indoctrinate students with the glories of private enterprise, and textbooks are required to celebrate its virtues. The man who devotes himself to private enterprise is looked upon as a public benefactor.

Public enterprise, by contrast, is either tiresome or suspect. The label "politician" is one of opprobrium and, since Senator McCarthy's crusade, a faint aura of suspicion hangs over the term "civil servant" as well. The head of a business firm is an executive, but the head of a Government office is a bureaucrat.

As for public enterprise itself, it conjures up such images as public housing, Federal dams and hydroelectric power and public health programs. To many minds these have the taint of socialism which, as everyone knows, is next door to communism. Certainly, if we hearken to some of our medical spokesmen, a plan for national health which enlists the Government in the enterprise is a plot hatched in Moscow.

It is natural enough that with this attitude we reward private service much more generously than public—not only in money but in respect and prestige as well. The contrast between the pay of the Supreme Court Justice and the corporation lawyer, the TVA engineer and the engineer of the private power company, the scientist in the Public Health Service and the surgeon in private practice, is too familiar to rehearse; it is not, perhaps, of central importance.

More important are the conditions of private and public service. Not only is public service badly paid; it is exceedingly vulnerable, and more so now than at any time in the past. It was Horace Greeley who observed bitterly during the campaign of 1872 that he didn't know whether he was running for the Presidency or the penitentiary. A good many politicians, and not presidential candidates alone, must have felt that way during some of our recent campaigns—the 20 years of treason type of campaign, for example.

The civil servant, too, is at all times fair game: fair game for demagogues making political capital; for congressional committees which allow themselves a degree of irresponsibility unparalleled in other English-speaking countries; for security investigators whose work—witness the Service and the Condon cases—is never done; even for newspapermen who yield nothing to these investigators in their contempt for privacy.

Another reason we are short on statesmen is that we no longer train for service to the commonwealth as did the generation of the Founding Fathers. At no time, to be sure, has there been more provision for formal training: Syracuse, Tufts, Harvard, Princeton, American and many other universities maintain flourishing institutes for the study of public administration or the Foreign Service. But valuable as this training is, it comes too late, and in a form too academic. The time to excite the imagination and stir the sympathies is in early youth, and the place is in the home and the community.

Thus the patriot Josiah Quincy left to his son "the Works of Algernon Sidney, John Locke, Bacon, Gordon's Tacitus, and Cato's Letters when he should have reached the age of 15" that he might be trained to the love of liberty. Thus George Mason—author of the great Virginia Declaration of Rights—charged his children "on a father's blessing, never to let the motives of private interest or of ambition induce them to betray nor the fear of danger or death deter them from asserting the liberty of the country and endeavoring to transmit to their posterity those sacred rights to which they themselves were born."

This attitude of the 18th century suggests another explanation of the decline of statesmanship in our time—the decline not only of the study of history but of the study of history in terms of great men and heroic enterprises.

The generation that won independence and created a nation was deeply versed in the history of Greece and of Rome, the history of Switzerland, of the Low Countries, and of England—which is another way of saying the history of freedom. They were familiar with Thucydides and Plutarch and with Milton and John Locke; they thought of themselves as part of a great tradition and immersed themselves in that tradition in order to perpetuate it.

We study history, to be sure, but in terms of impersonal forces or, worse yet, in accordance with the headache theory that history is just one problem after another. And when we teach it in the schools (we have to require it) we manage to drain it of heroes and heroics and reduce it to a drab level guaranteed to frustrate interest and smother imagination.

"After history has done its best to fix men's thoughts upon strategy and finance," said Justice Holmes, "their eyes have turned and rested on some single romantic figure—some Sidney, some Falkland, some Wolfe, some Montcalm. * * * This is that little touch of the superfluous which serves no mechanical end. Superfluous only as glory is superfluous, or a bit of red ribbon that a man would die to win." To which we may remark. "Not if our schools can help it."

Somewhere, too, we have lost that passionate concern for the future that animated the generation of Washington and Jefferson, that sense of responsibility to "our descendants to the thousandth and thousandth generation" to which Jefferson referred so movingly in his inaugural address. We have lost not only the 18th century faith in progress, but Victorian optimism as well; few of us really think the best is yet to be, the last for which the first was made. We want the best to be now, and we want to enjoy it ourselves.

We may believe in a future where airplanes fly twice as fast and all drudgery is eliminated by gadgets, but we do not believe in a future which will unveil comparable advances in the moral or cultural realms.

The generation of the Founding Fathers was extraordinarily conscious of posterity. As John Adams wrote of the signing of the Declaration:

"Through all the gloom I can see the rays of ravishing light and glory. Posterity will triumph in that day's transaction."

In a curious way, we no longer believe in posterity; perhaps we no longer believe in the young. We do not, for example, believe enough in posterity to save the forests, the soil, the water and other natural resources as fiduciaries for future generations. It may even be questioned whether we believe in posterity enough to persuade us to small efforts or small sacrifices. The 19th century could support a "St. Nicholas" and a "Youth's Companion"; we fob our young people off with television programs inculcating violence and sadism.

The 19th century permitted the young to keep their games and sports for their own enjoyment; we professionalize even school sports for the enterainment and profit of adults. Domestic architecture, that almost infallible index of a people's philosophy, proclaims our indifference to the claims of children. The 19th century could afford to build houses with nurseries, verandas for rainy days, attics and lumber rooms for play, even with rooms for books and a piano. We build more expensive and more hygienic houses with no room for privacy or for play.

Other people, more concerned with the health of their children, can afford bicycle paths; we drive our children off the roads with our giant cars. Other people, poorer than we, can afford parks and squares in their great cities; we take all available space for parking lots.

We can submit this attitude toward posterity to another and simpler test: the Founding Fathers, for all their misgivings about democracy, write no limitations on the expression of the popular will into the Constitution. It has remained for our generation to provide a massive vote of no-confidence in the political judgment of the future: by the 22d amendment we substitute our judgment for theirs on the crucial matter of electing a President.

Two final considerations illumniate the problem of statemanship, particularly in the last quarter of a century—the emergence in the United States of a patriotism that is narrow and chauvinistic, and the growth of statism.

The men who won our independence and laid the foundations of the American Nation were devoted patriots but they were, too, men of the world. For all their devotion to the Nation they were creating, they were children of the enlightenment. Reason taught them that all men were brothers, that purely national distinctions were artificial, and that there existed a great community of art and letters and philosophy and science cutting across and transcending mere national boundaries. The Declaration of Independence, it is relevant to recall, appealed to the opinion of mankind, and asserted the rights of man.

The nationalism of the 18th century, then, did not rest on a narrow base but on a broad one. It was not exclusive but inclusive. It did not find nourishment in fear and suspicion, or in hatred—as so much of our current patriotism does—but in faith and confidence. Perhaps one reason for the decline in statesmanship is that we have hemmed our potential statesmen in, we have denied them, as it were, tolerant and spacious ideas.

This has had two deplorable consequences. In the first place, it has put a premium on

ostentatious displays of chauvinism, and discouraged patriotism that is high-minded and disinterested. A kind of Gresham's Law has set in in the realm of public policy, bogus patriotism driving out the real thing, rhetoric supplanting eloquence, lip service substituting for true loyalty.

In the second place, it has steadily narrowed the concept and constricted the practice of genuine statesmanship. For years now the test of statesmanship has not been broad horizons, catholic sympathies, spacious ideas, but energetic hostility to communism or to ideas that some might think subversive.

This is not the way to foster love of country and service to her; it is rather the way to create a shabby concept both of love and of country, and to turn service into disservice.

The same cast of mind and the same pressures that have encouraged chauvinistic nationalism have stimulated the growth of statism. Its emergence can be most clearly seen in the new doctrines that require travel to be "in the best interests of the United States"; that regard the gathering of information about a foreign country as a "function of the conduct of foreign policy"; that subordinate the rights of freedom of speech, of the press, of association, to congressional notions of what is in the "national interest"; that take away even the citizenship of a native-born American if Congress thinks his conduct interferes with the conduct of foreign policy.

In a hundred other ways, too, we are enhancing the power of the state—making science, education, art, and letters handmaidens to the state. Nothing will more surely dry up the wellsprings of a genuine patriotism than the creation of a mystique of the state. All those who think it appropriate to subordinate the interests of freedom to the supposed interests of the state should heed the admonition of John Stuart Mill:

"A state which dwarfs its men, in order that they may be more docile instruments in its hands even for beneficial purposes will find that with small men no great thing can really be accomplished."

The Federal Budget and the General Welfare

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 18, 1960

Mr. ROOSEVELT. Mr. Speaker, a most timely and relevant publication has reached my desk. It is entitled "The Federal Budget and the General Welfare," issued by the Conference on Economic Progress on January 11 of this year.

A summary of the entire pamphlet is contained in less than six pages of chapter I. I think this summary is worthy of wide readership, and it is for this reason that I am inserting it in the RECORD.

The summary will indicate, I believe, that the study seeks to formulate a Federal budget which reconciles competing needs in balanced proportion. Likewise, it seeks to measure what the Federal budget as a whole can and should do, by fitting the budget into the framework of the entire national economy in operation.

For those interested in reading the entire study, I might point out that it arrives at some interesting conclusions about economic growth, price stability, and how the Federal budget can be balanced without higher general tax rates and without sacrifice of vital national interests which the budget should serve.

With the President's budget message fresh in our minds, I respectfully urge my colleagues to peruse the following summary of the report issued by the Conference on Economic Progress.

I. SUMMARY AND THEME: TO REVERSE THE GREAT NEGLECT OF THE GENERAL WELFARE

For a number of years, the Federal budget has shown a marked trend toward dangerously inadequate outlays for national security. Similarly, it has shown a marked trend toward grossly inadequate outlays for domestic programs, essential not only to individual well-being, but also to the overall health and growth of the American economy.

This neglect over the years is not yet being reversed. The general nature of the proposed Federal budget for the fiscal year 1961, which goes from the President to the Congress in January 1960, is now known. This budget continues this neglect.

OUR MANY-SIDED NEEDS AND THE FEDERAL BUDGET

Even from the limited viewpoint of the national security, many experts and informed laymen are now agreed upon this: a deficiency in weaponry is compounded by deficiencies in education, health services, and basic research. As a nation, we are piling up supplies of the trinkets which many enjoy, but slighting the basic services which everybody needs. Taking a broader viewpoint of the world challenge confronting us, we cannot afford a further neglect of insistent human needs, on the spurious ground that we cannot afford to do better while still in an arms race. To survive the all-pervasive race that we are really in, we must demonstrate mature awareness of the need for progress on many fronts, and dedicate ourselves to this well-balanced progress.

All who point this out recognize fully that this many-sided progress requires vigorous and sustained efforts by individuals, private organizations, State and local governments, and the Federal Government. But they further recognize that the Federal Government must take the lead, and largely through the Federal budget. The Federal budget determines our national priorities; it is the most important tool for identifying and helping to accomplish our greatest purposes as a nation. If the Federal budget falls down on its tasks, others cannot rise fully to theirs.

OVERALL FEATURES OF THIS STUDY

Many specialized studies have dealt very competently with our needs in one specific welfare area or another, and proposed increases in some category of the Federal budget accordingly. But generally, these segmental demands upon the budget have not been reconciled sufficiently with the total demands placed upon the budget. Nor has the total Federal budget been reconciled sufficiently with the needs and resources of our total national economy. In consequence, each portrayal of a specialized or segmental need generates a host of objections. This quickly overwhelms those who urge fulfillment of responsibility.

This study is pointed toward avoiding this frustration.

First, it quantifies, for a number of years ahead, the desirable size of a group of programs immediately related to the personal well-being of the American people. It selects programs which directly service individuals, such as education, health, and protection from the hardships accompanying old age, unemployment, and poverty.

Second, it estimates how much the Federal budget should contribute toward meeting these needs, after proper allowance for outlays which the private economy and other levels of government should make toward meeting these needs.

Third, it reconciles the proposed Federal budget outlays to meet these needs with all of the other responsibilities which the budget should assume, so that we do not rob Peter to pay Paul.

Fourth, it sets all of these proposed financial efforts, public and private, within the framework of our total national economic resources, to avoid the beguiling notion that spending money can achieve more than our economic resources can produce, or the dangerous notion that we should not spend enough to achieve what our economic resources can produce. It thus reappraises our true capabilities, both economic and financial. By showing what we can do, it points the way to what we must do.

Through this rational portrayal of the problem in its entirety, this study seeks to substitute unity of effort for cross purposes, rapid positive achievement for creeping negativism, and public comprehension for public confusion.

THE CURRENT CONFUSION ABOUT OUR CAPABILITIES

The study seeks to dispel current confusion on these salient fronts:

(1) Some people say that we are now so well-to-do as a nation that we should meet our public needs mainly by a forced shift from production of private goods to production of public goods, rather than mainly by overall economic growth. This position is economically wrong, because the volume of private poverty in our midst is no less challenging than the starvation of public services, and because the thrust of the new technology requires an immense growth of both private and public enjoyments to avoid chronic mass unemployment of plant and manpower. It is psychologically wrong, because only rising private living standards and expanding personal security can generate popular and political assent to much larger public programs.

(2) Many people now accept the truth that a high rate of economic growth is essential to serve our expanding private and public needs. But many new converts to the growth idea insist that we should postpone essential public programs until a few years of high economic growth enable us to afford them. These people ignore the fact that inadequate public outlays, as well as inadequate private outlays, contributed to the very low growth rate and very high unemployment rate averaged since the Korean war. Adequate levels of both types of outlays are indispensable to adequate economic growth.

(3) With simulated heroism, some people who do not really want larger public outlays and larger public programs warn us that these can be accomplished only through higher rates of taxation and great sacrifices by the people. But the $199 billion shortfall in total national production for the 7-year period 1953 to 1959, inclusive, resulting from a very low average annual rate of economic growth and a very high average level of unemployment, caused a shortfall of about $65 billion in public revenues at all levels of government at existing tax rates. And if our economy grows as it should from now forward, it

will generate, during the 5-year period 1960 to 1964, inclusive, about $350 billion more total national production, and almost $100 billion more public revenues at existing tax rates, than if it grows only at the rate registered since early 1953. These data are all in uniform 1958 dollars. The sound road to higher public revenues is higher economic growth, not higher tax rates. The latter, by repressing growth, would be self-defeating.

(4) Those now initiating the Federal Budget are confusing the absolute size of the budget with its size relative to the size of the total national economy. By trying to hold the line on the budget, they are formulating a budget which is far too small relative to the programs it should serve, but which nonetheless is much larger relative to the size of the total national economy than if a properly expanding budget were made part of a comprehensive program for adequate overall economic growth. Hence, the recent inability to balance the budget in a repressed national economy.

PROPOSED WELFARE PROGRAMS

The welfare programs upon which the study concentrates are these:

(1) Education: A 5-year program, starting now, is designed so add more than half a million classrooms and almost half a million teachers to the elementary and secondary public schools, with average teacher salaries rising from about $5,100 to about $7,500. Comparable programs are advanced for an expanding system of Federal aid (a) to scholarships for higher education and (b) for plant expansion at the college and university level. The Nation's total educational outlays at all levels are projected to rise from about $22.3 billion in the school year 1958–59 to about $38 billion by the school year 1964–65. This would present a rise in total educational outlays from 4.8 percent of our total national production in 1958–59 to 5.8 percent in a fully expanded economy by 1964–65. Proposed Federal budget outlays for education would rise from an estimated $549 million in fiscal 1960 to about $2.2 billion in calendar 1961 and about $5 billion by calendar 1964. Related to our total population, these Federal outlays would increase from $2.97 per capita in fiscal 1960 to $25.97 by calendar 1964. Measured against total production, these outlays would rise from 0.11 percent in fiscal 1960 to 0.78 percent by calendar 1964 in a fully expanding economy.

(2) Health: The study proposes immediate expansion of the social security system to provide health insurance for the aged, and gradual development of much wider protection by the mid-1960's. It proposes Federal outlays to help (a) work down a substantial part of the nationwide shortage in hospital facilities, estimated at about $16 billion, (b) build new medical schools, and (c) facilitate medical research. Federal budget outlays for all health purposes, estimated at $823 million in fiscal 1960, are proposed at $1.2 billion in calendar 1961 and $3.3 billion by calendar 1964. Related to our total population, Federal outlays for health would rise from $4.46 per capita in fiscal 1960 to $17.14 by calendar 1964. They would rise from 0.17 percent of our total national production in fiscal 1960 by 0.52 percent in a fully expanding economy by 1964.

(3) Protecting our senior citizens: Among individuals in the United States aged 65 and over, three-fifths subsist on per capita money incomes from all sources below $1,000 a year; 80 percent are below $2,000. The study proposes that average monthly retirement benefits under the old-age, survivors, and disability insurance system be lifted from the August 1959 level of $72.46 for a retired worker to approach twice this level by the mid-1960's. Correspondingly, the study proposes that monthly old-age public assistance to individuals not covered by insurance be lifted from an average of $56.14 in monetary payments to a much higher level over the same period of time.

(4) Protecting the unemployed and the disabled: At the depth of the recent recession, less than half of the unemployed received unemployment compensation, and in August 1959 the average weekly benefit was only $29.76. It is proposed that, by the mid-1960's, the average benefit be lifted to $50 a week, or about half of the projected weekly wage in that year, and that improved protection be extended to many more people. It is also proposed that programs be established to cover loss of wages during illness; that disability benefits, now provided for those aged 50 and over, be extended regardless of age; and that Federal legislation establish standards to promote comparable improvements in coverage and benefits with respect to workmen's compensation. The insurance programs are supported through payroll taxes, and how to obtain revenues sufficient to cover increased costs is indicated. The cost of these programs, in terms of our national economic resources, are reconciled with other private and public requirements throughout the economy.

(5) Public assistance: The study proposes additional Federal assistance to State programs to expand aid not only for the elderly, but also for dependent children, the blind, and the permanently and totally disabled, and also proposes that the Federal Government should initiate contributions to State programs for general public assistance. In these areas, it is proposed that Federal outlays be lifted from an estimated $2 billion in fiscal 1960 to $2.6 billion in calendar 1961 and $3.2 billion by calendar 1964. Related to population, the increase would be from $11.12 per capita in fiscal 1960 to $16.62 by calendar 1964. This rise would be from 0.42 percent of estimated total national production in fiscal 1960 to 0.50 percent in a fully expanded economy by calendar 1964.

ADJUSTING THE OVERALL FEDERAL BUDGET

The total proposed Federal budget incorporates not only the foregoing programs, but allows also for balanced expansion to meet needs with respect to all programs in the budget. Outlays for national security and international affairs would rise from $47.8 billion estimated for fiscal 1960 to $54.9 billion in calendar 1961 and $61.4 billion by calendar 1964. Over the same period, measured against our total population, this rise would be from $258.60 to $299.68 to $316.96 on a per capita basis. Over the same period, outlays for all domestic purposes would rise from $31.1 billion to $34.6 billion to $41 billion, or from $168.60 to $188.86 to $212.99 on a per capital basis. The total Federal budget would rise from an estimated $78.9 billion for fiscal 1960 to $89.5 billion in calendar 1961 and $102.4 billion by calendar 1964. On a per capita basis, the rise would be from $427.20 to $488.54 to $531.95. With the rate of overall economic growth projected in this study, however, the Federal budget would decline from 17.2 percent of our total national production during the calendar years 1953–59 to only 16.1 percent by calendar 1964, and the national debt as a percent of our total national production would fall from 66.7 percent during the calendar years 1953–59 to 45.8 percent by calendar 1964. The Federal Government's revenues flowing from sufficiently rapid economic expansion would balance the Federal budget before 1964, and maintain a surplus thereafter.

COMBATING INFLATION

The study rejects the spurious thesis that meeting the great priorities of our needs, with a sustained and high rate of economic growth, would be inflationary. The approaches set forth in the study would help to contain inflation. For the inflation during relevant recent years has been due to (a) cost inefficiencies arising from too low a rate of economic growth, too much economic slack, and effort to compensate for these deficiencies by administered price increases, and (b) shortages of important goods and services. These shortages result from neglect of our great priorities of need.

PROJECTED GROWTH IN THE OVERALL ECONOMY

The study projects an overall economic growth rate of 5 percent annually after the economy is restored to full employment and full production, and a higher rate until such restoration. It proposes various policies toward this end, including an expanding Federal budget and abandonment of the tight-money policy. The study computes that this high rate of economic growth would yield in the aggregate for the 5-year period 1960 to 1964, inclusive, about 19 million more man-years of employment, and about $350 billion more of total national production, than would be yielded by a low 2.3 percent growth rate (the actual annual average during the past 7 years). Even with the public outlays projected in the study, the high growth rate in contrast with the low rate would yield for the 5-year period as a whole about $5,200 more in average multiple-person family income, about $225 billion more in personal consumption expenditures, and about $55 billion more in private investment.

The study proposes a national prosperity budget, of which the Federal budget would be a part, to suggest long-range guides for concerted private and public action to achieve both the private and public economic progress which our material and human resources make entirely feasible.

The study has been directed by Leon H. Keyserling, with staff work by Mary Dublin Keyserling, Philip M. Ritz, and Lawrence A. Leonard.

Federal Censorship by Taxation

EXTENSION OF REMARKS

OF

HON. ROBERT W. HEMPHILL

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 18, 1960

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Rock Hill Herald of January 13, 1960:

IN OUR OPINION: FEDERAL CENSORSHIP BY TAXATION

The Internal Revenue Service and the Federal Power Commission recently made a ruling which amounts to Federal censorship by taxation.

The Federal agencies ruled that certain advertising by electric power utilities cannot be listed as a business expense for income tax and rate-making purposes.

Some electric companies used advertising to inform the public about threats to their industry from Government encroachment. In turn, the Government agencies ruled that such advertising to air political views was taxable.

An editorial in Editor and Publisher, journalism trade magazine, says: "In our opinion this ruling is un-American if not unconstitutional. Because of our severe income tax laws it gives the Government the power to censor political views by taxation. Only the wealthy will be able to express

views on pending legislation through mass media even if the proposed statute means financial disaster to them.

"The free press guarantee of the Bill of Rights was designed to give everyone equal opportunity to write as they pleased and to use a printing press to disseminate those opinions about public affairs, legislation, etc. The guarantee no longer is operative if the Government can rule that the expression of certain opinions is taxable and the utterance of others is nontaxable. Once the precedent is established there will be nothing to prevent an extension of the ruling to enlarge the taxable opinions—those opinions about public affairs, governmental procedure, and legislation which may not be uttered without penalty of taxation by the Government."

Representative OVERTON BROOKS, Democrat, of Louisiana, warns that if a Government agency has the power to say what kind of advertising is not a proper business expense, soon the agency will assume more control over the advertising and eventually business will need to clear all copy with Washington.

Representative BROOKS also says, "Whether advertising is done to meet private competition or competition from Government cannot make any difference in principle. In fact * * * we should be even more jealous of the right of private business and industry to protect itself against Government than against private competition because of the people's power inherent in Government."

The Federal agencies have, indeed, ruled dangerously, if not unwisely, concerning taxation of certain advertising. The agencies are assuming controls which are contrary to the principles of free speech and freedom of the press.

It is manditory that the agencies reconsider their ruling before they chip away two of the most precious, and necessary, cornerstones of freedom.

Hope for Success in Dealing With Communist Expansionism Worldwide Depends Heavily Upon Unity of NATO in Europe

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 18, 1960

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Mr. Edgar Ansel Mowrer, published on January 13, 1960. Under Secretary of State Dillon deserves great credit for having apparently succeeded in convincing the European members of NATO of the absolute necessity to subordinate old political and economic rivalries to putting the strength and unity of NATO first.

IKE'S BID FOR PEACE NEEDS BASE OF UNITY
(By Edgar Ansel Mowrer)

President Eisenhower in his state of the Union message repeated what most Washington newsmen have long known: During the last 7 years his primary aim has been peace. He also stated that he believes the current year may produce a step on the way to such a peace. If so, the coming summit meeting of the Big Four in May should be the most important international conference since the end of World War II.

Since success at this meeting would not only relieve the world of the nightmare threat of nuclear war but help the Republican Party win the coming election, the President must and will do everything he can to make that meeting at least the beginning of a new era.

Mr. Eisenhower seems to believe that it all depends upon the sincerity of the Soviet leaders: Do they really want the peace, disarmament, and cooperation they chatter about incessantly or are they trying to dope the free world into neglect of military strength and further inner division?

Nobody in the West can answer this question with certainty, but the Soviet leaders, I believe, will act at the summit according to their judgment of the strength and unity of their opponents. If the free world turns up divided and gullible, the Kremlin men seem almost sure to push their advantage to the utmost—and give nothing while asking a lot.

ONLY THEN

If the free world has reconsolidated its shaky position and the three Western leaders speak with a single voice, Mr. K. may really decide he has something to gain by acting in a civilized manner, at least temporarily.

If this is correct, instead of talking so much about Russian sincerity or issuing weak-sounding appeals to Moscow, the West's first need is to recement the cracks in its major shield: The North Atlantic Treaty Organization (NATO).

One of NATO's widest cracks is the cleft within Europe between the six-power Common Market and the European Free Trade Association (the "Outer Seven"). This cleavage has been an often unacknowledged source of bitterness to Britain. Although invited, that nation does not yet feel it can accept becoming just another European country along with Germany and France.

It first sought to prevent the Common Market with its aim of eventual political as well as economic integration, and failing in this, demanded the advantages without joining. When France (just imagine) refused, British leaders threatened and, again failing to get results, organized another free trade area as a rival.

HARMFUL

Though the Seven are far weaker than the Six, this division threatens the harmony of the 13 European countries within NATO and harms American interests. The United States has wisely supported all reasonable efforts toward European political integration but also desires low tariffs and less exclusion of American goods. (Cutting aid to Europe will hardly affect the U.S. deficit in the balance of payments—it is a political gimmick.) Nonetheless the Administration stood aloof from the European squabble until last December when Under Secretary of State Dillon got into the picture at Paris. Now he is back in Europe attending a special 12-country economic conference to be followed by a meeting of the Organization for European Economic Cooperation, Europe's device for using Marshall plan aid. We want:

(a) Harmony between the two European organizations on a low tariff basis.

(b) Europe's cooperation in a plan of aid to backward countries, the "internationalization of development loans." (This does not yet mean making all such loans through NATO, as I think it should, but it is a good start.)

If Mr. Dillon can succeed in these two aims, he will not only have greatly solidified the West economically but brought the NATO countries politically into the kind of unity from which they may just be able to negotiate a beginning of peace with Mr. K. at the summit.

Pitt N. Moon, Jr., Elected Birmingham Western Section's Best Citizen for 1959

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 18, 1960

Mr. HUDDLESTON. Mr. Speaker, each year the Industrial Press, an outstanding weekly newspaper in the Birmingham area, sponsors an activity wherein the best citizen of the western section of the metropolitan area is selected. This area is the circulation area of the Industrial Press.

This year an active civic and church leader, Mr. Pitt N. Moon, Jr., was selected. I am pleased to insert in the RECORD the article from the Industrial Press of January 16, 1960, giving full reason why Mr. Moon was this year's choice.

The article follows:

CHURCH, YOUTH, PTA ARE AMONG 1959 BEST CITIZEN'S INTERESTS

Pitt N. Moon, Jr., is a railroad man, an active worker in his church, a man interested in youth, a father whose children have acclaimed him as best citizen and the western section's best citizen for 1959.

Announcement of his selection for the annual title and trophy is made today by the Industrial Press.

Judges returned a unanimous decision early this week bestowing the title on the Ensley man. Each of the five judges have previously been accorded the best citizen trophy.

The new best citizen was born in Bessemer. His father was P. N. Moon, an accountant who later operated his own business. He passed away in 1957. His mother is Mrs. Grace A. Moon and her letter of endorsement in the annual contest said: "of course he is my son, but to me, he has always been a best citizen."

Pitt Moon has left that impression with many persons. Letters of endorsement continually pointed to his civic activities which benefit children, his neighbors, and friends. It seems Pitt's interest in his fellow man is just natural with him.

His family moved from Bessemer to Crumly Chapel in 1939. Pitt completed high school at West Jefferson High. It was after this he began working with Seaboard Air Line Railroad as a trainman. That's the job he holds today.

Pitt was working for Seaboard when he became seriously interested in courting Miss Lillian Virginia Deason. "I had known her about a year and a half," Pitt told us, "but I actually only courted her about 5 or 6 months before we decided to get married."

The young couple was married in 1941 by one of Pitt's first pastors. They planned the wedding and went to Calera, Ala., where the pastor conducted the marriage ceremony.

That year saw two impressive changes in Pitt's life. The first his gain of a wife. The second, a call into military service. He entered the U.S. Army Corps of Engineers 8 days prior to Pearl Harbor, December 7, 1941.

His Army career lasted some 4 years, 3 years spent at Fort Belvoir, Va., and the remaining year in charge of a separation center near Sacramento, Calif.

Pitt Moon III made his entrance into the family during the war years. June 1942. He's 17, the oldest of five children in the best citizen's family, and a student at Ensley High. Tommy is next in line. He's 12 years old. John Wayne is 11 and Jimmy Luther is 10. Youngest member of the family is Virginia Lynn, age 6 next month.

A primary activity of the best citizen is the PTA. He is a member of Ensley High School PTA, a member of Charles A. Brown PTA, where his sons attend school; and a member of Minor Elementary School PTA, and, none of his children have ever attended Minor.

Pitt began his PTA work at Minor in a round-about way. The unit sponsored a Cub Scout Pack. It needed a pack master and Pitt took the job. In the course of working with the boys, he worked with the PTA at Minor, became a member of its executive board, staged the first of its Halloween carnivals and continues to work with the unit and school.

The best citizen is active in his church, Ensley Highlands Methodist. It was his fellow members of the board of stewards there who nominated him for the honor. His children endorsed his nomination and pointed out "our daddy has helped by painting the young peoples rooms, cooking food, etc." They were right. Their daddy was painting in the church Tuesday of this week. He says he has enjoyed helping the young people in the church.

Pitt is widely known for his work with Ensley Little League. He first began managing a team there in 1956, and wound up being president of the league in 1958–59 and 1960.

An insight to Pitt's home life was given by one of his friends and neighbors. She said maybe Pitt wouldn't like her telling on him, but that he was most helpful to his wife at home in doing household work.

The best citizen, who lives at 2513 Avenue Q, Ensley, is active in Lodge 590, Brotherhood of Railroad Trainmen, serves its auxiliary as a past counseler; is a member of Ensley Post 35, the American Legion; and this year became a member of Ensley Civitan Club—where he sold 366 pounds of fruitcake this past December to aid the club in its community service work.

Pitt's work with the railroad keeps him out of the city every other day, but he's a busy person helping others when he is in town.

Lead and Zinc Miners Still Seek Justice

EXTENSION OF REMARKS

OF

HON. ED EDMONDSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 18, 1960

Mr. EDMONDSON. Mr. Speaker, the lead and zinc miners of the United States are still looking to Washington for justice.

Last week, the Tariff Commission began its third series of hearings in 7 years into the unquestionable distress and injury of our domestic lead and zinc producers.

Another strong showing was made that hundreds of American mines are still shut down, and thousands of American miners are still unemployed, as a result of recordbreaking foreign imports of lead and zinc.

There can be no serious question of the fact that quotas imposed by the administration in October of 1958 are not doing the job of reopening our shutdown mines and restoring the vitality and prosperity of our domestic lead and zinc producers.

From coast to coast, the evidence points in the other direction: the quotas have failed in their purpose, and must be strengthened or supplemented by other measures.

One of the splendid statements made on this point before the Tariff Commission was made by my distinguished colleague from Idaho, the Honorable GRACIE PFOST, who testified on January 12, 1960.

Mrs. PFOST, who has been one of the finest champions of the domestic miner in this body throughout her period of service, called for prompt and fair conclusions by the Tariff Commission.

The complete text of Mrs. PFOST's statement follows:

STATEMENT OF CONGRESSWOMAN GRACIE PFOST BEFORE THE U.S. TARIFF COMMISSION ON INVESTIGATION OF THE DOMESTIC LEAD AND ZINC INDUSTRY, JANUARY 12, 1960

Mr. Chairman and members of the Commission, I appreciate the opportunity to appear here today.

As a Representative of a congressional district in Idaho which is a heavy producer of lead and zinc, and as a member of the House Subcommittee on Mines and Mining, I am especially interested in this investigation by the Tariff Commission.

I understand Mr. Charles E. Schwab, of Kellogg, Idaho, who was until recently executive secretary of the Emergency Lead and Zinc Producers Committee in Washington, D.C., will appear later during these hearings and will give a very comprehensive picture as the situation exists in the lead-zinc field.

He did a tremendous job in coordinating the presentations made in behalf of industry before this Commission and the Congress. Mr. Schwab has recently been appointed superintendent of operations of the Bunker Hill Co. in north Idaho, and while he will be missed here, we are glad to have him home again where he will continue working toward a solution to our problem.

First, I want to express my appreciation to the Commission which has been tremendously helpful in making an objective analysis and the unanimous findings of serious injury in 1954 and 1958. These findings have laid the foundation for this hearing, and for your report to the Congress which I hope will be coming shortly.

This investigation, pursuant to Senate Resolution 162, and passed by the 86th Congress, deals with the full range of lead and zinc products, whether manufactured or unmanufactured. The investigation is timely in view of the clearly adverse effect imported ores and products have upon the depressed lead and zinc mining industry in Idaho and other mining States.

In my judgment, even with quotas operating throughout the entire year, no lead-zinc producer operated at a profit in 1959. In Idaho, the lead-zinc picture has progressively deteriorated since January 1, 1952, the date selected as the base point by the Tariff Commission for its first unanimous finding of injury (May 1954).

In the great Coeur d'Alene mining district in my State, one complete section known as the Pine Creek area, has only one mine working today, where seven mines previously operated.

Underground employment has declined 40 percent in the Coeur d'Alenes during this period and practically all of the moderate and small-size producers have been forced out of business. An estimated 2,000 workers have lost their jobs.

You have only to examine the annual financial reports of those mines still operating to see that the steady and excessive influx of metal imports continues its devastating and fatal impact upon this area.

It has been conservatively estimated that committees, school districts, counties, and State tax revenues during these 7 years have declined about $5 million a year in the Coeur d'Alenes, as the mines have closed down. Let me point out too, that the shutdowns do not eliminate the cost of maintaining the mines to prevent serious damage and to protect investments. Large expenditures are needed for pumping, retimbering, and other upkeep to forestall mine flooding and cave-ins.

The citizens of the mining areas in Idaho have had faith that the mining problem will be corrected. They have gone forward with building a new hospital, a new school, and other community projects. The Commission has the opportunity now, because of prior decisions to recommend an answer which will again provide a healthy economic climate in ours and other domestic mining areas.

The need for relief to the domestic mining industry in general has been abundantly established by hearings held last year before the Subcommittee on Mines and Mining on House Concurrent Resolution 177. I commend to the attention of the members of this Commission the record of these hearings and the committee's report, House Report No. 708.

The hearings contain statements by 21 Members of the House, 2 State Governors, and 67 other persons. All that these people ask is that the domestic mining industry be allowed to maintain itself in a sound and healthy condition. Such a condition is essential to the wise use of natural resources and the long-range growth and defense of the country.

The domestic industry is entitled to a fair share of the domestic market where economically feasible. The economic feasibility of domestic lead and zinc mining to supply a substantial share of the domestic market has long been established.

The mineral output of the United States in 1959 did not follow the upturn in economic activity. The total value of all minerals, including fuels, was less in 1959 than in 1957. Low metal prices and other factors dropped domestic mine output of lead to 251,000 short tons, the smallest since 1900. Mine output of zinc in 1959 was no higher than in 1958, despite the quota established in October of 1958. The combined price of lead and zinc metals is at present not materially higher than immediately after the imposition of the quotas, and is substantially below the level indicated by domestic mining interests as essential for restoration of production.

Perhaps the most disturbing element in this situation is the severe decline in employment for mining workers. Our so-called magnanimous foreign policy has backfired on U.S. workers.

American know-how has gone abroad. Now cheap foreign labor and the newest machinery installed in foreign lands is causing an invasion of our own shores.

It would be one thing if this invasion had come about gradually through the free enterprise of individuals and firms. Then our domestic firms and workers could have made normal readjustments. But the Government itself has directly stimulated the situation through loans, grants, barter, technical assistance and otherwise in foreign lands.

National policy requires that domestic production at least be reasonably protected from undue hardships arising from the Government's own actions in the economic sphere.

The folly of counting unduly on foreign sources of essential raw materials has been demonstrated once again in the new export taxes on minerals and related measures taken by the Cuban Government of Fidel Castro. The policy of the Congress, expressed in House Concurrent Resolution 177 and numerous earlier measures, is to avoid critical dependence upon foreign sources. It is essential to maintain a sound and stable domestic mining and minerals industry.

The law as it now stands delegates control over tariffs to the executive branch acting on the basis of investigations of the Tariff Commission. It has been urged that Congress should reestablish and exercise direct control over tariffs. In the meanwhile, the existing process should be effectively employed.

Time is of the essence in the Commission's current lead and zinc study. Undue delay in making the report would compound the current injury and might impede the consideration of related measures by Congress.

I urge that the Commission give its close and speedy attention to the testimony presented in this hearing, so that prompt and fair conclusions and recommendations may be made.

Shipping Outlook

EXTENSION OF REMARKS
OF
HON. PORTER HARDY, JR.
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 18, 1960

Mr. HARDY. Mr. Speaker, during my service in the Congress much of my effort has been directed toward promoting governmental efficiency and eliminating unnecessary expenditures. Often it has been observed that governmental red tape has been a major cause of wastefulness, and frequently I have observed that the requirements imposed on private industry for reports and recordkeeping often have become quite burdensome. Some of these requirements are, I believe, unnecessary, and certainly those which cannot be eliminated can be sharply reduced. This ought to be done promptly to promote better functioning of private concerns, particularly those which affect the public interest.

An illustration of the seriousness of this situation as it affects private industry, and a plea for the elimination of unnecessary expenditures of time and money was recently presented by the distinguished presidents of two large maritime associations in the United States. Ralph E. Casey, president of the American Merchant Marine Institute, and Ralph B. Dewey, president of the Pacific American Steamship Association, have combined their efforts in an urgent request to the Federal Government to eliminate the antiquated and burdensome documentation in regard to the operation of steamships by American-owned companies.

These executives make a strong case for the adoption of simplified practices. Their presentation is impressive and I hope appropriate action will be taken promptly to accomplish their meritorious objectives.

A most interesting and timely editorial by Stanley Mantrop appeared in the New York Journal of Commerce of January 8, 1960. I think it will be of interest to my colleagues.

The editorial follows:

SHIPPING OUTLOOK—CUT THE REDTAPE

(By Stanley Mantrop)

With shipping costs mounting, the time seems ripe for the Government to make a determined effort to seek international cooperation in eliminating much of the unnecessary paperwork which annually is costing the maritime industry more than a million dollars in added overhead.

For over a decade the industry has been rapping on the Government's door for some relief from this mountain of paperwork presently required to keep this Nation's ships moving here and abroad with very little success.

Now with cargoes on the downbeat and costs climbing, the industry is again pressing the Government for new action on an international scale. The plea is certainly worth some serious consideration.

There is much merit to the industry's argument that no other form of international transportation, and this includes air, is so thoroughly saddled by documentary redtape.

Paperwork requirements of governments here and abroad all add to the cost of doing business by ship, substantially so, in fact.

However, there are indications that international cooperation on the subject is closer than it has been since the industry began its battle some years ago, but plenty of pressure is still needed to complete the job.

That the subject is a vital one to shipping is evidenced by the international interest in the paperwork problem. Already it is under discussion by the Council of the International Maritime Consultative Organization, the International Chamber of Shipping, the International Chamber of Commerce, and the Organization of American States. And many maritime nations have alerted their governments to the need for an international housecleaning.

Government agencies also agree that the number of separate documents required by any ship—passenger, cargo, tanker, or bulk carrier—is staggering. To list just a few they include customs forms, immigration, public health, as well as a long list of local papers to satisfy police, Coast Guard, ministries of transport, animal quarantine, and a host of others.

The new appeals have come from two of the Nation's top maritime leaders, Ralph E. Casey, American Merchant Marine Institute president, and Ralph Dewey, Pacific American Steamship Association leader, both of whom call the existence of burdensome and wasteful paperwork required archaic.

An indication of what ship lines are up against these days in the way of unnecessary documentation can be gleaned from the fact that Manila, for example, requires 34 documents to accomplish what 19 will do in Bangkok, and perhaps 11 in Rotterdam. In short, most of the documents required by the various countries are duplicates.

Added to this international problem of doing business is the variety of forms and the number of copies required, the added burden of meeting local language conditions, measurement requirements, consular visa regulations, arbitrary variances in size and form of documents—even the quality of the paper stock used.

There is no reason why, now that a greater air of international cooperation exists, some concrete steps toward eliminating this costly and unnecessary waste of time and money could not be taken.

In the interests of keeping the American merchant marine on a strong competitive basis the request for simplification is worthy of some serious consideration by the United States and other governments.

Presidential Misses

EXTENSION OF REMARKS
OF
HON. CLEVELAND M. BAILEY
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 18, 1960

Mr. BAILEY. Mr. Speaker, President Eisenhower, in his state of the Union message, made great political capital over the fact that the Atlas missile has been developed to such a high degree of accuracy that it is within 2 miles of an absolute bulls-eye at 5,000 miles.

His second point of political capital was the rather startling prediction that his 1961 budget will contain a $4.2 billion surplus.

It is, I think, significant to observe the reaction of the editor of the Lexington (Ky.) Herald, who prays that the President, in his budget prediction, might be as accurate as the Atlas missile.

The Herald goes on to point out that in previous years the President has not even been close enough in his budget estimate to achieve a near miss.

Furthermore, the editorial points out, if the President is accurate in his prediction of a sizable surplus for fiscal 1961, that goal will be achieved at the expense of the school children of America, the depressed areas, and, in in general, the domestic economy.

It will be noted that the President has omitted doing anything whatsoever for the depressed areas, and his only reference to building up the Nation's capacity to provide far, far better training for our boys and girls was a mild pat on the head for a bill introduced last year, which is completely inadequate and which is so confusing and so complicated that every educational system in the 50 States would have to obtain the services of the proverbial and traditional Philadelphia lawyer to determine if it qualified for the limited assistance made available.

Furthermore, it has now become evident that the President, while using a few ill-chosen words to pay tribute to improving education, at the same time seeks to curtail one of the few programs that sees the Federal Government supporting in any way, shape, or form local educational efforts.

Last year the President proposed a bill which would drastically curtail payments made to local educational agencies located in what we term a federally affected area. This bill, H.R. 7140, was eventually referred to the General Education Subcommittee, of which I am the chairman. We conducted rather extensive hearings and attempted to inform everyone who was interested in this legislation that they were being conducted, so that there would be ample opportunity for all sides to be heard.

The Secretary of Health, Education, and Welfare, Arthur S. Flemming, and Commissioner of Education Lawrence Derthick dutifully and loyally defended the administration's position.

Not one witness appeared before our subcommittee in support of that position. Not even the author of the administration's bill. Furthermore, two other Members, representatives of the President's party, had introduced bills that would embody parts of the President's program to curtail payments under Public Laws 815 and 874. Neither of these two Members appeared before our subcommittee, although they were issued special invitations.

At the conclusion of the hearings, the subcommittee met in executive session and rejected H.R. 7140 by adoption of a formal resolution.

Now we find that the President is submitting a budget which assumes that the Congress enacted H.R. 7140 and that it has been signed into law.

Mr. Speaker, under unanimous consent I include, as a part of my remarks, the editorial published by the Lexington (Ky.) Herald on Saturday, January 9, 1960.

The editorial follows:

EVEN A NEAR MISS WOULD BE GOOD NEWS

President Eisenhower, in his state of the Union address, told America's millions that in 14 recent tests this country's Atlas missile had hit within some 2 miles of bullseye at ranges of more than 5,000 miles. We hope that the President's estimates on the budget attain equal accuracy. In the past he hasn't been credited even with a near miss.

The President's report to the Nation, following the usual pattern in a presidential election year, contained little that was new. He devoted much of the talk to the need of greater expenditures for defense, switching from praise of long distance bombers, as stressed in earlier state of the Union messages, to a certain insistence on missiles. We probably would have been in better position, defensively, if the stress had been placed on missiles earlier in the Republican regime.

Greatest applause came when President Eisenhower predicted a budget surplus of $4.2 billion for the end of fiscal year 1961. We hope that his figures are verified by actual records on June 30, 1961. So far the President has been considerably off target in his budget predictions. In his 1958 message he predicted that the fiscal year-end deficit might reach $400 million but it finally was tabulated around $2.8 billion. The next year's budget came up with a resounding deficit of more than $12 billion dollars, to set another Eisenhower peacetime deficit record. In his 1959 address he suggested a $70 million surplus as likely to be recorded on June 30, 1960. In his address this week he upped that estimate to $200 million. We hope that he is correct, but recent history does not give much hope in this connection.

The President said that he would present Congress with a balanced budget for 1961 of approximately $79,800,000,000, and that prospective income would produce the 4 billion plus, surplus. That would be about half of the surplus provided in 1 year of the Truman administration when a record surplus was shown, but something startlingly new for a GOP administration.

On domestic problems the President gave little hope that his new program would contain any provisions for education or help to depressed areas. School authorities who had expected the message to hold out some hope for aid in school construction found nothing tangible in the President's statement that "the route to better trained minds is not through the swift administration of a Federal hypodermic or sustained financial transfusion"; and his further assertion that "the educational process, essentially a local and personal responsibility, cannot be made to leap ahead by crash, centralized, Government action." His suggested plan of relieving current educational deficiencies apparently is the same as offered in previous messages. "It is designed to stimulate classroom construction," the President said, "not by substitution of Federal dollars for State and local funds, but by incentives to extend and encourage State and local efforts." Your guess as to what he means by this is as good as the next.

President Eisenhower again asked that this country provide billions of dollars for foreign aid but he had no proposals for helping our own country's economically depressed areas. Some of our people, epecially those in economically depressed eastern Kentucky, to use one of the President's choice expressions anent the steel strike, "are getting sick and tired" of seeing millions of dollars squandered in some of the foreign-aid programs while the administration turns a deaf ear to needs of our own people. It is repugnant to them to see news pictures of some foreign potentate being presented with gold equal to his own weight by his loyal subjects, and at the same time realize that our country is pouring unlimited dollars into such areas under the guise of economic aid.

Representative BAILEY, of West Virginia, in discussing the foreign aid program in the House, declared last year that "when I was leading the fight for school construction legislation, I showed a total of 84 contracts that the Government had to carry out educational programs abroad. They were actually building school buildings. * * * There were nine agricultural high schools in one particular country where they were paying the teachers' salaries in addition to building the buildings. And that has to do with our situation of a shortage of 140,000 classrooms." It is in areas such as these that many Americans find themselves unable to wax enthusiastic over the administration's program or to applaud the unsupported promise of a surplus.

On the whole the President's address was just what the Republicans needed to send them forth to render a verdict they've already made in the selection of Vice President RICHARD M. NIXON as Mr. Eisenhower's successor. The President even brought in the settlement of the steel strike but ducked all implications as to its inflationary certainties. "It is gratifying to note," he said, "that in spite of the increase in wages and benefits, several of the major steel producers have announced that there will be no increase in steel prices at this time." GOP leaders hope that this will be the situation at least until after the election. We don't believe that it will last that long.

The President's remarks about his efforts to bring peace to the world were warmly received by all. His recent oversea visits seem to have brought good results and we look hopefully to his later trips to South America, where our relations certainly need improving. Maybe we can pick up support from this area and let's hope that it will replace, in part at least, what we have lost in our relations with France.

We believe that the whole speech would have been better received if the President had suggested just one thing that showed a sympathetic understanding of some of our domestic problems and if he had shown a disposition to make a more careful study of our foreign aid expenditures. The speech, on the whole, was a fitting valedictory of his service as President and perhaps also will serve as a farewell address in behalf of the administration that has been with us since 1952.

Washington's Lady Ambassador for Christ

EXTENSION OF REMARKS
OF
HON. E. ROSS ADAIR
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 18, 1960

Mr. ADAIR. Mr. Speaker, in the August 1959 issue of Christian Life magazine an article appeared which I think is of general interest as it concerns an aspect of Washington life not frequently enough made known. Accordingly, I include, herewith, a condensation of "Washington's Lady Ambassador for Christ," by Donald H. Gill:

WASHINGTON'S LADY AMBASSADOR FOR CHRIST
(By Donald H. Gill)

One morning recently in Washington, D.C., the wife of an Indiana Congressman was busily engaged in the routine activities of getting a husband off to work. Juggling household responsibilities, she wondered how she could find time to fulfill the multitude of official duties Washington social life had heaped upon her.

The door closed behind her legislator husband, bound for the House Office Building. She breathed deeply, sat down with her daily devotional book, "My Utmost for His Highest," by Oswald Chambers.

Weight of responsibilities still in the back of her mind, she turned to the reading for that day. Words of the Scripture text leaped out to satisfy her thirsty spirit: "Casting all your care upon Him, for He careth for you."

Instantly she realized that she had been trying to carry her responsibilities in her own strength. Then she saw that Scripture also declares that "the government shall be upon His shoulders."

She was jubilant. Why hadn't she seen this before? She had given her life to Christ, but here she was, trying to do her work by herself.

Overjoyed at her discovery of another secret in Christian living, she walked to the telephone and called her close friend Alicia Abrahamsen. It had been Alicia—of the International Council of Christian Leadership, the well-known organization of Christians in Washington—who had led her to Christ during a trip through Europe the summer before.

As Alicia picked up the telephone at Fellowship House, ICL headquarters in Washington, several prominent persons in the Nation's Capital were on their knees in prayer in the front room at Fellowship House. Mrs. Abrahamsen could still hear the petitions as the voice of the congressman's wife came bubbling with the blessing of her new spiritual discovery.

Before the conversation finished, the two women, at two different locations along embassy row, had bowed their heads in prayer. Once again Alicia Abrahamsen thanked God for another evidence that the Holy Spirit was taking hold of a life.

In her contacts with scores of congressional wives, cabinet wives, diplomats' wives and other prominent women in Washington, Alicia Abrahamsen has one aim: to share genuine Christian experience with these

women so they, too, will be led to draw on the spiritual life in Jesus Christ.

The Congressional Wives' Prayer Group which Alicia started has been so used by the Holy Spirit that two similar groups are now being organized—one for cabinet wives and the other for wives of diplomatic officials along embassy row.

It might seem natural that the daughter of Abraham Vereide, executive director and founder of ICL, head up such a ministry among the women of Washington. And yet she confesses that an overwhelming sense of inadequacy almost kept her from undertaking the task.

After the war Alicia faced the challenge. She moved to Washington, D.C., to live with her mother and father and open Fellowship House, a Christian embassy. The task wasn't easy, for she knew that many people would be looking at her life to see if it demonstrated the victory she talked about.

As time went on Alicia knew that the women of the capital needed the kind of prayer group which was proving so successful with the men. When her father spoke to her in January 1955 about starting such a group, again she shrank back. But this time she knew where to go for strength and assurance.

Among those who responded were Mrs. Walter Horan of Washington, Mrs. Sidney Herlong of Florida, Mrs. Harmar Denny of Pennsylvania, Mrs. Charles Bennett of Florida and numerous others. Such women were soon to be numbered among Alicia's closest friends. They shared with her both their problems and their blessings. Their meetings became a means of pooling their deepest inspirations on the application of the Scriptures to their daily lives.

The Congressional Wives' Prayer Group, comprising about 15 to 30 women, usually meets in the homes of members at 10:30 in the morning. After coffee, the chairman opens with prayer, makes announcements and introduces a speaker—usually a Bible teacher, missionary or a member of the group. The theme is generally on the power of prayer and what Christ can mean to individuals and to the Nation. Specific problems are discussed and prayed about. Everyone is invited to pray aloud in the prayer period with which the meeting closes.

The wives of every Member of the House and Senate are invited to a tea each spring sponsored by ICL. Last year Mrs. Olin Johnston, wife of the Senator from South Carolina, was chairman. A missionary from Hong Kong spoke of miraculous answers to prayers, Mrs. Peter Marshall shared experiences from her life, and Dale Evans Rogers gave her testimony.

Alicia's faith is not a vague sort of thing, a rosy optimism. It has an object, an unshakable foundation—that God is at work in this world, using people to His glory. Whatever He has promised He is able also to perform. She searches the Word—and is always encouraging her friends to do the same—for God's specific promises and for the guidance of the Holy Spirit.

Many women in Washington can testify to the spiritual help which they have received through Alicia Abrahamsen and her prayer groups—such as Mrs. J. Edgar Chenoweth of Colorado, Mrs. Charles B. Hoeven of Iowa, Mrs. Walter Riehlman of New York, Mrs. E. Ross Adair of Indiana and Mrs. Clifford G. McIntire of Maine—all wives of U.S. Congressmen.

The clue to Alicia Abrahamsen's ministry lies in her statement: "The deeper spiritual life is an absolute necessity to live the victorious life and to have the overflowing life that is a blessing to others. The world is hungry for reality and we have failed to make Christ real in our lives. We are so apt to become self-righteous or narrow and condemning. Christ wants us to be in love with Him so that everyone who comes into our presence might sense the loveliness of Christ."

Alicia Abrahamsen does more than say it. She lives it. And therein lies the success of her witness in Washington.

Donald Comer Writes New York Times on Textile Import Problem

EXTENSION OF REMARKS

OF

HON. GEORGE HUDDLESTON, JR.

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 18, 1960

Mr. HUDDLESTON. Mr. Speaker, Mr. Donald Comer, chairman of the executive committee of Avondale Mills, Inc., one of the leading cotton textile manufacturing companies in our Nation, on November 23, 1959, addressed a letter to the New York Times, in which he very clearly and forcefully presented the viewpoint of the American textile manufacturers on the need for taking some immediate steps to curtail excessive foreign imports.

Believing the letter to be of importance and interest to all those interested in the welfare of our cotton economy and all our domestic industries, I am pleased to insert it in the RECORD for the benefit of my colleagues.

The letter follows:

NOVEMBER 23, 1959.

Mr. L. P. HUGER,
Letter Editor, New York Times,
New York, N.Y.

DEAR MR. HUGER: In your paper of November 19 you have a news items headed U.S. Protectionists Seek Rise in Tariffs, you say "Protectionists have been arguing this way for years without much success." I wonder how you measure success. Under the protection started by Alexander Hamilton down to this good day, American industry with American wages have led the world. Today our income from both industry and farm have resulted in so vast a purchasing power that the rest of the world looks our way with a hungry eye for a marketing place for their wares. They offer them to us, not because of anything new in style, design, or originality, but only because they are a cheaper imitation of ours. Cheaper only because of their lower wages and lower standards.

In the beginning, our tariff was needed only for protection against European things. Don't you think the results proved the wisdom of the plan? In the beginning, the South opposed this tariff protection of industry, because we sold our cotton at the world prices in competition with Africa and Asia, and the rest of the world. If Hamilton had lived, I think he would have corrected that situation. We had to wait until Franklin Roosevelt and the 1933 Congress for our farmers to get their protection. A.A.A. guaranteed them a parity price. This was direct protection, industry's was indirect. In Hamilton's day, it was only Europe that threatened. Today, it is not only Europe, but the rest of the world, with Asia out front. In the early days, we had the machines, Asia had only their hands. Today those millions have not only their hands, but the same machines that we have and they are just as adept and skilled as are we.

Senator DOUGLAS asked how much longer our textile industry would be before the Congress asking for help. I answered, "Certainly as long as Congress fixes our wages and working standards (the highest in the world), and the price of our cotton; certainly as long as they fixed the price of this same cotton to our foreign competitors at 8 cents per pound cheaper than to us." Our relative high wages help create our relative high purchasing power. It appears very tempting to our competitors across the oceans. Are you surprised that they look with hungry eyes and continue to reach for it? Do you know of any wise farmer who prepares a lush pasture for his cows, who doesn't put a fence around it to keep out the hungry cows of those less provident or even less fortunate? If you had a cotton mill, what would you do? You would have to have a fence or move your mill to Asia, and Mr. Robert Stevens calls that exporting jobs instead of things.

In our misnamed reciprocal trade program, Secretary Hull is quoted as describing it "selling what we have in overabundance that the other fellow needs and taking our pay in what he has in overabundance that we need. With some three-way trading, we speak of our need of raw products from abroad." We wind up, though, in shipping our raw products to Japan, our cotton which she needs, and taking our pay in her manufactured goods which we don't need. She could ship her cotton goods to Indonesia and take her pay in tin and rubber, etc. She could ship her cottons to South America and take her pay in coffee, cocoa, bauxite, etc., and ship those things to us which we need. That is the kind of foreign trade we believe in, plus something extra, and we call it living and helping live. That is why we agreed to a quota of Japanese imports of unwanted and unneeded cotton goods. You might ask the Singer Sewing Machine Co. if Japan reciprocated. We have for several years begged the administration to correct this situation, particularly because of the increasing threat. The President, at this late date has asked the Tariff Commission to start a protracted hearing to prove that our Government, selling our competitor cotton at 8 cents per pound less than they sell it to us, hurts us. To prove that two and two are four, we are asked to suffer and wait.

The President continues to refuse to recognize the double hurt that is coming from the foreign lower wage standards. Mr. James M. Chapman, president of A.C.M.I., was quoted in the Southern Textile News as follows: "Chapman hits limited imports survey order," and says it was "another victory for the State Department over the welfare of the country." The number of our fellow sufferers, because of this, are rapidly increasing. Chinaware, tuna fish, plywood, woolens, etc., wire, iron, pipe, stainless steel, and a thousand and one other things. I was recently in the store of an importer in the East and was shown some turkish towels made in Turkey and was told that the Turkish Government was trying to build a large addition to their towel mill and was over in this country looking for some help in the way of management and know-how. I immediately thought of my friends Joe Lanier, Charlie Cannon, Buck Dumaine, and John Cheatham. I am sure they want to supply America with turkish towels made in America, not in Turkey.

This is all so contrary to his "Dear Joe Martin" letter promising that his foreign trade program would be administered without hurt to a single American industry. We have a $41 billion defense budget. This is to prevent the invasion of soldiers, a future threat. May I suggest that our very present danger is the increasing invasion of things.

I hope this is not too long for you tc read and I hope you will believe me when I tell

you that I think we are going to have to get help from Congress, and I might add that this is a vital threat and it is later than some of us think.

Yours very truly,

DONALD COMER, Sr.

Hon. Thomas Kennedy of Hazleton, Pa., New President of the United Mine Workers of America

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, January 18, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include two editorials, one from the Wilkes-Barre Times-Leader, Evening News of January 14, 1960, entitled "Tom Kennedy Heads UMWA," and the second from the Hazleton Plain Speaker of January 15, 1960, entitled "Kennedy Election Brings New Honor to Hazleton." Also included is a column which was featured in the Hazleton Plain Speaker of January 15, 1960, entitled "Tributes to Thomas Kennedy," as well as a biographical sketch of Mr. Kennedy from the Plain Speaker of last Friday, January 15.

The editorials follow:

[From the Wilkes-Barre Times-Leader, Evening News, Jan. 14, 1960]

TOM KENNEDY HEADS UMWA

The formal installation of Thomas Kennedy as president of the United Mine Workers of America in Washington today to fill the vacancy, created by the retirement of John L. Lewis, provides a fitting climax to an outstanding career in the field of labor with excursions into the realm of public service.

Primarily, Tom Kennedy has been a labor leader, despite his eminence in State and local politics. His main interest has been, is, and always will be the miners' union, although his extracurricular activities have not been without significance.

The Lansford native and Hazelton resident has traveled a long way on the journey through life. The eldest of eight children, he left public school in the fifth grade at the age of 12, switching to the alma mater of so many successful men of that period—the breaker—to help support the family. Four years later, his father was killed in a mine accident and his obligations increased.

There is nothing like adversity and responsibility to make an individual mature. Tom Kennedy is no exception to the rule. He grew up rapidly and soon was secretary of his local union. At night, in his spare time, he studied to prepare himself for the challenges ahead in life.

In 1910, at the age of 23, he left the mines to take over the presidency of District 7 of the United Mine Workers of America and the rest is history, for his qualities of leadership soon asserted themselves and he continued up the ladder until he took over the helm this afternoon.

No individual could possibly be better prepared for a post than Tom Kennedy is for the presidency of the United Mine Workers. He possesses ability, experience and a well deserved reputation for sagacity and resourcefulness. He knows the ropes and is not given to excesses. While he is not John Lewis in personality, he has the will, integrity and knowhow of his colorful predecessor.

The affairs of the United Mine Workers of America are in capable hands, as another of Luzerne County's sons comes into his own on the national scene. This is a big day for anthracite region, as well as for the United Mine Workers and for Tom Kennedy personally.

[From the Hazleton Plain Speaker, Jan. 15, 1960]

KENNEDY ELECTION BRINGS NEW HONOR TO HAZLETON

We join today in a salute to Thomas Kennedy, who yesterday afternoon assumed the presidency of the United Mine Workers of America, a worthy successor to John L. Lewis.

Our fellow townsman received a justly deserved and highly merited honor, following a lifetime of service to the great organization that he now heads.

The anthracite region should be especially proud of Kennedy's achievement in becoming the first man from the hard-coal fields to head the national union.

The Governor of this great Commonwealth, David L. Lawrence, in paying tribute refers to the fact that the life of Kennedy reflects a remarkable history of personal leadership. The State's chief executive says that it is particularly fortunate that Kennedy has a record of solid achievement in the field of government. "He knows the goals and purposes not only of his mineworkers, but the entire Nation and all its citizens," declares Governor Lawrence.

Attorney James P. Costello, of this city, emphasized another side of the life of the noted labor leader. "Tom Kennedy's greatest accomplishments," he says, "is not so much the high quality of his administrative skill and industrial leadership as it has been the development of a personality and a set of personal traits which mark him as the most human and humane of men."

Following the ceremony that attended the inaugural rites in the Nation's Capital, Kennedy and his wife will return to Hazleton to receive the friendly and personal plaudits of the homefolks. This has occasioned a proclamation by Mayor S. Thomas Capparell, of Hazleton, designating today as a day set apart and to be known as Thomas Kennedy Appreciation Day.

The chief executive recommends its due observance by our citizenry. We know this appeal strikes a responsive chord and neighbors and friends will make it known that Tom Kennedy has the best wishes of all for success in meeting the tasks that will confront him as president of the United Mine Workers of America.

TRIBUTES TO THOMAS KENNEDY

David L. Lawrence, Governor of Pennsylvania:

"I salute United Mine Workers President Thomas Kennedy as a man whose life reflects a remarkable history of personal leadership.

"It is particularly fortunate that the man the mineworkers have chosen to succeed John L. Lewis also has a record of solid achievement in the field of government.

"With his experience as a former Lieutenant Governor of Pennsylvania, Kennedy knows the goals and purposes—not only of his mineworkers—but of the entire Nation and all its citizens," said Lawrence.

"I join with you tonight in congratulating Tom Kennedy on the honor he so richly deserves," added Lawrence. "And I join with you in praying for his continued success."

Attorney James P. Costello, president of Luzerne County Bar Association and former mayor of Hazleton:

"Tom Kennedy's greatest accomplishment is not so much the high quality of his administrative skill and industrial leadership as it has been the development of a personality and a set of personal traits which mark him as the most human and humane of men.

"There are those who may think that material progress is the hallmark of success. Not so with our humble friend, Brother Kennedy. To him highest achievement consists of lending a helping hand, extending a warm smile with a needy dollar, helping men in the adversity of industrial problems, of unemployment, of sickness * * * yes, and also of being willing to share expenses that are coincidental with death.

By DANIEL J. FLOOD, Congressman from 11th Congressional District, Luzerne County:

"Back home we know him as a friend, neighbor, and a leader of organized labor, but in the Nation's Capital he is known as a statesman. He has served four Presidents of the United States ably and well not only on commissions dealing with the welfare of the United States, but also representing this Nation upon important international commissions all over the world."

"He is known in Senate and House committees not only as a servant for his union, but in reference to many domestic affairs," FLOOD said.

"His great repute for integrity is recognized by everybody in Washington of both great political parties. I am proud to say in Washington that Tom Kennedy is a friend of mine and comes from my hometown," the Congressman added.

"Here is a man from our hometown streets who comes to us in the Nation's capital who sits with kings, presidents and leaders of great nations bringing to them from his knowledge and from his heart and from the warmth of his spirit and the understanding of people those things which makes America great. And so in Washington we are just as proud of Tom Kennedy as you are back in Hazleton."

Msgr. Francis Schmidt, director of St. Michael's Industrial School for Boys, Hoban Heights:

"This is an honor he justly merits after long years of devoted, effective service to this great organization. We here at St. Michael's are especially happy to see a new honor come to Mr. Kennedy. He has been our friend for many, many years; he has shown great interest in our work for underprivileged boys and he has supported it generously in very many ways.

"Speaking for the entire community of St. Michael's, for the assistant priests, the sisters, the members of our lay staff and of our family of 250 boys and for myself, I pray that the good Lord will bless Mr. Kennedy with many, many active and helpful years to come; and, I further pray that the organization over which he now presides will enjoy an increasing measure of prosperity and good service for a strong and wise leadership."

Mart F. Brennan, president of District No. 7 and international representative of Districts 1, 7, and 9, United Mine Workers of America:

"The true worth of anyone may be measured by his contribution to the welfare of his fellow man. Throughout a long and distinguished career, Tom Kennedy has given of himself unstintingly to uplift the working man to a position of honor and dignity in society. In this endeavor he has filled many positions of honor and trust.

"During wage negotiations, at innumerable conferences, in the councils of the

mighty, Tom Kennedy fought for the hopes and aspirations of the coal miner, and indeed all labor.

"Down through the years he has also carried the message of democracy to other lands. His name is familiar to many peoples in the scattered places on the globe. His voice is heard and respected by downtrodden people everywhere. To those shackled by the bonds of poverty and despair he brought hope of a better day. He has been a staunch defender of freedom and human dignity, and against the atheistic ideology of communism."

Dr. Edgar L. Dessen:

"I am honored and privileged to be able to speak a word of tribute to Tom Kennedy as he ascends to the presidency of the United Mine Workers of America. I speak for Can-Do, and through Can-Do the Greater Hazleton Chamber of Commerce and its affiliated agencies.

"Tom's lifelong struggle to help the miners needs hardly be amplified. His ideas of labor and social reform were many years ahead of their time, but he has lived to see them accomplished. He has been a giant of strength and wisdom to the United Mine Workers.

"His efforts for his community are less well known, mostly because of his modesty and self effacement. He has helped practically every worthwhile project conceived in Hazleton during his lifetime. He has helped Can-Do and our industrial rebirth in more ways than I can describe."

Peter Flyzik Lansford, international representative of the United Mine Workers of America:

"Tom Kennedy is more to us than a leader of our great organization. He is a former neighbor and a good friend; who can better understand the problems of the miners.

"Tom Kennedy will be the first man from the anthracite region to head the United Mine Workers of America and we are sure he will do everything in his power for the mine workers everywhere."

Vic Diehm, president of the Northeastern Pennsylvania Industrial Development Commission:

"As president of the NPIDC we found Thomas Kennedy ready and willing to help not only in matters affecting the anthracite region insofar as coal itself is concerned but to help the entire neighborhood in its chance to go ahead industrially speaking. He has been a great citizen in our region, his heart has always been here in Hazleton. His efforts have been directed not only for the entire organization of the United Mine Workers and the labor movement but always ready to extend a helping hand to those of us back home."

BIOGRAPHICAL SKETCH OF TOM KENNEDY

Thomas Kennedy was born at Lansford on November 2, 1887, a son of Peter and Mary (Boyle) Kennedy.

His formal education lasted only 6 years when he was forced to take a job as breaker boy at the age of 12.

When only a lad of 16 he was elected to his first union office, a post with Lansford local 1738.

In 1908 he was elected to the District 7 Executive Board and 2 years later, at the age of only 23, he became district president.

In 1925 he became international secretary-treasurer of the UMWA and in the interim had served as a member of the Anthracite Conciliation Board from 1910 to 1924. He was named vice president of the UMWA in 1947.

In 1936, Kennedy was elected as a delegate-at-large to the Democratic National Convention in Philadelphia and in 1938 he was a candidate for the Democratic nomination for Governor. He was defeated, however, because the State Democratic organization opposed him.

He served from 1935–39 as Lieutenant Governor of Pennsylvania and was recognized as one of the ablest parliamentarians ever to preside over the State senate.

His other activities in the past have included visits to various European cities as a representative to the Miners' International Federation and also representing the union at meetings of the International Labor Organization, and the International Confederation of Free Trade Unions; service on various importance committees at national conventions of the AFL and CIO; and member of the Pennsylvania Post-War Planning Commission. In recent years he was a member of the Governor's Tax Advisory Committee in Pennsylvania during the administrations of Gov. George M. Leader and David L. Lawrence.

Kennedy is also a member of the board of directors of two historic organizations which were formed largely to promote the use of coal. The first is American Coal Shipping Co., Inc., which was formed in 1957 by the UMWA, coal operators, and the coal originating railroads to foster shipment of American coal to foreign nations. The other organization is the National Coal Policy Conference, Inc., which was formed in 1959 to reawaken Americans to the prime importance of coal to the Nation's economy. Represented on its board are the UMWA, coal operators, coal-carrying railroads, public utilities which use coal, and manufacturers of coal mining equipment.

Kennedy has been active in religious circles, particularly in the promotion of Catholic charities to which he has given both his time and money. He is a member of the board of directors of the Hazleton Catholic Charities, a board director of the Hazleton United Givers Fund, and was a board director of White Haven Sanitorium in Pennsylvania from 1936 to 1956. Before the sanitorium was turned into a home for retarded persons, Kennedy had been instrumental in arranging a program for the treatment of anthracosilicosis by the Barton Memorial Hospital, at Philadelphia, and the Jefferson Medical Hospital.

He is a member of St. Gabriel's Roman Catholic Parish, the Knights of Columbus, the Friendly Sons of St. Patrick, the Fraternal Order of Eagles, Hazleton's Good Evening Club, the American Academy of Political and Social Science, and the National Catholic Welfare Conference.

Kennedy has been awarded doctor of laws degrees by three universities, St. Vincent College, Latrobe; St. Francis College, Loretto; and the University of Scranton. He is a longtime promoter of and contributor to St. Michael's Industrial School for Boys, Hoban Heights, which he terms the "Boys Town of the East."

Kennedy was married in 1912 to the late Helen Melley, of Coaldale. There are two children from this marriage, Thomas, Jr., an attorney of Hazleton, and Mrs. Thomas B. Noonan, of Barnesville, Schuylkill County. There are five grandchildren.

On November 12, 1959, Kennedy married the former Evelyn Summers, of Washington, D.C.

Status of the New York, New Haven & Hartford Railroad

EXTENSION OF REMARKS
OF
HON. EDWIN B. DOOLEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, January 18, 1960

Mr. DOOLEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a resolution of the Board of Trustees of the Village of Larchmont, N.Y., that has to do with the critical financial status of the New York, New Haven & Hartford Railroad.

The importance of the railroad to commuters in the county of Westchester is tremendous, and it is urgent that the dilemma in which the utility finds itself at the present time be solved as quickly as possible.

Following is a transcript of the resolution unanimously adopted by the Board of Trustees of the Village of Larchmont, N.Y., at a meeting on January 11, 1960:

Whereas, in view of the crisis in the financial status of the New Haven Railroad, and the threat to the vital transportation service it provides in four States; and

Whereas in view of the fact that the communities served by the New Haven here in Westchester County have submitted to a series of four increases in commuter fares in a little over 3 years, totaling 47 percent, and will soon pay higher taxes as a result of tax relief granted to the railroad by New York State: Now, therefore, be it

Resolved, That we, the members of the Board of Trustees of the Village of Larchmont, N.Y., hereby appeal to the Governors and legislative bodies of Massachusetts, Connecticut, New York, and Rhode Island to take immediate action to aid the New Haven Railroad through additional tax relief or loans on easy terms or such other measures as will in their judgment prove effective in preventing the further deterioration or stoppage of service; and be it further

Resolved, That we hereby appeal to the Senators and Congressmen of these four States to introduce legislation in Congress which will provide immediate emergency aid to the New Haven Railroad through subsidies or loans for repayment on generous terms. A delay in extending this help may mean much greater costs and losses to the public and to both State and Federal Governments.

MARGARET E. LORD,
Village Clerk.

Cascade National Park Study

EXTENSION OF REMARKS
OF
HON. DON MAGNUSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Monday, January 18, 1960

Mr. MAGNUSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial which appeared in the Wenatchee Daily World on January 10, 1960. The editorial relates to a bill I have introduced providing for a study by the Secretary of the Interior in cooperation with the Secretary of Agriculture to determine the feasibility of establishing a national park in the north Cascades region of Washington. I do not know whether a park should be established, but I do think it is extremely important that we obtain an expert opinion as soon as possible so that plans for a permanent policy for the best utilization of the area can be made.

The editorial, which gives an excellent analysis of some of the land-use problems involved, follows:

THERE ARE THINGS TO BE SAID FOR CASCADE NATIONAL PARK

Reappearance of the proposal to establish a national park in the Cascade Mountains took many local folks by surprise.

All the talk of late has been about the Glacier Peak wilderness area. It had been assumed the national park idea was out the window.

But it was given new life last week when the Cascade National Park bill was introduced in Congress. The bill is not to establish a national park. It only orders a study of the possibility of establishing one.

Why not a national park?

The furore that the Glacier Peak wilderness proposal stirred up would be but a gentle zephyr to the storm that may greet the park idea.

There was bitter opposition over the wilderness boundaries. But those opposing groups may stand shoulder to shoulder to fight the national park.

The mountaineering clubs opposed the wilderness boundaries as too small. Even if the national park takes in a much greater area, at least one mountaineer group—the Mazamas of Portland—has said it will oppose it because a national park isn't maintained as wilderness. Roads and tourist facilities are built into it.

And the mountaineers want their area shut away from civilization. They want only people who hike or ride horseback to get in. They don't want roads, cars, or thousands of people there.

The lumbering industry opposes the wilderness idea because it closes areas to lumbering. Chambers of commerce oppose it because of a fear it will reduce lumber payrolls. These same groups will oppose a national park just as strongly for the same reasons.

The national park concept can't be disposed of quite that easily, however. It's certainly not all bad.

A national park would produce wealth for an area—maybe more wealth than the lumbering payroll that would be lost. Roads would be built into it. Tourist facilities would be developed. People—tourists—would come in. Look at Mount Rainier, Glacier National Park, Yellowstone Park. The wealth they've produced in tourist dollars is probably many, many times more than the value of their timber as lumber.

Unless chambers of commerce have just been paying lip service to this concept of tourism as an industry, they're going to have to think pretty seriously before they turn down a national park.

There is majestic beauty in the area considered as the North Cascade National Park site. There are mountain meadows knee deep in flowers whose springtime bloom is July. There are passes on which you can stand and gaze, awe stricken, over the vast panorama of jagged peaks that seem to stretch into infinity.

This is the area the wilderness area advocates want to close. But if they are successful, who will see these sights? Only a comparative few who will hike or ride the long trail miles beyond the ends of the roads.

A national park would open the back country to all. Just as tourists from all over the world thrill to the drive up the Going to the Sun Highway in Montana, they might step out of their car on Buck Creek Pass to view the unexcelled sight of Glacier Peak.

This would be done without destroying the wilderness beauty of the place, either. In just a few hours hike from Lake McDonald Lodge in Glacier National Park you can be in country just as wild and unspoiled as at Image Lake in the Mount Baker Forest.

Should we make it easy for people everywhere to enjoy the majestic beauty of the Cascade back country? Or should it be reserved as a special prize for those who are willing to hike back to it?

Certainly one thing to be considered in any national park proposal would be the size.

We would not want a national park to lock up valuable timber any more than we would want a wilderness area to do it.

We would consider the boundaries mentioned in connection with a national park proposal last summer ridiculous. It contemplated a park extending from Stevens Pass on the south to Foggy Pass, a dozen miles beyond Harts Pass in the north.

It took in all of the proposed Glacier Peak wilderness area, all of Lake Chelan above Twenty-Five Mile Creek, far down the Skagit, the Suiattle and Sauk. It was an ultraambitious proposal, covering roughly four times the 422,000 acres in the Glacier Peak wilderness proposal.

We've always looked to our back country for lumber, grazing, recreation, and possibly most important of all—water.

Any attempt to restrict it to any single use is regarded with natural suspicion.

Wilderness areas and national parks dedicate it only for recreation.

This is in direct conflict with the present "multiple use" policy of the forest service. It allows some timber cutting, but requires reforestation. It allows grazing, but protects the watershed. Its trails and campsites encourage recreation.

It wouldn't be fair to close our minds to the values of a North Cascade National Park. But its advocates will have to go some if they are to produce a plan that makes better all-around use of our Cascade back country than the forest service's multiple use program now in effect.

An Attack on Democracy

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Monday, January 18, 1960

Mr. RODINO. Mr. Speaker, people of all faith have been shocked by the repeated acts of bigotry and vandalism which have spread like wildfire through every major city. The fact that these deplorable incidents have invaded the United States must be a matter of intense dismay and disgust to every responsible citizen.

When we consider that our very forefathers came here in search of religious freedom, we realize that this is an attack on the very core and fountainhead of our democracy.

As President Eisenhower said, in a message to religious leaders last Tuesday:

The virus of bigotry seems to be ever present in the body politic. We cannot ignore it nor can we allow it to spread 1 inch. For when it becomes rampant it can cause the destruction of freedom and decency everywhere.

Mr. Speaker, no one is in a position to assess how much of the anti-Semitic outrages in this country is the work of organized bigots, and how much is the product of misguided cranks and adolescents looking for excitement and notoriety. No doubt much of this vandalism can be attributed to twisted teenage pranks.

But this is a matter of no less concern.

There is a very, very serious difference between painting swastikas on houses of worship and between popularizing the latest teenage fad, and if we have failed to impress upon our youngsters the vile significance of the swastika we have failed, very seriously, to fulfill our educational responsibilities.

It is intensely distressing to me to realize that the Nazi lesson may not have been really learned; that a few short years after the war our youngsters may already be so unaware of the Hitler horror that they can circulate that Nazi symbol of death and vilification. In my opinion, this implies a weakness in our moral fiber and a degeneration in our sense of values which amounts to moral bankruptcy.

But the evidence shows that these acts are not all teenage pranks. The use of a stencil to draw swastikas in Baltimore, recently, may or may not have been instigated by more adult minds. The circulation of printed pamphlets of hate is certainly not the work of adolescents. The fact that Nazi slogans have appeared in German in some places is equally frightening.

I do not know, nor does anyone else, what motivates those individuals who perpetrate these virulent acts. I do know this, however: we cannot permit this cancer to take root. It must be made absolutely clear that America cannot and will not tolerate this outrage to democracy.

Educators must make this absolutely clear to their students. Communities must root out the bigots in their midst and hold them up to public shame and disgrace. Local officials must constantly be on the alert to apprehend violators of the law.

Mr. Speaker, I feel very strongly that no Member of Congress can ignore these undemocratic activities. The pressure of concerted public opinion and censure must immediately be brought to bear.

I am therefore introducing a resolution, identical to that already introduced by Congressman FLOOD, which strongly expresses the sense of outrage and indignation of the Congress at this deplorable display of bigotry and hate.

I am also inserting a clipping from the Newark Star Ledger, which describes some of the more recent incidents:

[From the Newark Star-Ledger, Jan. 13, 1960]

MORE SWASTIKAS FOUND, DEMAND FOR ACTION RISES

Discovery of more swastikas on the walls of schools and synagogues swelled demands yesterday for action against the bigots and vandals responsible.

The crooked cross, symbol of Nazi anti-Semitism, was found daubed or scrawled on public buildings, cars, and homes in Los Angeles; Chicago; St. Louis, Mo.; Omaha, Nebr.; La Crosse, Wis.; and Lowell, Ind.

Police at first had discounted the rash of swastikas across the nation as twisted teen-

age pranks, probably inspired by similar anti-Semitic demonstrations in Western Europe.

But top policemen and Jewish leaders warned that the ugly fad also could be an outlet for real religious bigotry. A German-born Chicago psychiatrist, who asked that his name be withheld, said, "This is just the way it started in Germany 14 years before Hitler came to power."

Wisconsin Attorney General John Reynolds ordered the State's top crime-fighting equipment into the investigation of two swastikas painted on a La Crosse synagogue.

The words "Jews get out" were also smeared on the synagogue. Reynolds said the State crime lab was sending a mobile unit to analyze paint scrapings and other evidence.

Other incidents of the same stripe included:

One hundred headstones in a Jewish cemetery on Staten Island smeared with yellow paint, with swastikas, and the word "Jew" painted on several.

Nine swastikas outlined on the walls of the Omaha Central High School, another at the B'nai Jacob-Adas Yeshuron Synagogue, and yet another at a grocery store.

A break-in at a school in the Los Angeles suburb of Lawndale, where vandals tore up an American flag, scrawled swastikas over a music room, and wrote in German, "Down with Americans, hail good Germans" on a blackboard.

Two black-painted swastikas on the front doors of the Bethesda Lutheran Church in the St. Louis suburb of Pine Lawn.

Three golden swastikas painted on the car of Chicago high school student Robert Meyers, a non-Jew.

Vandals' invasion of the little town of Lowell, Ind., where few, if any Jews live. A green swastika was painted on the door of John Miller, who is not Jewish, and paint was smeared on his home. Green swastikas were daubed on the wall of a nearby school and the school's flagpole rope was cut.

Nazi, anti-Jewish pamphlets with such titles as "Jews Are Through in '72" found on 200 cars at University of Maryland parking lots.

A Statement Concerning the Use of the Means of Mass Extermination in the Waging of War

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 18, 1960

Mr. SCHWENGEL. Mr. Speaker, the members of the faculty of the Presbyterian Theological Seminary of the University of Dubuque, Dubuque, Iowa, have signed a statement concerning the use of the means of mass extermination in the waging of war.

The thoughts expressed in this statement are worthy of consideration and under leave to extend my remarks, I wish to bring the statement to the attention of the Members of Congress and ask that it be printed in the Appendix of the RECORD.

The statement follows:

A STATEMENT CONCERNING THE USE OF THE MEANS OF MASS EXTERMINATION IN THE WAGING OF WAR

In view of the fact that the Government of the United States has not yet repudiated mass extermination as a method of waging war, we the undersigned, members of the faculty of the Theological Seminary of the University of Dubuque, confess the following truths:

1. God has revealed Himself in Jesus Christ as the loving Creator, Preserver, and Redeemer of human life.

2. Jesus Christ is at once God's word which assures us of life in Him and which commands us to do all to preserve the life of our neighbor.

3. For the preservation of the life of the neighbor for whom Christ died and rose again, God has appointed the state with the task of providing for justice, freedom, and peace by means of the threat and exercise of force. In the fulfillment of this task the state may, as a last resort, wage a domestic or foreign war.

4. But the threat and exercise of the means of mass extermination in waging war is blasphemy against God the Creator, Preserver, and Redeemer of human life and is sin against the creature for whom Christ died and rose again. It defeats the very purpose for which war may lawfully be waged, and a state which employs such means becomes (in this respect) a nihilistic state by the indiscriminate destruction of the evil and the good, the just and the unjust, the defenseless and the armed, the living and those not yet born.

5. In modern times the state of Adolf Hitler revived and perfected the barbaric horror of genocide whose military counterpart is war by obliteration of defenseless civilians, e.g., the bombing of Warsaw, Rotterdam, and Coventry, and the annihilation of Lidice."

6. The initial horrified reaction of the United States and her allies to these crimes gave way during the years of fighting to the acceptance of Nazi policy. Pinpoint bombing of exclusively military targets was followed by saturation bombing of whole cities. Napalm, jellied gasoline, enabled us to make raids in which women and children were roasted alive.

7. The perfecting of the atom bomb provided us with a diabolically efficient instrument for waging war by the extermination of whole civilian populations.

8. Although the war's outcome was not in doubt, we dropped this bomb on two Japanese cities, immediately killing more than 100,000 men, women, and children and maiming thousands of others not only then living but in generations yet unborn.

9. Even before Soviet Russia possessed the atomic bomb, we relied principally upon the threat of massive retaliation, that is, nuclear mass extermination, rather than upon the conventional weapons of war, in pursuit of the policy of containment.

10. Moreover, since Nagasaki we continued to maim others both living and yet unborn by numerous tests of nuclear weapons with a callous disregard for the rights of neutral nations.

11. Meanwhile Russia and other nations have developed, or will develop, these weapons and are relying upon our policy of mass extermination in waging war.

12. There is, however, no conceivable end that justifies these means—neither the salvation of the West with what is here called Christian civilization, nor the salvation of the East with what is there called the achievements of the Socialist revolution.

13. "Do not be deceived; God is not mocked, for whatsoever a man sows, that he will also reap." (Galatians 6: 7.) All men and nations who follow the policy of war by mass extermination provoke the wrath of God and His just retribution, whether they deny Him or whether they profess their worship of Him.

14. Nevertheless, "if we confess our sins, He is faithful and just, and will forgive our sins and cleanse us from all unrighteousness." (I John 1: 9). We therefore confess our sin and the sin of our people to Almighty God and to the survivors of those whom we have wantonly destroyed. We further confess that we as Christians have been shamefully weak and tardy in this our confession of guilt.

15. As "fruit that befits repentance" (Luke 3: 8), we declare that we can no longer support the Government's policy of the threat and exercise of the means of mass extermination, whether nuclear, chemical or biological. We cannot sanction the production, testing, and application of the means of mass extermination, nor can we approve of any military service that involves the use of such instruments of warfare.

Huntsville Parades Fond Farewell to Retiring Hero General Medaris

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 18, 1960

Mr. HUDDLESTON. Mr. Speaker, Gen. John B. Medaris, one of our Nation's finest military leaders and a keyman in the establishment of our missiles system, will unfortunately leave the Army January 31, 1960.

The whole Nation regrets General Medaris' retirement, but the people of Alabama who have come to know him especially well as he commanded the Redstone Arsenal Army Ordnance Missile Command at Huntsville will especially miss him. As an indication of this fact, I am pleased to enclose an article from the Birmingham Post-Herald of Saturday, January 16, 1960, telling of the Huntsville tribute to this retiring hero:

HUNTSVILLE PARADES FOND FAREWELL TO RETIRING HERO GENERAL MEDARIS
(By Clarke Stallworth)

HUNTSVILLE, ALA., January 15.—Huntsville said goodbye to Maj. Gen. John B. Medaris today.

General Medaris, who played a large part in putting America's first satellite into space, is the retiring commander of the Army Ordnance Missile Command. He will leave the Army January 31.

The general and Mrs. Medaris, riding in an open convertible, led a parade in his honor through the streets of Huntsville.

Later, standing on a reviewing stand in front of the Madison County Courthouse, Medaris smiled and waved as 11 bands and numerous floats passed by.

When the parade was over the general was mobbed by a group of children seeking autographs. He smiled and signed them all.

One majorette, Martha Campbell of Scottsboro, asked him to sign her baton. He shook his head, and signed.

At a banquet here tonight, Courtney Johnson, Assistant Secretary of the Army for Logistics, eulogized Medaris.

Said Johnson: "When the news came that night of the first sputnik, Dr. Wernher

von Braun and General Medaris seized the opportunity. In 90 days, they assured the Secretary [of Defense], the Army could launch an American satellite."

EXPLORER SOON ORBITED

"Eighty-three days later, after the go-ahead finally came, Explorer I was fired into orbit under the personal direction of General Medaris.

"The Nation owes an everlasting debt to the courage, the farsightedness and the firm leadership that made this possible."

Medaris established the Army Ballistic Missile Agency February 1, 1956, said Johnson.

"When General Medaris came to Redstone Arsenal the unique capabilities of the technical group supervised by Dr. Wernher von Braun were largely unrecognized outside the Army. Yet they represented the Nation's only experience in the successful development of long-range ballistic missiles.

"They had hopes and plans about exploring outer space that could not then be disclosed without risking public ridicule. Who, in retrospect, was mentally prepared to accept the fact that man would travel to the Moon?"

INSPIRED OTHERS

"There were a few who could understand these ideas—one of them was General Medaris, whose creative imagination quickly inspired his design team.

"A profound change in atmosphere and attitude came over Redstone Arsenal as General Medaris swung into action. He instilled a sense of urgency and pride of accomplishment.

"He tolerated no delay. He made the necessary decisions without hesitancy."

Medaris refused to answer any questions put to him by reporters—on any subject.

MUM ON FUTURE

But Johnson said Medaris "will enter a new career wherein I'm sure he will continue to improve our educational system, to keep this country in the forefront of technological development essential to international leadership."

The festivities began with the 3:15 parade through the streets of Huntsville, then there was a 5:45 reception for Medaris at the Russel Erskine Hotel, and a 7 p.m. banquet at the community center.

Dumping of Atomic Waste Into the Waters of the Gulf of Mexico

EXTENSION OF REMARKS
OF
HON. JOHN YOUNG
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 18, 1960

Mr. YOUNG. Mr. Speaker, I want to take this opportunity to call to the attention of the House of Representatives a most serious and hazardous proposal now under consideration by the Atomic Energy Commission which may have far-reaching and injurious effects on every American citizen now alive and on generations to come.

On January 13, 1958, a private industrial company, the Industrial Waste Disposal Corp., of Houston, Tex., filed application with the Atomic Energy Commission for a license authorizing this company to receive, package and dispose of certain radioactive waste materials by placing this radioactive material in cement containers and dumping them in the waters of the Gulf of Mexico. On December 5, 1958, the Atomic Energy Commission published in the Federal Register a "Notice of Proposed Issuance of Byproduct Material License to the Industrial Waste Disposal Corp.," which would authorize the disposal of this radioactive waste in this manner. The notice stated that the license would be issued unless formal hearing was requested.

Immediate public interest was expressed in this matter and various municipalities and groups demanded a hearing. The State of Texas also requested a hearing. Hearings were held in Houston on January 22, 1959. After these hearings, the AEC issued an intermediate decision the effect of which was to approve the dumping license of the disposal company. An appeal to the full Commission was taken by interested parties, and final hearings are set here in Washington on January 20, 1960.

I most firmly believe, and I think a majority of the Members of this body will feel as I do, that the dumping of atomic waste into waters of the oceans touching our shores poses a possibility of a serious hazard to the health and well-being of our citizens. At best, the evidence introduced by the AEC at previous hearings was speculative and conjectural. I believe the U.S. Congress would be derelict in its duty to the people of this country if we stand idly by and allow without protest a branch of the Federal Government to engage in a practice which may have far-reaching ill effects upon the health of the citizens. I most seriously object to the approval of this disposal license by the Atomic Energy Commission until such time as it has been established beyond any doubt that the dumping of this atomic material in the waters of the Gulf of Mexico will not be harmful to human life or marine life in the disposal area.

I feel, likewise, that it should be definitely determined at this time to what extent this disposal program will be accelerated or expanded in future operations for the disposal of atomic waste. I understand it has been the experience of other waste disposal areas, both in Europe and off the shores of this country, where dumping and disposal operations have been inaugurated, that these dumping operations tend to expand and increase to the point where the number of curies contained in the original operation may be infinitesimal as compared to the vastly increased number of curies contained in the cumulated subsequent dumping operations.

This is not an isolated matter, pertaining to the citizens of the States bordering the Gulf of Mexico alone. I have in my files a list of proposed dumping grounds running the full length of the Atlantic seaboard, around the Florida coast, and the entire Gulf of Mexico. Thus, today we are concerned with one dumping operation in the Gulf of Mexico, tomorrow and in future years if we open the door for this proposed plan, we may be faced with radioactive waters lapping our shores from Maine to Texas, and from Oregon to California. This would indeed be a Frankenstein monster which we might not be able to control or rectify.

This problem not only has national significance, but has now become a matter touching on our relations with our neighbor to the South. About a month ago the Government of the Republic of Mexico, acting through channels, protested to our Department of State the dumping of this atomic waste in Gulf of Mexico waters. In a letter dated November 18, 1959, to the Chairman of the Atomic Energy Commission, Mr. Rubottom, Assistant Secretary of State, advised the AEC that the Mexican Government is making formal protest to this proposed action by a branch of the U.S. Government. In his letter of protest to the Atomic Energy Commission, Mr. Rubottom states:

> From the note of the Mexican Embassy it may be inferred that the Mexican Government believes disposal of radioactive wastes so close to its shores would be interpreted in Mexico as a unilateral and arbitrary act in the part of the United States, adverse results from which would present virtually identical hazards to the residents of the two countries. Our Embassy at Mexico City concurs in the Department's view that Mexico's reaction to the granting of the license would be uniformly adverse and would cause harm to our relations with Mexico, regardless of any explanations that might be given. Furthermore, it would be difficult to explain why the United States unilaterally and without the concurrence of Mexico selected a site for disposal of radioactive wastes in an area approximately 180 miles from the shores of both countries, particularly as so little can be known with certainty in Mexico regarding the possible adverse effects oceanic waste disposal might have over a long period of time.

Mr. Speaker, I share the concern of the Government of Mexico for the future health and well-being of its citizens, and it appears to me that the U.S. Congress might do well to follow the example set us by the Republic of Mexico and express a similar concern for the people of our own country whose lives and health are endangered by this proposed action on the part of one of our Federal agencies.

A Surplus of Snake Oil Can't Cut Taxes

EXTENSION OF REMARKS
OF
HON. ROSS BASS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, January 18, 1960

Mr. BASS of Tennessee. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include the following editorial which appeared in the Nashville Tennessean on January 13. In my opinion, this is an excellent article and one which merits the attention of the entire membership of the Congress.

The editorial follows:

A SURPLUS OF SNAKE OIL CAN'T CUT TAXES

The Eisenhower administration is ballooning hypothetical legislation into a mythical budget surplus and an imaginary tax cut. The only thing real in this parlay is the election year politics from which it derives.

The President himself tossed the balloon aloft in his state of the Union message, when he predicted a $4.2 billion surplus in the fiscal year ending June 30, 1961. That was snake oil. Such a surplus depends entirely on improbable developments.

Congress, for instance, would have to pass postal rate increases, a highway users' tax increase, and farm legislation that it has already rejected. Our farm economy would have to improve enough so that farm expenditures would be cut by almost $1 billion without legislation. All spending, even for defense, would have to be held at or below present levels, no matter how much the economy and the population expand.

Moreover, the long steel strike cut revenues by at least $500 million and by how much more nobody yet can be sure. And the administration's own tight money policies choke the economic growth upon which increasing revenues depend.

The President at first proposed to use his illusory surplus only for debt reduction. But hardly was he off the podium before a high official, who declined to be quoted by name (there are a lot of those in the White House crowd) told the Associated Press that the administration would favor a tax reduction next year if the predicted surplus is used for debt reduction.

Thus Congress, in one stroke, was tempted to knuckle under to the President's pinch-penny policies and threatened with the blame for no tax relief if, instead, it provides money for the Nation's needs. And the public was beguiled with the notion that a tax cut is just around the corner if the Eisenhower budget line is followed.

The hard fact is that no surplus is likely and even if it develops, tax relief is less important than recovering our military supremacy, aiding our neglected schools, developing our national resources and facilities, and assisting the underdeveloped nations.

Hinting at tax cuts, however, is always good, cynical politics. In this case, the Eisenhower administration won't even be around in 1961 to be held accountable. And Mr. NIXON is too shrewd to offer such spurious hopes in his own name.

Senator Green To Retire

EXTENSION OF REMARKS
OF
HON. AIME J. FORAND
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, January 18, 1960

Mr. FORAND. Mr. Speaker, it was with mixed emotions that I received the announcement that Senator GREEN would not seek reelection.

The Honorable THEODORE FRANCIS GREEN, now in his 93d year, is the senior Senator from Rhode Island, and has been in the Senate since January 1937. He has the distinction of being the oldest man ever to serve in Congress.

I am saddened at the thought that such a great statesman and so excellent a representative of our State will not be with us in the Halls of Congress after this session.

I am happy, however, at the thought that after so many years of arduous service as Governor of our State and as one of our U.S. Senators he will have an opportunity to relax and take life easy.

We will miss his sage counsel and advice in the Halls of Congress but I am confident that while he will withdraw from active service he will continue his keen interest in politics and will be available to us whenever we call on him.

His leaving active political life will leave a void that will be hard to fill. His long experience in public affairs, both foreign and domestic, has been invaluable to our State and country, both under Republican as well as Democratic administrations.

About a year ago Senator GREEN gave us an example of his greatness, of his patriotism, and of his love for America. He did what few, if any, Member of Congress has ever done—step down voluntarily from the chairmanship of a great committee.

He relinquished the chairmanship of the Senate Foreign Relations Committee because he felt that his impaired sight and hearing made it impossible for him to discharge the duties of that high office as he felt it should be done.

He now informs us that medical attention has remedied the condition although it has not done so to a degree sufficient to permit him to discharge his congressional duties as he feels should be done and, therefore, has decided not to seek reelection.
